## Address by Gen. Mark W. Clark on Accepting Award of the Italian-American Labor Council

EXTENSION OF REMARKS
OF
**HON. ROBERT F. WAGNER**
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Monday, October 15, 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very unusual and historically significant address delivered by Gen. Mark W. Clark at the Columbus Day celebration of the Italian-American Labor Council on October 12, 1945, at the Hotel Biltmore, New York City. I had the great privilege of being present on this memorable occasion and heard the address of General Clark when accepting this year's "four freedoms" annual award of the Italian-American Labor Council.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Antonini, distinguished guests, it is with great pride that I accept this year's "four freedoms" award of the Italian-American Labor Council. It is a real satisfaction to attend a gathering of a group which is contributing much to friendship between two great countries. In accepting your award, I fully realize that I merely represent the American soldiers whom I had the privilege to command, and who, by their individual and collective acts of bravery, made possible the liberation of the great land of Italy.

Day before yesterday as I looked out from the window of my airplane and saw the shores of America ahead, my mind went back to the day, more than 450 years ago, when a great and daring Italian, standing on the deck of a tiny ship, caught his first sight of a new world. I thought with gratitude of the home for free people which the discoveries of Christopher Columbus gave to humanity; and I was proud to recollect that my country had permitted me to work, in the Old World, for the reestablishment of freedom and democracy.

In discussing Italy today one can very easily become entangled with the political side of the question. I will leave that to the diplomats and will be sufficiently diplomatic myself tonight to stick to my knitting and discuss the military side of the picture.

Let me now tell you something of the Italian campaign. First, I could have accomplished nothing in the rugged terrain of Italy had it not been for you American mothers and fathers, brothers and sisters, and relations who raised and unselfishly sent to me the magnificent American soldiers, who made our great victory in Italy possible. Never did a commander have more to be proud of than I, in leading into battle the men you sent to me.

On September 9, 1943, these men in my Fifth American Army, the first American troops to land on the continent of Europe, officially returned the call of Christopher Columbus when we landed at Salerno.

The Germans accepted our challenge and on the 13th of September counterattacked with everything they had and drove a wedge all the way to the sea. It was only the determination of these forces—my gallant British comrades as well as my splendid Americans—that prevented our being pushed into the Mediterranean.

Then came Naples, the crossing of the Volturno, the hard times at Cassino, and the landing at Anzio. I had been directed to land at Anzio in the hope that a flank threat to the enemy would force his withdrawal. This was not the case. He again accepted the challenge and moved down many divisions from northern Italy. You know the months of desperate struggle that continued on this restricted beachhead. But later, in the 1944 spring offense for Rome, Anzio—a thorn in the enemy's side—proved most useful and gave us an ideal jump-off position which led to the capture of the Italian capital.

I well remember the picture of our tired doughboys marching through the streets of Rome amidst the wild applause of the Italian people. I heard of one GI saying as he approached the ancient Roman ruins of the Colosseum, "Gee, do you suppose we caused all that damage?" We were very proud that this beautiful Italian city, first of the Axis-dominated European capitals to be liberated, could be spared damage.

At that time my son Bill was about to become a first classman at West Point. I waited for many weeks after the fall of Rome to hear from him, hoping that he, too, would share my pride in our great accomplishment. Finally a letter case. I tore it open anxiously and it read something like this: "Dear Dad, June has finally come and I am now a first classman. I know you will be pleased to know that we licked the Navy in baseball the other day. It was a great game.

"I have been made a sergeant and my class standing this year, I am sure, will please you. Now that I am a first classman we get weekend privileges in New York." He went on to tell me of the good-looking girls he had met in this fair city and of his anticipation of the good times to come while he was a first classman. There was not a single word about our capturing Rome, and I was greatly disappointed until I came to the end of the letter and there at last was a postscript which read as follows: "By the way, Dad, I see you're doing all right, too."

After Rome the action was fast. The Germans retreated in disorder to the formidable Gothic position in the Appennines. About this time, as you will remember, half of my Fifth Army was ordered away from our front to prepare for the invasion of southern France. I often wonder how far and fast we might have gone had those troops remained. They were troops flushed with victory. I do not believe that they could have been stopped. It was when we were confronting this mountain stronghold that your president, Mr. Antonini, came to visit me. I remember taking him to a forward observation point, high up in the mountains where we could see the fertile Po Valley and the city of Bologna. We had looked longingly at this prize objective and I hoped that perhaps some layman, who saw the situation for the first time, might suggest a new plan of action but that was not the case. No matter how long you looked at Bologna and no matter how thin you sliced it, it was still "boloney."

Winter came and further troops were withdrawn for the European battle. Shortages of ammunition and replacements developed. Snow and ice not only made progress by foot practically impossible, but almost entirely stopped the fine air support which we had always received from our Allied Air Forces. It was finally decided to stop the attack and rest our troops, and get ready for what we hoped to be the final spring offensive. It was about this time that General Alexander took over the Mediterranean theater and I assumed command of the Fifteenth Army group which comprised all the ground fighting forces in Italy, my own old Fifth and the British Eighth Armies.

As spring approached, we made our plans. We must not let the 25 German divisions and the 4 Fascist Italian divisions fighting on their side get away and intervene in the great battles being fought elsewhere, or withdraw undefeated into Hitler's Alpine redoubt. Our job was to smash these German armies in the Po Valley. In planning this battle my great concern was to see that all of the forces of the Fifth and Eighth Armies attacked with everything they had.

For this final battle we had 10 major nationalities. There were Poles, Canadians, Italians, New Zealanders, British, Palestinians who formed a Jewish brigade—Indians, Americans, white and colored; Americans of Japanese origin, South Africans, and Brazilians. It was truly a polyglot army. By this time we had well organized the Italian partisan army which stood poised in the Appennines, in the Alps, and the Po Valley between, ready to strike in coordination with the regular troops. For months from my headquarters we communicated by radio with these partisan bands. We parachuted supplies, food, ammunition, and even jeeps into their mountain hideouts. We gave each little group its instructions and cautioned all to hold back for the crucial moment. It has been a great satisfaction to me in this final battle that the Italian civilians by their

understanding cooperation, the Italian organized army by its splendid valor, and the Italian resistance groups who freed 200 towns and cities, contributed so much to the liberation of their own country. From the time that we landed at Salerno, I never heard of a major sabotage effort against our troops. The people were with us.

You know what happened in our final battle. The 25 tough, well-trained German divisions—after bitter resistance—were completely destroyed. We destroyed them south of the Po River. We killed thousands of them and destroyed great quantities of their equipment. When the German commander came to me to surrender, he told me, with tears in his eyes, that only remnants of his proud armies had escaped to the north, with no equipment, and with but one mad desire—to get back into Germany.

Sometimes we are tempted to exult over this great victory. But always there returns to me the solemn recollection that it was dearly won. Our gallant dead in many a mountain valley will always have our reverent gratitude for the victory they made possible.

In this campaign the great industrial northern Italy, with its productive Po Valley, was saved with relatively little damage. The great cities of Bologna, Turin, Milan, and Venice were in our hands. Genoa, the proud birthplace of the man whose memory we honor today, was in good shape except for port facilities. The recovery of this mighty industrial north in good condition means a great deal to the future of Italy. I again traveled through this area as far south as Rome only within the last 10 days and I was pleased to note a great revival in activity, in signs of life, in lightened expressions on the faces of people. I think Italy is on the mend. She has many trials and unhappy days ahead, but I am convinced that her present leaders are completely determined forever to destroy fascism, to rebuild their ideals of democracy, and to restore Italy to its rightful place in the community of peace-loving nations. This task will call for discipline of the highest sort—the government of his own life by every patriotic Italian in the best interests of his country. Such self-discipline is the democratic equivalent for the cruel repressions of dictatorship. Free government cannot survive without it. Let us in America give an example of this to our Italian friends.

With determination to succeed in the new ways of peace as we did in war—with tolerance and understanding each for the other—with the comradeship born of mutual dangers and sacrifices—and in reliance on that Divine guidance without which man's greatest efforts are feeble, let us Americans with our Italian brethren overseas and men of good will everywhere look forward to a bright tomorrow.

---

## Address by Luigi Antonini, President of the Italian-American Labor Council, on the Presentation of the "Four Freedoms" Annual Award by the Italian-American Labor Council to Gen. Mark W. Clark

---

EXTENSION OF REMARKS

OF

### HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Monday, October 15, 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered by Luigi Antonini, president of the Italian-American Labor Council, on October 12, 1945, at the presentation of the "four freedoms" annual award to Gen. Mark W. Clark.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For nearly 4 years, we celebrated Columbus Day while the guns of war were thundering. This is the first Columbus Day of peace—since that fateful year of 1941. I greet you heartily on this memorable occasion, as mankind begins to dig out of the rubble and ruins of total war and gropes and strives to reach the highways leading to a world of peace and plenty.

This is more than a gala occasion. It is even more than a day set aside for celebrating an immortal event of the past. This is a truly historic occasion—for the future. On this dias are seated men who have already made much history—and from whom history still has much to hear and mankind much to benefit.

Highly renowned Americans are joined with us tonight in our climax of a year crowded with endeavors for the triumph of democracy and justice. Through their courage and capacities, they have won the undying esteem and gratitude of our country. Through their valor and vision, through their vibrant idealism and vigorous intelligence, they have enshrined themselves in the hearts of all the downtrodden and liberated, of the liberty-loving people in all lands.

Our guests and speakers are men who were indispensable to America's history on the fields of war. They are now entrusted with new high responsibilities by our country; they are now discharging these duties in a manner and spirit that can only assure and speed the day of humanity's decisive and lasting triumph on the fields of peace. They are, in the finest sense of the word, citizens of the world.

As we read the news and listen to the radio commentators these days, we are bound to get a feeling that the tasks of peace may, in many respects, be even more difficult than those of war. Think of the deadlock and stalemate—to put it charitably—of the recent first conference of the Council of Foreign Ministers. Thus I speak to you tonight of the trials and tribulations of the Italian people at this critical juncture of history not so much out of our high respect for the memory of the glorious Genoese mariner, nor even in token of our very inadequate appreciation of his epoch-making achievements for human progress. It is history that has chosen Italy to be the crucible of our solemn purposes and sacred promises in war and the first testing ground of our principles and plans in peace.

To the Italian-American Labor Council, Americanism is an ideal, a principle, a conviction, a way of life. That is why we have always hoped and worked to have the strongest members of the United Nations allow and assist the land of our forebears to become a mighty fortress of democracy in turbulent Europe and a pillar of peace in the edifice of international security. We had believed that it would be relatively easy to arrive at a peace settlement with the new Italy which rendered decisive contributions to its own liberation as well as to the common victory. We had always felt that democratic Italy, though momentarily in dire straits, was in nobody's sphere of influence. In spite of everything that has happened and has not happened, we still firmly believe that the best interests of every European power demand equitable relations with more than 45,000,000 people of Italy. And at the very foundation of all our hopes and faith that the land of our forefathers would soon return to her rightful place of honor in the community of democratic nations was the genuine and warm sympathy of the American people for the people of Italy.

We were sure that for the sake of world democracy and prosperity, Italy would be offered a generous peace—yes, a better peace. But what do we find now? The Italian people who destroyed the Fascist dictatorship and joined our side in the war are being offered a very bitter peace. These revolutionary changes in Italy were not maneuvers of expediency in the fashion of Balkan Nazi-minded generals who became turncoats when the handwriting on the wall for Germany could be read by even the most politically illiterate. There is not now in all Europe a government that is led by forces more devoted to democracy than is the Italian Government of today. At the helm of the present Italian Government are men who saw the inherent evil in fascism from the very outset. They fought it consistently and courageously. Let those statesmen who are now sitting in judgment on these heroic anti-Fascist fighters—especially those statesmen who judge them unfairly and harshly—recall and realize that these democratic leaders of the new Italy never trafficked with totalitarianism in any shape, manner, or form. These architects of a free and democratic Italy never did sign a commercial treaty with Mussolini, or a military accord, or even nonaggression pact with Hitler.

The peace and prosperity of all Europe and the entire world can only be undermined and destroyed by imposing a punitive peace on the Italian people—by forcing them to pay crushing reparations, making a mockery of their national sovereignty and dismembering their domain in utter contempt of the Atlantic Charter.

Liberty-loving America is the last and best hope of freedom-loving Italy. It is up to our country to set the pace in having the big powers realize that the Italian people were the first victims and not the last villains of Mussolini's Fascist tyranny and aggression. It is primarily up to us, citizens of the new world discovered by Columbus, to get the big powers to understand that they are signing a peace treaty, not with the ghost of Mussolini, but with the resurgent spirit of Garibaldi, Mazzini, Matteotti, and the dynamic idealism of their successors, Parri, Silone, Cianca, Modigliani, Faravelli, Sforza, Lussu, Carandini, Ruini, Saragat, Tarchiani, De Gasperi, and their democratic colleagues.

Thanks to the decency and generosity of the American people, the task of safeguarding and strengthening the reborn democracy of Italy has not waited for the slowly grinding wheels of diplomacy held down by the system of single-nation veto power in international peace conferences. As Secretary of State Byrnes has declared, our country has already "contributed several hundred million dollars for the relief of the Italian people. Their condition is deplorable. We must continue to help them." These are good words—well and timely spoken. In the campaign for the relief and rehabilitation and the democratic regeneration of the new Italy, our Council has spared no efforts, morally and materially. Towards this end, we have provided to the best of our ability, food, clothing, medicines, aid in the rebuilding of bona fide free trade unions, assistance to the heroic fighters for freedom in the darkest days of the struggle, and help to the genuine friends of democracy and unswerving foes of all dictatorship.

And now we are launching a new endeavor. We are about to build a home for the most innocent and helpless victims of the terrors of fascism-nazism and the horrors of war. Tonight's proceeds are to go to a fund for the establishment of a home for orphaned children in Italy. This home will be dedicated to the memory of the prime architect of victory, that resplendent figure of American and world history, the one to whom we

made just 1 year ago tonight the "four freedoms" award. I speak of our beloved late President Franklin Delano Roosevelt. It is most appropriate, indeed that his memory should be honored by the rise of an institution which shall help save and build up for Italian democracy strong and devoted sons who shall make and mould out of their motherland a beacon of culture and civilization and a bulwark of human liberties and progress.

It is most fitting that this year's "four freedoms" award of the Italian-American Labor Council should be made to another great American whose magnificent military genius, broadness of social and political vision, and depth of human sympathy have contributed so decisively to the liberation and resurgence of democratic Italy—as well as to our understanding and appreciation of her true and full role in winning the war and building the peace.

## Letter From the President on the Occasion of the Presentation of Award to Gen. Mark W. Clark

EXTENSION OF REMARKS
OF
### HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Monday, October 15, 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, President Truman's message to the Columbus Day celebration of the Italian-American Labor Day Council at the Hotel Biltmore on October 12, 1945, on which occasion the Italian-American Labor Council presented its annual "four freedoms" award to Gen. Mark W. Clark. The message is embodied in the presentation remarks of Mr. Luigi Antonini, which I desire printed in the RECORD.

There being no objection, the remarks and letter were ordered to be printed in the RECORD, as follows:

REMARKS BY MR. LUIGI ANTONINI PRESENTING THE ANNUAL "FOUR FREEDOMS" AWARD TO GEN. MARK W. CLARK

Tonight, the Italian-American Labor Council makes this year's "Four Freedoms" Award to a most illustrious son of the American people, Gen. Mark W. Clark, liberator of Italy from the barbarous yoke of nazism. About a year ago, I was on a mission to Italy for the American Federation of Labor. There, under the murderous fire of the Nazi legions, he was my host and I was his guest. It was there and then, in the glaring light of battle fire, that I saw clearly his truly American spirit, his genuinely American way of treating and leading his brave and superb army. Indelibly impressed in my memory, in my mind and heart, are the enthusiasm which he generated, the encouragement which he so ably gave, and the brilliance with which he directed his troops in smashing the Gothic line. This rare combination of qualities is the key to his peerless and triumphant leadership in the longest fight waged by our troops on the continent of Europe.

And on no other battlefield in the world were there massed such huge fighting forces of so many different nationalities, races, creeds, color, and language. Here in Italy there was built an invincible fighting front of the United Nations, inspired and united by devotion to the cause of freedom. This welding of Americans, British, Australians, Africans, New Zealanders, Indians, Poles, Brazilians, French, Negro and Japanese Americans, and Italians demanded the highest capacities of generalship and statesmanship and the firmest faith in humanity. Fortunately for our country, for the people of Italy, and the cause of world democracy, Gen. Mark W. Clark, in command, fully and brilliantly met all these most exacting requirements. His accomplishments bore out our most fervent aspirations and highest aims. It is these outstanding achievements which led our council to select Gen. Mark W. Clark as the recipient of this year's "four freedoms" award. General Clark has well earned the title of liberator of Italy, for he is a fighting champion of the "four freedoms."

I can think of no better way of opening the ceremonies of the night than by presenting to you a letter just sent me by the President of the United States Harry S. Truman. The letter reads:

OCTOBER 1, 1945.

DEAR MR. ANTONINI: It is especially fitting that the Italian-American Labor Council has selected Columbus Day as the day for the presentation of its annual "four freedoms" award to Gen. Mark W. Clark.

General Clark has rendered superb service in the liberation of the Italian people. Soldier, statesman, and humanitarian, he deserves the thanks of all people of Italian blood in this country for all that he has done for the beloved homeland and for those liberated from the heel of the oppressor.

Columbus had vision and courage when he fared forth on the voyage which gave the world two new continents. I have full faith that Italians of the present day will face the heavy task of rehabilitation with the same faith and courage. Please extend to General Clark my hearty congratulations and my warmest greetings to all who gather in his honor.

Very sincerely yours,

HARRY S. TRUMAN.

Yes, and on my visit to Italy a year ago today I found in General Clark a truly American general in the best sense of the word. History has had its generals. There were Genghis Khan and Radeski. And there were also George Washington and Giuseppe Garibaldi. You know, even in our country we have generals and generals. But General Clark is far more than a superlative soldier. He is a real general, a grand leader of men facing their supreme test, and a magnificent human being, fine, fearless, and forceful on the field of battle, keen in appraising and quick to appreciate the dynamic social forces and deep-going social changes.

When we honor Gen. Mark W. Clark tonight we pay tribute to our Nation and the glorious Army which gave him to the freedom-loving world. I am profoundly stirred with joy and gratitude as I now pin on you, General Clark, the "four freedoms" medal and offer this resolution and plaque of honor and esteem to you for rendering such immeasurable services to the resurrection of liberty in Italy and to the cause of freedom and democracy throughout the world.

## Looking Ahead

EXTENSION OF REMARKS
OF
### HON. JOSEPH H. BALL
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
*Monday, October 15, 1945*

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Looking Ahead," delivered by me on Wednesday, October 10, 1945, before a meeting of the Independent Voters of Illinois, at Winnetka, Ill. The address deals with domestic and foreign policy issues.

There being no objection, the address was ordered to be printed in the RECORD as follows:

We of the United States face two great tasks in the decade immediately ahead.

One is to exercise strongly and wisely the leadership which has been thrust upon us in developing agencies of government on the world level which can and will resolve peacefully the inevitable conflicts among nations and prevent a third great war from destroying our civilization.

The second is to develop and make effective in our domestic affairs policies and programs which will bring to reality the greater opportunities, abundance, and freedom for the individual which modern science and industry have placed within our grasp.

Events of recent weeks have made it clear that while the United Nations have won the war completely, we still have achieved only a precarious beachhead in the long fight to make the peace just and secure.

Any lingering complacency that the ratification of the San Francisco Charter solved the problems of peace for good was dispelled by the circumstances surrounding the breakup of the Council of Foreign Ministers meeting in London.

Secretary of State Byrnes' report to the Nation on that conference last week is a tremendously important document. It reached a new high in official frankness in reporting to the Nation the facts of an extremely unpleasant situation. If the American people are to support a strong and realistic foreign policy, the first requisite is that they know the facts upon which it is based.

The Secretary's report made it clear that, despite the conferences at Moscow, Teheran, Yalta, and Potsdam, we and the Russians still are not agreed on the basic principles to be applied in the peace settlements. Or at the very best, we do not agree on the interpretation or application of those principles. It appears clear that the procedural questions on which the conference broke up technically, were merely a subterfuge to cover up differences over the substance of the peace treaties under discussion. Particularly involved were the questions of what constitutes an interim government broadly representative of all democratic groups in a country, and what are the requisites to a free election.

It is quite understandable that such differences should arise. Russia does not have any political democracy as we define the term, and free elections are nonexistent there. Our concessions in Poland are ample proof that we are not attempting the impossible task of imposing our ideas of democracy on the whole world. But there is a point beyond which we cannot go in making concessions to Russia's fears without making a mockery of the cause for which we fought and won the war—the freedoms and rights of people.

I support wholeheartedly the policy laid out by Secretary Byrnes, of continuing to seek basic agreements on these principles. It is only as we achieve a minimum of such agreements, hammered out in the give and take of conferences on specific issues and thoroughly understood in both their interpretation and application, that we will breathe life and reality into the framework for preserving peace established at San Francisco. That machinery is strong. I think if we try hard enough we can make it adequate to the task. But it will not function at all unless the major powers, on whom the major responsibility rests, are in substantial agreement on the principles by which it should operate.

It is futile to gloss over or disregard these real and unpleasant differences on principle which are cropping up. That will not solve

them, but merely aggravate them. The only way they can be solved is to bring them out into the open where we know what we are about, and where public opinion can function effectively to help a solution.

Neither can I subscribe to the idea that the atomic bomb, and other weapons nearly as destructive, already have made the United Nations organization obsolete, and that we must immediately junk it and begin work on the Charter of a full-fledged world government.

In the first place, establishment of a full-fledged world government is obviously impossible without that agreement on basic principles which we have been discussing, and which we are still far from achieving. And secondly, with nationalism as strong in every country as it obviously is today, and with the cement of common danger in war removed, it would take years, instead of the months it took the nations to agree on the United Nations Charter, to agree on a world constitution, if they ever could agree.

We and the world dare not wait that long. It is imperative that we proceed to establish as soon as possible the machinery on which we have agreed and then bend all our efforts toward making that machinery fully effective.

There has been recently quite a debate, albeit somewhat one-sided, as to what we and Britain and Canada should do about the atomic-bomb secret. Some want the secret turned over to Russia immediately as an evidence of good faith. The majority of Americans seem to think otherwise.

The debate indicates the danger of a piecemeal approach to the over-all problem of peace. The atomic bomb cannot be considered separately from other armaments and other secret weapons—and each major nation has a few of the latter. And the question of armaments in turn must be integrated into all other international relationships, economic and political.

Leadership in securing the peace has been thrust upon the United States. The mere fact that nearly all nations are looking to us for help to prevent famine and pestilence as well as long-term loans for economic rehabilitation would force us into that position of leadership even if our great military power had not already placed us there.

We are interested primarily in assuring peace in the world. We are convinced that peace can be achieved only if minimum principles of justice, democracy, and freedom are made enforceable throughout the world. I do not believe that we should now bail out the world with our money and goods with no questions asked. We had a disastrous experience along that line after the first great war when our contributions were used to prepare for the second conflict.

I think that in every situation and on every negotiation we should insist on a quid pro quo in the form, not of vague and general promises to do something in the indefinite future, but of specific settlements of specific issues which recognize and apply those minimum standards of justice and decency which we are convinced are essential to future peace. We should not, and I think our past record is proof that we will not, be dictatorial or intransigent in our approach. But we cannot prevent another great war by merely accepting grand statements of purposes that always turn out to mean something different to the other fellow when the times comes to apply them.

We should be perfectly willing to agree to a free and complete interchange of all scientific knowledge, including that on atomic energy, among all the United Nations, but we should insist on safeguards that would make certain the exchange was complete.

When we extend economic help to Britain I want to see, before the loan is made and not afterward, a just settlement of the Palestine question on the basis of the Balfour Declaration. The way the British Colonial Office has evaded and reneged on its clear obligations under that declaration is not only a disgrace to the cause of human freedom for which we fought the war, but an affront to the first victims in that war. If the British Government cannot control its own colonial office, then perhaps it is time to make Palestine a mandate of the United Nations instead of a British mandate.

But while clearing up some of these less justifiable aspects of British imperialism, it might be a good idea for us to reexamine the plans in high quarters to make the Pacific an American lake by grabbing bases all over the place. I have yet to hear a convincing argument on how American bases 7,000 miles from our homeland will make us any more secure, unless we intend to fight the moment any nation makes a move toward flanking those bases, and certainly they would contribute most to international peace if they were international bases. We are sure of our nonaggressive intentions, of course, but isn't it understandable that China and Russia, seeing us plan formidable bases 7,000 miles from California but only a few hundred miles from their shores, might not see it quite that way?

That does not mean that we can or should disarm or let our military strength deteriorate. Like every Member of Congress, I am deluged with demands that demobilization of our armed forces be speeded up. That is understandable, and, as a matter of fact, the demobilization is going as rapidly as can be expected—at the rate of nearly 50,000 men a day. What has concerned me is the attitude back of many of the messages I receive—to the effect that now the war is over there is no further need for us to have a strong armed force.

Have we forgotten so soon that aggressors respect no argument but force? Have we forgotten that because England was weak, Chamberlain had to capitulate at Munich? Are we so soon forgetting our obligation to the 250,000 men who gave their lives to win this war to see to it that it does not happen again?

Until the United Nations organization is set up and functioning, until it has proven its adequacy by experience, we dare not become so weak that our voice raised against aggression or injustice will be impotent, as it was in 1931 and 1936. Whatever our natural haste to get the boys back home, let's for the sake of the sons of those boys, not go so far or so fast that the tragic record of appeasement of the warmakers during the 1930's becomes possible again.

Our task here at home, of achieving greater prosperity and fuller opportunities and freedoms for all people, will be much easier if we solve the international problem. For only as we are assured of international stability and peace, can the scientific and industrial forces making for prosperity be fully released. Conversely, if we must plan our domestic policies in the shadow of ever-threatening international war, our task is tremendously more difficult, if not impossible.

I think there is general agreement in the United States as to the domestic goal we seek. Some call it prosperity, some an economy of abundance, more recently it is labeled full employment. I would define it a little more exactly as a society in which every individual who puts forth a reasonable effort can enjoy a decent and comfortable standard of living and in which he has the greatest possible degree of political and economic freedom. While we agree on the goal, we are far from agreeing on the means to achieve it—particularly the Federal policies and programs which are most likely to help get us there. Let's discuss briefly the question of means to achieve that goal, particularly with reference to economic security for the individual and freedom for the individual.

A good start for such a discussion is this quotation from the Declaration of Independence: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive to these ends, it is the right of the people to abolish it, and to institute a new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness."

Even today, 169 years later, that is radical political philosophy. It still represents a goal toward which we are moving, but which we have not yet achieved completely. We recognize that the authors of the Declaration were not talking about arbitrary equality of men and women because they knew that individuals are not equal in abilities or capacities. They were talking about equality of rights and opportunities for the individual.

It is significant that in the Declaration of Independence there is no mention of economic security. Unquestionably, its authors knew that economic security is sought by every individual; in fact, it was a far more pressing problem then than now. But I believe they also recognized that complete economic security is to a large degree incompatible with freedom for the individual, and that is why they did not emphasize it, either in the Declaration or our Constitution.

While we have come to take individual freedom and equality of rights almost for granted, I think our record in this war shows that we hold freedom more precious than life itself, and certainly far more important than economic security. The basic issue in this war was between democracy and tyranny, between freedom and slavery for the individual.

It is my own conviction that only individuals who are strong, with trained minds and healthy bodies, can be truly free. They have the best security of all, that which comes from inner confidence of their own ability to meet whatever may come.

Our emphasis, therefore, in seeking greater opportunities and freedom should be on measures and policies which will strengthen the individual and free his mind from fear by giving him knowledge, training and health. The highest freedom of all for the individual is freedom from fear, the confidence that he can and will measure up to any test that may come and remain true to his own inner creed.

One of the great issues we must meet is racial discrimination. We cannot blink the fact that millions of Negroes in our country are treated as second-class citizens. They do not have equality of rights and they are not given the education and training that would assure them equality of opportunity.

We must by Federal legislation protect the civil rights of Negroes, their right to vote and their right to a just trial when accused of crime. We must also give them equality of opportunity, immediately through some agency such as the Fair Employment Practice Commission, but over the years through a tremendous improvement of health and educational standards for Negroes.

I think any psychiatrist would agree that fear is at the basis of the white supremacy doctrine in the South. The whites are afraid of what may happen to them if Negroes are given the equal rights and opportunities guaranteed them by the Constitution. They are afraid they might not be able to compete. They are fearful of reprisals for long years of repression. They are really insecure and their freedom is seriously curtailed because fear plays such a prominent part in determining their actions and attitudes. The only way to overcome fear of that kind is to face it squarely and beat it. The only way the white people in the South will ever prove to themselves and the world that

they are free of fear is to give the Negroes real equality and see what happens.

Our biggest job in the next decade is to make as sure as is humanly possible that all citizens of this great democracy do start even in life, which is the only way they can have equal opportunities. That means equal educational opportunities for all, without regard to financial position, and also health standards as nearly equal for all as we can make them. Both of these objectives must be sought primarily by working with children and young people. It is a slow and almost impossible job to educate and free the mind of an adult individual who has grown up in ignorance and fear. Likewise, it is a slow and difficult job to give healthy bodies to adults if the proper foundation has not been laid in childhood.

There is a real danger today that we will place so much emphasis on economic security for masses of people that we achieve it at the expense of freedom for the individual. We have a tendency to confuse economic security with freedom. Actually, the most secure individual in our society is a prisoner serving a life sentence, but he is hardly free. The people of Germany in the early thirties were so intent on achieving economic security that they permitted their liberties to be liquidated without even a fight.

Our whole concept of freedom includes a willingness to assume the obligations and risks inherent in it. It was men and women imbued with that concept who left the safe and civilized East to push west across the wild mountains and untamed prairies who built our railroads, our mines, our great factories, who in the past 5 years invented, produced, and used the weapons that won this war. Every time in history when men and women have turned over to an outside agency all their individual responsibilities and risks, whether to a Julius Caesar, a feudal baron, an Adolf Hitler, or an omnipotent state, they have also relinquished their individual freedoms.

The easiest and to some the most logical way to achieve economic security for all would be for the Government to take over and operate all our economic institutions. But our experience with even the mild economic controls we've had during this war has proven that government could not wield such complete economic power without becoming tyrannical and liquidating individual freedoms. Our economy is so vast and complicated and our people so individualistic that only the most ruthless control would make such a system work.

One great contribution which the capitalistic system and private enterprise make to freedom is that they offer the individual a choice of many thousands of different ways of making a living with many thousands of potential employers. Government control of all employment would liquidate that freedom of choice. But government does have an obligation to see to it that the trend toward monopoly which is inevitable and inherent in a capitalistic system does not result in drastic curtailment of this freedom of choice.

Our laws against monopolies need to be strengthened and more vigorously enforced. We should provide more funds for enforcement and then insist on vigorous prosecutions. We can and should, in our tax laws, give smaller and medium-sized businesses every reasonable incentive. The consent decrees by which several antitrust suits were settled during the war may have been a necessary expedient, but we should now insist on no further compromise with monopoly.

In a field about which I speak from experience, that of newspaper publication, the present trend toward mergers and chain ownership of great newspapers is a serious threat to freedom in this country. It does two things. First, it limits seriously the choice of employers for the individual who has chosen newspaper work as his vocation. If, for instance, he finds it impossible to work with a clear conscience for one newspaper of a large chain and resigns, he is not likely to find employment with any other newspaper in that chain. His choice of employers is limited and the economic pressure for conformance regardless of conviction is increased. Second, this concentration limits the freedom of access of the people to information about what is happening in the world. No newspaper is completely objective and neither is any newspaperman. Even in the choice of what is to be printed, an editorial policy must be followed and the news which reaches the public is selected, usually with a large degree of objectivity and adherence to standards, but often with the intention of influencing public thinking toward a specific policy. The greater the concentration of ownership of these means of communication with the public, the less freedom the public has to read all sides of any given issue. That is one more reason why our controls on monopoly cannot be too strict.

The role of social or economic security in our system is important, but must be kept subordinate to preserving and expanding the freedoms and opportunities of the individual. As I see it, the role of social security is to adequately care for the inevitable casualties in a competitive capitalistic economy, but not to furnish a high guaranteed standard of living to everyone regardless of the effort and contribution made by the individual.

Just as government has had to step in and protect individual rights and opportunities and the public interest against great concentrations of economic power in management of industry, so, I believe, government must step in and protect individuals and the public against the concentration of economic power in great unions. It is no more right for unions or their leaders to arbitrarily and irresponsibly deprive individuals of their opportunity to work and produce than it is right for an employer to do so, but it is being done, as we all know. The tendency in some unions to impose artificial restraints on production, to trample roughshod over the rights of minorities in their own ranks, and to disregard completely the public interest must be checked. They are destructive of individual freedom and harmful to the Nation's welfare.

This may sound like radical doctrine to some, or reactionary doctrine to others. Frankly, labels interest me far less than finding a sound and intelligent solution to our problems. The fact is that the great majority of us are conformists. We make many if not most of our decisions in life under the spur of fear: fear of economic insecurity or fear of social ostracism. To a degree that fear motivates all of us and it is dominant in some of us.

I believe there is a real danger that in striving for economic security, particularly through government, but also in the policies of industry and great labor unions, we may finally achieve security for all at the expense of freedom for the individual. In other words, we will leave little or no opportunity for leadership, no chance for the nonconformist, whether he be crackpot or genius. To make our democratic system work, we must have leadership—men and women who are willing to fight and risk all for new ideas and ideals. In industry, it has been the nonconformist looking for a better way to do things who has contributed most to our progress. In our social and political life, it has been the nonconformist, willing to challenge the old shibboleths and prejudices, who has been the spark plug of our progress. If the time ever comes when leadership, men and women who differ from the mass and have new ideas, have no alternative but conformance or starvation, then we will have lost our freedom.

We can best guard against that eventuality by keeping our sights always on our primary goal: the fuller achievement of equal rights, freedoms, and opportunities for all individuals. We seek, not just jobs, any kind of jobs, for 60,000,000 Americans, but 60,000,000 opportunities for free Americans to work and produce.

## Western Mining Activity

EXTENSION OF REMARKS

OF

### HON. E. P. CARVILLE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

*Monday, October 15, 1945*

Mr. CARVILLE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Nevada State Journal of September 28, 1945, and also a letter I received from W. Clifford Dunham relating to mining activity in the West.

There being no objection, the article and letter were ordered to be printed in the RECORD, as follows:

[From the Nevada State Journal of September 28, 1945]

NEVADA MINES NOW PRODUCE 22 MINERALS—WIDE VARIETY LISTED BY STATE'S 102 OPERATORS

CARSON CITY, September 27.—Nevada's 102 mining operations are now producing 22 different kinds of mineral wealth, including such things as diatomaceous earth, dumortierite, turquoise, and vermiculite, it was revealed here today.

The major products, judging from the number of men employed, are copper, lead, tungsten, gypsum, and zinc, in that order. The 10 copper mines, with their 1,875 workmen, alone employ more than half of the State's 3,421 miners, but the others are distributed among a wide variety of operations.

Among the more unusual jobs in the State's mining industry are those held by four men producing tin, four others producing turquoise, and five who are turning out dumortierite.

As of the close of 1945 fiscal year, 18 gold mines were in operation with the comparatively small total of 84 men thus employed. Recently, however, the termination of the war has boosted both the number of gold and silver mines in operation and the number of men employed in this form of mi[illegible]g.

Following is a list of the number and type of Nevada mines in operation and the men employed in the production of the minerals produced:

| Product | Number of operations | Number of men |
|---|---|---|
| Barium | 2 | 15 |
| Brucite | 1 | 27 |
| Clay | 2 | 4 |
| Copper | 10 | 1,875 |
| Diatomaceous earth | 3 | 44 |
| Dumortierite | 1 | 5 |
| Fluorspar | 2 | 11 |
| Gold | 18 | 84 |
| Gypsum | 4 | 188 |
| Lead | 22 | 477 |
| Limestone | 3 | 48 |
| Magnesite | 1 | 10 |
| Manganese | 1 | 7 |
| Quicksilver | 3 | 44 |
| Silica sand | 3 | 54 |
| Silver | 2 | 9 |
| Talc | 3 | 22 |
| Tin | 1 | 4 |
| Tungsten | 10 | 257 |
| Turquoise | 1 | 4 |
| Vermiculite | 1 | 10 |
| Zinc | 5 | 187 |
| Not reported | 3 | 8 |
| Total | 102 | 3,421 |

ANAHEIM, CALIF., *October 10, 1945.*

Senator CARVILLE,

*Washington, D. C.*

HON. SENATOR CARVILLE: While making examinations of mines and mining throughout Wyoming and Utah during the past 3 years, I have made several observations and would like to pass this information on to you to aid in the passage of your bill. These examinations have taken place while I have been both examining engineer and project engineer for the Bureau of Mines.

These findings are very limited but no doubt the same facts will be found in many once active mining districts or in many potential districts.

I have made a careful study of one large mining district in Beaver County, Utah, and one in Tooele County, Utah, on base metals. One nonmetallic mining district in Crook County, Wyo., was studied for the production of only one ore.

All mining districts are started from the production of high-grade monobase metal ore; that is a pure copper or lead ore carrying high values in gold or silver, or both. Later these ores become complex and the smelter penalties for gangue minerals or zinc content make the operations unprofitable. Since most of the operators are unable to cope with this condition by milling their ore the properties are closed down and soon the boom camps become ghost camps.

During the war with the benefit of the bonuses paid on metals, many of these camps have been given new life through the work of lessees. Now that the war is over and the payment of a bonus will soon be terminated, most of the leases will be dropped and these lessees added to our unemployed list. Most lessees do not like to work on a daily wage basis. Many of them are prospectors at heart and want to work for themselves.

Now in these districts above mentioned, I can give you some data on the potential tonnages of ore and potential mines that can operate with the number of men now employed and the number who can be employed if an outlet for their ore is furnished, or if they receive some encouragement.

Below is a list of the areas.

| Area | Number of mines | Tons production | | Men employed | | Metals produced |
|---|---|---|---|---|---|---|
| | | Present | Postwar | Present | Postwar | |
| Beaver County, Utah | 38 | 135 | 545-1,760 | 67 | 577-1193 | Lead, Zinc, Copper. |
| Do | 10 | 20 | 105-375 | 13 | 100-216 | Fluorite |
| Tooele County, Utah | 14 | 17 | 112-350 | 12 | 55-172 | Lead, Zinc, Copper. |
| Crook County, Wyo | 2 | 0 | 50-100 | 7 | 24-64 | Fluorite. |

These figures show what can be done and would be produced if there were mills to concentrate the ore which can be mined in these areas. There are no mills in the areas at present and if no custom mill is put in the area before the bonus goes off, practically all the men now employed will be added to the unemployed list and the small present production decrease.

These mills could be constructed through RFC Government loans or by private parties, or operated as cooperative mills under supervision of the Bureau of Mines.

There are many areas throughout the western United States where similar mining conditions exist and many men could be employed with a great increase to our natural resources.

These areas noted are only a few of perhaps many in Utah and Wyoming and Nevada that would give employment to many men and increase taxable property in the States.

Something must be done to encourage the development and exploration of our mineral resources which are the very foundation of American industry.

Respectfully,

W. C. DUNHAM,

*Geologist and Mining Engineer.*

## British Advised To Take Notice of Feeling Concerning Palestine

EXTENSION OF REMARKS

OF

### HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lowell Mellett entitled "British Advised To Take Notice of Feeling Concerning Palestine," which appeared in the Washington Sunday Star of October 14, 1945:

BRITISH ADVISED TO TAKE NOTICE OF FEELING CONCERNING PALESTINE

(By Lowell Mellett)

It is inconceivable that those who make British policy know the extent of the ill will developing in this country as the result of their behavior in the matter of Palestine. Word has come that President Truman's proposal for the immediate removal of 100,000 Jews from the concentration camps and makeshift miseries of Germany to Palestine has met with an unfavorable reception in London. And there is no indication that the new Labor government will alter the policy established by the Chamberlain government toward the Jewish homeland.

Now in this country is a British financial mission, seeking a $5,000,000,000 loan. Negotiations with our State Department are said to have progressed satisfactorily and very soon an agreement on terms may be presented to Congress for its approval. Whatever the merits of the proposal, and however well it may be argued that assistance to our late ally would work to the benefit of our own country, it might be worth while for this British mission to examine the strength of some of the existing prejudices against Britain.

They will find that the prejudice resulting from the British default on its moral commitment in the matter of the Jews is a very strong prejudice, one capable perhaps of upsetting their hope of monetary aid. It is deeply rooted in Congress.

The last formal action on the subject occurred a year ago, when a resolution was offered asking the British Government to make good the Balfour Declaration, approved by President Wilson, reopen Palestine to Jewish immigration, and permit the building of the contemplated Jewish commonwealth. This resolution was held up at the request of the administration because of the war. The thing for the British to note, however, is the authorship of the resolution—Senators WAGNER and TAFT, two men ordinarily as far apart as the poles. When these two agree on any important policy it can safely be labeled American policy. They still agree in this instance and both are pressing for action, as are many other Members.

If other evidence is required to prove the depth of American feeling, it can be found in a letter to President Truman, signed by a majority of the Members of the Senate and House. It can be found in a petition from the Governors of 40 States and in resolutions adopted by 33 State legislatures during the past 2 years; likewise in resolutions of the A. F. of L. and the CIO, and the individual pronouncements of 818 labor leaders and 2,000 university presidents and professors.

There is no point in discussing the merits of the issue. Rightly or wrongly, opinion in this country has jelled. The case for the Arabs has been discounted in the light of the showing they made during the war, both as friends and as enemies, and their obvious impotence in these days of mechanized warfare. Junketing Congressmen, after visiting the Near East, are convinced that the Arabs never could have been more than a minor nuisance even when the British situation was really precarious.

The case for the Jews has been made as eloquently by British statesmen as by American. Churchill's charge that Chamberlain's repudiation of the Balfour Declaration was "a plain breach of a solemn obligation," is well known in this country. So, too, is the position taken by the Labor Party before the recent election. "There was a strong case before the war," said a party resolution. "There is an irresistible case now, after the unspeakable atrocities of the cold and calculated German Nazi plan to kill all Jews in Europe. * * * The Arabs have many wide territories of their own; they must not claim to exclude the Jews from this small area of Palestine, less than the size of Wales."

So the financial mission might bestir itself to have this American prejudice removed by action in London, before the question of the loan reaches Congress. If any such loan should carry a condition that the British first be required to keep their word to the Jews of the world—and to the American Government—a smell would thereby be attached to British statesmanship likely to last a long, long time.

## A Blow to Communism

REMARKS

OF

### HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. ROONEY. Mr. Speaker, during the past week people throughout our Nation and the entire world, of all religious faiths and creeds, received news that, in my opinion, has been transcended in importance only by the joyous tidings of VE- and VJ-days. I refer to the thorough denunciation of communism and return to God and religion of the former president and managing editor of the Daily Worker, the official newspaper of the Communist Party in the United States.

This event should bring into clearer perspective the truth that religion and recognition of God is the real bulwark of our life and country. When a Communist, particularly a leader and one of such intimate connection with that un-

American pagan ideology as a member of the Communist National Committee, turns his back on his party and its teachings, it is certainly an appropriate time for every citizen of our land, whether Protestant, Jew, or Catholic, to realize that without religion and recognition of God the people of this Nation and the world are lost.

Our forefathers founded our free and liberty-loving United States of America upon the recognition of the existence of a supreme being. One simply cannot be a Communist and hold to be self-evident the truths set forth in the Declaration of Independence that all men are created equal, that they are endowed, by the Creator, with certain inalienable rights, and that among these are life, liberty, and the pursuit of happiness.

I have always been bitterly opposed to communism and always will be, and will fight every Communist encroachment upon our American way of life. Everyone in our land possessing the slightest degree of common sense has known all along that communism cannot solve our, or the world's social problems. But it is vitally important that every man, woman, and child in America know that this former chieftain abandoned communism because it is as he says inherently antireligious; because it cannot work as a basis for the solution of economic ills, and because it destroys individualistic thinking and makes mere puppets of its disciples.

Communism has often been aptly described as a wolf in sheep's clothing. By blatantly advocating some principles which are really democratic and just and of benefit to the man who labors by the sweat of his brow, Communists seek to hide the fact that they are, as Louis F. Budenz, the former Daily Worker managing editor, declares, irrevocably set upon the ending of the religion of Catholic, Jew, and Protestant in this country and determined to cultivate ruthlessness and lust for power and warfare against moral principles. How serious and hostile the communist movement really is is evidenced by Budenz's statement that communism "aims to establish tryanny over the human spirit" and "is an unending conflict with religion and true freedom."

When some of us here in this House oppose and delay humane and progressive social measures, such as proper social security, the antilynching bill, the bill to abolish poll tax, to create full employment, the bills to establish a fair minimum wage, to establish a Fair Employment Practice Committee, and to give to the veteran the rights and privileges he has justly earned, we are really playing right into the hands of the Communist leaders who loudly advocate and falsely claim credit for such legislation, but who really haven't the slightest interest in such bills other than to cloak the un-American intents of their anarchistic bosses. As a Member of Congress I am always amused when Communist officials arrogantly demand that I vote for social and just labor legislation that no one could induce me to vote against. Certainly we do not need a Communist to reiterate the words of the senior Senator from New York that we must be committed to maintenance of world peace, jobs, and prosperity, with special emphasis upon the needs of returning veterans, development of our productive capacity to bring a higher standard of living, slum clearance and low-rent housing, speeding up of reconversion, keeping the cost of living on an even keel, reduction of the causes of industrial strife by industrial justice and continuation of the fight against racial and religious discrimination.

Finally, I must remind the citizens of this country of every religious belief—Protestant, Jewish, and Catholic—that we should feel indebted to Msgr. Fulton J. Sheen, Catholic educator and one of communism's most articulate foes, for his success in converting Mr. Budenz, his wife, and three daughters to the Catholic faith and renunciation of the Communist movement. In severing his association with this Godless movement and after accepting a professorship in economics at Notre Dame University, the former Communist Party stalwart said:

> Reason and faith have led me to this happy step. Communism and Catholicism are irreconcilable. * * * With deep joy I wish to announce that by God's grace I have returned fully to the faith of my fathers, the Catholic Church.

## Child-Care Centers

EXTENSION OF REMARKS

OF

### HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

"Whereas the sudden cessation of hostilities and the announcement of the Federal Government of the rather abrupt withdrawal of financial assistance for the operation of child-care centers has left no machinery nor sponsorship for carrying on this important program during the transition period immediately ahead; and

"Whereas so many of the mothers of children cared for in these centers are the wives of men still in the service, or widows of men who lost their lives in the service, and are therefore responsible for earning the livelihood for their families; and

"Whereas a considerable number of the women whose children are served in child-care centers came from other parts of the country to work in the war industries of this area; and

"Whereas the sudden enforced abandonment of child-care centers will cause irreparable damage and hardship: Now, therefore, be it

"*Resolved*, That the City Council of the City of Los Angeles urge the Members of Congress from Los Angeles County, and the Senators from California to give their support to the continuation of financial assistance from the Federal Government for the operation of necessary child-care centers in order to meet the present emergency."

I hereby certify that the foregoing is a complete and correct copy of resolution adopted by the Council of the City of Los Angeles, at its meeting held October 3, 1945.

[SEAL] WALTER C. PETERSON,
*City Clerk.*

## What Shall We Do With the Atomic Bomb?

EXTENSION OF REMARKS

OF

### HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. MADDEN. Mr. Speaker, the nations of the world are greatly concerned over the effect of the development of the atomic bomb as it pertains to future progress and world peace. Extended deliberation and solemn thought should be given by the Congress on any legislation dealing with the atomic bomb because our country's attitude today may influence world history for centuries.

I wish to hereby extend, for the consideration of Congress, a timely editorial written by H. B. Snyder, editor of the Gary Post Tribune, Gary, Ind.:

WHAT SHALL WE DO WITH THE ATOMIC BOMB?

What to do with the atomic bomb continues to be one of the leading topics of the day and it will doubtless continue to be. It has presented a new problem to the world and that problem will not have been settled until satisfactory controls have been set up.

What are those controls? No one can say now. The problem is so new and the threat so vast, controls cannot be contrived in the time we have had. Many want to turn the bomb over to an international alliance, others would share it with other nations, while some would keep it for ourselves.

There are difficulties with all proposals. There is no international alliance or league stable enough to take charge of and provide security against this new danger. If the secret is made public, then the bomb may become a threat to world peace in the near future. If we keep it to ourselves, there is reason to believe other nations will be able to duplicate it within a reasonable time.

Therefore, it is evident careful consideration must be given to our policy. That means we shall do nothing with it for the present. The work of development will go on so that all other nations, no matter when they start to duplicate the bomb, will always find themselves some years behind us.

This is a nice position to be in for the moment, but it is hardly likely we shall be satisfied to keep it long. For it cannot help but create feeling against us even as it also develops the respect we call fear. That is hardly the attitude we wish to create in the world. It is not the attitude of democracy.

This means we must look forward to sharing our secret with our friends at least, and possibly with everyone. When that time shall come must depend on world affairs, but it is not impossible the bomb itself may become our best bargaining agent. What we want is a peaceful world, and we might trade the bomb for it.

Even though we fill a unique place in the world in that we are generally admired, we should be very careful not to let the bomb wear away that feeling. Russia may show more resentment than any other nation because Americans criticize her more than any other nation. Then the Russians, because of their isolation, are more suspicious than any other people.

Let's not let them think we are using the bomb as a threat, but rather that we hold it in trust for a peaceful world, and when that world can be properly organized the bomb and all the information we shall have obtained will be turned over to it to insure world progress and solidarity.

## Oscar S. Cox

EXTENSION OF REMARKS
OF
## HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. BLOOM. Mr. Speaker, in early 1941, Mr. Oscar Cox, then associated with the Treasury Department, appeared before the Foreign Affairs Committee in its historic consideration of the Lend-Lease Act. As the principal author of the Lend-Lease Act, Mr. Cox made one of the great contributions to victory.

In the years that followed he was successively general counsel of the Lend-Lease Administration, Assistant Solicitor General of the Department of Justice, General Counsel and, finally, Deputy Administrator of the Foreign Economic Administration. In those years the members of the Foreign Affairs Committee came to know Mr. Cox personally and to appreciate fully his great talents as a public servant. Mr. Cox's departure from the Government should be a matter of regret for all those who believe that the Government requires men of ability and imagination.

Under leave to extend my remarks in the RECORD, as testimonials of Mr. Cox's contribution to Government service, I include editorials which appeared in the New York Times of October 6, 1945, and the Washington Post of September 14, 1945, and a newspaper story in the Chicago Sun of September 29, 1945, describing his achievements:

[From the New York Times of October 6, 1945]

YOUNG MAN IN WASHINGTON

In the resignation of Oscar S. Cox as Deputy Administrator of the Foreign Economic Administration, which takes effect today, the Government loses another of the able young men with whom President Roosevelt surrounded himself. Less well known than some of the others, Mr. Cox was one of the ablest. It was he who dug up the 1892 statute permitting the Government to lease munitions of war to other countries. On this was based the famous H. R. 1776, the Lend-Lease Act.

Mr. Cox joined the Roosevelt administration in 1938 as an assistant to Treasury Counsel Oliphant after a successful career as an assistant corporation counsel of New York City. In the latter post he directed investigations that added $200,000,000 to utility company property assessments in New York City. In Washington he moved from the Treasury to the Office of Production Management, then to the Lend-Lease Administration as general counsel, to the Justice Department as Assistant Solicitor General, and finally to his last position as Deputy Administrator of FEA. He served well in all of them. His liberal ideas and his persuasive voice will be missed in Washington.

[From the Washington Post of September 14, 1945]

SERVICES RENDERED

If the history of the war could be written with due regard for truth, it would be found that behind the figures and fronts of the men in the news were aides who contributed mightily both to their principals' public reputations and to victory. The aides might be called the second line on the domestic front. One of the most significant figures in this list, Oscar S. Cox, Deputy Administrator of the Foreign Economic Administration, has just resigned from Government service. Seven years ago, the 32-year-old Mr. Cox, fresh from the corporation counsel's office in New York, put his brilliant talents and his progressive convictions at the Government's disposal. First he served Secretary Morgenthau at the Treasury. There he quickly earned attention by his knowledge of the law and the lore of Government procedure, and he united his erudition to an unflagging zeal and an imaginative resourcefulness. Moreover, he never forgot that politics is the art of the possible.

Perhaps Mr. Cox's greatest contribution was his spadework on the inception and acceptance of the lend-lease expedient. It was Mr. Cox, who, when the administration was troubled about ways and means of giving full aid to the democracies, dug up an old 1892 statute which allowed the Government to lease munitions of war to other countries. Here was a precedent for resolving the administration's dilemma. It had been done before, and, in the exigencies of those parlous days when Hitler was stopping up one American access to Europe after another, it could be done again. The idea having been accepted by his chiefs, Mr. Cox went to work on the writing of a lend-lease bill, the famous H. R. 1776, with results that are now history. That he helped to make such history must be a great satisfaction to Mr. Cox, and we wish him success in his essay in private law practice commensurate with his achievement in the public service.

[From the Chicago Sun of September 29, 1945]

INSIDE STORY OF PREPAREDNESS—GOAL OF 50,000 PLANES WAS SET BY F. D. R. IN ERA OF ISOLATIONIST SECURITY

(By Thomas F. Reynolds)

WASHINGTON.—Hitherto undisclosed information revealed today that President Roosevelt began moving toward the annual production goal of 50,000 fighting planes for America and its allies as early as 1938 while the United States still was relaxing in fancied isolationist security.

But the late President, branded a warmonger for attempting to arouse the Nation by his quarantine speech in the fall of 1937, was unable to translate the plans into concrete requests for almost 2 years.

When the President did ask Congress to approve and authorize such a program in the spring of 1940, the isolationist press branded it absurd and even Thomas E. Dewey, his Presidential opponent 4 years later, said publicly that it was beyond possibility of realization.

The long-range preparedness vision of the late President was revealed today by officials interested in straightening out the record now that the $42,208,000,000 lend-lease program is being shut down and its liquidation entrusted to the State Department.

They indicated that in fairness to the former President, his early work should be made known—especially in view of the fact that the same isolationist groups who blocked his early moves now are attempting to make the charge that he left this country unprepared for the tremendous task which broke out on Pearl Harbor day.

A careful review of hitherto censored memoranda reveals that the late Herman Oliphant, then general counsel for the Treasury, first sounded the administration alarm on production difficulties inherent in the threat of war which Mr. Roosevelt had pointed out to the Nation.

That was in the spring and summer of 1938—even before the late Neville Chamberlain, then British Prime Minister, had made his deal for "peace in our time" with Hitler at Munich. Oliphant was encouraged to put a staff to work on those long-range problems by Mr. Roosevelt and the then Secretary of Treasury, Henry Morgenthau, Jr.

Key man on this staff was a young lawyer, Oscar Cox, who later was to draft the Lend-Lease Act. In the fall of 1938, Oliphant came up with data to show that if war did break out, this country would have to assume that sooner or later it would be involved. On this data, Oliphant concluded that the only possible insurance policy would be to step up airplane production to 50,000 planes annually.

Morgenthau, Oliphant, and Cox, by memoranda and personal conversation, put the 50,000-plane idea before Mr. Roosevelt. He was impressed, and consented to permit work on it to continue. But he told the planners that it would be impossible for him to make any such proposal at that time to a Congress which even then was trimming minor defense appropriations.

The timing was wrong, he said. And it was not until May 1940, when the German Wehrmacht was running wild through France, and England was virtually defenseless, that he was able to present the plan to Congress—to be met even at the eleventh hour by incredulity and amazement.

The goal, of course, was achieved and surpassed.

The work done by Oliphant's staff, notably Cox, formed the genesis of lend-lease, an unparalleled weapon by which this country traded goods, guns, machines, and dollars for fighting services of its allies and victory.

This work also enabled England in its desperate hours prior to lend-lease to find weapons which encouraged it to stand for critical months alone against Germany.

The work started on the assumption of Oliphant's staff that the systems of World War I would not work—first, that no private firm could be purchasing agent here for the Allies, as was J. P. Morgan in the First World War; and, second, that the Allies were going to be desperately short of dollars to buy American weapons.

This staff pioneered the way into purchasing by Anglo-French air missions which began buying a few planes here when the war broke out in September 1939.

And it went to work on problems of standardization, arguing for freezing of certain plane models to enable producers to swing toward mass production. It went into the problem of ammunition for small arms—the question of British use of 30.3 rifle shells as against the United States .30-caliber rifle.

In 1940—a full year before lend-lease—when France was falling and Britain was in desperate need of arms, the mechanics of purchase here were breaking down. The question was whether the United States would choose to insist on formal dollar payments and see Hitler astride the British Isles, or take drastic action.

It was Cox at that critical hour who found an old 1892 statute which permitted the Secretary of War to lease certain properties for up to 5 years. That broke one bottleneck and limited types of war matériel were made available.

Then, after Dunkerque, Britain was desperately in need of rifles, pistols, and small-arms ammunition, because the escape from Dunkerque had stripped its surviving troops of all equipment and its beaches were virtually defenseless. The United States had ample supplies in warehouses. But the State Department ruled that the United States could not provide them to Britain because this country still was neutral and to do so would violate international law.

The State Department ruled that was legal. The private firms hurried the weapons to Britain. They included 500,000 rifles, quantities of 75-millimeter cannons that were growing obsolete, Lewis and Browning machine guns. And Britain armed its reorganizing army and its civilians and stood firm.

Then, in the fall of 1940, Mr. Roosevelt determined to meet the problem head-on and ordered Morgenthau to cut red tape and make this country the actual arsenal of de-

mocracy. Cox was put to work drafting once again.

He drafted the original Lend-Lease Act in 20 minutes, basing it on the old 1892 statutes and the Pittman resolution permitting shipments of arms to Latin-American countries. That draft went to Morgenthau, who had his Treasury lawyers go over it quickly.

Again Cox was called in to break the bottleneck. He found that while the Government couldn't sell the weapons, private companies could do so with full legality.

Furthermore, he found that much of the ammunition and many of the guns were growing aged and the War Department would not be averse to seeing the material replaced with new ammunition and weapons. So the crucial weapons were traded in to private companies such as United States Steel Export and others, which undertook to replace them for the War Department with new weapons.

It then was all very simple.

It went through revisionary examinations in the War and Navy Departments, was shown to congressional leaders who approved after minor revisions. Cordell Hull, Henry L. Stimson, the late Frank Knox, and Morgenthau then initialed it—all within the space of a few hours in 1 day as it was hurried from department to department by messenger.

Then it was rushed to the White House, President Roosevelt studied it for 10 minutes, then leaned back in his chair and slapped his desk.

"Boy—that's it," Mr. Roosevelt said.

Although the drafting was done by legal experts, it was Mr. Roosevelt personally who took over the task of explaining the move to the American people and to Congress. While preparations were quietly going ahead in Congress for reception of such a move, Mr. Roosevelt went for a short sea trip. On his return, he was told that preparations were ready.

He met correspondents at the White House and in December, 1940, began the press conference that now is historic.

"When your neighbor's house is on fire, you lend him a fire hose," said the President of the United States.

## Ambassador Patrick Hurley and Chinese Unity

EXTENSION OF REMARKS

OF

### HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, the recent settlement between Chiang Kai-shek and Mao Tse-tung is a tribute to the diplomatic ability and statesmanship of our Ambassador to China, the Honorable Patrick Hurley. While the agreement reached between the Kuomintang and Communist Parties has not brought about complete accord between the two factions, it has, nevertheless, laid a firm foundation for eventual settlement of China's internal problems. The success achieved so far has been due, in large part, to the untiring efforts of Pat Hurley, who has had to surmount tremendous difficulties in bringing these two groups together. Due, in large part, to his persistence and skill the chances for unity in China are greater now than ever before. It is with confidence that we look forward to Ambassador Hurley returning to his post in China where, we hope, an eventual and complete reconciliation of all Chinese elements will take place. This is not only necessary but desirable so that China will become internally strong and thus be able to assume the responsibilities and the obligations that go with a great power. When this position is achieved China then will become, in reality, a bastion for peace in Asia and the world.

Mr. Speaker, in this connection, I would like to insert in the RECORD an article by Barnet Nover covering the present situation in China and the part played by Ambassador Hurley. Mr. Nover is one of the outstanding newspaper commentators in the country today, and his work always shows a realistic understanding of the problems he discusses and a background of scholarly research. Under unanimous consent, the article referred to, follows:

STEP TOWARD UNITY

(By Barnet Nover)

CHUNGKING AND THE CHINESE REDS

It would be rash to assume that the agreement which the central Chinese Government has just concluded with the Chinese Communists eliminates for good all sources of actual or potential conflict between them.

The differences between Chiang Kai-shek and the Reds are altogether too deep-seated and of too long standing to be wiped out overnight by any paper pledge by both elements to live at peace with one another and work together for the common good of the nation.

Certainly, the signing of the agreement does not in and of itself mean that China is now truly united, not in our meaning of the term, anyway. Basically, the agreement only establishes and legalizes a state of truce between the central government and the Chinese Communists. Out of that truce, however, real peace and unity may evolve. If that happens, the Chungking pact will prove to be a very important milestone in China's national life.

It can be more than that. It can also prove to be one of the foundation stones of peace in the Far East.

One important reason why at recurring intervals over a period of more than a hundred years the Far East has been a great international storm center is that during the entire period China has been weak. Being weak she has been a prey both to internal rivalries and foreign pressures.

The Sino-Japanese War that began in 1937 and that led, 4 years later, to Pearl Harbor, was only the last of a series of conflicts whose root cause was China's inability to defend herself.

Before China can grow strong enough to insure her security against external attack she must first achieve unity. By the same token, any situation that inhibits such unity or delays its achievement makes for international turmoil.

During recent years there has been a great deal of criticism of American policy vis-à-vis China. This criticism has come most vehemently from those who have argued that in supporting Chiang Kai-shek we were putting money on the wrong horse. They have favored granting direct support to the Chinese Communists on the ground that the Yenan regime was more honest, more democratic, more of a people's regime than the government at Chungking.

This pressure was resisted, and with good reason. Not only, with all its faults, was the Chungking Government the duly constituted goverment of China, so recognized not only by us but by all the other United Nations, including Russia, but in giving direct support to the Chinese Communists we would have been feeding the fires of civil war in China.

Instead, repeated efforts were made by American emissaries to bring Chungking and the Chinese Communists together. These efforts got nowhere for a long time, and all the while Chungking and Yenan were preparing as well as they could for what many regarded as the inevitable struggle between them. Both sides were reckoning on the gains to be derived from Japan's ultimate collapse and from the support they hoped to get from the outside to make themselves supreme in China.

In order to find a solution of China's internal difficulties it became clear that an understanding had first to be reached by outside nations having the greatest direct interests in what happened in China. This meant, particularly, Russia and the United States.

The full story of the efforts made by the United States to reach an understanding with Russia regarding the Far East has yet to be told. When it is told it will reflect credit on American diplomacy, not least on the efforts made by Maj. Gen. Patrick J. Hurley.

Before going to China as American Ambassador, General Hurley visited Moscow and had long conversations with Marshal Stalin and Foreign Commissar Molotov on the subject of Chinese affairs. At that time he sought and received assurances from the Russian leaders of the Soviet Union's determination to avoid fishing in China's troubled waters by giving aid to the Chinese Communists. On a later occasion, General Hurley helped persuade the Kremlin to enter into conversations with the Chinese Government for a settlement of the issues outstanding between them.

General Hurley's efforts to bring Chungking and the Chinese Communists together were the corollary to the efforts he had made at Moscow. A good deal of credit for the easing of Russian-Chinese and Chungking-Yenan tensions certainly belongs to him.

The question remains how well the present Chungking agreement will be carried out. By no means all differences between Chungking and the Communists have been disposed of, even on a truce basis. It is clear, however, that each side has made concessions to the other.

Chungking has agreed to democratize the central regime and end the present one-party dictatorship. The Chinese Communists, for their part, even while insisting on the appointment of the governors of four northern provinces and the retention of a large military force, have agreed to recognize Chungking's paramountcy in principle at least and accept, again at least in principle, the nationalization of all military forces in China. How well this agreement is carried out will determine how speedily real unity will be achieved in China. At least a start has been made.

## California's Postwar Problems Are a National As Well As a Local Responsibility

EXTENSION OF REMARKS

OF

### HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. McDONOUGH. Mr. Speaker, all Members of Congress are vitally concerned about the postwar employment problems and reconversion in whatever

State we may come from. I think, however, it is safe to say that the problem in California is more complex and difficult than in any other State in the Union.

There are several distinct reasons:

First, California is overpopulated due to expanded war industries.

Second, California's climate is so desirable and attractive that people coming there during the war do not want to leave.

Third, California needs peacetime industrial expansion and the manufacture of basic materials in order to keep her increased population employed.

Southern California, of which Los Angeles County is the metropolitan center, will suffer the most unless industrial peacetime manufacturing is expanded to provide employment for its surplus population. The labor, raw materials, cheap hydroelectric power, factories, transportation facilities, and consumer markets are available, but we are fighting against the severe competition of eastern manufacturing centers.

The Kaiser steel plant in Fontana is struggling against eastern steel manufacturers for its existence. The war left two mammoth modern synthetic rubber plants in Los Angeles County which must be kept operating. It also left one of the most modern aluminum extrusion plants as well as some of the largest shipbuilding and repair plants together with the largest airplane manufacturing plants, and numerous smaller factories which can readily be converted into peacetime production.

Los Angeles County has the finest equipped rail and harbor facilities in the West. All of these facilities can and must be used to provide labor with suitable employment, and to supply the West and the foreign-trade markets with peacetime products. Otherwise our great hydroelectric plants will go begging for wheels to turn, and our mammoth industrial factories will become ghostly monuments and labor will go begging for jobs, seeking relief from the State and counties unless suitable legislation and proper future planning is laid out now to prevent economic deterioration.

Under leave to extend my remarks, I include the attached article from the Los Angeles Daily News:

CALIFORNIA'S THREE CHOICES

It is easy to blow wise over California's postwar unemployment problem. What is hard is to discover means of solving it.

Thus, though the storm warnings are out—plain for all except the blockhead fringe to see and heed—the problem of maintaining nearly 3,500,000 civilians in employment continues to baffle the State's—and the Nation's—top experts.

In the wake of Government development of war industries, 1,800,000 people have come to California since 1940.

If these new residents are going to find places in the State's peacetime economy, a tremendous expansion of industrial and agricultural production will be required.

As stated by the University of California's bureau of public administration, the State has three choices: increased production, a permanent burden of unemployment relief, or reduction of population.

Since increased production offers the only long-range solution if the Pacific West is to realize its full destiny, the problem is what can be done to bring about increased industrial activity.

To plan and carry out greater production during wartime was comparatively easy. In the first place, as Samuel C. May, director of the Berkeley campus' public administration bureau has noted, "the airplane plants and shipyards did not develop in California under normal competitive conditions. They came to California," May reminds us, "because the Federal Government under its war powers planned and directed their location, financed their construction, and contracted for purchase of their entire output."

In other words, Uncle Sam set up business in our midst and the people came out in droves to work for him.

It was all great stuff while it lasted. But now, about to be thrown back upon the self-reliance of local communities, the State government, and private business war workers facing continuing cut-backs are experiencing an understandably queasy feeling.

Where we go from here is therefore the big question.

Looking at the over-all national economic picture, the average observer certainly has little cause for optimism over the West's immediate industrial future.

Technological advances in all employments since 1939 have whittled a good 10 percent off the Nation's labor force. Trades and services, unfortunately, cannot absorb every displaced factory and agricultural worker. Hence, Professor May, taking into account a reasonable population loss, estimates that, despite some degree of expansion in trades and services, California will still have 1,050,000 unemployed by 1947.

What has happened has been a great economic mutation. A region formerly supported by a tourist industry, agriculture, and light manufacturing, has as a result of the war become industrialized. Factory smoke and orange blossoms are now the mix of California's air. The result is, as Fortune magazine says, that "the West now has an industrial population that only industry can employ."

To employ this population in a peacetime consumer economy, May estimates, would require an initial capital outlay investment for plant and equipment of at least $6,500,000,000.

This figure represents three times as much, he says, "as the annual average capital expenditures for plant and equipment as were invested over any 3-year period of the boom 1920's for the entire United States."

Because public works is at best only a stopgap measure, and because unemployment relief, if long continued, would burden the entire economy, the answer to continuing employment in California is extensive investment in what Henry Kaiser calls "seed" industries.

Where to obtain—or from whence to attract—such great sums of capital as are needed is the crux of the problem.

Converting to peacetime production existing wartime plants and facilities presents a difficult undertaking. Unlike eastern heavy industry—notably motors, cars, rails, steel, and electrical machinery—California's airplane plants and shipyards, as well as its Fontana steel enterprise, cannot be converted to manufacture of civilian goods without far reaching and costly alteration. While eastern industry returns to the functions for which it was originally established, the Pacific coast faces the challenge of building an almost entirely new industrial structure.

Money to build this structure is not available in sufficient amounts locally. Thus, as May indicates, "California's immediate future will depend upon whether this capital will flow into expansion of eastern concerns * * * or whether it can be encouraged by favorable conditions to come to California."

Past efforts in this direction have not been particularly successful. Eastern industry generally resists regional competition, maintains close tie-ups with eastern banking and credit concerns.

Consequently, California has but one way out of the postwar maze: assistance and planning by the Federal Government.

California, however, cannot maturely appraise its future or determine the extent and direction of Federal assistance in a happy-duck attitude of resistance to realities. The "everything is going to turn out all right" philosophy won't avert what Fortune aptly terms "Predated disaster."

It is obvious, therefore, that Californians—and westerners generally—should have a considerable stake in the objectives of the Murray-Patman full-employment bill. It is also natural that they should look with interest and hope to the many other measures now before Congress aimed at steering the American economy toward peace and plenty. Prosperity for the Nation as a whole gives California a better chance to catch up with its labor force.

Fundamentally, however, larger-scale development of western resources and production, the elimination of discriminatory practices such as unfair basic point prices and monopolistic restraints, and the encouragement of investment in western business and industry through Government-guaranteed loans—these are the guideposts to California's postwar future.

It is not an easy road. "Work pile" programs will soften the transition shock. Federal aid will smooth the way. But the really tough job of building a firm economic foundation for the West's expanded population is going to take a lot of perserverance.

Now is the time to hammer relentlessly at the task of creating a healthy economy for the State and the Nation.—R. E. G. H.

## Who's Right—and Who's Wrong?

EXTENSION OF REMARKS
OF
**HON. ROBERT F. RICH**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

WHO'S RIGHT—AND WHO'S WRONG?

In September, Socony-Vacuum offered its employees a 15-percent increase in pay. Added to increases previously given since 1941, this made a total increase, in both hourly wages and weekly take-home pay, ranging from 32 to 38 percent since that date.

The offer was accepted by the great majority of our employees. It was rejected by the union holding contracts with 4 of our 15 refineries, representing less than 10 percent of the company's total employees.

The union called a strike in violation of the provisions of the War Labor Disputes Act and of the no-strike clause in the contracts.

The Government summoned a conference between 11 oil companies and the union officials. This conference failed to reach an agreement. The Secretary of Labor then proposed that the dispute be submitted to arbitration—but the proposal limited the arbitration to the difference between the company's offer of 15 percent and the union's demand of 30 percent.

In view of the grave inconvenience caused the public by the strike, Socony-Vacuum expressed its willingness to arbitrate on any fair basis.

We stipulated that the arbitrator should consider what is a fair increase in wage rates,

without reference to the company's voluntary offer or the union's demand. The Secretary of Labor's proposal provides that arbitration should determine what increase should be given employees in excess of 15 percent. This was and still is the only difference between the Government's position and the company's.

It is not arbitration at all when the arbitrator begins by giving to one party half of what that party demanded.

We asked also that the arbitrator should be mutually acceptable. The arbitrator subsequently named by the Secretary is entirely acceptable to us.

We have repeated to the Secretary of Labor our willingness to accept the decision of the arbitrator as to the wage to be paid.

Socony-Vacuum did not decline arbitration.

B. BREWSTER JENNINGS,
*President, Socony-Vacuum Oil Co., Inc.*

## Ireland's Case Before the International Tribunal

EXTENSION OF REMARKS
OF
### HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions which were unanimously adopted at a meeting held recently at the Hotel Astor in New York City under the auspices of the Clan-na-Gael of New York and Bronx Counties. I feel that our Government should exert every influence to obtain an impartial hearing of Ireland's case before the international tribunal which is to be set up to establish peace and justice throughout the world. The Partition Act passed by the British Parliament should be promptly repealed if we mean to do justice to the small nations of the world:

Hon. JOHN J. ROONEY,
*Washington, D. C.*

DEAR CONGRESSMAN: The resolutions which follow were unanimously adopted at a meeting held under the auspices of the Clan-na-Gael of New York and Bronx Counties, N. Y., in the Hotel Astor, New York, on Sunday evening, September 16, 1945:

"Whereas Thomas Davis, the Irish patriot, poet, philosopher, and publicist, to whom this meeting of citizens of Irish blood is paying a tribute of affectionate remembrance on the centenary of his death, detested bigotry and intolerance and devoted his great talents in the years of his mature manhood to the noble work of uniting in the bonds of friendship the people of Ireland and establishing, through that nion, an independent and distinctively Irish nation, under the government of which all its citizens, regardless of their racial origin, creed or class, would enjoy equal rights; and

"Whereas we believe, as Davis believed, that sectarian hatred is an evil thing and that when it is fomented and practiced for the purpose of oppression or to impede the progress of a people toward freedom it is doubly reprehensible; Therefore be it

"*Resolved*, That we draw the attention of the executive department of the Government of the United States, of our representatives in both Houses of Congress and of our fellow citizens to the grave injustice which was done to the people of Ireland by the Partition Act which was passed in the British Parliament in 1920 and to the evils which have resulted from the dismemberment of Ireland; and be it

"*Resolved*, That we denounce the government set up in six counties of northeastern Ireland, after the partition of the ancient Irish Nation, as a bigoted military despotism, which has oppressed and penalized the Catholic people of that area, because of their religious beliefs, which continues to violate every one of the 'four freedoms' and which has been enabled and encouraged to continue its acts of oppression by subsidies received from the British Imperial Treasury; and be it also

"*Resolved*, That we appeal to the Government of the United States, which shares responsibility for the keeping of the pledges regarding human rights and human freedom given to the world by the United Nations during the progress of the war, to insist that those pledges be kept, and we request our Government to withhold financial aid, part of which may be used for the purpose of oppression, from any foreign government that violates those solemn promises; and be it further

"*Resolved*, That we request the United States Government to use its powerful influence to obtain an impartial hearing of Ireland's case before the international tribunal which it has been announced will be set up to establish peace and justice everywhere throughout the world."

Sincerely yours,

JAMES REIDY.

## Port Efficiency—Key to Increased Foreign Trade

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Thomas E. Lyons, executive secretary, Foreign-Trade Zones Board, Department of Commerce, before the annual meeting of the American Association of Port Authorities, Palmer House, Chicago, Ill., October 11, 1945:

On October 11, 1940—just 5 years ago today—I addressed a meeting of the Association of Atlantic Marine Terminal Operators in New York. At that time our country was at peace but war clouds were gathering and we had already initiated an active national defense program. At the New York meeting I pointed out the difficulties of carrying on international trade with a large segment of the globe already at war. I also referred to the increased responsibilities which port authorities and terminal operators would have to assume as the war spread into other world areas. In my talk I listed some of the new and unfamiliar commodities which we would require from distant lands for our defense program and urged port officials to gear their facilities to handle this vitally important traffic.

That our ports and terminals have done a fine job in preparing for war admits no doubt. Records of the movement of troops, war materials, lend-lease, and commercial cargoes through our ports to the various world theaters will go down in history as even a greater achievement. Irrespective of these achievements, our ports cannot afford to rest on their oars or bask in this reflected glory. Even today, while our harbors are handling the debarkation of soldiers and war materials, port officials must inventory terminal equipment in the light of peacetime needs and plan a course of replacement which will assure proper port facilities in the postwar world.

One lesson that the war has taught us is that as a nation we are no longer self-sustaining and that we are dependent on other world areas for essentials of everyday life. We also have learned that if we are to develop our export trade in proper proportion to our domestic economy we must in turn increase our imports. Students of foreign trade, both in and out of the Government, have given considerable study to the question of our postwar foreign trade. While they are not in agreement as to the dollar values of this trade, all agree that it will be substantially greater than the banner year of 1929.

The Department of Commerce believes that an export trade of well over $10,000,000,000, with imports at $6,000,000,000, are possible postwar goals for the United States and that these goals can be achieved if proper measures are taken. In dollar terms, this would mean a level of trade at least double what it was in 1929 and three times what it was in the years just preceding the war. In terms of employment, it would mean about 5,000,000 jobs directly related to export trade as compared with less than 2,500,000 before the war. These figures would be associated with a gross national product not far below $200,000,000,000, and a national income of, say $165,000,000,000.

Although values are important in measuring foreign trade, port authorities who have the responsibility of providing cargo facilities are more concerned with commerce when expressed in tonnage. Last year the Department of Commerce published a study setting out our exports for the years of 1929 and 1937 as twenty-nine and one-tenth million and twenty-three and eight-tenths million cargo tons, respectively. Our imports for these identical years total twenty-five and twenty-four and eight-tenths million tons, respectively. Postwar tonnage estimates are set out as thirty-four million tons—exports, and thirty-three million tons—imports. In other words, according to the Commerce Department study, postwar export tonnage will be 17½ percent over 1929 and 42 percent greater than in 1937. Import tonnage estimates for the postwar period run approximately 33½ percent higher than either 1929 or 1937. These figures relate exclusively to dry cargoes—the class of traffic in which port authorities and terminal operators have particular interest.

During the war rapid strides were made in the field of air transport and figures of cargoes carried appear impressive, especially when stated in values. Within the past fortnight we have seen a cargo ship of the air, the *Globester*, circle the world in 6 days. Later on we may expect many more such argosies of the air. While this development is spectacular and important I think we can still feel confident that the bulk of our international commerce when calculated on a weight basis, will continue to move by surface ships—at least as long as our seaports are operated efficiently and economically.

Although there are many phases of our foreign trade which merit discussion, I will limit my remarks to two important developments—both resulting from the war—which I think vital to our port and shipping interests.

The first development concerns the Government's program for stock piling strategic and critical materials which must be obtained abroad. Authority for stock piling of materials and metals is contained in the Surplus Property Act of 1944. Section 22 of this act lists 24 commodities which have been designated as "Strategic Metals and Minerals." These commodities include—copper

lead, zinc, tin, magnesium, manganese, chromite, nickel, molybdenum, tungsten, mercury, mica, quartz crystals, industrial diamonds, cadmium, fluorspar, cobalt, tantalite, antimony, vanadium, platinum, beryl, graphite (and to which may be added aluminum or any other minerals or metals in such quantities or amounts as the Army and Navy Munitions Board may determine to be necessary for the stock pile authorized by the act of June 7, 1939). A report of the Army and Navy Munitions Board and published as Senate Document No. 5, Seventy-ninth Congress, first session, entitled "Strategic Materials" contains a current list of strategic and critical materials. Group A of this list relates to materials for which stock piling is deemed the only satisfactory means of insuring an adequate supply for a future emergency. In addition to setting out the critical and strategic commodities, the list also contains footnotes concerning special storage and handling requirements for some of this material.

For obvious reasons, actual quantities of individual items cannot be revealed. I am permitted, however, to state the aggregate tonnage involved. The present program calls for the stock piling of 37,311,510 short tons of metals—a figure equal to the total import tonnage for all United States ports in 1936. The stock piling of vegetable oils (fats and oils), which are also included in group A, will total 274,000 short tons.

It occurs to me that our smaller ports might furnish the logical solution for the handling and storage of a considerable part of this tonnage.

The second development relates to the realinement of trade, which is bound to result from the defeat of the Axis countries. Germany and Japan and, to some extent, Italy had developed extensive trade relations with other world areas. Japan dominated the Far East trade, while Germany had built up substantial trade interests with South America and other world areas. For the present, at least, the Axis countries have lost this trade. Their merchant marine have ceased to exist. A recent dispatch from Japan stated that only 35 ships remained of her strong prewar merchant fleet, which was reported to have consisted of approximately 2,500 ships of 6,000,000 gross tons.

Prewar trade figures of the Axis countries were quite impressive. Let me point out some of the high lights, especially in the Far East, an area which should be of especial interest, not only to our Pacific ports but to the ports of the Atlantic and Gulf as well.

The total foreign trade of the Far East countries of Korea, Manchuria, Siam, China, India, and of the Pacific islands and continents (the Netherlands East Indies, Malaya, the Philippines, Australia, and New Zealand) was approximately $5,500,000,000 in 1936 and $6,500,000,000 in 1937, divided as follows:

| | *Imports* | *Exports* |
|---|---|---|
| 1936 | $2,418,856,000 | $3,035,518,000 |
| 1937 | 2,761,157,000 | 3,681,564,000 |

The Axis countries participated in this trade with totals of $1,333,333,333.33 in 1936 and $1,500,000,000 in 1937, or about 24 percent of the total trade for both years. Japan's share of the Axis totals for these years was 79.6 and 75.9 percent, respectively, with Germany's percentages 17.4 and 18.9 and Italy's 2.8 and 5.3 for these periods. (See table I.)

The external trade of these Far East areas thus approximated 20 percent of the foreign trade of the entire world for these years, which was about $25,000,000,000 and $31,000,000,000, respectively.

In 1936, on a weight basis, nine so-called colonial products exported from far eastern areas to Axis countries, including Japan, amounted to 9,750,000 tons. (See table II.) This figures, approximated in tons, the total import traffic of Boston, Baltimore, Philadelphia, and New Orleans for that year. Much of this now frustrated trade must seek new channels of distribution. Our own ports can glean a fair share if they are able to provide the necessary storage and marketing facilities. During the same year (1936) Germany sent merchandise valued at more than $200,000,000 to Latin America. German shipments to 12 of the larger Latin-American countries totaled a million and a quarter metric tons. Although these figures are incomplete, they indicate the huge trade between Axis countries and other world areas just prior to the outbreak of the war. Much of this trade may perforce find its way to this country. However, the chances of this temporary windfall remaining after former Axis countries resume normal commercial activities depends to a considerable extent on the services and facilities which our ports provide.

As a substantial part of the frustrated colonial trade would not be intended for domestic distribution, some arrangements would of necessity have to be made to free this traffic from burdensome customs restrictions while enjoying a temporary haven here. In the past our bonded warehouse laws have not proved conducive to the development of this class of trade. On the other hand foreign-trade zones offer full freedom for the holding of colonial products until a foreign market has been found. These advantages have been amply demonstrated in the New York foreign-trade zone since its opening in 1937. A number of other ports, including New Orleans and San Francisco, are scheduled to establish foreign-trade zone facilities as soon as war conditions permit. Let us hope in planning construction of these foreign-trade zones that the respective port authorities will keep a weather eye on this lucrative international trade which will soon be seeking haven in our ports.

TABLE I.—*Foreign trade of the Far East and Australasia with the former Axis countries*

## White Artists Only

EXTENSION OF REMARKS

OF

## HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of Sunday, October 14, 1945, entitled "White Artists Only":

WHITE ARTISTS ONLY

In his letter to Representative POWELL, made public yesterday, President Truman deplored the racial discrimination which barred Hazel Scott from the D. A. R.'s Constitution Hall in Washington, but said he couldn't interfere with "a private enterprise." He probably couldn't, but the D. A. R. is not altogether private. It exists under a congressional act of incorporation, for the purpose, among others cited, of "securing for all mankind the blessings of liberty." It has the right to deposit its collections, if it can't find room for them elsewhere, in the Smithsonian and National Museums. It is privileged to make an annual report to the Smithsonian's secretary, who transmits it to Congress, which customarily causes it to be printed in the Government Printing Office. The D. A. R. certainly has some responsibility toward the citizenry at large, including those of races not represented in its membership.

The D. A. R. can't be an exclusive social club and also a public institution. It can't shut out large numbers of good Americans and expect to be venerated by those and other good Americans. It can't stand for the American patriotic tradition and close its doors to the descendants of Crispus Attucks, first American to fall in the Boston massacre, and Peter Salem, said to have fired the shot that killed Major Pitcairn, the British officer who started the Revolutionary War. It can't point to an unbreakable segregation rule, for in January, 1943, under pressure of public opinion, it broke that unbreakable rule and permitted Marian Anderson to sing in Constitution Hall. It can't consistently, with a membership descended from revolutionists, hang its case for segregation, as the executive committee tries to do, on "prevailing custom."

The ladies of the D. A. R. are responsible for many good works, as any reader of their annual reports (see S. Doc. No. 251, Government Printing Office, 1945) must realize. But their good works will not help them much in popular esteem if they cater to an unworthy and unpatriotic prejudice.

## Army Air Pilots Held in Service To Aid Private Line?

EXTENSION OF REMARKS

OF

## HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. HAVENNER. Mr. Speaker, I have received a letter from one of my constituents, who is now a member of the Air Transport Command in China, which deserves the attention of every Member of Congress, and particularly of the members of the Military Affairs Committee. It is my intention to present this letter to the chairman of the Military Affairs Committee and ask that he request the War Department to investigate the plight of this young man, and many others like him, who are being kept in that far-away wilderness, according to the statements made in my constituent's letter, for the purpose of aiding in the establishment of a privately owned air line.

The letter is as follows:

SIR: I am connected with the ATC here in China. The ATC for your information is the part of the armed forces connected with the Air Corps that is the one that delivers the goods to the fighting men on time and in quantity. We are not the fighters although we do our share of dying along with the others. Hundreds of men are war victims in cases of deaths and wounds, but to this date there never has been one single complaint from us. Today, however, we have a complaint that should, to our belief, be brought up in the Congress, asking why we as citizens and soldiers pro tempore, are to be kept here in China and in India to foster the financial well-being of an air line.

This is the first time that we have ever found reason to complain of the actions of the men who lead us and direct us.

It seems that the purpose of us remaining here in China and the Far East is to see to it that a small group of big businessmen may make a success out of an air line that will put no money in the pockets of the many, but only into the hands of a few.

We have been told by the powers that be, that the reason we are to remain in the CBI is that the military necessity is such that we must stay there until the civilian air lines might come over and take these bases under their wings. The military necessity is to be set by the theater commanders and must I presume coincide with the contracts that have been let by the Government for these companies to take over. I would like to know since when does the Army go into the business of fostering private interests? I can understand the Army protecting something that already has been established, but not something that is the dream of a few industrialists.

We have just gotten through listening to the radio telling us that all men in the States with 37 or more points with 1 year's service in the Army will not have to come overseas. Also that men 34 or over with 1 year's service also will not have to come over and have a share of misery with us. Just what is it that says we in the ATC seem to be in a different branch of the service altogether than that of any other branch? All other branches are sending men home that are over 35 years of age, points, length of service and other reasons, but we in the ATC will not be sent home until the minds of a few men are made up. Regulations are drawn up for the men in the Army as well as the heads of the Army to be obeyed, and although a regulation came out that men over 35 years, and those with points would be released at once. Those orders are not being carried out by the ones responsible for those orders to be carried out. Why?

As long as a war emergency existed, I and hundreds of men like me were willing to stay here and see the thing through. Now that it is over, we want to come home and see our loved ones once more.

I don't suppose that I only will be the only one to protest the treatment we are receiving over here now, and I wish to raise my voice in protest over the means the ATC is using to encourage a private company to establish their air line over here and not worry over the feelings and security of the soldier who fought and won his war over in this theater under the most trying conditions.

The men in the ATC that operated in China and India did so without any fanfare or glory being shown them; they performed duties under conditions that have never been undergone by any army of ours in history. They fought under conditions that compared and at times surpassed those of the Infantry and other men of action. We worked in the steaming jungles, flew in any kind of dirty weather, endured the terrible monsoons that even the movies can never hope to imitate, lived in huts and tents that were no bar to rodents and snakes of all descriptions, ate food that natives of the country would not eat themselves, fought night and day against the greatest scourge of mankind, the mosquito carrying malaria. How many hundreds of men now are lying in hospitals with this dread disease that may remain with the man as long as he shall live?

The man who was called "rear echelon" was also bombed and strafed with no means to fight back other than to depend on the fighters on the fields to give them some sort of protection. No battle stars for China; no points on account of this. Points awarded for battle stars for men who took a trip now and then over the "hump." Every other outfit in the Army who served in China received battle-participation credits in the form of points; but although the ATC was along with them in the same theater, they have not gotten one single point or credit for the action they have seen. Why? Did the bullets and the bombs have a particular branch of the service marked on them? No.

CONCLUSION

According to the head of the Chinese Government, the American soldier in China did a magnificent job in helping the Chinese defeat their and our ruthless enemy. He said we participated in many battles and were under fire from many sources, but we came through and did the job. What further proof does the War Department need to see if we in the ATC earned the right to share in the benefits of battle awards that other outfits have to their credit?

Sir, I hope you will find the time to see if something can't be done to help us get

home and see our loved ones again, as all of us feel we have done our job and should be shown some form of thanks for the deeds we have done and the sacrifices we have made.

## Silver

EXTENSION OF REMARKS
OF
### HON. BERKELEY L. BUNKER
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. BUNKER. Mr. Speaker, I rise to take issue with the distinguished gentleman from New York [Mr. CELLER] who, on September 27, made some statements in his extension of remarks with regard to silver.

I realize full well the responsibility which rests upon his shoulders to endeavor to protect the interests of his constituents. However, I do not agree that the responsibility of any Member of this body requires, nor do I believe the House should condone, the presentation of ambiguities or misstatements of fact in discharging his duties as a representative of his people.

Of course, we are all aware that the manufacturers and retailers of jewelry and silverware, many of whom reside in or near the Congressman's district, derive considerably greater profit from the manufacture and sale of articles containing silver than do the producers of the ores in which silver is found in my State.

The gentleman would have us believe that the silver in the Mexican peso has a normal value of 20 cents. He neglected to state that the exchange rate of the Mexican peso with the dollar has been for several years, and still is, almost 60 percent below parity. The result of this devaluation of the peso reduced its melting point to the low level of 53.3 an ounce for the silver it contains. The Mexican Government is calling in these pesos in order to melt them down and recirculate them at a higher melting point, so as to give to the silver content of these pesos a proper value under the newly established price of 71.11 cents an ounce for foreign silver.

I disagree that, to quote the gentleman, "This price dislocation caused by the OPA has created havoc all over the world, especially in those countries where silver is the standard metal for money." I insist that this new price is a step in the right direction as it restores to the peoples of the countries who believe in silver money a portion of the lost value resulting from the demonetization of silver beginning in 1873, which constituted one of the great economic crimes of modern history.

It is inferred by the gentleman from New York that silver is not as precious as it is cracked up to be. The preciosity of silver is determined by its production ratio in relation to gold, which at present is less than 7 to 1. Unfortunately, the price of silver has fallen to a ridiculously low level because of pressure exerted by international manipulations where it now rests at a ratio with gold of about 50 to 1. This discrepancy must, and will be corrected.

He states that silver is not essential as a base for currency and that any metal with the full weight of American faith and American resources behind it can pass for currency. I would like very much to exchange with the gentleman a bar of pig iron for a bar of silver with or without the stamp of the United States Government on it. The gentleman states that silver is worth far less than 71.11 cents per ounce, but he fails to give any reason. The fact that the price was raised to that figure in order that his jewelry constituents could obtain it, indicates that it is worth at least 71.11 an ounce. I expect to see the price of silver advance until it reaches $1.29 an ounce, its normal and proper value.

I call his attention to the fact that since the recent adjustment of the price of foreign silver to 71.11 cents an ounce, that the silver in the dollar is actually worth 55 cents, while the gold that backs each Federal Reserve note dollar is worth only 25 cents.

I take issue with the gentleman when he states that "the Treasury has 2,000,000,000 ounces of idle silver." If he will examine the daily statement of the Treasury, he will find that the Treasury has less than 500,000,000 ounces of silver that is not already being used as money; and I wish to point out that approximately 200,000,000 ounces of this so-called idle silver is now in the process of being coined for currency issue in the United States. The gentleman will also be interested to know that a small portion of this so-called idle silver is being set aside for the manufacturers of high-priced jewelry and silverware which will give to the constituents a handsome profit.

In connection with the gentleman's miscalculation of 2,000,000,000 ounces of idle silver he stated that "this vast horde is daily mounting." It would seem to me to be a very simple matter for the gentleman to learn the facts by calling the Treasury Department before making such a gross misstatement. The Treasury is not now acquiring any silver and has not acquired any for over 3 years.

Of course, the gentleman's chief interest lies in aiding his constituents to purchase silver for the manufacture of jewelry and silverware, for he states that "The Silver Purchase Acts should be scrapped and any silver beyond currency needs should be sold to jewelers, manufacturers, and silversmiths at intrinsic values," and that silver should compete with other metals like copper, lead, and zinc. What a ridiculous statement, after silver has served as money throughout the world for thousands of years.

The gentleman states that "manufacturers cannot use up our supply of domestic silver" and that there is "no need to import silver." If there had been no need to import silver, the OPA would not have raised the price to 71.11 cents an ounce. That is the same price at which his jeweler friends have been purchasing domestically mined silver for the past 3 years. Furthermore, there is not enough domestically mined silver being produced to supply our Treasury with current requirements for silver coinage, or the trade with enough silver to keep his constituents producing their goods on a full-time basis.

## Team Play Won Brooklyn, N. Y., Its Veterans' Hospital

EXTENSION OF REMARKS
OF
### HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Walter B. Gunnison in the Brooklyn Eagle of Sunday, October 14, 1945, concerning the new 1,000-bed facility which is to be presently erected in Brooklyn by the Veterans' Administration.

The entire Brooklyn delegation in this House as well as Senators WAGNER and MEAD worked as a team in obtaining this much-needed hospital for the veterans of our community. The successful result was pleasant news not only to our congressional delegation but to every Brooklynite and organization who aided and cooperated in the project.

TEAM PLAY WON BROOKLYN ITS VETERANS' HOSPITAL

(By Walter B. Gunnison)

Remember the old fairy story about the beautiful castle that disappeared into the ground?

Word got around that if someone played enough music of the right kind, the building would rise again.

So all the best musicians showed up and tried their talents and their luck, but nothing happened.

Then one day someone dreamed up the idea of everybody playing together. That's one version of the birth of orchestras. At any rate, they struck up a melody and as they played the castle rose slowly and majestically, more beautiful than ever.

Brooklyn got its veterans' hospital through team play, and some observers, in marking the victory, have remembered the old nursery tale. However, in Brooklyn's case it took more than one melody to turn the trick. It took a lot of hard playing and a whole repertoire of tunes.

Monday was the red letter day in the history of the hospital project. President Truman gave the nod and Gen. Omar Bradley, head of the Veterans' Administration, gave out the good word. The hospital, a $6,000,000 structure with room for 1,000 beds, will be constructed on a site in Fort Hamilton.

The money has been earmarked and this time the whole thing is official, something that the veteran can put his finger on. The date hasn't been settled yet, but the start is just around the corner.

The site will be in one corner of the 140-acre reservation overlooking the Narrows. Not far away is the tower of Poly Prep. In another direction is Dyker Beach Park and

the Belt Parkway. Off in the distance is Coney Island, with its crazy profile against the sky.

The hospital will rise and stand as a symbol of community effort which was crowned with success after long years of struggling, political intrigue, name calling, bitterness, recriminations, false predictions. The same years, however, were marked by patient driving by veterans and their organizations.

The need for the hospital became apparent in recent years with startling clarity. These were war years and men were coming home with battle wounds and strange diseases. Their numbers were piling up like a wet piece of snow rolling down a hill.

Back in their civilian clothes, they joined their mates from the previous war in making long treks to the Bronx, where the only hospital for their needs was available. The crush in the Bronx was so great that in some cases the veterans who got there too late one day were sent back to Brooklyn and told to come back later. It was nobody's fault. That's the way things were.

Choosing the Fort Hamilton site and making it stick was something like catching a moth with one hand. It was like watching a circus chariot race. The white horses were sure to win, but they didn't come through until the home stretch.

That's the way it was with the Fort Hamilton site. It was in one day and then it was turned down the next day by the War Department. Other sites would be mentioned, but all concerned stuck to their preference for Fort Hamilton.

It was appropriate in a way that the announcement of the site was made by General Bradley. He was the head of an Army group that did things in Normandy and France and Germany, many of which tactics were considered impossible in the textbooks.

The hospital project got really hot the night of September 20 at a dinner in Brooklyn to Jean A. Brunner, national commander of the Veterans of Foreign Wars.

Representative JOHN J. ROONEY, one of the speakers, revealed that the Brooklyn congressional delegation had had an audience with General Bradley the same day. General Bradley had let it be known that the site had been picked. There were a few other things to be ironed out, however, before the site could be revealed. In any event, it was to come from President Truman.

The Brooklyn Eagle reported the Fort Hamilton site about a week later. It was confirmed this past Monday by General Bradley, with the approval of President Truman.

Through the years, the Eagle has left its columns open to the struggle of veterans and their leaders for the hospital. A year ago a series of articles in the Eagle described the facilities offered in the Bronx and the hardships of Brooklyn veterans required to travel great distances to get there.

The articles were praised by veterans' organizations and credited with having spurred the drive for the facility here.

From the start, the Fort Hamilton site, which will be turned over to the Veterans' Administration by the War Department, was considered a logical spot for the facility. Situated in a staging area at the reservation, the property overlooks the waters of the Narrows.

During the war the recreation areas at Dyker Beach were thrown open to the soldiers at the fort, including a baseball field and golf course. The assumption is that Commissioner Robert Moses would give his blessing to the use of the park by men requiring treatment at the hospital.

The section, which is bordered by Cropsey Avenue Extension, Dyker Beach, and the Belt Parkway, is quiet. On summer evenings, men will be able to watch the twinkling lights of Coney and the tower of the Half Moon Hotel, which looms something like a minaret.

A symbolic gathering of eight veterans' organizations will hold a dinner to mark the winning of the hospital on October 28 in the Columbus Club. It is hard to pick out individuals for special acclaim in connection with the project, but here are some of those who will attend the dinner:

Department Vice Commander Vincent D. Cronin, of the American Legion; Harold Burke, chairman of the Veterans of Foreign Wars veterans' hospital committee; Frank D. Schroth, publisher of the Eagle; Miles F. McDonald, candidate for district attorney on the Democratic ticket; City Councilman Joseph T. Sharkey; and the Brooklyn Representatives, John J. Delaney, Joseph L. Pfeifer, Eugene J. Keogh, Andrew L. Somers, James J. Heffernan, John J. Rooney, Donald L. O'Toole, Leo F. Rayfiel, and Emanuel Celler.

## House Foreign Affairs Subcommittee Reports on Economic and Political Conditions Abroad

EXTENSION OF REMARKS
OF
### HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. MUNDT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following joint news release:

JOINT PRESS RELEASE FROM CONGRESSMEN KARL E. MUNDT, REPUBLICAN, OF SOUTH DAKOTA, AND FRANCES P. BOLTON, REPUBLICAN, OF OHIO, MEMBERS OF SUBCOMMITTEE NO. 2, HOUSE FOREIGN AFFAIRS COMMITTEE, WHO ARRIVED HOME SUNDAY FROM A 63-DAY TRIP THROUGH 20 EUROPEAN, ASIATIC, AND AFRICAN COUNTRIES IN WHICH THEY MADE SPECIAL ECONOMIC AND POLITICAL STUDIES IN CONFORMITY WITH HOUSE RESOLUTION 315

WASHINGTON, D. C., October 16.—Two members of Subcommittee No. 2 of the House Foreign Affairs Committee, Congressmen KARL E. MUNDT, Republican, South Dakota, and FRANCES P. BOLTON, Republican, Ohio, returned to Washington by plane from Paris, Sunday, after making a 63-day study of economic and political conditions in 20 countries of Europe and the Near and Middle East. They told reporters here today they were preparing reports to be submitted direct to President Truman and to the House Foreign Affairs Committee on a number of vital, complicated, and controversial matters.

"The most striking and impressive reaction we received from the countries visited," the two committee members of the House Foreign Affairs Committee said here today, "was the almost total confidence they have in America's good intentions and their vast expectations for our economic assistance and our political and military leadership. These hopes for American aid and assistance are so tremendous that they exceed the possibility that any single great power could measure up to their expectations. As a consequence this almost childlike faith in the capacity of the United States to produce miracles is a bit terrifying since some measure of disappointment and disillusionment is inevitable. Our leaders must make clear in some way that our good intentions and our earnest desires to be helpful must after all be limited to our financial capacities. Otherwise, if we permit foreign governments to expect too much too long, we shall find ourselves in a position where the very great storehouse of good will which we now have will be deteriorated by the bitterness which always grows out of disillusionment. A little more frankness now will forestall charges of bad faith at some more distant date."

Congressmen MUNDT and BOLTON stated they had not yet had sufficient time to analyze their notes sufficiently to complete the reports they expect to make to the President and to their committee, but on certain matters their findings have already crystallized into specific recommendations. Among the recommendations they propose to make to both the executive and legislative branches of Government as a result of their investigations abroad are the following:

(1) AMERICAN OUTPOSTS

The State Department representatives who are serving as foreign officers in our legations and embassies abroad are an able, courageous, and well-informed group who almost uniformly are doing a great piece of work for the United States. In many cases our foreign staffs are inadequately housed in poor offices entirely nonrepresentative of the dignity of the United States, and the resultant cost in loss of prestige for America far excels any savings we may make by utilizing inferior buildings in out-of-the-way locations.

Of even greater importance, however, is the fact that the reports and recommendations which these on-the-spot foreign officers file with our State Department are not given sufficient consideration in Washington. Too frequently it appears our foreign policy in this country grows out of the proposals of pressure groups within America rather than being developed out of the reports coming from our diplomatic representatives abroad who are actually on the scene and whose communications contain first-hand and accurate information on conditions abroad. It is our recommendation that American foreign policy should be based on reports from our representatives abroad rather than built to conform with the demands of pressure groups here at home.

(2) MANDATES

It appears obvious that the system of mandating semiindependent countries to single mandatory powers has failed. Too often, the mandatory power comes to look upon its mandate as a potential colony and to develop for itself special economic, military, and political advantages. It is our recommendation that wherever a country requires outside assistance and support in the form of the so-called mandates set up after World War I that these mandates be administered jointly by the Great Powers, so that none can secure for itself special advantages at the expense of the other. This will also make it easier for mandated areas to secure their independence since all selfish reasons for continuing the mandate will have been eliminated.

(3) MILITARY GOVERNMENT

In Berlin and Vienna we found the joint controls of the four occupying armies operating much more successfully than we had expected. They are still somewhat inefficient and awkward due to language difficulties and differences in political and economic emphasis, but the areas of agreement among them are surprisingly large. Generals Eisenhower and Clark in Berlin and Vienna deserve rich credit for doing a remarkably satisfactory job under difficult circumstances. The experience the Big Four are getting in working together may well develop a pattern for joint administration and cooperation which can be transferred to areas requiring the assistance of foreign governments in the future in order to develop the strength and stability necessary in certain areas for complete independence.

We recommend, however, that the present policy of dividing Germany and Austria into four separate zones be discontinued as soon as possible. Instead, a central administration should be set up for each country so that the difficulties, inconsistencies, and controversies now prevailing as a result of trying to establish policies for the four separate pieces of pie into which each country has been carved can be eliminated. Rather than having separate zones of authority with rival policies and competing programs, the Big Four should agree at the top on over-all programs for denazification, reeducation, and the permanent disarmament of enemy countries. A start in the direction of unified rather than isolated controls has been made in Vienna. It should be extended to all areas of all occupied countries.

(4) FOREIGN POLICY

Throughout the 20 countries we studied, we found need for the enunciation and clarification of our prevailing American foreign policy. Too much confusion and uncertainty exists abroad as to what actually comprises our foreign policy and as to our basic attitudes toward ex-enemy and friendly powers. We believe there is immediate need for the development and declaration of a positive, understandable, and consistent foreign policy for the United States. This policy should then be pursued with considerably more persistence and firmness than is presently observable.

Before entering into agreements for economic aid and before recognizing the new governments being set up in war-ridden countries we should define what we mean by honest elections, freedom of press and communications, free speech, free religion, and freedom to dissent. At the moment, we find America giving recognition to some postwar governments which deny these freedoms while we withhold recognition from other governments because of their denial. Unless our foreign policy displays more consistency than that, it is certain to lack the force and influence which it is important we exercise in the reestablishment of sanity, stability, and solvency in this very troubled postwar world.

(5) UNRRA

Part of the responsibility with which we were charged by Congress was to study the operations of the United Nations Relief and Rehabilitation Administration abroad. We regret that we cannot bring back a more encouraging report on what we observed.

The need for relief and rehabilitation among the liberated areas of the world is so acute and so vast that anything less than candor in an evaluation of UNRRA would be unconscionable. Candor requires us to report that except in Greece, we found UNRRA to be operating with far less efficiency than the needs require.

In some UNRRA offices abroad over 20 different languages are being spoken by the members of a single staff. In some offices the dministrative head of UNRRA is a national of a country which contributes nothing to the supplies which are being distributed so his country is unaffected by any waste or extravagance which occurs. In some offices, UNRRA officials simply requisition supplies but lack all authority in determining the method or manner of their distribution. Granted the best of intentions on the part of all officials, it is impossible to get efficiency and economy under such conditions.

What actually appears to be happening is that UNRRA has become a great experiment in international administration, but no matter how noble its objectives it is operating so awkwardly and the mastering of the inevitable difficulties attaching themselves to so cumbersome an experiment is so slow that this experiment is today being paid for in human misery, in suffering, disease, and in actual starvation in the liberated areas.

It may be too late at this tardy date to develop an adequate substitute for UNRRA. If it is too late, certainly corrective steps should be taken to make positive that UNRRA supplies are not diverted into channels never intended for their use, to see to it that those who provide UNRRA relief have the necessary controls to determine the manner in which it is administered and, above all, to provide that at least in the top administrative posts the personnel be selected from among the Nations making the most substantial contributions to its support.

(6) LEND-LEASE

Both in connection with lend-lease and in the disposal of surplus war supplies abroad, substantial dividends can be secured for American taxpayers if the administration will sharply step up without further delay its program of disposing of unneeded supplies and equipment.

Great storage areas of unused war supplies and equipment—much of it with a definite civilian-purpose value—are scattered throughout the war zones and in friendly countries. There is great need for these supplies at this time by countries trying to rehabilitate their economies. By selling these surplus war supplies now and by selling unused lend-lease equipment and supplies still in the name of the United States, a substantial financial return can accrue to this country which will reduce our over-all war costs. Such a program will also give real assistance to friendly nations badly needing this material and evidencing a readiness to buy now for cash.

Furthermore, we can now sell for the coin of the realm and utilize this foreign currency to good advantage in supplying our own troops in these foreign areas. If we continue delaying the disposition of these supplies, we will encounter the problem of dollar shortages and payment difficulties since our need for foreign currencies will be less real, once our armies have evacuated all but the enemy countries.

(7) RUSSIA

Russia is a vast nation with an almost unpredictable potential. We spent almost 2 weeks in that country. The biggest deficiency in Russia at the moment seems to be lack of motivation. Its people are busy and its factories are operating, but they appear to be working in slow motion.

However, we found no apparent desire or demand anywhere in Russia to move away from what is today the Russian version of communism. There seems little more likelihood of Russia adopting the methods of our free enterprise system than there is of our adopting the techniques of Russian communism. Russian communism is today actually much closer to State capitalism than it is to "one for all and all for one" Marxism. Russian political leaders do not deny this; in fact, they desire to have their system recognized as a Russian phenomenon.

This Russian experiment operates as a police state with numerous political police readily observable. It permits no opposition party and no opposition press. It punishes its political prisoners. It is a vast laboratory of central planning combined with central prodding. It has a privileged class of government and military leaders, together with certain other favored groups. It appears to be developing the new isolationism whereby foreigners are discouraged from studying and observing the Russian techniques or from reporting through uncensored press channels on the Russian experiment.

We found the average man on the street and on the farm in Russia to be friendly and courteous. He is fond of America. He approves of our merchandise, our movies, our books, our products, and our techniques. He has no hostility toward either our country or our methods. He admires our achievements.

Russia is placing a commendable emphasis on education and her political leaders and her scientists are men of real ability.

As we came to understand it, the weakness of our American policy toward Russia is that we apply a double standard of political and diplomatic morality toward her in our official attitudes. This double standard should be dropped. All of our Russo-American policies should work both ways and apply equally in both countries. We should accord the Russians every courtesy, consideration, freedom, and confidence that they accord us—and no more. We should treat their visiting nationals and their missions to America precisely in the same manner in which they treat our nationals in Russia. Our dealings with Russia should be friendly but firm.

Russia is obviously and energetically extending her economic, political, and military influence into all the peripheral countries on her border with varying degrees of success except in Turkey where the Turks have withstood all Russian expansionist policies. We should have a decision among the Big Five at once as to whether the world is to be divided into spheres of influence or not. We believe it should not be so divided. If it is not to be so divided, however, instead of granting Russia carte blanc authority in such areas as Bulgaria, Hungary, Yugoslavia, Poland, and the like, we should transplant to these countries something analagous to the four-power administrative or supervisory systems now operating in Germany and Austria.

At present our military missions in the Balkan countries for example are serving largely only as reporters without newspapers, although the orders issued to the conquered countries are made out in the name of the Allied Control Commission. Frequently, however, our American military command never sees these orders until they appear in the newspapers as established mandates. This situation should not endure. We should not permit our country to have responsibility designated to it unless we are permitted to exercise commensurate authority. This is not now the case. This was a United Nations war. It was a United Nations victory. If peace is to endure it must be a United Nations peace. If it is to be a United Nations peace it follows that at least the major participants in the victory must have something to say about the machinery and methods to be employed in establishing stability and solvency and in rehabilitating the areas devastated by war. Today this situation does not exist in many defeated countries and among several of our war-ridden allies. Unless prevailing policies are changed in this connection conditions are likely to get much worse before they begin getting better.

Finally, we believe we can have peace with Russia and that we can work with that great country in the common interest of all humanity provided (1) neither country engages in expansionist policies not authorized by the other and (2) neither country treats the other in a manner which would prove unacceptable were the same policies reversed and applied to it. The differences in our political and economic ideologies need prove no barrier to lasting peace provided we utilize realism in our relationships with Russia.

(8) PALESTINE

In troubled Palestine, we found three sides to the controversy eager to present their views instead of only two as we had anticipated. Our committee took transcribed testimony in Jerusalem from the leaders of the Jewish, Arab, and Christian factions.

We found the situation in Palestine to be tense, strained, and dangerously explosive.

Conditions are such that it is indicated that bloodshed may easily arise either from hastily considered, abrupt action or from sustained, stubborn inaction through refusal to face up to the basic facts in the perplexing Palestine problem.

It would be unfair to all concerned—especially to the persecuted Jews who have already suffered so greatly in Europe—to simply dump thousands of defenseless Jewish immigrants into Palestine at this time to run the hazards of new abuses from a new group unless we are willing to send American soldiers along to maintain order by force. Even this action would appear certain to provoke armed attacks and uprisings by the Arabs of the countries of the Near and Middle East.

The Palestine situation is one which requires careful, unbiased study and a solution which will cure more hardships and heartaches than it creates. We have transcribed notes fully covering the complex and conflicting viewpoints of all factions in Palestine who actually live in the country and desire to make it their permanent home. We are going to make these hearings available to our committee and to Congress with the hope that they will be helpful in pointing toward a solution to this long-standing problem which will avoid bloodshed, eliminate persecution, and promote justice.

## Look Who Throws Stones at Pearl Harbor

EXTENSION OF REMARKS

OF

### HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the St. Louis Star-Times of September 24, 1945:

LOOK WHO THROWS STONES AT PEARL HARBOR

The isolationists are in full cry again. They have emerged from their storm cellars, revitalized by the vitamins of an article in Life magazine and a series of charges by John T. Flynn, professional grouser. The gist of the charges are that President Roosevelt knew that war was coming, and that he maneuvered us into the conflict to pull Britain's chestnuts out of the fire.

The isolationists are falling over their own arguments and getting into a fearful and ludicrous snarl in their effort to discredit the former President and give some face to their own discredited positions. Of course, the President knew the war was coming and coming directly at us. From the moment Japan joined the Axis, the stage was set for a two-front war against America, a war that both documents and admissions by Japanese officials have revealed was being planned for more than 30 years. It was to Mr Roosevelt's everlasting glory that he did what he could against the hampering tactics of the isolationists to keep our outpost in Europe from collapsing. And our only outpost was Britain before we got into the war.

Tojo has admitted that he planned the war in the Pacific and brought it upon his people. The resurgent isolationists make no mention of these proofs of Axis premeditation of war. In fact they are fatally inconsistent. At the moment they are charging that Mr. Roosevelt knew war was impending and did nothing to warn the commanders at Pearl Harbor. On the other hand, before the war they were infuriated by the preventive steps represented by lend-lease, the repeal of the neutrality law, and the 50-destroyer deal.

Had Kimmel and Short, for instance, at Pearl Harbor followed the policy of the isolationists, they would have ridiculed any warning of Japanese attack had it been sent to them. They would have given all their military personnel a holiday and would have set themselves to pen a diatribe against the warmongering of Mr. Roosevelt, with various hackneyed observations about the roasting of chestnuts.

No, the isolationist assailants of Mr. Roosevelt cannot have it both ways. They were the men who did their best to make a Pearl Harbor of the entire United States. They were the men who scoffed at Mr. Roosevelt's warnings. They were the ones who, despite the guns pointed at our heads by the Axis Nations, told us this was not our quarrel and that the enemy could not cross the British Channel, let alone the Atlantic Ocean. When we realize how close the German scientists were to perfecting the atomic bomb, such counsel is clearly seen as a prescription for national suicide.

Now the isolationists are busily attempting to invite public forgetfulness of their own stupidity by trying to make the man who was most alert to our danger the scapegoat for Pearl Harbor.

So far no one has charged that Mr. Roosevelt, even if the Japanese code had been broken, had any knowledge that the Japs meant to strike at Pearl Harbor. Guam, or Singapore was the more logical inference.

There is, of course, one transparent fallacy in the arguments of the isolationists and political witch-hunters. They are charging that Mr. Roosevelt wanted to precipitate us into the war. Yet that could have been accomplished just as readily if the Japs had attacked us at Pearl Harbor and we had been ready for them as it was when they attacked us in a state of unpreparedness.

Consequently Mr. Roosevelt would have served his alleged motive just as well by transmitting the information he was supposed to have as he would by withholding it.

Another highly questionable aspect of this isolationist-political smear campaign is the effort to make a great martyr out of Thomas E. Dewey. Dewey refused to use alleged information that the administration had broken the Japanese code, it is contended. His forbearance is presented as an act of patriotism so great that his Presidential prospects were sacrificed forthwith. Politicians know, more than anyone else, the flimsy flimflam of such a contention. Had Dewey told the Japanese that the administration had broken their code, he would have brought down upon his head a torrent of censure. After having promised to keep the war out of the campaign, he would have furnished the enemy with the greatest aid and comfort. It would have been political suicide and he and his advisers knew it.

The public, of course, knows who prepared this Nation for victory and it knows also who would have laid the basis for defeat. The louder the detracters of President Roosevelt yammer about Pearl Harbor, the more clearly the public will remember.

## Feeder Cattle Are Too High

EXTENSION OF REMARKS

OF

### HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. HOEVEN. Mr. Speaker, Mr. A. C. Hanson, of Lyon County, in my congressional district, recently wrote an article relating to the high prices of feeder cattle, which appeared in the October 6, 1945, issue of Wallace's Farmer and Iowa Homestead. Mr. Hanson is not only a prominent farmer but he is also a member of the Board of Supervisors of Lyon County, Iowa. His own views and experiences as set out in the article, together with a report on interviews with other northwestern Iowa farmers relating to cattle-feeding prospects, make interesting and informative reading. Under leave to extend my remarks in the RECORD, I include the article which is as follows:

The other day, I was sitting in a commission company office in the Sioux Falls, S. D., stockyards. A cattle feeder friend from near Lester, in my home county of Lyon, walked in. After exchange of greetings, I inquired:

"What are you doing, Bill—looking for feeder cattle?"

"No. I have 50 head of cattle ready to sell," he replied. "As to buying replacements, the way the picture looks to me right now I think I am going to let the other fellow feed the cattle this winter."

At a chance meeting with another feeder from northeast Lyon county, this reply came to my inquiry: "I am waiting awhile to buy any cattle. They are too high right now."

Another feeder near my home town of Inwood (southwest Lyon) placed an order a few weeks ago with a Sioux City commission firm. The other day he called and had the order canceled. He said, "Don't buy unless I call you again."

These opinions expressed by men in different parts of Lyon county seem to be rather typical of a hesitant attitude that prevails among a majority of cattle feeders in northwest Iowa. The reasons are several.

The labor situation is still acute, and some men who have had a hard year want a chance to relax and ease the strain for a few months.

Feed costs are high. The supplies of old corn are above the average of recent years, but at this writing the new crop is still at the mercy of the weather, and at its best cannot make yields anywhere near those of last year.

The price of feeder cattle is still considerably above last year, although most feeders expect lower prices inside of a few weeks, especially on medium to plain cattle.

Two feeders from this area have just returned from a trip into the range areas of Nebraska, Wyoming, and South Dakota. They give an interesting report on the present attitude of the range cattlemen. These range men are all quite aware of the subsidy on killer cattle and are trying to add that to the cost of feeders.

At one cattle sale, these Iowa feeders saw a drove of 3-year-old 1,300-pound steers bid up to $14.15 per hundredweight. The sale was held up a bit while the owner was consulted.

He informed the auctioneers that if the buyers would add the amount of the subsidy (50 cents), he would sell. This made the price $14.65, and the cattle were sold that way.

Thus far, I have referred mainly to opinions that emphasize the negative side of the question whether to feed or not. Not all feeders are pessimistic.

A feeder across the line in Sioux County, Iowa, put in 60 head of 1,000-pound feeders a few weeks ago. He buys medium to plain cattle with weight.

In his opinion, the possibility of a good cattle market in the spring will be better than in December, because reconversion to civilian production will have been accomplished by that time and employment will be higher.

On our farm, we nearly always feed a carload or two of western lambs in the early fall, and delay putting cattle in the feed yard until October or later.

This year, our schedule will be about as usual, except that we are guessing right now that medium quality steers and heifers can be bought at more attractive prices in December or late November.

Our final plans will be influenced by what happens to the corn crop, and perhaps by the date when our son in the Army arrives home.

The cattle-feeding game is fascinating. It seems that once a feeder has turned out a few truckloads of profitably fed cattle that it is hard to resist the temptation to get in again.

For that reason, I predict that some feeders who now say they will not fill their feed lots this year will change their minds, especially if the 1945 corn crop matures.

But on the whole it seems this is a good time to be cautious. Especially does it seem wise to consider feed supplies and avoid overstocking on the grades of cattle that call for a long feeding period.

Those who follow a consistent policy of feeding the best year after year will probably not make any radical change in their programs this year. It does seem, however, that the feeder of medium quality cattle may be in the safest position.

## Compulsory Military Service

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Monday, October 15, 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No Need for Conscription," which was published in the Bottineau (N. Dak.) Courant of March 21, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO NEED FOR CONSCRIPTION

After the war is over, we see no further need for the conscription of young men into the armed forces. We do believe that the United States should maintain a good sized Army and Navy—but we are convinced that all the needed men can be had by voluntary enlistments. Many of the men in the forces now will want to remain there after the war to make it their life profession. Other young men are waiting for the day when they can enlist in the forces, and these two groups will supply enough men for the forces.

Here is what the Presbyterian Tribune of December 1944 has to say:

"As a substitute for universal military training and conscription, a good many otherwise intelligent and socially minded people are attracted, indeed fascinated, by proposals that we should adopt compulsory national service. The argument runs that it would be a marvelous thing for our youth—some would include young women—on becoming 17 or 18 to have a year of work outdoors, have their health defects corrected, be taught how to keep well, learn to mingle with all and sundry, learn to read and write if illiterate or otherwise have educational defects remedied, learn discipline which American youth assertedly knows nothing about, and receive instruction in the principles of democracy and Americanism—all of course at Federal Government expense and under military direction."

Volumes might be written on this fantastic proposal, but the main point can be stated in very few words. In the first place, it is unfortunately true that a good many American young people suffer from the material and spiritual handicaps just mentioned. What to do then? Let them go on growing to young manhood or womanhood thus handicapped? This is to suggest that home, church, school, and local community should abdicate their functions. Surely what we should do is repent of our past neglect and see to it that in the future these institutions which are basic to a democratic and a Christian society do their job.

In the second place, to suggest that in a year of compulsory national service the neglect of our children and youth can be made good is plainly ridiculous. It is safe to say that no educator or psychologist or religious leader in his right mind would ever have made or entertained such a suggestion unless he had in the back of his head the idea of preparedness for another war. If we do want universal military training and conscription, let us settle that issue on its merits as the military men, who for their part don't want what they call Eleanor frills, insist. Let us not be duped by our own fuzzy thinking into adopting military conscription under the guise of national service or trusting to a patent medicine to put our young people on their feet after they have been betrayed by home, church, and school.

## Democracy Is the Golden Rule Applied to Self-Government—Democracy Demands That the Unfortunate Be Built Up

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. DOYLE. Mr. Speaker, by reason of having been granted unanimous consent so to do, I am pleased to have inserted in the CONGRESSIONAL RECORD of this date the splendid editorial from the Hynes-Clearwater Journal, published at Hynes, Los Angeles County, Calif. This prosperous, progressive community is in the Eighteenth Congressional District of California, which I have the honor to represent in this House. It was published in the newspaper above noted under date of Thursday, September 6, 1945, and the author of the editorial is the editor of the publication. The community of Hynes is in the heart of one of the most prosperous, progressive, and patriotic dairy-producing districts in the Nation. And unstintingly this whole area did one of the grandest jobs in the Nation toward the winning of the war.

SELF-GOVERNMENT LESSON

(By W. Kee Maxwell)

If you would see a successful democracy in miniature, seek out a busy corner in a city and watch a traffic cop at work. Here one lone man, by the outstretching of his hand, holds in check the motor cars of the well-to-do and the footsteps of the walking poor. Huge automobiles which might easily run him down halt and tarry for his signal to pass. Mobs of pedestrians who might easily overcome him stand patiently awaiting his word. What is the source of that individual strength to which the multitude bows without murmur or complaint?

He wears a uniform which symbolizes the organized authority of the people. His strength is the common sense of the mass translated into order. And the secret of cheerful acquiescence of the crowd is simply this: That each conserves his own good by conserving the good of all the others.

There is democracy in essence. The basic lesson which every member of any self-governing nation must learn—and practice in all his relations as a citizen—is the lesson of the busy corner and the traffic cop. By acknowledging, in principle and practice, the rights of the other fellow, the citizen makes his own rights safe.

To understand the vital truth of this idea it is only necessary to imagine what chaos would result at the busy corner with the traffic officer killed or driven from his post and the host of pedestrians and motorists each striving by force for his own advantage without regard to others. Confusion and disaster, with safety for none, would be inevitable.

There is an erroneous conception of democracy at large in America today under which certain groups and elements ignore the common good in their zeal for their own selfish interests. They would make the state their particular benefactor and servitor at the expense of other groups and elements. They would sacrifice the general welfare to their own privilege. Smarting under what they choose to regard as injustices, they attain political solidarity for the purpose of enforcing their will through the exercise of their balance of power in elections. Their mode of procedure is both offensive and defensive—to favor those who will serve their interest and undertake the defeat of those who oppose them. Followed to its logical consummation, this procedure would result in dictatorship by a particular group, serving its own ends with the remainder of the people wholly subservient and bearing the financial cost of this favoritism.

The menacing thing to our democracy is that the success or partial success of one group in advancing its interests inspires similar attempts on the part of other groups. With government with blocs gaining the upper hand, government for the greatest good of the greatest number degenerates into a perpetual contest between these blocs to make the state an agent of their own aggrandizement. Subdivision follows division; and the ultimate end is ruin, with violence superseding the orderly practices of democratic government.

The highest ideal of the state as yet conceived is to provide equality of opportunity and equality before the law. And the highest conception of citizenship is that which takes least from the state and gives most to it. To make this distinction clear, it is only necessary to contrast the soldier who gives his all in his country's service with the parasite who preys upon the public treasury.

Democracy does not demand that the fortunate be torn down, but that the unfortunate be built up. Democracy does not ask in behalf of one group at the expense of another group or of the common mass. Democracy, as Theodore Parker said long ago, does not say that I am as good as you, but that you are as good as I am.

The uniformed man at the busy corner is there to serve you, but only as he serves every other citizen. He is there to protect your rights, but only as he protects the rights of the other fellow. If he makes a special concession to you, he lets down the bars for concessions to others—with the certain result of lost authority and general chaos.

Democracy is only the Golden Rule applied to self-government. You can't expect the other fellow to observe his end of it unless you take care of your own.

Mr. Speaker, as the import of this strong, timely editorial so amazingly gets down to where people really live, I desired that a larger circle of Americans have the benefit of its clear and constructive analysis and application to the fundamentals of an enduring democracy.

## Prospects for a Reasonably Sane World Order

EXTENSION OF REMARKS
OF
### HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. BULWINKLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following special feature article by Mr. Ben E. Atkins in the Gazette, of Gastonia, N. C., of October 13, 1945:

The prospects for a reasonably sane world order, taken all in all, look a lot better now than they did even 30 days ago. We've got a long way to travel still, of course. We are just beginning to build the foundations of what we hope will be a durable peace, and we mustn't be impatient.

The attitude of America, more than the attitude of any other nation taken as a whole, is inclined toward impatience and snap judgment. We've got to get away from that.

We can afford to be a little impatient in our personal affairs, or even in our national affairs. We can afford snap judgment in our internal economy, because when mistakes are made we can always start over again and try something else. That's the way our Government has been built, by an honest system of trial and error. When we try something and it doesn't work, we chuck it and start off in another direction. All in all it has worked pretty well in America. We have often rushed in where more cautious nations would have feared to tread. We have suffered a lot of bumps and bruises. We have paid for our mistakes. But we have always managed to come out on top.

But this business of trying to build a democratic and a peaceful world is a far more complicated and a far more dangerous business than that of trying to build a system of Government for a single country.

We are taking the lead, but we are going to have to go easy. Many of the members of the World Security League are simply not going to be rushed into anything. They are going to insist that as many details as possible be sifted out before any one single issue is signed and sealed.

And that will be the best way. That's why we are going to have to check our speed, hold our tempers, and control our innate impatience. No matter how slowly and carefully the delegates go about building the World Security League, mistakes are going to be made. Probably some pretty big ones. Steps are going to have to be retraced. A lot of bloody noses and injured sensibilities are going to have to be salved and bound up before any real coordination among the United Nations is really achieved.

But things do look better.

The Allied commander in Japan is finally getting down to the fundamentals of the Potsdam declaration. The Japanese at last are beginning to realize that they have been defeated and that they are taking orders from their conquerors. The signs point to a true reformation in Japan, or at least a major effort at such a reformation. In that, too, we will be forced to go slowly, trying to show the Japanese mind simply and convincingly what we are trying to do, why we are trying to do it, and why it will be the best thing for them after the reformation has been completed.

Things look better in Germany, particularly since Allied seizure of the great war industries of I. G. Farben. But in Germany, too, we have a slow job.

This reformation business is something altogether new to us, and for that matter to the entire world. Maybe it isn't going to work, but our job is to do everything within our power to try to make it work and to make it stick.

The job of serving as political-moral-economic missionary to millions of people scattered over the face of the earth who don't speak our own language is a terrifying job when you get to thinking about it. And the most important job we have ever undertaken in our history.

Our work seems to be having some effect in places far removed from the zones of occupation.

Things are happening in Fascist-dominated Argentina. Just what they mean is not yet altogether clear, but on the surface the overthrow of the Peron dictatorship and the calling of a national presidential election look like steps in the right direction from the United States point of view. Whether political conditions in Argentina will really improve, none of us yet knows. We must simply wait and see.

In Spain, Fascist-loving Franco is promising his constituents broader civil rights and more personal freedom than they have hitherto enjoyed.

Franco, of course, is a treacherous little squirt, and we can't afford to take him at his word. The chances are that he is making these gestures in an effort to gain some favor with the United Nations Organization, which so far has denied him a seat at the conference table, and which in all likelihood will continue to deny him entrance.

Here, too, we must just wait and see what happens.

The big fly in the ointment just now seems to be the misunderstanding, or rather lack of understanding, between Russia, Britain, and the United States.

I believe, however, that this big fly can and will be fished out in due time.

The encouraging signs, we must admit, are small ones, and widely scattered. But they are encouraging signs nevertheless. And I think you will see them multiply and grow more encouraging as the work of organizing the world for peace and security progresses.

At least we are not moving backward. We are not standing still. We are moving forward, falteringly and gradually though it may be.

B. E. A.

## A Boost From the Home Town for H. R. 3939, To Eradicate Cancer and Polio

EXTENSION OF REMARKS
OF
### HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THURSDAY STUDY CLUB,
*La Crosse, Wis., October 9, 1945.*

Hon. WILLIAM H. STEVENSON,
*United States Congress,*
*Washington, D. C.*

DEAR CONGRESSMAN STEVENSON: Thursday Study Club of La Crosse, Wis., heartily endorses your efforts toward the appropriation of a fund for the prevention, control, and cure of cancer and infantile paralysis.

We are very proud that one of our townsmen has had the foresight to draft and present this outstanding bill before Congress at a time when the attention of Congress is focused toward so many different problems.

We feel that you should be highly commended for your stand on this vital problem. Thursday Study Club pledges its support to you to secure the successful passage of bill H. R. 3939.

Yours very truly,
MRS. GLEE M. HETHERINGTON,
*Secretary.*

## Great Britain Helps Delay Return of American Soldiers

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. PITTENGER. Mr. Speaker, Great Britain is again demonstrating the fact that that country knows how to take care of herself. As a part of that program, vessels now being used to bring soldiers of the United States back from Europe, are being taken back by Prime Minister Clement Attlee's Government, because the British want to use them. As a result there will be a loss of shipping space for at least 125,000 of our soldiers for the next 3 months.

Note the following news item from the Washington Post for Sunday, October 14, 1945:

BRITISH TAKE GIANT LINERS FROM YANKS

LONDON, October 12.—Withdrawal of the *Queen Elizabeth* and the *Aquitania* from the United States ferry service threatened today to prevent thousands of American soldiers in Europe from getting home for Christmas as planned.

It was announced in Commons that the two huge British vessels which have carried more than 91,000 troops across the Atlantic since VE-day under lend-lease arrangement will be returned at once to their Cunard Line owners for the repatriation of British troops.

The British action, which the United States Army indicated was a surprise, came as a jolt to thousands of Americans "sweating it out" for transportation home. It was stated officially that transfer of the two liners would mean a loss of shipping space for at least 125,000 men during the next 3 months.

An Army statement said an unspecified number of American Victory ships were to be traded temporarily to the British for continued use of a third liner, the *Queen Mary*.

SIXTY-FIVE THOUSAND YANKS CAUGHT

The troops scheduled to come home on the *Queen Elizabeth* and *Aquitania* included 80-point men who fought in Europe. There were no guesses as to when 70-point men may get shipping.

British Minister of War Transport Alfred Barnes, announcing the liners' transfer, explained that the surrender of Japan had made the reallocation necessary.

WILL CARRY CANADIANS

It was reported the *Queen Elizabeth* soon would start carrying Canadians homeward and that the *Aquitania* would be used, at least temporarily, to transport Australian soldiers to their homes.

Around Red Cross and officers' clubs the news hit heavily.

Capt. Bill Frishman, Washington, D. C., said he was "tired and mad about the whole business" after waiting 3 weeks for transportation.

A 90-point Eighth Air Force ground crewman, Sgt. Robert Rous, of Baltimore, said he had been alerted for shipment home since July. Now, he declared, "I'm going to get up on a soap box and tell people a thing or two when I get home—if I get home."

AMERICAN PEOPLE SHOULD KNOW GREAT BRITAIN SHARES RESPONSIBILITY FOR DELAY

Mr. Speaker, if there is any paramount reason why our noble ally should take steps to cripple and make impossible the return of our American soldiers from European battlefields, I am sure all of us would like to have the facts. I note in the news items that the orders to withdraw the *Queen Elizabeth* and *Aquitania* from this ferry service caused quite a little surprise among our Army men in Europe. It ought to surprise and shock a lot of our people here who like to do everything for everybody else, and neglect America and America's problems. Frankly, I think this is just another example of cold-blooded, selfish business procedure on the part of Prime Minister Clement Attlee's government. He may be a liberal but in this case there is nothing liberal about the attitude toward the United States or its soldiers who fought to make the world safe for whom?

TRANSFER OF DESTROYERS IN 1940

Memory is sometimes short, but I would like to remind Prime Minister Clement Attlee, of the Labor Government, that back in 1940 Great Britain was desperately in need of boats. It is an ugly fact, but still a fact, that the British Empire had to have help, and needed it right away. President Roosevelt, with customary generosity, made what some people thought was a Christmas present of 50 destroyers owned by the United States Government. These destroyers were built with money raised from the taxpayers of this country, the fathers of sons and wives of husbands who are now in Europe trying to get home after the war is over. Probably Great Britain will be glad to put those destroyers in condition, and as long as she cannot furnish this country with the *Queen Elizabeth* and the *Aquitania* she will return the destroyers in good condition, we can then use those boats to bring back a few of our soldiers who have now been the forgotten men, so far as Great Britain is concerned. This is a happy suggestion for our State Department to work out.

## Federal Labor Relations Policy

EXTENSION OF REMARKS

OF

### HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Monday, October 15, 1945*

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Needed, a Federal Labor Relations Policy," delivered by me over the radio from Philadelphia, Pa., on October 9, 1945. The address deals with Senate bill 1171, the Federal industrial relations bill which the Senator from New Mexico [Mr. HATCH], former Senator Burton, of Ohio, and I introduced.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEEDED: A FEDERAL LABOR RELATIONS POLICY

Production stoppages, due to labor disputes, are slowing down reconversion seriously. At the same time Congress, under considerable pressure from organized labor, is devoting major attention to legislation aimed to cushion the shock of reconversion unemployment by extending unemployment compensation benefits and to set up economic planning for full employment.

If the public welfare demands that the Federal Government seek to achieve postwar full employment opportunities, as I believe it does, then it is only common sense that the Government must be concerned with every factor which interferes seriously with that objective. Widespread stoppages of production due to labor disputes certainly is such an interference.

It is increasingly apparent that present statutes and agencies—the National Labor Relations Board, the War Labor Board, and the Department of Labor Conciliation Service—however strengthened by Presidential directives or requests, are inadequate to handle the situation or prevent the wave of stoppages from growing. What is needed is an adequate, fair, and understandable Federal labor relations policy written into law and applying equally to both parties. In an effort to meet that need, I joined with two other Senators last June to introduce Senate File 1171, the Federal Industrial Relations bill. The other two authors are Senator Carl A. Hatch, of New Mexico, and Senator Harold H. Burton, of Ohio, now Associate Justice of the Supreme Court.

As you perhaps know, the leaders of organized labor are violently, one might almost say hysterically, opposed to the bill. They seem to oppose any legislation in this field, for that matter. Both the AFL and CIO in their publications have blasted S. 1171 almost daily since its introduction. Because they have misrepresented the legislation so completely, I welcome this opportunity to tell you what it would do.

The original drafting was done by a voluntary committee of lawyers who spent more than a year in the task. The committee was headed by Donald R. Richberg, Washington attorney who helped draft the Railway Labor Act and the Norris-LaGuardia Anti-Injunction Act. Collectively, members of the committee had had 200 years of experience in labor relations, representing employer, employees, and Government. With that background they drafted a bill which they believed would adequately protect the great public interest in this field, while at the same time treating both interested parties, labor and management, fairly and impartially.

The bill was revised extensively in a series of conferences with the three Senators before it was introduced. We purposely did not consult either management or labor, who will have their opportunity to be heard in committee, before its introduction. We were generally familiar with their viewpoints, we were concerned primarily with the public interest, and we did not want a bill that was either pro-labor or pro-management.

Three fundamental principles are embodied in the bill. First is that both management and labor, in the public interest, should exhaust all reasonable procedures for peaceful settlement of their controversies before resorting to strike or lockout. Second is that both parties should be made responsible under law for fulfilling collective bargaining contracts which they sign. And third is that neither management, through discrimination, nor a union through a closed shop contract and a closed membership, should be permitted to monopolize job opportunities for any particular group.

The machinery to make these principles effective consists of two Federal boards. A Federal Labor Relations Board of five members appointed by the President and confirmed by the Senate would administer all Federal activities aimed at settlement of labor disputes. An Unfair Labor Practices Tribunal of three members, likewise appointed by the President and confirmed by the Senate, would perform all quasi-judicial functions under the revised Wagner Act. It would determine when either employees or employers had been guilty of unfair practices and take action through the district courts to stop them. The two agencies would utilize the same staff as much as possible and the present conciliation service be under the direction of the Federal Labor Relations Board, so as to unify all these activities. We separated the mediation and quasi-judicial functions of the Government because experience has shown that the same agency which must find one of two parties guilty or not guilty of unfair practices, will not afterward be accepted by the other party as an impartial mediator in a dispute.

Disputes are divided into three main categories and procedures established for handling each. The first category is disputes over representation: where rival unions claim to represent a majority of employees or where the employer questions whether any union has a majority. These would be settled as they now are, by election and certification by the Federal Labor Relations Board.

The second category of disputes is those arising over interpretation or application of an existing collective bargaining agreement or over discipline. No strike or lockout would be permitted over such controversies. If the collective bargaining contract did not provide itself for final arbitration of such disputes, as most good contracts do, the Board would direct both parties to refer the dispute to a Board of Adjustment, consisting of an equal number of members appointed by the union and by the employer with an impartial chairman named by the Board. The decision of this Board of Adjustment would be final and binding on both parties, enforceable in Federal district court.

The Kelsey-Hayes Wheel Co. strike, which grew out of the disciplinary discharge of three employees after a War Labor Board finding that they had beaten up a foreman on the job, and has thrown 50,000 persons out of work, would fall into this category and would be outlawed if S. 1171 became law. A strike or lockout over such a minor issue, where the facts can be easily ascertained and a fair solution found, violates every rule of common sense and we believe should be prohibited.

The third and major category of disputes is those arising over the terms of a proposed collective bargaining contract. More detailed procedures, all proven by experience, are required in such controversies. First it is made the duty of both parties to bargain collectively, and either party must fix a date for a conference within 10 days if one is requested by the other party. If conferences between the parties fail to bring an agreement, either party may request the Federal Board to intervene, or if the Board finds it necessary it may intervene on its own volition. Normally the Board would first send a conciliation commissioner to try to bring the parties together, and if that failed, the Board itself would attempt to mediate the dispute. Conciliation and mediation are simply the efforts of an impartial third party to bring about an agreement between two other parties who are engaged in a controversy. Many times simply by persuading both parties to think twice and giving them a little time to cool off, such efforts succeed.

If mediation failed to settle the dispute within a reasonable time, in most cases not more than 30 or 60 days, that would end the Federal activities in most cases and both parties would be free to take whatever action they pleased. However, if the dispute was in an industry of major importance, say the automobile industry, the Board would try one other step. A special fact-finding commission would be named, either by the Board

or the President, which would have at least 30 and not more than 60 days in which to hold hearings on the dispute and file a report of its findings of fact and recommendations for settlement.

During all of these procedures and for 30 days after the Fact Finding commission had filed its report, both parties to the dispute would be required to maintain the status quo. The union could not strike, and the employer could not lock out his employees or make any change in wages or working conditions without consent of the union or the Board. Once these procedures had been exhausted, both parties would be free to take any action they desired

This requirement, which is the heart of the bill, would be enforced in one or all of three ways. First the Federal Board could seek an injunction in Federal court to restrain a violation, which then would become contempt of court punishable by jail or fine. For that purpose and that only, the Norris-LaGuardia Act prohibiting Federal injunctions in labor disputes is suspended by the bill. The second enforcement method would be through civil suits for damages by either party suffering loss through a violation. Such civil actions are authorized by the bill. The third method is an amendment to the Wagner Act making a violation by either party an unfair labor practice subject to the jurisdiction of the Unfair Labor Practices Tribunal.

In addition to a standard voluntary arbitration section, S. 1171 also provides that where the Federal Board makes a finding that the public health and safety would be endangered by a prolonged stoppage, it may vest the Special Fact Finding Commission with the powers of a Board of Arbitration, its settlement of the dispute to be binding on both parties for not to exceed 2 years and enforceable in Federal court. While this is not a vital part of the bill, I think that again common sense dictates some such provision. In both the threatened oil-workers strike, which would hit at a vital fuel supply, and the elevator operators strike in New York City, we have seen in recent weeks two cases where Government tried to force compulsory arbitration, but on a completely hit-or-miss basis. Let's recognize the clear fact that we cannot permit, and Government will take some action to prevent, a prolonged stoppage of vital supplies or services, and provide a democratic, orderly method of settling the disputes which are inevitable in these industries.

The Federal Board's jurisdiction would be limited to disputes threatening a substantial interruption of interstate commerce. Controversies involving fewer than 20 employees or essentially of a local nature would be left to State jurisdiction. Speedy action is essential in this field, and loading a Federal Board's docket with small, local cases is one sure path to delay.

The third principle of the bill, prohibiting any monopoly of job opportunities, is embodied in a revision of the unfair labor practices of the Wagner Act, making them apply to employees as well as employers, and writing in a new provision on the closed shop. S. 1171 would *not* prohibit a closed-shop contract. Such a contract, entered into voluntarily, would be legal and binding unless and until the Tribunal, after a thorough investigation, found either that the contract was not wanted or approved by a substantial majority of the employees covered by it, or that the union was a closed union, restricting its membership arbitrarily and thereby denying job opportunities to all except a privileged few.

Briefly, that is the bill which labor leadership charges would enslave labor. Actually, it imposes fewer obligations and restraints on unions than does the Railway Labor Act, which certainly has not enslaved the railroad brotherhoods.

The Federal Government, recognizing that the public interest was involved in the employer-employee relationship, has imposed many restraints and obligations on the employer. The Government has protected and encouraged labor's right to organize. Today, labor leaders wield as great economic power as any captain of industry ever boasted. Their actions vitally affect the welfare of millions of people inside and outside their membership. Yet there is nowhere in our Federal statutes any provision requiring these leaders to give the slightest consideration to the impact of their actions on the general public. So far as the law is concerned they are completely unrestrained and irresponsible. Some of them publicly admit their inability to fulfill contracts which they themselves have signed.

That kind of a situation is not democratic, it is not law and order. It is complete chaos, and until it is remedied by legislation, it is futile to even hope to achieve full employment in this country.

If that is also your conclusion, contact your own Congressman and Senators and urge them to support Federal labor-relations legislation.

## Compulsory Military Service

EXTENSION OF REMARKS

OF

### HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Monday, October 15, 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter which appeared in the Progressive, published at Madison, Wis., on the 12th of March last, entitled "Wake Up, America!"

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WAKE UP, AMERICA!

DEAR SIRS: Already in this Congress there have been introduced two bills which would thrust peacetime compulsory military training upon the United States. The bills referred to are H. R. 1306 and S. 701.

These bills are grossly contrary to the principles for which our boys are fighting, bleeding, and dying. When these boys have finished their cadaverous task, they expect to return to the society they were compelled to leave. They also expect to obtain, in the shortest possible time, jobs which will enable them to raise families, to acquire the necessities and luxuries of life in addition to making a definite contribution to society.

The peace, for which these boys are fighting, must be a permanent, durable peace. This is probable only by the complete elimination of those forces, both existing and potential, which are pernicious to this cherished objective. One of those potential forces is the compulsory peacetime conscription proposal.

This pseudo-panacea to protect us from future aggressors would be the primary step toward a third world holocaust, because:

1. It would make America a military despot such as has produced disastrous results in Europe throughout the centuries;

2. It is the dictatorship method for solving unemployment which led this Nation directly to war, and which, if employed in peacetime, will lead us to wreck, ruin, and revolution;

3. It is the wrong education for peace. Our society cannot be improved by compulsory training in the ways of violence;

4. It would grant the state control over personal conscience. This is brazenly exemplified by the imprisonment of more than 4,000 conscientious objectors, who, under the draft law, were specifically exempt from combat service because of religious training and belief. This is another of the many circumventions of the law by the New Deal evaders.

Wake up, America! The time for action is now. We must work ceaselessly to defeat this insidious proposal lest we sell our democratic birthright for a mess of military pottage.

ROBERT C. TUETING.

CINCINNATI, OHIO.

## If Time Is of the Essence Why Not Save It?

REMARKS

OF

### HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. BENNETT of Missouri. Mr. Speaker, in consideration of proposals to streamline Congress and increase the effectiveness of its works, consideration should be given to the amount of time wasted in calling and answering vocally to the roll. This could be accomplished by mechanical means, as it is in some State legislatures, with considerable saving to the taxpayers.

The roll was called 281 times in the last Congress. It takes about 45 minutes to call the roll of 435 names. That means 12,645 minutes were consumed or, putting it another way, 210 hours and 45 minutes. Broken down into 5-hour legislative days that means we sat here 42 days just for roll calling.

What would that saving of 42 legislative days each year mean? Without undertaking to answer the question in complete detail here are a few things to consider.

The CONGRESSIONAL RECORD must be printed each day Congress is in session. The Government Printing Office tells me that it costs an average of $5,000 per day to print the RECORD. For 42 days that would be $210,000. There were 181 days on which the RECORD was printed last year at a cost of $900,000. This cost would be cut almost one-fourth.

The calendar cost $75,000 at the last session, an average of about $415 per day, or $17,388 for 42 days.

There are many other documents, bills, and resolutions which must be printed on those days Congress sits in session. Untold savings could be effected in printing alone.

It is also pertinent to note that we might be able to reduce some of the number of highly paid personnel in the House. We have three reading clerks who call the roll. Two are paid now at a rate of $7,989.96 per year each, and the third gets $5,489.96. We have a tally clerk who is paid $7,989.96, and his assistant gets $5,489.96. The Journal Clerk is paid $7,989.86, and his assistant gets $4,108.60 per year.

Obviously, all of these jobs could not be abolished. We would still need at least two men to read the bills. We

would need a tally clerk and a journal clerk but around $17,000 per year could be saved on salaries paid at present for help which could easily be dispensed with.

Obviously such a proposal as I suggest would require some readjustment in habits so far as the Members are concerned but such is in order. I doubt that 42 legislative days could be saved for it would only be fair to Members in their offices to furnish a 15-minute warning by the bells before a vote. However, the savings which could even then be effected are considerable.

A readjustment which would be required as a byproduct of this development would be that Members would have to be assigned to definite seats in this House. It is about time these hard benches were declared surplus and turned over to some prison or museum specializing in primitive instruments of torture and some decent seats, at least as comfortable as those in the gallery, were provided. If this could be done maybe Members would stay in their seats and the decorum of the House would improve.

My resolution would authorize and direct the Accounts Committee to investigate this matter and upon favorable report empowers the Architect of the Capitol to receive bids, to purchase and install a mechanical or electrical device to record the roll of the House, paying for it out of the contingent fund. This is 1945. The membership of this House is much larger than it was in 1789. Let us adapt ourselves to the requirements of the times. It is in the public interest. Time is of the essence.

## In Honor of Pfc Paul E. Davis

REMARKS

OF

### HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. SCHWABE of Oklahoma. Mr. Speaker, since the cessation of hostilities we have witnessed many celebrations in honor of our illustrious fighting men. Great aggregations have greeted our military leaders, the titular heads of the various branches of our armed forces.

But the war was not won alone by the generals, the admirals, and other top officials of our military organizations. It could not have been won without the heroic and valorous action of our privates. Of course, it takes both officers and privates to win a battle, and many more privates are required than officers to win a war. A proper appraisal of the value of the services would doubtless result in more acclaim and credit being given to privates than to officers.

I have taken this occasion to pay tribute to a great private, Paul E. Davis, of Fairland, Ottawa County, Okla., the first enlisted man to enter Tokyo.

Mr. Speaker, Private First Class Davis served in Troop D, Twelfth Regiment, First Cavalry Division, in the United States Eighth Army. He was wounded during 75 days of bitter fighting against the Japanese in the Luzon campaign in the spring of 1945. Davis served 27 months in the Pacific theater of operations. He participated in the Philippine Islands campaign which resulted in the recapture of Manila by Gen. Douglas MacArthur's forces last February.

Private Davis was born and reared in the neighborhood of Fairland, a prosperous little city of the right name in a rich agricultural section of northeastern Oklahoma, where he attended the public school. He worked on a farm in his native neighborhood until he enlisted soon after Pearl Harbor. He has lived with his maternal grandmother, Mrs. Emma Crotzer, now 82 years old, since infancy. Incidentally, Grandmother Crotzer has eagerly watched and waited for the return of her grandson. She has received many letters from him asking her to "live till I get home." Would that Mrs. Crotzer could be in Washington today with her grandson whose services and achievements we are privileged to honor on this occasion. She would know that her life has not been in vain and that she has given to this country a great heritage, a character and a personality who set out to achieve and has succeeded. I feel that more credit is due to Mrs. Crotzer than to anyone else for exerting the influence over the life of a mere country lad that has developed into a man who is now a national hero. We pay our most respectful homage to this noble woman and her efforts and accomplishment.

Post No. 2688, of the Veterans of Foreign Wars, of Miami, Okla., posted a reward of $1,000 for the first American serviceman to enter Tokyo, and that sum has been paid to Paul E. Davis. In further recognition of this signal feat, the commander in chief of the Veterans of Foreign Wars, on the occasion of his first official call upon the President of the United States, presented Private Davis to the Commander in Chief of the Army and Navy of the United States.

Private Davis has the ambition, as soon as he is released from the service, to continue his agricultural pursuits. We bespeak for him success and happiness. The determination which won for him the honor in his military work should inspire in him that spirit of persistence which will spell success in any line of endeavor.

## Bringing Our Soldiers and Sailors From Overseas Back Home

REMARKS

OF

### HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. SPRINGER. Mr. Speaker, our soldiers and sailors yet in the service and who want to come home are greatly disturbed over the fact that many of our ships, of every kind and type, are being sent back to participate in the Navy Day exhibit, at New York, and are not available for transporting our boys back to the United States. So many of our boys are at the very threshold of securing their discharges, upon their return to our country, but they are advised there is no transportation for them to be returned to the United States. It is a sad commentary for us to behold the rush of our ships to New York for exhibit, on Navy Day, while our boys sit idly by, on some deserted island, wanting to come home—yet there is no available space upon the ships remaining in the service to bring them. Our gallant fighting forces have done their job—they did it well—and it undoubtedly appears to them they are the forgotten men of this war, when our ships available for transport service are sent to New York, from far-flung South Pacific ports, and from the European waters, to participate in an exhibit. I have received many letters from our men still in the service upon this subject. One soldier, now serving on Guam, who is married and has three children, and who has been in the service for almost 4 years, wrote as follows:

> Everyone here is made despondent over the Navy Day deal in the States. There was a notice posted upon the bulletin board regarding that exhibit. It is almost too late now to do anything about it, because we learned last night that 48 ships had left Guam to participate in that big show. We cannot understand that policy, and it is too bad that they would take all of those ships back to the States for that big Navy show when they need all of them here to get the men back home.

Mr. Speaker, there is ample time in which to celebrate Navy Day, or any other day, after our boys have been brought back home. Many other letters have been received by me from our servicemen upon this same subject. Our servicemen want to come home, and those that are not now needed, and many hundreds of thousands of them are not needed for any purpose now, should be provided with transportation immediately so they may be returned to their homes and to their families, their businesses and their jobs. I am unalterably opposed to the celebration of Navy Day, at this time, and I am opposed to any other celebration which will cause ships available for transport duty to be taken out of service, while we still have soldiers and sailors in the service on foreign soil and who are ready to return to the United States. We want to get these boys back home at the earliest possible moment. Yet, under the present plan of the Navy to bring untold hundreds of ships back to the port, at New York, to celebrate Navy Day, there will be many thousands of our boys left on desolate and deserted spots, all over the world, awaiting transportation back home. They will be compelled to remain in those desolate spots for weeks because of this planned exhibit.

Mr. Speaker, I have just read an article from one of our leading newspapers, with a date line of October 8, with the following headline: "Third Fleet ships moving through Canal to Atlantic." The article further related that the vanguard consisted of two carriers, one battleship, two

cruisers, and six destroyers. It took 11 hours for the vanguard of the mighty Third Fleet to pas through the Canal. The entire operation, the Navy said, for the entire Third Fleet, would require some 4 days to pass through the Canal.

I am wondering how many soldiers and sailors, ready for discharge, that mighty fleet could return to our country during a period of several weeks' time? They could bring one group, and return into the South Pacific for others, and untold thousands of homesick and war-torn veterans could be brought back home, while those ships are parked along the Atlantic seaboard for exhibition.

Mr. Speaker, may I say that I am unalterably opposed to such exhibitions, as the Navy Day proposed for this year, while our boys are waiting overseas to be brought back home. Let us first bring our boys back home, and then if the Navy wants to celebrate, let the celebration proceed. However, until our boys are returned home from the battle fronts all over the world, let us refrain from all celebrations and let us use every ship, of every type, to bring our boys back. The boys want to come home, and we want them brought back home at the very earliest moment. When they arrive home, that will be the happiest day of their lifetime, and all America can then celebrate.

## UNRRA

REMARKS

OF

### HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. CARNAHAN. Mr. Speaker, after observing with a congressional committee so many countries in a state of economic, social, political, and spiritual chaos, it was a delight to know that the United Nations had given serious consideration to the relief and rehabilitation problem, a problem which the war intensified and a problem on which future peace and order so heavily depends.

UNRRA was created during the war so that it might recruit and train its personnel, assemble equipment and supplies, and be ready for the tremendous job which it would be expected to increasingly assume as we approached the end of hostilities.

Considering the fact that UNRRA recruited its personnel under very adverse conditions while manpower was being channel into the direct war effort and the fact that supplies and equipment were assembled from a rationed market with a very definite lack of priorities, I commend the organization on its accomplishments. Now that both the European and Pacific wars have ended this necessary competition will be greatly relieved and UNRRA should continue to strengthen and improve its efficiency in helping the millions of cold and hungry victims of the war to find themselves again. The task, though staggering in size, is most worthy and UNRRA now holds the key position of actively teaching by application the democratic concept.

While other ideologies are in the process of expansion throughout the world and some of them by force the United Nations may find that military victory is only an empty illusion if they miss the mark on plans and the execution of those plans for the world of tomorrow. An agency such as UNRRA, which assists people in relieving their adversity, may by so doing inspire the confidence and admiration of the individuals so relieved and fortify them against radical leaders. Free peoples are not continuously cold, hungry, and destitute, and conversely cold, hungry, and destitute peoples are not much impressed with a verbal explanation of freedom.

As we strengthen and support UNRRA we strengthen and support a great movement which is working effectively at the job of spreading the desire for freedom and is thus reducing the power of the appeal of radical organizers. UNRRA has proved itself to be worthy of careful consideration and adequate support.

## Red Cross Aid to Surviving Jews Succeeded Where Others Failed

EXTENSION OF REMARKS

OF

### HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Murray Frank, entitled "Red Cross Aid to Surviving Jews Succeeded Where Others Failed," which appeared in the Jewish Advocate, Boston, Mass., Thursday, October 4, 1945:

RED CROSS AID TO SURVIVING JEWS SUCCEEDED WHERE OTHERS FAILED

(By Murray Frank)

WASHINGTON.—The general policy of Red Cross relief is to distribute supplies on a nonsectarian basis, and let the chips fall where there is the most urgent need for them.

In line with this policy, the American Red Cross has assisted thousands of Jews in Europe, while not undertaking relief programs exclusively for Jews. Thus many Jews who are alive in Europe today have been aided by the Red Cross in their struggle for survival in Nazi-occupied Europe. Thus, many Jews have benefited in recent months since their liberation from the Nazi concentration and slave-labor camps.

Mr. George Korson, foreign editor, and Mr. Melvin A. Glasser, assistant director of civilian relief of the American Red Cross in Washington, have made available to this correspondent interesting reports of recent date depicting in some measure the activities and the extent of assistance rendered to inmates of liberated concentration camps.

In the 10 months between September 1939 and June 1940 the American Red Cross provided about a million dollars' worth of food, clothing, and medical supplies which were distributed to the general population in Poland, including the Jewish population.

After the outbreak of the war in 1939, the International Red Cross succeeded in getting Germany to accord civilian internees the same status and treatment as that given prisoners of war. But attempts to obtain similar status for inhabitants of concentration camps were unsuccessful. The German Government would not even allow representatives of the International Red Cross to visit these camps. But in several instances the joint relief commission of the International Red Cross was given permission to send relief shipments into some of the camps. Thus, Red Cross records relate of medical supplies reaching the Jews of Riga, the Jews in the Theresienstadt ghetto, and in the camps of Westerborg and Vught in the Netherlands.

The basic responsibility for the care of displaced persons and liberated inmates of concentration camps rests with the military authorities, but Red Cross relief activities were coordinated with the supply programs of the Army. Consequently, under the direction of the military authorities, the Red Cross has been extending its assistance in recent months to the people in the concentration camps by organizing medical care and facilities, repatriation services and the distribution of clothing.

FIRST AID AT BERGEN-BELSEN

In the camp at Bergen-Belsen, 12 teams of British Red Cross workers, including doctors, went in immediately after the camp was liberated to work with the inmates, most of whom were Jews. The American Red Cross, working closely with the British Red Cross, sent into Bergen-Belsen 16,000 garments soon after liberation and later followed up with an additional shipment of 100,000 garments, which were distributed to a number of camps throughout the American zone.

American Red Cross staff members were also among the first to visit the Buchenwald camp arriving there only a day after it was liberated. Many thousands of Jews were found among the inmates of this camp. The Red Cross representatives brought with them supplies of cod-liver oil, soap, and other items; and shortly thereafter, large quantities of clothing for the internees reached Buchenwald.

Similarly, the Dachau camp, containing many Jews, was visited by Red Cross workers soon after its liberation and a quick survey of relief needs was made. In the first week of Dachau's liberation, shoes and clothing were brought in from Red Cross stocks found in Hungary. In addition, a large quantity of prisoner-of-war parcels sent by the American Red Cross was discovered in this area, since there had been a number of prisoner-of-war camps there, and these parcels were promptly routed to Dachau and distributed to the liberated internees.

In reading reports by Red Cross field representatives, describing conditions in the camps, I was primarily interested in what was being done for the survivors in the first days and weeks after liberation.

Here is an account, taken from an American Red Cross report, of the first activities at Dachau:

"Immediate arrangements were made for the field supervisor and field representative—of the Red Cross—attached to headquarters to go to Weimar the following morning. The field representative picked up half a ton of soap and cod-liver oil 8 miles north of Frankfort at a German military hospital where they had been uncovered by the American Red Cross. * * * Next morning we drove out to the camp (Dachau) immediately after breakfast, unloaded our supplies. * * *"

BASIC DUTIES

"An American medical unit came in the following morning and set up in the SS hospital to care for the sick. Delousing arrangements were made. The Germans had sabotaged the water supply and the camp had been without water for several days, but water was being brought in in large wagons

and a water-point was being established. Abundant food supplies were being brought in by the Army, but great care was being exercised in gradually increasing the ration because of the prolonged starvation the prisoners had undergone. Representatives of each nationality were chosen and lists made up of internees; arrangements for screening as rapidly as possible were made. * * *

"We went on to the camp hospital. There men lay on pallets on the floor, 12 to 20 in a room. They were as thin as the bodies we had seen stacked up, and seemed scarcely more alive. Yet, when they saw that we were Americans, they lifted their heads and smiled; some even waved. I doubt if many of them will see home again; they are so far gone it seems impossible that they could be brought back to life once more."

Excerpts from a Red Cross report on Buchenwald about a month after liberation, read:

"It was hard to tell where the American Red Cross was needed most but it was obvious that the sick deserved attention immediately. * * * Nearly one-third of the camp were seriously ill—the others could have used hospitalization. * * * There had been only one hospital previous to the arrival of the American Army—mainly erected by prisoners who stole boards and bricks at the risk of their lives to add an ell here, a room there. Officially it had little medicine and such contraband supplies as they managed to acquire were used mainly to save the children, as it was understood that they came first. The hospital was a magnificent monument to the spirit of the prisoners and their will to live, but as a medical institution it was totally inadequate. The Army set aside the barracks formerly occupied by the SS guards as a second hospital, and American medical personnel aided in staffing it. But the new hospital needed beds, mattresses, blankets, linen, bedpans, wash bowls, and almost any other item of equipment you might name. The patients lacked eating utensils, drinking glasses, pajamas, and clothes in which to leave the place. * * *"

RESOURCEFULNESS

"Within a week practically all patients had a bed, mattress, pillow; toweling and sheeting had been acquired, sewing machines were being brought in. So many of these patients had completely shrunken digestive systems that food was a grave problem and the ARC field representatives made daily checks in the kitchen and among patients to report the greatest needs and worst complaints—it took some time to get an edible bread for instance, as there was no yeast in the area and the sour bread was not fit for the well, let alone the ill.

"The 1,000 children had existed, under the SS, solely by virtue of the work they did, as all children over 10 worked from 8 to 16 hours daily in the factories. The prisoners, therefore, purposely falsified the records to make it appear that there were far fewer boys in the camp than was actually the case, and the youngsters spent most of their time in hiding.

"At first (when the Allied armies moved in) it was hard to persuade the youngsters to move from their hideouts, and the buildings were unnaturally quiet for some days after they moved in. They refused to play outdoors and showed little elation over such things as the chocolate ration which the field representatives managed to collect from the soldiers in nearby camps. Their new clothing, which field representatives had made in clothing factories which they started, made a great impression upon them. The smart little suits and caps which replaced the prison stripes worked a miracle. Two weeks after they had moved to their new home, outdoor games were going on full tilt in front of their buildings and you could hardly hear yourself think in their halls. The children's program has been an unqualified success.

"The prison garb was a great deterrent to the morale of the well prisoners and so the field representative assigned to this job * * * started a series of clothing factories, drawing on the large stores of cloth, using displaced persons as tailors in charge of requisitioned German workers. The one American Red Cross trailer worked overtime carting shirts and trousers back to camp. The field representative kept an anxious eye out for thread, needles and buttons wherever they went. At first it was a race to see whether there would be enough clothing for the departing groups, but after the factories got into their stride, there was plenty for camp and for the dependent Buchenwald colonies in the TB home and similar places. * * *

"About a month from the date that American Red Cross arrived on the scene many of the prisoners began leaving. The hospital patients have decreased to 2,500 and many of these will be able to leave soon. The amazing thing is that, after years of malnutrition, mistreatment, and a corresponding loss of health and confidence, they could still hold a May Day celebration that included a Coney Island booth with balls to throw at the heads of Hitler, Goering, Goebbels, etc., and a barker who was worthy of any sideshow."

Recovery, however, is still a long way off for the many who are broken in health and spirit. The majority refuse to return to their old homes in eastern Europe to live amidst the mass graveyards of their closest ones, the ruins of their homes, and the animosity of the local population which in certain areas seems to be carrying forth the policy of extermination of the Jews where the Nazis have left off.

Solution of the problem of these thousands will require intensive help, not alone from Jewish groups and organizations but also from national and international governmental agencies, such as the Red Cross, UNRRA, and the Intergovernmental Committee on Refugees.

## Working Together for the Common Good

EXTENSION OF REMARKS
OF
### HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the forty-fifth annual convention of the Rhode Island State branch of the American Federation of Labor, at the Narragansett Hotel, Providence, R. I., and broadcast over Station WEAN, Sunday, October 7, 1945:

My friends, I want to talk to you about an expression which is making the rounds whenever the talk turns to the subject of industrial relations. It is, "Working together for the common good." You have read it, I know—you have heard it from the lips of public speakers and radio commentators. It has been presented as the cure for all our ills—it has been described as the answer to our present-day problem of industrial unrest.

While it might appear to some to be overplayed—I want to affirm to you, my friends, that I believe it is the only way out for all Americans. Working together for the common good will set us on a path toward a richer and happier life—toward the enjoyment by all of the many great benefits the future holds in store.

It would be folly for me to attempt to skirt the important issues of the hour. It would be cowardly for me to stand here and preach platitudes when I know, and you know, the screaming thought of the moment is how in God's name are we going to win for ourselves and our children the peace and freedom and prosperity for which we hunger.

Daily the press carries denunciations of American labor unions for their dastardly activities in scuttling reconversion. Our own newspaper denounces even the right to strike and pleads for the repeal of the Smith-Connally Act, the legislation for which it stumped so mightily when it thought trade unions were about to be hung, drawn, and quartered.

Nowhere in the pages of this paper will you find one column, one paragraph, one word which would intimate that in the arena of economic conflict perhaps the man at the machine has a cause which should be heard.

Never a whisper for the man and woman who made the tools of war and who still must provide meat and bread from a steadily dwindling pay envelope. Sarcastically, he is pushed aside. His losses are his own, the editor enchants, and his losses are of far less consequence than the infinitely greater losses that industry faces.

That is the bond of cooperation we have served up to us by those who pompously pretend a paternal interest in our future.

Working together for the common good calls for decency in the treatment of the problems of all of us. It is unjust to refer deliberately to the interests of the workingman as opposed to the interests of the Nation as a whole. Are not the working men and women of the country the parents who gave the men who fought and died—the men whose blood has saturated the beaches of Europe and Asia. The sacrifices of these heroes will never be forgotten. Yet these great economic apostles who would put father against son—and family against family—in their mad effort to paint labor as an enemy of the veteran—they forget—or they never knew—that the anguish and heartache borne by the mother at home was often a far greater pain than that suffered by the wounded soldier on the battlefield. And that mother, in her intense happiness at the return of her soldier son, is not permitted to forget for a moment the daily struggle to make both ends meet.

The unrest which exists throughout the country today should not be, were it not for those who see in the transition from war to peace a glowing opportunity to cement their personal interests—even though it be at the sacrifice of the common good.

Why is there unrest? Because working men and women are chiselers, some say. The man who is raising a family—paying rent, buying clothes, and fighting prices, in order to keep food in the ice box—he is branded a scoundrel and a humbug because he seeks work at a trade which he has spent a lifetime in learning. A man who has a family to feed cannot wax enthusiastic over a job at 40 cents an hour. Nor can a skilled mechanic give humble thanks for a caretaker's job.

Why has the present unrest been permitted to continue—slowing the flood of production to a mere trickle at a time when the world thirsts for the products of our factories? It continues because there are still employers who sit like a god on an Olympus of profits, growing angry as they see far below them on a plane of mechanized monotony, the distant employees, like rebellious children who refuse to offer sacrifice.

They'll say I'm a demagog for talking thus, but look at the record.

My office was swamped with mail from industrialists who bitterly condemned the suggestion that the Federal Government should provide assistance by way of unemployment compensation during the transition period.

Why did they protest? You know—as well as the press knows—if we provide a family man with $25 a week while he is out of work—through no fault of his own—then industrialists will be compelled to pay him a decent living wage for his gainful toil.

But do they honestly declare that to be the reason for their blind opposition? Certainly not. They profess a paternal interest in us. They declare we are not worthy of such consideration. The working men and women of America—the very men and women who contributed so much toward compiling the greatest production record in history—who gave their sons to America—who bought bonds, who paid taxes, who went without in order to feed our Allies, and who are even yet asked to give more; these men and women are branded sluggards and dolts; they would rather live in the gutter like dogs on $25 a week than live in the sun like men on a decent living wage—gained from honest labor.

They are told their Government must not help them, for thus lies the road to dictatorship. When they turn to their Government for consideration, the Government which organized and regimented their lives during the war, they are met with a sneer and told to go fight the battle of economic rivalry on whatever crumbs they can garner—their Government refuses to entertain their plea.

Some profess this is as it should be. Workingmen should be denied a hearing. They should be dragooned into whatever occupation their overseers shall determine. This in America after a war which was fought—we believed—to provide for all peoples a new conception—a new understanding—of the brotherhood of man.

And what about the other side of the picture? How did the Federal Government treat the problems of industry? You remember this when you read in the daily paper the bitter denunciations of a Federal Government that would help the workingman. When you are told that any form of assistance from the Federal Government means the end of democracy and the dragooning of all men in our society, you recall that it was not so many years ago that industry in this country held your Government by the throat and wrung from it every last ounce of assistance that could be had before it was willing to even discuss cooperation in the manufacture of the needed tools for defense.

Industry has had its profits during the war. The record discloses that never in history has there been a more profitable period than that through which we have just passed. Industrial profits, even after taxes, have been the highest of all time. And now taxes are to be reduced in order to add substantially to the tax credit allowed industry out of war contracts—an allowance to pay the costs of reconversion.

But was that sufficient assistance from government? Not by a jugful.

In June of 1944 the Federal Government tendered more substantial help to private industry—to tide over the perils to be faced in the days of reconversion. The Federal Government insured adequate compensation in the termination of war contracts; it included expenses for removing and storing materials; profits were allowed on uncompleted portions of war contracts; interim financing was provided for plus interest on all settlement claims.

This for industry is eminently fair, and does not threaten democracy, despite the fact that it provides hand-outs from the Federal Government. But let someone advocate something decent for the man who labors and is out of a job through war-contract terminations, and all the skies go blood red, democracy shakes to her very foundations, and the Republic staggers toward utter ruin and destruction.

Yes, cooperation for the common good is what is needed. Not, what we have today—on the one hand excuses and justifications for economic royalists who are just as reactionary today as they were in 1929 when their greed brought their house of cards tumbling around their ears—and on the other hand nothing but ridicule and vilification for the member of a union who seeks to fight the battle for survival with no weapon in his arsenal except the right to strike. That weapon he is bluntly told, he must not use—because it is more important that we have luxuries—than bread and milk.

The American people know what it wants. Some call it peace of mind. Some call it by various names. Some may be hard pressed to put their tongue to any single definition. But down in your heart of hearts you know that the backbone of what we call the American way of life is the American home. That little piece of this earth in which is concentrated all the hopes and dreams of the American man and woman.

There are just two things that go to make that home a success—a genuine respect for God—and economic security. Destroy either and you destroy the American home. Then you can really begin to prepare for the destruction of our society which has been promised every time labor unions have taken up the cudgels to fight for that security.

Cooperation for the common good is more than desirable—it is vital. Those who would serve their country well can be about the job by putting an end to their generation of class hatred and bigotry—and fostering in its place a genuine feeling of working together to gain the common goal.

During recent years labor unions have come of age. They have grown to maturity and they will not be cast into the discard. They are a factor in American industrial life and intelligent manufacturers and businessmen recognize that fact.

I have always insisted that with every right gained by labor there has been a corresponding responsibility. I still maintain that position. I insist the labor unions must shoulder the responsibilities that go with their newly won position. They must make a genuine contribution to the ordering of American life if they are to survive. But I also maintain you can't hold a man against the wall by the throat and lecture to him about his duties to society.

American industry must recognize that it also has responsibilities to society as well as the rights which it so loudly declaims at every opportunity. American industry has a social responsibility to the men who produce the products from which profits are derived—and to the merchants and businessmen who must depend on that producer for their livelihood. The piling up of huge profits is no longer the be-all and end-all of industrial operations.

Industry stands to gain most, in the long run, by full employment at decent wages. Full employment will produce an expanding economy wherein all can enjoy the outpourings of our tremendous industrial empire.

Let those who preach the cause of industry—who seek for industry the power of life and death over our economy—think for a momen on the swinging pendulum to which they like to refer. Let them look at events throughout the world—look at the day-to-day picture of developments at home. Those who plead for the protection of private enterprise—and let me say labor unions are well in the forefront among those who want private enterprise to thrive and flourish—those who wish to see American industry function free from all controls, save those which are dictated by an honest conscience—they can best serve their cause by insisting that industry shoulder its responsibilities and begin to pull its part of the load in this democracy of ours.

If industry will do that, then industry in America shall have the powerful voice in the shaping of its own destiny. American industry can lead us to even greater heights than we have yet been able to attain.

But if industry, in its blind selfishness, shall refuse to recognize its proper obligations to society, then other hands will seize the reins—others will determine the destiny of private enterprise.

The working men and women of America seek economic security. Their program is clear. It is positive. Members of labor unions cannot enjoy that security alone. It must—it shall—benefit all.

Industry has the opportunity to cooperate for the common good. Its cooperation will guarantee its survival.

It is cooperation or chaos.

## Opium Drive Efforts Are Failure

EXTENSION OF REMARKS

OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ray Tucker in the Hibbing (Minn.) Daily Tribune of Monday, October 1, 1945:

OPIUM-DRIVE EFFORTS ARE FAILURE

(By Ray Tucker)

Washington officials privately report an amazing lack of progress in their almost single-handed crusade to stamp out the world-wide opium evil as a consequence of a conflict involving those lands where production of the drug is a major source of revenue. Save for the Chinese, our allies and former enemies have shown themselves to be most uncooperative.

Britain and the Netherlands, for instance, proclaimed that they would abolish the trade after they had recaptured their possessions in the Far East and the Southwestern Pacific. But England refused to close 6,000 opium shops in India during American troops' presence in that country, despite repeated requests by our Army officials.

London has reneged on her promise to wipe out the business in recaptured Burma, with the result that our State Department has forwarded several sharp notes reminding her of past pledges.

The fate of the Judd resolution, adopted by Congress, which proposed that opium-producing nations restrict the crop to the minimum required for medical and scientific purposes, is illuminating. It was proposed by Representative WALTER H. JUDD, of Minnesota, a former medical missionary in the Far East, and was wholeheartedly approved by the men on Capitol Hill.

Copies of the declaration, which was approved by Congress in July of 1944, were transmitted to the Governments of Great Britain (on behalf of India and Burma), Iran, Afghanistan, Russia, Turkey, Yugoslavia, China, and Mexico.

The only nation which agreed to carry out the proposal to ban the growth of opium entirely was Afghanistan.

The United States has waged a 40-year war at The Hague and Geneva for elimination of the illicit traffic. Our immediate concern is selfish as well as humanitarian. The global conflict, which saw our soldiers serving in many strange lands, has brought the problem right to our doorstep.

Although few of our men succumbed to the opium habit in the Far East, Army files list numerous incidents of a tragic nature, mostly in India. But the great fear is that returning soldiers and our occupation forces may be subjected to temptation unless their access to the demoralizing drug is prevented by international cooperation.

Every great war since the Crimean, when opiates were first used for medical purposes on a large scale, has witnessed the spread of this evil among demobilized and civilian populations. There is also the danger that smuggling of the stuff into this country will be attempted in a big way unless world-wide controls are established.

The Japs utilized opium in their conquered countries as a weapon. Although they had banned the trade on the home islands because of its bad effect on national vigor and life, they propagandized the use of opium among temporarily enslaved subjects in order to weaken their powers of resistance. It is now estimated that there are at least 32,000,000 addicts in the regions which they overran in the months after Pearl Harbor.

Tokyo Rose, however, blamed the British for this abomination. In a December 2, 1944, radio address, recorded by American monitors, she recalled that England had foisted the drug on China for the sake of revenue, even fighting the famous Opium War to gain her ends. Then Tokyo Rose went on to say:

"Japan suppresses this trade. England perpetuates it. I ask you—which is the enlightened nation? Which is the Christian nation? Which nation seek to benefit the peoples of the Far East?"

The United States, having failed to persuade other major nations to join us in the movement to stamp out the opium evil, intends to use its military power and occupation forces to this end.

Narcotic Commissioner Harry J. Anslinger has lectured at all the schools for training of our civilian governors and our military overlords. He has given them the history of the drug problem in the territory which they will control. Based on Mr. Anslinger's experience and knowledge, the War Department has issued the following directive on this subject:

"It will be the policy of all American expeditionary forces under American command, immediately upon the occupation of a part or the whole of any of these territories, to seize all narcotic drugs intended for other than medical and scientific purposes which they may discover, and to close existing opium monopolies, opium shops, and dens."

Unfortunately, United States troops will not exercise authority in the blackest spots—Iran, Burma, India, Indochina, and Macao, a Portuguese island off the coast of China. All we can do is to set an example for our allies and former enemies.

## Assurance of a Lasting World Peace

EXTENSION OF REMARKS

OF

### HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a radio talk which I delivered yesterday with relation to my bill authorizing our representative on the Security Council to promptly use our armed forces to suppress any breach of the peace, when such action is deemed necessary by other members of the Security Council and has the approval of the President of the United States:

Ladies and gentlemen, I want to talk this afternoon about a resolution which I introduced in the House of Representatives on Thursday. If my resolution is adopted, or if its provisions are adopted in other legislation, I shall feel that our district will have helped vitally toward making the United Nations Charter work and so assure a lasting world peace.

I think that we all feel a measure of security because the groundwork for peace was started during the terrible days when victory was far off, when victory was, indeed, doubtful. I think we all feel a deep pride in the courage that was displayed by peace-loving nations who were then fighting for their very existence, but who believed it important that their best talents be put to work on the structure of international good will. That work has been going on since August of 1942 when the Atlantic Charter was declared. It may be many years before we really see our hopes and aspirations bearing fruit. We all realize that there will be much give and take, much compromise, many heart-breaking hours of disappointment and frustration. But we realize, too, that a dogged persistence at the monumental task to which we have set ourselves will and must pay dividends. We dare not give up, ever. If we are set back at one turn, we must go back onto the course and try again, try other plans, but keep going.

We have learned that peace is not a static thing. Once achieved it will not flourish by itself. It must be constantly nurtured, constantly coaxed. No man of good will may relax on this job.

The resolution I just introduced is similar to one I presented to the Congress last March. Briefly, it authorizes our representative on the Security Council to immediately call out our armed forces when our leading allies deem it necessary, in order to stop at the outset any attempt by any nation against another which threatens the peace of the world. In such an event, our armed forces would act as a riot or police squad. A comparison would be the responsibility of the peace organization in any city. A quarrel may break out in a neighborhood. It could spread to a riot if the police were compelled to seek the consent of the city council before they could intervene.

It is all right for us to talk now and say that Japan could have been and should have been stopped in Manchuria. Yes, America was ready then, but there was no international organization of which we were a part which was ready to take the necessary drastic measures. The Ethiopian invasion could have been halted. But again, we—and when I say "We," I mean the democratic nations of the world—did not have the courage of our conviction that the Ethiopian war should have been stopped in the talking stage. We had plenty of warning. In fact, the invasion was postponed for months on account of the rainy season.

We could have stopped Hitler at Austria. We could have stopped him at Munich. We could have stopped Japan in China at the outset, but we had neither the international organization, nor the international force, nor the international courage to stop the murder. Not until it became slaughter did our righteous wrath break the bonds of our isolation and compel us to take our proper role in attempting to restore decency to the world.

Atolls and hills, islands and villages we hardly knew existed, whose names even now are unpronounceable to many of us, places far away from our familiar surroundings, have been stamped on American history with the blood and the limbs and the bodies of our young men.

To be sure, had we been in a position to have taken the necessary police action during the several years which preceded Pearl Harbor, and assuming that the police action would have prevented this war, we would have lost men. But we would not have ruined an entire generation.

In the years to come, many a family will wonder whether it would not have been better for their soldier to have been killed in battle than to have come back a wreck of humanity unable to piece himself together.

But today I do not want to dwell on the past nor on the fearful incidents that will come from the past. We have a job to do and we must keep our minds and our thoughts and our hearts on the future, determined that in every way possible we will prevent war from now on.

During my campaign for reelection a year ago, I stated my conviction that the resolution I have introduced must be adopted as a means to prevent another war. Many people had written and consulted with me urging that I give this measure my advocacy. Last March I introduced a preliminary resolution. I am frank to admit that my resolution was vague in the specific details as to how the goal could be reached. But today we know definitely what we want.

In April our delegates met with those of 50 other nations at San Francisco to work out and draw up the provisions of the United Nations Charter. Two months later the United Nations adjourned their conference, presenting to the world a document which is forming the basis of an international organization—an organization which, if properly directed, will be the structure of good cultural, social, and economic relations between all the members of the community of nations, with the ultimate result of lasting harmony and understanding.

The Charter has 111 articles. In order to make the Charter a living document, special action must be taken to implement most of its provisions. In our democracy legislation will have to be enacted by the Congress to implement many of them. In that way the Charter will, time and time again, be given back to the people of this country through their representatives in Congress for study.

My resolution deals specifically with articles 42 and 43 of the Charter. Article 42 definitely calls for the use of "air, sea, or land forces as may be necessary to maintain or restore international peace and security." Such action would be taken only when the Security Council decided that measures short of the use of armed forces were not adequate to meet a threatening situation effectively. We must not wait for Congress to debate—and then vote.

But under no circumstances may any action, under the requirements of my resolution, be construed as an act of war, nor may any such action be construed as in any way abrogating or altering the constitutional right of the Congress of the United States to declare war.

I repeat that measures taken under my resolution by our representative must be construed merely as preventative measures, in the nature of police action, which is deemed necessary to keep the civil peace. We want to prevent immediately aggravations that will lead to war between any two nations, because we have learned that war between two nations does lead to war between many nations.

My resolution requires that our representative must at all times be in constant touch with the President and act under his instructions. The President must immediately apprise the Congress of any measures or actions taken in accordance with my resolution for the furthering of the agreements we make under the provisions of articles 42 and 43 of the Charter.

Some people tell me that the atomic bomb has changed things so that the mere use of our armed forces will not allay war, because a nation or a part of it can be wiped out by an aggressor before we could take the necessary steps. My answer to them is that we must remember that our representative on the Security Council and his aides, working in conjunction with the representatives of other nations and their aides, will at all times be wise to what is going on in other countries so that we and they will be forewarned and know in advance what warlike volcanoes are likely to be erupted. That is

the great advantage in our being an active participant in a world organization.

Second, we must proceed on the assumption that the atomic bomb will be outlawed just as poison gas was outlawed. In any event, an international police organization is imperative, and I wish to repeat the provision of article 42 of the Charter, which states that the use of air, sea, or land forces, as may be necessary, shall be used to maintain or restore international peace and security. We have to be prepared immediately for any incident that may occur. There must be no question of our constitutional right. In numerous instances in the past, our President has intervened with armed force, but always he has been subject to severe criticism and the question as to whether he had the constitutional authority arose. It is high time that we put an end to that doubt, so that the entire world will henceforth know that we are acting in accordance with the will of the American people.

We must always remember with pride that the United States led in creating the Security Council. In working out the provisions of the Charter, we emphasized the importance of quick action by the Big Five in order to be able to solve problems and make decisions speedily. The purpose of my resolution confirms the stand we took at San Francisco in that regard.

This legislation would not be needed by our Allied Nations. Their government set-up is different. But we, a democracy at all times, have a President who is elected by the people every 4 years and always accountable to them. Our representative on the Security Council merely carries out his considered judgment and his decisions which are reached after his constant consultation with the elected and appointed leaders of our Government.

In the keeping of the peace, to my mind, the obligations which the leading Allied Nations assume under the Charter provisions which call for an international police force, are paramount. No world war ever started as a world war. It is the small war that should be put down and then it does not grow into a world war.

The passage of my bill will declare to the world that we mean what we say when we announce our unalterable determination that our every power will be used to prevent another war of whatever size or compass. It will declare to the world that we have moral strength behind the leadership we displayed in pointing the path for others to follow us in developing a world organization wherein the family of nations may work together as our United States do. The sooner this resolution is adopted, the better. Now is the time, now when our people are confused and worried over the apparent frustration of our initial steps to reach complete harmony with our allies in working out the peace.

In a nutshell, ladies and gentlemen, the purpose of my resolution is to put out the incipient fires of war before they get started.

## Moral and Spiritual Recovery From War

EXTENSION OF REMARKS

OF

### HON. CHESTER H. GROSS

OF FENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Herbert Hoover entitled "Moral and Spiritual Recovery From War," at the seventy-fifth anniversary of Wilson College, Chambersburg, Pa.:

We have ended a bloody and horrible era of history. It has been a war in which the enslavement, the starvation, and killing of women, children, and civilian men have returned to the levels which we thought had gone by a thousand years ago.

America has emerged as the most powerful of nations if we wish to use that power. In any event, we now have the opportunity to give leadership in a new era for humanity. What the distant future of this new era will be depends much upon our institutions of higher learning. They must mold the leadership of the Nation.

But beyond this the war has imposed upon you who are enjoying the privileges of this institution, and all the men and women of our colleges, an immediate responsibility to the American people such as you have never hitherto known.

We hear much about the reconversion of economic life from war to peace. We hear little about reconversion of our intellectual, moral, and spiritual life from the shock of war to a life of peace. Yet that is the first necessity if civilization itself is to recover.

Surely if the new era upon which we enter is to be an era of progress it must rest upon the rebirth of truth and justice and tolerance. It must rest upon intellectual and spiritual freedom and upon a live public sensitiveness to wrong and a resentment of brutality. The redemption of mankind will depend upon those who can give intellectual, moral, and spiritual leadership in these immediate years.

To indicate how much reconversion we need in this field we should frankly examine some examples of the degeneration of our ideals during this war. Such an appraisal will not be popular with those whose war emotions still drown their reason, although I shall speak with restraint. Yet facing these facts is the first step to redemption. And now is the time to face them.

#### THE DEGRADATION OF TRUTH

Let us examine what has happened to truth. It is the first fatality of any war. And total war results in the mass slaughter of truth. Propaganda is one of the weapons of war. And propaganda is at best but half truth. It tells only one side. Its justification is that strategy requires that the enemy be misled. Morale at home in war also requires a boost of spirit by suppression of some things and emphasis on others. War controls are used to cover up blunders and failures. Another taint of untruth still hangs heavy in the air. One of Lenin's principles of propaganda was to confuse vocabularies. At one time America had simple and well-understood expressions, such as self-government, independence of nations, democracy, personal freedom, and liberalism. The war leaves us with these phrases stuffed with perversions of truth.

Exploitation of emotion, regimentation of the press and confusion are not operations in pure intellectual honesty. And these practices leave an imprint of the usefulness of lies. The consequence is that the habit of the war-perfected skills of government propaganda are carried over into peace. There is no national permanence in falsehood. There will be no lasting integrity in citizens unless there be intellectual honesty in government.

#### THE DEGENERATION OF JUSTICE

The war has temporarily injured something in our ideals of justice. Our righteous indignations at the crimes which brought this war and the brutalities of the enemy have clouded our vision of justice.

Justice demands that the men responsible for this must be punished. It requires that the military castes and their weapons be destroyed and be kept destroyed.

But justice also requires that we do not visit on the children of millions of Germans and Japanese the sins of their fathers. Nor can we justly indict and punish 200,000,000 people. Vengeance and revenge are not justice. Measures which reduce the economic life of coming generations to the low levels of an agricultural state are neither justice nor good policy. That will create gigantic cesspools of hate, poverty, and conspiracy against the world. There is no such thing as a "hard peace" or a "soft peace." It must be a just peace if we are to restore justice in the world. And without justice there is no peace.

#### THE GROWTH OF BRUTALITY

We have lost something in our sensitiveness to brutality. For instance, before the war we protested in deep indignation the bombing of children, women, and civilian men by the Japanese at Nanking, the Russians at Helsinki, the Germans at Warsaw and London. We said war must be confined to clashes of armed men, not the killing of civilians. Yet did we not wind up the war by killing tens of thousands of women and children at Hiroshima and Nagasaki? Even if we grant that it was necessary, it is not a matter to exult over.

Thousands of people are still being committed to concentration camps in eastern Europe without a semblance of justice or compassion. Under the name of reparations men are being seized, and prisoners are being worked under conditions reminiscent of Roman slavery. Yet we have become so habituated to brutality that we are tolerating it with little protest.

#### THE DEGENERATION OF FREEDOM

We have lost something of our ideals of freedom. We went into the war under the persuasion of such ideas as the "four freedoms" and the Atlantic Charter. This was to be our second and last crusade to free the world from domination, from despotism, from imperialism, from brutality, from fear. Our banners have always proclaimed the freedom and the rights of nations and of men.

Now we find hundreds of millions of human beings breathe less independence, less liberty, less freedom from fear than before we started on this crusade. Their successful rescue at that time was the justification of our first crusade. Can we honestly say that we have not surrendered these peoples on the altar of appeasement?

#### THE LOSS OF TRAINED MINDS AND SKILLS

The war has brought us a loss in our intellectual life from another direction. In our lists of dead are a multitude who would have given intellectual leadership to our people. Of those who survived, the draft and diversion to war have cost us the equivalent of six annual crops of young men trained in the professions and the arts. I regret to say that, after the interruptions of war, too small a part of them are returning to colleges for training. Worst of all, by continuing the draft of boys between 18 and 21 since the war has ended we are destroying still another crop. There will sometime be a shortage in scientists, teachers, doctors, engineers, lawyers, and our leaders in the humanities. It is not even intelligent of our military forces to continue depriving our future defense of these skills.

#### OTHER DEGENERATIONS

I will not dwell on more examples of our moral, spiritual, and intellectual losses. I could rail against the rise of nationalistic and group selfishness. I could bewail the decrease of compassion which distinguishes christianity. I could deplore the growth of intolerance. I could expand upon the impairment of the whole cultural structure of the world. I could emphasize the loss of faith in our American system of life.

However, these degenerations in ideals and standards, this insensitiveness to wrong are common to all wars. We have recovered from them before and we can recover from them again if we have wisdom and courage.

The immediate danger to the world is a sense of frustration in America at the failure of our crusade for freedom and our continued moral and spiritual losses from the war. For from frustration can come bitter isolationism.

THE WAR IS NOT ALL LOSS

And do not get the idea that I am saying the consequences of the war are all bad. The war involved questions of national defense. We made important scientific discoveries, especially in the manipulation of the atom. The heroic deeds of America's sons and daughters have added to the glory of the Nation. They have enriched our traditions of valor. The war resulted in the extirpation of three of the festering sores of military aggression in the world. We have a start at world cooperation to at least maintain military peace.

But I am not here discussing our world situation. I am concerned with the recovery of our own American intellectual and moral and spiritual standards from their war degeneration.

THE PART OF OUR EDUCATIONAL INSTITUTIONS

Some one may say that for regeneration of moral and spiritual ideals we should again return to the Sermon on the Mount. That is right, but the responsibility for the idealism of America does not rest alone on the Church. It rests also upon our institutions of higher learning, for such institutions have loyalty to standards as vital as to patriotism itself. They also have the responsibility to proclaim truth and tolerance, to insist upon justice, to awaken a sensitiveness to wrong, to selfishness, to brutality.

Indeed, without these values, there can be no successful reconversion of even the economic world from war to peace. Adam Smith taught that all material wealth comes from the earth with its increment of value from labor and skill. But he mostly overlooked the most important asset of nations without which no amount of soil or mines or labor can produce lasting wealth. That indispensable asset is moral and spiritual; it is integrity, justice and a willingness to unselfish cooperation of its citizens.

LEADERSHIP

It is a commonplace to say that in this complex modern civilization no nation can survive without leadership. And by leadership I do not speak of public life alone. We must have leadership in every branch of life from the shop foreman to the President. We must have leadership among the neighbors and in the home.

One of the riches of American life is the vast reservoir of leadership in the people. But leaders are not found like queen bees. Neither does heredity produce them and certainly bureaucracy does not do so. It is our educational system rooted in the whole people upon which we must depend to develop leaders. That is, the mechanism of free men through which youngsters with qualities of mind and character are promoted from the whole people and trained for leadership. From here must come the constant stream of young men and women who will refresh our ideals.

No doubt there are men and women who rise to leadership without the full help of our colleges. But our national supply would be poor indeed if we had to depend upon this method.

But an intangible corruption has come into our concepts of leadership during the past few years. It is dinned into us that this is the century of the common man; that he is going to do this and demand that. The idea seems to be that common man has come into his own at last. Certainly he is a good vote-getting attachment.

Thus we have developed a cult of the common man. I have not been able to find any definition of who this common man is. Most American men, and especially women, will fight if called common. Likewise, in humility, we refer to ourselves as made from common clay, but we get mad when anyone says our feet are made of clay.

However, whoever this political common man is, I want him to have all the unique benefits of the American way of life, including full opportunity to rise to leadership. But if we are to have leadership in government, in science, in education, in the professions, and in the home, we must find and train some uncommon men and women.

The only seriously objectionable part of this deification of the common man is the implication that mediocrity is an ideal, that the uncommon man is to be discredited or discarded.

Let us remember that the great advances have not been brought about by mediocre men and women. Rather they were brought about by distinctly uncommon men and women with vital sparks of leadership—men and women like St. Francis of Assisi, and Florence Nightingale, and Abraham Lincoln. Many of these great leaders were, it is true, of humble origin, but that was not their greatness.

The most gigantic experiment of this cult of all history was the dictatorship of the proletariat in Russia. It is from the fumes of this cauldron that we mostly get these ideas. But one of the humors of sociology—if there is humor in it—is that the most recent phase of the revolution in Russia is a frantic search for the uncommon man. And he is given privileges and payment relatively to other citizens far more than America offers today.

There is no identity whatever between mediocrity and popular government—although that is what many of our bubble blowers are trying to put over on the American people.

The essence of our American system is that the best are to be selected for public responsibility and public service. It is also the essence of our economic life, our spiritual life, our educational institutions.

We have a recent and powerful example. In the command of our military forces and our scientific forces during the war we searched and found the uncommon men and women. They proved that they could give leadership without being dictators or Fascists or endangering popular government.

Despite this curious cult who erect antagonisms to the uncommon man, I am confident it will not confuse our educational institutions. Our sure hope of recovery in the moral and spiritual world is the wealth of uncommon men and women among our people. And it is our educational institutions that will promote and train them.

CONCLUSION

To sum up, may I say that the colleges have a great obligation courageously to restore our moral and spiritual losses from the war, to renew our ideals of freedom, to regain our sensitiveness to wrong, and to provide the Nation with renewed supply of trained leadership. Unless we rebuild this new era on these foundations, it means the war has been lost. It means more. It means that civilization is lost. I am convinced that our educational institutions are equal to this, the greatest of tasks.

---

## Science in Democracy

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Science in Democracy," by Brig. Gen. David Sarnoff, president, Radio Corporation of America, at the American Academy of Political and Social Science, Philadelphia, Pa., October 5, 1945:

America, to be first in peace and first in war, must be first in science.

To achieve this, we must have democracy in science as well as science in democracy.

The essence of science is freedom to question and to experiment, with an opportunity to draw conclusions, unrestricted by any forces that would hamper liberty in thinking. The realm of study, investigation, and development must be free. Whether in politics or in science, it is the keynote of democracy that people must be free to think, free to discuss, and free to try their ideas in practice. To impose the opposite is tyranny.

That is one of the great lessons of World War II. We should not embrace victory merely as a triumph and let it rest as such in history books. We should study its lessons to cultivate progress and to safeguard the future. With peace comes the vivid truth that to be strong in this modern world a nation must have science ever ready to march with its Army, to sail with its Navy, and to fly with its Air Force. Indeed, some products of science, such as an atomically-powered missile, must be ready to fly through the air instantly, unattended by sailor, soldier, or pilot; guided to its target by push-buttons in a control room far away.

Such an alliance of science and military power can be achieved most effectively under the democratic form of government. The fate of Germany and Japan is evidence enough. Despite an earlier start by Germany in the creation and development of scientific weapons of war, the democracies were able to outdistance the enemy in this domain. If there be any doubt, let the doubter look to radar and atomic power. Developed and harnessed by democracy, they searched out the enemy and wiped out despotism. Our scientists gave their best voluntarily, while those of the Axis Powers worked under duress. Democracy, unhampered by prejudices and obsessions about race and creed, was able to utilize the knewledge and brain power not only of its own scientists but of many who had been ruthlessly banished from their homelands by the dictators.

FREEDOM TO PIONEER

For many years past, scientists from foreign lands have come to our shores and settled here so that they could study and experiment free from oppression, free from commands, and free from regimentation. Prominent among them we find Tesla, Steinmetz, Pupin, Einstein, Michelson, Zworykin, Fermi, and many others. Here they found the environment conducive to study and research, to free exchange of ideas, to experiment and discovery. Our Nation has profited by their endeavors, and science has advanced.

America, the cradle of liberty, is also the cradle of invention. The list of our native scientists and inventors is a shining roll of honor. As a result, thousands of wartime scientific accomplishments helped to turn the tide of victory for the United Nations and thus rescue democracy from those who would destroy it. Scientists in democracy must continue to pioneer on an ever-expanding scale. We must be as daring in peace as in war. We must follow our vision with the same confidence if we are to cross new frontiers of progress. Through new products, processes, and services that science can create, we should gain a fuller life, increased employment, improved health, and national security. We must cultivate our natural talents and resources to meet the promise of science if we are to develop its endless opportunities for securing a higher standard of living for the masses of people everywhere.

VIGOROUS POLICY NEEDED FOR SCIENCE

It is imperative, therefore, that the United States maintain a vigorous national policy for the promotion of science. Statesmen, philosophers, and religious leaders have led in the past—now scientists must join them in the vanguard of civilization. In the future, freedom and science must walk together, hand-in-hand as the spearheads of peace.

For this purpose, every phase of technology should be explored and developed. Every scientist or embryo scientist must be encouraged, if America is to remain unsurpassed in peace and unconquerable in war.

The national security of the United States demands that military scientists and industrial scientists continue their cooperation; for peace and security rise and fall with science.

We have but to read the dramatic stories of the life and death race between the scientists of the United Nations and of Germany, to realize how narrow was the margin during the earlier periods of the conflict. It was frightening, even after the war had ended, to find how nip-and-tuck the race had been between German and American scientists in harnessing atomic power, rockets, radar, bombsights, tanks, and other implements of war. It behooves America, therefore, to develop its scientific capital, to protect and to encourage science in times of peace, if the principles and traditions of this country are to survive.

SCIENTIFIC TALENT MUST BE CULTIVATED

Today we survey a world that has emerged from the most terrible war in history; a war in which science, like a global flame thrower, spread death and destruction around the earth. From now on, no nation is immune. No nation can be protected by oceans or mountains, forts, frontiers, or isolation. Victory in any future war may be determined by the skill of scientist against scientist. No physical barrier will limit the battlefields. The victor will be the one best fortified by science and development, by discovery and invention, and by use of scientific weapons in the hands of the ablest fighters.

Science that saved democratic civilization in World War II must now be used for peace. This calls for training young Americans with an aptitude and an interest in science and invention. Therefore, democracy must promote scientific education, not only for the development of weapons, but for the creation of employment, for the production of more abundant crops, for increasing national health, and for developing new wonders in atomic energy, electronics, chemistry, and physics that will make for good living and eliminate poverty and disease throughout the world. America must cultivate its reservoir of youthful scientific talent along with development of its natural resources.

War gave tremendous impetus to scientific research. We must keep it moving in the right direction—toward progress in peace. In our land the power behind it will come from the training of future scientists—from the high schools, colleges, laboratories, and workshops of America.

Just as we have succeeded in releasing atomic energy from uranium, we must release the energy from the minds of our youth. In the fertile brains of American boys and girls are the master keys to the future. We must stimulate and encourage youth, if this Nation is to have health, prosperity, and security. With its natural interest in science, youth is one of America's greatest national resources. The figment of an idea may be more revolutionary than the fission of an atom.

Great industrial laboratories will be built, splendidly equipped and on sites conducive to clear thinking; but they will be worthless, no matter how great the funds behind them, if trained men of research do not work within their walls. There is no substitute for brains. Men, not tools, are the lifeblood of research.

ENLISTING SCIENTISTS FOR PEACE

We stand on the threshold of revolutionary developments that call for thousands of trained scientists. We need them more and more to convert to the uses of peace, the scientific achievements of the war, which victory has made available to us.

When war came, the manpower requirements of peace were pushed aside. War drafted scientists, teachers, and students with little question of future needs. Scientific and prescientific schools emptied their classes into the training camps of the armed forces. Industry and education responded alike to that draft of men.

Now the war is over. Peace is the order of the day. And peace, to meet our national needs, should have the priorities that were given yesterday to the demands of war. Subject only to urgent military necessity, peace should have the right to recall, for the great national service of science, the trained men, and the young recruits it gave up to the war.

But no mere return of our potential scientists from the armed forces can meet the pressing needs of the hour. You cannot recruit scientists through draft boards. They must be recruited through years of training in colleges and universities. If we are to meet the needs of tomorrow, we must enroll now, in our scientific schools and laboratories, an army of students for the 4 to 6 years of college and postgraduate work that is necessary to produce trained scientists. Nothing less will give our Nation the scientific preparedness we must have for the march of science in peace as well as in war.

VALUE OF SCIENTIFIC RESEARCH

At the end of the First World War, it was vividly apparent that scientific research also was a vital factor in our industrial progress. As a result, it grew tenfold between 1920 and 1940. Within the past two decades, in television alone the radio industry spent more than $20,000,000 on research. That investment has called for faith, for initiative, and for young men with new ideas. Now we are on the threshold of a new postwar industry. Television is destined to become a utility in the American home and a revolutionary force in world-wide communications. It will bring visual entertainment to the homes of rich and poor alike; it will flash letters, documents, and pictures around the world while the television eye in factories will enhance safety and speed industrial processes.

In radio, each forward step leads to something new. From radio principles and television techniques sprang another new wonder, so miraculous that it is called a sixth sense—radar. But this, too, required research on a wide basis.

Unified research on a national scale that cost $2,000,000,000 produced the atomic bomb. Scientists themselves were amazed at the speed of the development. They thought it possible but believed it would require 20 years or more to achieve results. Their calculations, however, did not take into account the impact of war which produces speed, direct action, and concentrated effort.

Peace also can benefit from concentration on certain pressing problems. For example, what would result from even $100,000,000 wisely spent on cancer research? If research produced a cure for cancer, it would save more lives than were lost in the war.

SCIENCE REVEALS AN INVISIBLE WORLD

Research into the unknown is a great adventure. It should be encouraged if American scientists are to blaze new trails in life, as the electron miscroscope has done in revealing the miscroscopic world which surrounds us. From a study of the infinitesimal organisms and elements, from the unseen rays and waves which permeate our bodies, we may find the answer to our future in the Atomic Age. The tiny, invisible things of life are only beginning to reveal their importance. The electron is the key to the world of the infinitesimal.

We have long associated power with great size but we are now beginning to realize that tiny invisible things, such as the electron and the atom, are the nuclei around which our very existence whirls. We are beginning to see that the atomic structure is a universe in itself, like the one in which our earth revolves around the sun. We see before us a new universe of power—the power of protons, electrons, deuterons and neutrons. When the atom is smashed terrific energy is released. Scientists tell us that when a lone neutron, with only a thirtieth of a volt of energy behind it, strikes the core of a uranium atom, 200,000,000 electron volts of energy shoot out.

HARNESSING UNIVERSAL POWER

The release and control of atomic energy represents a new and successful attempt by man to tap nature's great source of universal power. Let us envisage nature as a huge safe on which there is a combination lock. Inside this giant structure there are many chambers, one of which contains atomic power. Man, thus far, has learned only the combination to the safe and found the key to a single chamber. He has yet to find the keys to many other chambers which will unlock the secrets of nature that may astonish and change the world.

Now the scientist has stepped out from the darkness of military secrecy into a spotlight that focuses the eyes of all the world upon him. The people in whose name he achieved victory look upon him as a giant endowed with magic powers for good or evil. But it is he who creates and it is they who must decide how his handiworks are to be used—for construction or destruction?

With the perspectives now unveiled, humanity may look forward to a future of terror, or a future of security and abundance. If we desire the latter to be our destiny, then all nations must decide to live in harmony in "one world." Such decision would be helped if the social sciences moved forward at a faster pace. They should not lag so far behind the physical sciences, as they have in the past. The statesman, the politician, the scientist, the spiritual leader, the teacher, the industrialist, and the labor leader must carry their new responsibilities to society, in the light of these momentous developments. Each must do his part towards curing the causes of conflicts and preventing misuse of the new forces now at a man's disposal. Only thus can we preserve the freedom and democracy for which our sons and daughters fought and gave their lives.

THE USE OF SCIENCE

On August 5, 1945, the earth was spinning in an orbit of destruction. Science threw a mighty switch and released the atomic bomb. The world gasped! Almost in the twinkling of an eye mankind moved out from the dark clouds of war into the promising sunshine of peace.

In the wake of war there are many new ideas and discoveries, which can be applied to our every-day life. In some instances, however, science ran far ahead of man's readiness to provide practical safeguards that would confine their uses to peacetime purposes. Atomic energy is one disturbing illustration. Further development is bound to release the great potentialities of atomic energy for use in industry, heat, light, power, and transportation. But the atomic units that one day may power hundreds of thousands of peaceful automobiles and airplanes, also could be used in war.

Nor can it be safely assumed that atomic bombs necessarily will come only from the skies. They might come from submarines or ships, or even from land artillery. In fact it is conceivable that smaller and better

atomic bombs, as small as baseballs, might be plants by saboteurs at strategic places and there remain hidden until such time as an enemy decides to strike. A secret radio signal transmitted from a distance might be used to detonate such bombs and spread havoc far and wide.

Science races time, and man in his efforts to survive and to progress is in the race with both. Now, as man surveys the maze of possibilities which technology created in the heat of warfare, he faces the great tasks of converting and confining them to peacetime utility.

As we sit at home and watch the Tigers play the Cubs on the screen, or watch dancers in the studio at Radio City, television—for example—looks like an emissary of peace. But like other wonders of science, television too, if man so chooses, may be applied to war. Television in peace has fascinating aspects; in war terrifying!

TELEVISION IN WAR

Since the war ended, Gen. H. H. Arnold, commanding the United States Army Air Forces, has revealed that flying rockets which can be directed to targets far beyond the horizon are a definite possibility; no longer a dream. Television gives them an eye. From a distance, radio controls them in flight. So deft, so all-seeing is this control, that from the launching site, the operator can guide the winged missile as if he were inside its shell. If he sees that it is not going to hit the target, he can turn it quickly; he can even make it loop-the-loop. The very thought of thousands of these television-eyed monsters of destruction coming up over the horizon of the sea as a storm cloud may well cause us to shudder. They might be loaded with warheads of atomic power, some to strike and wipe New York off the map, while others guided westward to turn Pittsburgh, Detroit, Chicago, and other cities into death and dust. No longer is the suicide flier needed; television can do his task—and more.

We have the testimony of another great airman, Air Chief Marshal Sir Arthur Harris, of Britain, who recently said, "War in the future is in the hands of the scientists. * * * Just as you had the old knight in armor leveled by the first man who got hold of a gun, now you have gotten to a stage where a country could win a war despite its size. It could win, however small it was, provided it had the scientific resources and brains to obtain mastery of the new weapons. If you couple the atomic bomb with the projected missile you have something with possibilities that hardly bear contemplation. The whole world is now in the range of this weapon."

I tell you the bomber with a television eye is no myth; neither is the radio-controlled rocket.

TELEVISION IN PEACE

It rests with man how television, atomic power, electronics, and all the other forces of science are to be used. In man's will lies the answer to the future influence of science on the world. If harnessed for useful purposes the world will go into an era of wonders never before believed possible. Man will be able to look around the world by television, with the same facility that he now listens around the world by radio. Historic events such as the Japanese surrender on board the battleship *Missouri* in Tokyo Bay will no longer encirele the earth only as sound. They will be seen and heard as sight and sound in tandem.

Nor should we think of television only as an optic nerve over which entertainment and information flow pictorially, for it has many other uses which may even dwarf its performance in the home and theater. Wherever transport needs vision, television will help to provide it. The airplane will see by television and radar; so will ships on the seven seas. Similarly, wherever industry needs an eye, television will provide it. It will watch over industrial processes and machines; it will go into places the human eye cannot reach. Fireproof eyes will be put into furnaces to scan chemical reactions. Tunnels will have these radio eyes as will conduits and mines.

COMMUNICATIONS IN THE FUTURE

Several days ago a prominent communications official from Europe called at my office. We talked of communications and the future. I could see that the threat of competition between radio and plane bothered him. In reading the news that a plane had flown a film from Iwo Jima to Washington in 30 hours he saw an ominous cloud darken the future of electric communications. Most certainly planes would pick up speed and deliver mail even faster.

Then I told him I had no fear for the future. Radio traveling 186,000 miles a second is faster than any aircraft or even a mail-carrying rocket. A radio signal circles the globe in one-seventh of a second. Before a mail-laden plane could get off a runway in Australia, radio could be delivering mail from Melbourne in Washington or London. Furthermore, radio could televise an important scene or event, anywhere, so that all the world might see it instantly and simultaneously. Radio travels with the speed of light. Television is light and radio combined.

I told my friend that in the future a person will write a letter or a message that will be put on a belt moving in front of a television eye. In a split second that letter or message, exactly as written, will appear in England, South Africa, or China. There it will be automatically reproduced by a photographic process for delivery in minutes—not hours as required by even the fastest airplane.

My friend began to smile. His conception of the future of communications was changing. He was startled when I told him that eventually we may be able to take a sealed letter or document and flash it across the hemispheres without opening the envelope. That, again, is a television possibility—and it's not fantastic. If X-rays can look through the human body and through steel, why should it not be possible for the television eye to look through a paper envelope? This would make possible a radio mail system.

SCIENCE AND SECURITY

Atomic energy, radar, electronics, television, jet propulsion, plastics, and airplanes are the craftsmanship of scientists. They are the architects of our future. It is not war alone but also science that transformed the world within the past 6 years. The chief effect of the two atomic bombs was not on the two Japanese cities which they destroyed, but on the human mind. As science reconverts to peace, the evidence of all this will become clear. War was a potent force in the crucible of destiny.

In war, we used science to defend democracy, to defeat its enemies, and to destroy their false philosophies. In peace, democracy must advance the use of science for a better life and make its benefits available to all.

While we strive to obtain these benefits, we must not neglect the problem of preserving peace by adequate preparedness. For the dangers which face all of us from the new forces released by science, must not be ignored. We should adjust our military and industrial establishments to proper peacetime proportions as quickly as possible; but we must maintain them at a level that safeguards our national security.

Our Nation must not dissipate the moral and physical strength it now possesses in a world that is far from stabilized. Other nations, too, will benefit from our earnest efforts to substitute world peace for world war, if America is prepared with trained men and modern means to meet the perils of the terrifying forces science has discovered. If we fail in this, democracy will fail.

Let us, therefore, recognize the twin necessities of science in democracy and democracy in science.

Let us see to it that in our new-won freedom, the scientist retains his liberty to think, to speak, and to work unfettered. Let us teach our youth the great responsibilities of science and encourage them to travel its highways of progress. Let them be bold in thought and daring in pursuit of the vision of their dreams.

At the same time, let us not ignore the fact that the dangers mankind faces, call for vision, courage, exploration, and action not only in physical sciences but also in the political and social sciences. For all the world is now one neighborhood and the best guaranty for our own security and prosperity is the security and prosperity of our neighbors as well.

Democracy in its hour of triumph demands that America be strong and help to make science a useful servant, not the master, of mankind.

---

## Army Discharge Policy at Clovis Army Air Field

EXTENSION OF REMARKS
OF
### HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, I am in receipt of a letter from a Montana serviceman now stationed at Clovis Army Air Field. I am calling attention to the deplorable situation which he describes to the House for its consideration and then I am taking the matter up with the War Department. I feel that this situation needs investigation, and I shall request that measures be immediately instituted to correct the position these boys are in so that they will receive all possible consideration at the earliest possible moment. Under unanimous consent, the letter referred to follows:

CLOVIS ARMY AIR FIELD,
*Clovis, N. Mex., October 6, 1945.*

Representative MIKE MANSFIELD:

DEAR SIR: I am writing you in hopes that you may be able to put pressure in the right places to cause this Army to discharge us more rapidly.

We have been through this war, we have put in plenty of time in combat overseas; now this war is over, we who are eligible for discharge have done our job and did it cheerfully, although it wasn't very pleasant. Now we want back in civilian life that we may be of some use to ourselves and our fellow men.

Some few days ago the statement was made over the radio that all men of over 85 points by the VE-day count had been discharged. If this is true, how can the Army account for at least 100 men still on this base as yet that have not been released? Many have over 100 points and have dependents. They have no "bad time" to make up. Why are they still here?

There are far more men here than are needed. There are at least five men for every job here.

If they are going to discharge by the point system, why isn't it done fairly? There are many men in the 70-point bracket that al-

ready have been released, but as yet very few in the 80-point bracket, not to mention the men that have over 85 points that are still here. This whole Second Air Force, and this base especially, needs an investigation.

There is no reason why they can't let us out faster. They didn't seem to have any trouble getting us in the Army at the rate of several thousand a day!

There has been some very underhanded business going on here. For instance, if you slip the right man in base headquarters a $20 bill, he will have you out of here in a week's time; that is done very regularly here! Why is it that officers are given preference over enlisted men for discharge? The base I am to be separated from, if I am ever released, is now crowded with a bunch of officers, so we enlisted men just have to wait.

The morale here is the lowest I have ever seen it either in the States or overseas. It will take very little more of this Army's wasting time and foolishness to start some mass desertions. There aren't many of us that wouldn't "go over the hill" either if it would do any good toward getting an investigation made of this jumbled-up discharge system.

We are only wasting our own time, the time this Nation needs, by being kept hanging around here doing nothing, waiting to be released.

I am not signing my name to this because, from things I have seen happen on this base and in the Second Air Force, I know it would mean the guardhouse for me if Colonel Morgan, the base C. O., should ever find I wrote a letter like this to my Representative.

I can assure you on my word of honor every statement I have made in this letter is the truth and can be proven.

Yours respectfully,

A STAFF SERGEANT FROM MONTANA.

## Must We Continue Diplomatic Collaboration With Fascism?

EXTENSION OF REMARKS

OF

### HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. COFFEE. Mr. Speaker, newspapers throughout the country are replete with editorials denouncing Franco Fascist Spain, calling attention to the Fascist ideology of its government. Under Franco all liberal thought is suppressed; freedom of speech, religion, and assmebly are abolished. There are no elections in Spain. One political party is permitted, the Falange. There is a close intertie between Spain's falange and the colonels' government in Argentina. Many Argentine officers were trained in the German Army. Spain and the Argentine today are the asylum for hundreds of Nazi emigrés.

I have a resolution pending in Congress, to wit, H. R. 312, which would, if enacted, express the will of Congress that diplomatic relations with Spain should be forthwith severed. When I started this crusade some years ago there was practically no support for such a move in America, outside of liberal circles. Today most of the daily papers recognize that we are placed in an anomalous, if not ludicrous, position in the eyes of the democratic world by continuing to give economic and diplomatic support to Franco. Hundreds of editorials in most of the daily press of America have urged the severing of such diplomatic relations, and have bitterly denounced the Franco Fascist Government. Some typical editorial expressions pertinent to this subject matter are as follows:

From the Christian Science Monitor of Boston, September 28, 1945:

LET'S MAKE IT CLEAR

If publication of the Roosevelt letter to Norman Armour, Ambassador to Spain, last March is intended to clarify American policy toward General Franco, it comes too late to achieve maximum effect. In fact, there is a distinct possibility that the move may simply cause the mists around American policy to shift a little, instead of dispersing them.

While President Roosevelt did in this letter register opposition to the Franco regime, the very fact that the United States was at that moment sending a new Ambassador to Madrid gives us some measure of the opposition. It consisted of private statements against the Spanish dictatorship, but not enough public censure or direct political and economic pressures to help the Spanish people to liberate themselves.

When President Roosevelt wrote that the United States did not intend to interfere in Spain's domestic affairs, he was expressing a correct policy of nonintervention approved by many. But the Spanish Government had given the United States plenty of cause to withdraw diplomatic recognition, if not to apply sterner measures.

Coming so soon after Russian denunciations of General Franco, publication of the Roosevelt letter seems intended to show that the United States has not lagged behind Russia in opposition to the Spanish fascism.

But even at this moment new questions arise. There are reports that Latin-American countries have been preparing to demand a diplomatic break between the Americas and General Franco when the Inter-American Conference meets next month at Rio de Janeiro. There are also reports from Washington describing publication of the Roosevelt letter as a move to forestall these demands.

Let us hope the reports are mistaken. To correct them, the State Department could take steps now to withdraw recognition from Madrid and to make clear that United States policy aims at a return of the Spanish Republic.

From the Wyoming State Tribune, Cheyenne, Wyo., October 2, 1945:

ONE RUSSIAN DEMAND

Even those who completely disagree with other Russian demands may lend sympathetic ear to the assertion of the acting Soviet Ambassador to the United States, Nikolai Novikov, that the United Nations should force the removal of Generalissimo Franco as head of the Spanish government, and furthermore, should try him as a "war criminal."

Instead, it may be presumed in the light of the past, that the larger of these nations, other than Russia, will continue to coddle the murderous little friend of Hitler and Mussolini.

So abstruse may be the ways of "diplomacy."

From the Daily Independent, Ashland, Ky., September 11, 1945:

SPAIN'S FUTURE LEADER

After Franco, who? One reason why this pro-Axis dictator has been able to keep hold of the Spanish Government has been the disunity of his opponents. Now they seem really to be getting together under the leadership of Juan Negrin, the last prime minister of the Republican government. A conference in Mexico has effected an agreement of factions, including the vital question of the handling of money which the exiled Republicans were able to salvage when they fled.

Negrin presided over this conference, and has been accepted as the choice to start the new government off when Franco is dispossessed. After that he will resign to permit an election, but he may well be asked to continue until things get started.

Negrin is an able man of liberal views. Under him it is unlikely that Spain would ever be subject to President Truman's reproof, "We do not like Franco or his government."

## Problems of Reconversion

EXTENSION OF REMARKS

OF

### HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Sunday Star of October 14, 1945:

SOUTHEASTERN OIL AND AFFILIATES,
*Jacksonville, Fla.*

*To All My Friends:*

Much is being said and written about the problems of reconversion. Can we maintain full employment? And can we keep the industrial machine rolling in high gear?

Well, former President Franklin D. Roosevelt once observed, "The only thing we have to fear is fear itself!" How true. And how timely.

If the problems of the future appear great, it should be remembered that any job—no matter how big—can be done if sufficient persistence and determination are employed and the willingness exists to pay the price in energy for its accomplishment.

If one says it cannot be done, it is he who cannot do it. He is licked before he starts. And paradoxically, while he is saying it can't be done, someone already is doing it. What a lot of people need these days is a good swift kick in the can'ts.

No task is particularly difficult if it is divided into small jobs. The experience of difficulty tends to strengthen the mind even as physical labor strengthens the body. We all agree—that quitters never win—but winners never quit.

If the elevator to success is not running, then we must climb the stairs. We must never fear failure to the extent that we are unwilling to take a chance. Our greatest glory is not in avoiding falls—but in rising every time we fall. All of us are entitled to a quota of mistakes which go to make us qualify as human beings. A good man does not blame failure but he is absolutely merciless toward lack of effort.

So let us keep faith in ourselves. Let us always remember that the future holds nothing for those who have lost faith. Pessimists are never in demand—never become leaders.

THE LEADER

If you think you are beaten, you are.
If you think you dare not, you don't.
If you'd like to win, but think you can't,
It's almost a cinch you won't.
If you think you'll lose, you're lost.
For out in the world we find
Success begins with a fellow's will—
It's all in the state of mind.
If you think you're outclassed, you are.
You've got to think high to rise;
You've got to be sure of yourself before
You ever can win a prize.
Life's battles don't always go
To the strongest or fastest man—
But sooner or later the man who wins
Is the man who thinks he can.

It is absolutely proper to accept with serenity the things that cannot be changed. But by all means let's have the courage to try to change the things that can and should be changed.

Don't be afraid to criticize. * * * Where all think alike no one thinks very much. Democracy gains in strength and wisdom from the clean criticism and eternal vigilance of its citizens.

God Bless America! So say we all. And God bless that symbol of glorious democracy—the loud heckler at the back of the hall—even though we may totally disagree with him.

Let us continue to fight for those things in which we believe, always remembering that it is not the size of the dog in the fight but the size of the fight in the dog. Let us not be judged by what has been given us in life but rather by the fortitude we bring into it.

We live in a Nation where opportunities are virtually unlimited. Take a man with a strong hand, a pair of overalls, a few ideas and a willingness to work * * * this man can grow big doing big things; or he can grow big doing small things in a better way.

But as Henry Dodd put it: "The reason many of us do not recognize an opportunity when we meet it is that opportunity usually goes around in overalls looking like hard work."

Each of us becomes the product of his own efforts. Every man writes his own destiny and, as the great Thomas A. Edison said: "Everything comes to him who hustles while he waits!"

Your affairs, even as mine, are but the lengthened shadows cast by you and me and those with whom we are associated. If the pattern does not please us, then it is up to us to change it. Only action will change the shape of a shadow. Wishing and thinking will not.

The pent-up demand for every conceivable kind of merchandise is going to be great during the next few years. We cannot complain about the business outlook. But for each of us to obtain a share of his business we must roll up our sleeves, grit our teeth, and pitch in there and fight.

Apropos of pitching in—the best way in the world to learn how much a fellow has "on the ball" is to make the going tough for him. Either he will take it with a grin and come back for more or he will fold up.

Remember Elbert Hubbard's poem:

The tree that never had to fight,
For sun and sky and air and light;
That stood out in the open plain,
And always got its share of rain;
Never became a forest king,
But lived and died a scrubby thing.

This is equally true of men. And the only successful way for any of us to get along in this world is to take the bit in our teeth and solve our own problems. Our hopes and our plans may not necessarily materialize in the manner we desire because as James Barrie wrote:

"The life of every man is a diary in which he means to write one story, and writes another; and his humblest hour is when he compares that volume as it is with what he vowed to make it."

We should start now, to do the things we know we should do. Then we soon would spell "now" backwards. The best time is to start today—the best place—right where we are.

Luck or chance need not rule a man's destiny—his fate depends upon his character. If he is strong, he can overcome circumstances; if he is weak, circumstances will overcome him.

I, for one, believe in the eternal verities, that honest effort always wins its reward and that the success of any businessman or individual is assured if the inspiration to succeed is never allowed to die. And inspiration will never die unless we lose faith in ourselves.

The answer to our reconversion problem and what the future holds in store for you and for me is:

What will you and I make it?
It is entirely up to us!

Sincerely,

GORDON DUKE.

---

## Celler Introduces Bill To Amend Communications Act of 1934—Bill Designed To Protect Radio From Overcommercialization

EXTENSION OF REMARKS
OF
## HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. CELLER. Mr. Speaker, I have this day introduced a bill to amend the Communications Act of 1934.

The bill is designed to reenforce the basic congressional intent expressed as far back as 1925. The ether is a public medium and its use must be for public benefit. The use of radio channels is justified only if there is public benefit. The dominant element for consideration in the radio field is, and always will be, the great body of the listening public, millions in number, country-wide in distribution.

Today there are more than 900 standard broadcasting stations, more than 600 of which are affiliated with one or more of the four national networks. These more than 600 stations utilize 95 percent of the nighttime broadcasting power and over 55 percent of the day broadcasting time is taken by national networks programs. By 1943 over $307,000,000 was grossed from time sales of all broadcasters in this country. The cost of a single hour of full network coverage runs as high as $25,000. In 1943, 144 advertisers provided 97.2 percent of the national network's revenue.

We will do well to consider the questions carefully whether the air waves which are public property and only licensed to operators in the public interest shall be permitted to become merely an adjunct of big business, and whether it is socially wise to permit the neglect of regional interests to continue.

Reading carefully the opinion of the FCC in the matter of the transfer of the control of the Crosley Corp. to the Aviation Corp., one can easily see that the FCC felt it had not acted in a manner consonant with the public interest in permitting the transfer to the Aviation Corp. The majority opinion based its decision on a lack of congressional authority to do otherwise.

Today FM makes possible the development of thousands of new stations. The excessive use of these and existing stations for commercial advertising purposes must be curbed so that in fair measure the listening public can find in radio a greater intellectual maturity. Programs of cultural and educational value, particularly regional needs, have been insufficiently developed. Radio is in danger of being consumed by the profit fever. It must be remembered that operators of radio stations are licensed and thus hold the position of trustees for the benefit of the public at large. For example, the educational program Invitation to Learning was carried by only 39 of the 136 stations which could have had use of it; National Radio Pulpit was carried by 60 stations and rejected by 79; the Chicago Roundtable was rejected by 84 out of 139 stations and Labor for Victory, the only labor program carried on any of the major networks was rejected by 104 out of 139 stations. For these reasons, I have included in the bill the following:

> The Commission shall fix percentages of time (commonly known as sustaining time) to be allocated during each part of the broadcast day by each class of broadcast stations or by each broadcast station, without charge, for particular types or kinds of nonprofit radio programs or for particular types or kinds of nonprofit activities; and such percentages of sustaining time shall be set forth as conditions of operation in each broadcast station license.

Another phase of the bill concerns itself with excessive prices paid in the transfer of stations. I know of one case where a station was sold for 1,543 times its net income. Stations with assets of about $50,000 have been sold for $500,000. Such uncontrolled prices make it possible for only those of great wealth to operate stations and tend to keep the control of radio in the hands of a select few. It is an unbalanced and unhealthy condition for so vital a medium as radio which has tremendous force in the molding of public opinion and public taste. The bill I have offered, therefore, includes the following:

> No transfer or assignment shall be approved in which the total consideration to be paid for the broadcast property, tangible and intangible, exceeds the fair value of such property: *Provided*, That such fair value shall not exceed double the depreciated cost value of the tangible broadcast property transferred or assigned.

Application for renewal licenses are made every 3 years. Too often the renewals are granted automatically. There should be a reexamination for each renewal application to determine whether the public interest is best being served by its present operators. Each renewal should be subjected to rigid investigation and any citizen who wishes to do so should be allowed to raise his voice in opposition or register his complaint. Furthermore, any person or entity desiring to function on the wavelength involved should have the right to appear and present his case. If he can demonstrate his ability to operate the station to a greater degree in the public interest, renewal of the application to the current licensee should be refused and the privilege granted to the new applicant. I have included such requirement in the bill. Such requirement would galvanize all station owners into conducting and supervising the activities of their station in a manner that will be consistent with the public medium philosophy indicated by Congress when it

carefully considered the Communications Act of 1934.

The bill further includes an amendment to section 303 by adding a new subsection whereby the FCC shall "prescribe the form of any and all accounts, records, and memoranda to be kept by broadcast stations. Any and all financial reports filed with the Commission shall be open for public inspection." The first sentence is identical with the provisions applicable to the telephone and telegraph companies. Certainly what applies to these public utilities should likewise apply to radio. The Commission presently does not require how and in what manner the reports shall be filled out. Some of the accounts now filed would not be acceptable under an approved system of accounting. The reports filed now are simply received by the Commission with no comments except that the Commission publishes aggregated accounts, summarizing types of broadcast, power used, and so forth. But the report published by the Commission is not designed to cover any individual station. The public is entitled to know how much the trustees of public property are making. The air waves and radio channels are public property and only loaned to private entities for a specific purpose and for a specific time.

I have a good word to say for the various chains and other independent stations. They have done a good job. They have made excellent progress, but I am sure that the operators themselves will be the first to deny that they have reached the ultimate in the improving of radio broadcast. I want to give praise where praise is due. Constructive criticism should not be deemed baneful. Both radio operators and the public can profit from the passage of the bill I have offered.

It most certainly is not my purpose to advocate in any way government ownership of radio. I want no truck with such government ownership. The best example of such government ownership is the British Broadcasting Company, and American radio most emphatically does not suffer by comparison. The sprightliness, the ingenuity, the variety, and inventiveness of American broadcasts cannot be matched by BBC. I believe that radio operation belongs in private industry, but I likewise believe that private operation must be cognizant of its failings and help in remedying them.

A copy of the bill I have offered follows:

A bill to amend the Communications Act of 1934, as amended

1. Amend section 307 (d) of the Communications Act of 1934, as amended, by adding at the end thereof the following:

"Before filing any application for renewal of a broadcast station license, a licensee shall cause to be published at least three times, in a daily newspaper of general circulation published in the community in which such station is licensed, a display advertisement in such form as the Commission shall prescribe, setting forth his intention to file a renewal application, the date on which the existing license expires, and a statement in the form prescribed by the Commission that others seeking the same channel must file application before that date in order to receive competitive consideration, and that anyone desiring to oppose the renewal must file his reasons with the Commission in writing at least 30 days before such date."

2. Amend section 3 of the Communications Act of 1934, as amended, by adding at the end thereof a new subsection, as follows:

"(bb) With respect to broadcast matters, 'public interest' includes the interest of all listeners within the service area of the broadcast station or stations concerned; and no finding of 'public interest' shall be made in any broadcast matter unless the Commission finds that excessive use of the station has not been made and will not be made for commercial advertising purposes."

3. Repeal subsection (c) of section 307 of the Communications Act of 1934, and insert in lieu thereof a new subsection (c), as follows:

"(c) The Commission shall fix percentages of time—commonly known as sustaining time—to be allocated during each part of the broadcast day by each class of broadcast stations or by each broadcast station, without charge, for particular types or kinds of nonprofit radio programs or for particular types or kinds of nonprofit activities; and such percentages of sustaining time shall be set forth as conditions of operation in each broadcast station license."

4. Amend section 303 by adding at the end thereof, a new subsection (s), as follows:

"(s) Prescribe the form of any and all accounts, records, and memoranda to be kept by broadcast stations. Any and all financial reports filed with the Commission shall be open for public inspection."

5. Amend subsection (b) of section 310 of the Communications Act of 1934, as amended, by adding at the end thereof the following:

"No transfer or assignment shall be approved in which the total consideration to be paid for broadcast property, tangible and intangible, exceeds the fair value of such property: *Provided*, That such fair value shall not exceed double the depreciated cost value of the tangible broadcast property transferred or assigned."

## Soriano Again

EXTENSION OF REMARKS
OF
**HON. JOHN M. COFFEE**
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. COFFEE. Mr. Speaker, in certain speeches I have discussed the career of Col. Andres Soriano, who has been a favorite of General MacArthur. Soriano is a Spaniard, active in the Falange before Pearl Harbor in the Philippines; later an officer in the Philippine Army, after becoming a Filipino citizen, and now a citizen of the United States. The New York daily newspaper PM on October 8 discussed graphically the most recent developments in reference to this most remarkable, if not incredible, figure:

FRANCO'S LOSS IS OUR "GAIN"

WASHINGTON, October 8.—Col. Andres Soriano, one-time backer of Franco in Manila before the war and once dreamed of becoming a Spanish duke under a restored monarchy, is now an American citizen.

This happy event took place in Washington last Friday in district court with the aid of a "very high recommendation" from General MacArthur, on whose staff Soriano has served since the Philippine invasion. Presumably when Soriano took the oath he didn't give the fascist salute that he once gave in Manila back in the day when he was Franco's honorary consultant there and was one of the chief fund-raisers for the Spanish dictator.

This new American citizenship comes as a result of Soriano's service in the United States Army on MacArthur's staff, although he fought a good chunk of the war at his suite in the Hotel Shoreham. It comes, too, at the ducky moment when it will be much more pleasant to have his huge property holdings in the Philippines under the protection of the United States flag than subject to the vagaries of Philippine political developments.

Colonel Soriano has been somewhat unstable in his citizenships. He started life as a Spanish subject, although born in the Philippines. Then, suddenly in 1941, at a time when the United States was freezing the assets of Axis nationals, he became a Filipino citizen after some legal gyrations that still are a subject for debate in the Philippines. It was Manuel Roxas, ex-collaborator with the Japanese and now president of the Filipino Senate, who got him his Filipino citizenship.

## Deliverance or Doom

EXTENSION OF REMARKS
OF
**HON. ROY O. WOODRUFF**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 10, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under unanimous consent to insert in the RECORD, I offer the article entitled "Deliverance or Doom," by Dr. E. M. Langer, research associate of physics, California Institute of Technology, which appeared in Collier's weekly for September 29, 1945:

DELIVERANCE OR DOOM

(By Dr. E. M. Langer)

All of us who have given real thought and careful imagination to an atomic age have made one common blunder. We have assumed it would be the hope and horror of future persons; we never dreamed that we, ourselves, would be asked by the newspapers and magazines for which we work to sit down and write, "Here it is. We must now do thus and so." And in that all-too-real circumstance, I feel a sense of shock that mingles with elation over having lived, myself, to see the day. It is a great day.

A committee of scientists and statesmen, appointed by President Truman, is formulating a plan for the new age. Every fact of the present situation is known to that committee. Nothing more is known to me than what had been discovered before the war and what has been told since the atom bombing. So this discussion is offered with reservations. It is a first, exploratory set of suggestions which may give rise to others more informed and therefore more germane. But it will show, I think, not just the peril which confronts humanity. It will give some estimate of the hope that lies ahead of us and some notion of how we human beings, who depend so desperately upon our foresight, may devise plans big enough and rational enough to make atomic energy the instrument of deliverance rather than of doomsday.

World reaction to the atomic bomb has been too largely limited to a feeling of terror and too little concerned with the greater problems and the greater possibilities of the new force. Atomic energy is only incidentally a military weapon. As a source of power it will be more important to human beings than all the wars recorded.

In Collier's, more than 5 years ago, Dr. R. M. Langer, of California Institute of Technology, predicted this day in detail. Here are a few of the things he said in that widely quoted article:

"The foundations of the happy era have already been laid. The driving force is within our grasp. * * * On the basis of how you live today you cannot make a chart of how you will live tomorrow. You must draw a wholly fresh picture, for the face of the earth will be changed. The destructive potentialities of U-235 make it imperative that the citizens of the future be better educated than they are now with respect to their social responsibilities."

The replanning of our world should begin for you as you read this, if you have not already begun. We still need more facts concerning all aspects of the situation. But the one fact in our possession—the reality of the bomb, when viewed in the light of the history of science—is enough to guarantee that the energy of the atom will be available—and soon. The only question is how soon. Sir James Chadwick, head of the British experts who helped to develop the bomb, has stated that atomic energy will be commercially available to us in a period closer to 10 years than 50. He ought to know.

From the standpoint of our future prosperity, our abundance, our very existence as individuals and as a species, and not merely from a military standpoint, it is to the utmost advantage of every person alive to do what he can to see that this energy is made available as soon as possible.

We know that three major problems confront us: Atomic energy as a weapon, atomic energy as a power supply, and the possible hazard implicit in all atom-splitting experimentation. Let us consider them one by one.

1. The most mistaken idea in the public mind today is that "atomic energy is our secret." Its secrecy is about equal to that of next year's models of automobiles. The basic principles were known everywhere before the war began. Scientists from numerous nations engineered the bomb by applying those principles. But many nations worked upon the practical application of atomic energy before the war, and during it, and their scientists are continuing to do so now. The industrial organizing that manufactured our bombs was a putting to work of facts everybody knew.

2. It is unreasonable to assume that scientists will never find means to release the energy in the atoms of substances other than uranium. Every single atom is theoretically capable of energy release—the atoms in this paper, the atoms in your hand. Thus the monopoly of uranium-bearing ores—widely believed to be a "protection" against atom-bomb danger—will give us at best only temporary protection. Furthermore, uranium-bearing ores are widely distributed. Many sources lie in and on the earth, as yet undiscovered. So there is no way to control uranium sources, even if such control would assure a lasting monopoly of the raw materials from which atomic energy is produced.

3. Although we required three hidden cities to produce the bomb, it must not be thought that such gigantic facilities will always be needed for the production of atomic energy. It is more logical to assume that, in the future, devices for the release of that energy may be produced by comparatively small factories and laboratories.

4. The military value of atomic fission is so enormous that no successful method of destroying the discovery or of forbidding further experiment can be devised or enforced. Any attempt to stop research would merely encourage its secret performance somewhere by persons who hoped to achieve world conquest at the expense of nations which had deliberately disarmed themselves. Our recent experience with Germany and Japan makes that fact unmistakable.

5. The suggestion of some scientists and experts that large industries, and perhaps even cities, will have to go underground not only involves fabulous expense and a change in the way of human life but also fails to consider the nature of the new force. In its inevitable refinements, it will be the perfect agent for sabotage. Not just a factory, but a city or a subterranean labyrinth will be subject to total destruction by a small object. Every passage, duct, conduit, doorway, flume, chimney, airway, water pipe and other route of entrance to an underground city would be vulnerable, and every loaded train or truck, every box, suitcase, tire, or even human being would have to be minutely examined, every minute, even in peacetime. This perpetual risk of losing a whole underground city and all the people in it as a result of one instant of inattention or error seems to make the cost of entombing our cities or big factories utterly unreasonable.

The whole psychology of attempting a defensive attitude toward atomic threat seems to me in error. The only possible security lies in the solution of human problems—the problems of the agents who will from now on control the new energy.

These five points sum up to one: We have knowledge of a terrible weapon which we can neither long withhold from others nor abolish from the world. Whatever happens to us, atomic bombs are here to stay. The argument against the use of this instrument on humane grounds will wither—as such arguments have always died away. Every nation, from now on, can justly say, "America is a decent nation—and America used the atomic bomb."

In this military connection another point is worth raising. With radar direction or direction by suiciding patriots, and with stratospheric rockets that travel at thousands of miles an hour, the axiom about a defense for every offense becomes increasingly tedious. It is still the chief tenet of many an old soldier—although, if it holds true, why are half the cities of Europe flat? Granting, even, that a defense against such formidable methods of assault is devised—the radar gun, for example—what then? Some rockets would get through. And beyond that defense lie the certain-to-be-invented, still less imaginable new forms of attack. It would be sane to assume, I think, that the new era will revise the hypotheses of any future war—reducing it to mere atomic slugging, to the ability of a people to take it. For the bomb will sire the atomic torpedo, mine, rocket, jet plane, death ray, and God knows what else.

### OIL AND COAL NO LONGER FUELS

But as atomic energy becomes commercially available, public concern will shift to immense and immediate new problems. We must consider the likelihood that the new energy will supplant familiar forms; that much has already been hinted by the President's announcement of the bomb. Coal may ultimately be mined only for the chemicals in coal tar and no longer for fuel. The oil wells of the Nation may one day be needed for lubrication, but not for gasoline. In place of great dams and immense hydroelectric plants there will be small, neat, energy-producing buildings. All this, probably in your lifetime. But who will reimburse losers in such developments—and how? Can a debt-laden nation hope to meet such widespread industrial obsolescence without panic or inflation or the socialization of all its property? It can if we plan as a people.

It is reasonable to assume that atomic energy will become available in small but enormously powerful units. Units which will heat, cool, and air-condition a home for a decade without a refill. Units which will result in an automobile with a fuel supply built in for the life of the car. Units which will make air transportation so cheap, and of such long range, that all passengers and most freight will take to the airways—ultimately stranding railroads, ships, and trucks.

This talk—anxious, excited, hopeful—is going the rounds today. It is logical talk. But it is also inadequate talk—and almost childish. The potential future is much bigger. For we cannot really predict what will be discovered by principles still unknown—principles known only to exist. We cannot yet hope to imagine what we will accomplish even in a decade, now that we can experiment on our earth with facts and conditions which were but theory yesterday. For, suddenly, we command temperatures thousands of times as hot as any antique furnace of a year ago, energies which used to be but guesses concerning the interior of stars, matter in new forms and the means of changing it, electrical current with an amperage of millions, rays and neutron streams which might make new orders of vegetation—or sweep a city with cancer, for that matter—and pressures of the order of a hundred million pounds per cubic inch.

How then can we guess the things that factories, laboratories, and corporations will be mass producing for you and me even in 1950?

At the moment, we stand where Benjamin Franklin stood with his key and kite in relation to electricity. Could Franklin, that day, have predicted radio? Or television? Radar? Or the electron microscope? We are that blind, and our future is proportionately that much more prodigious. Which is still, doubtless, an understatement.

We could, of course, undertake to hold back such developments in America simply to protect our investments in existing facilities and plants. What then? For one certainty, we would fall swiftly behind the rest of the world. We would sit by and watch others progress. England, for example, is already governed by a party pledged to socialize the coal mines. If those mines become useless—that party can and surely will socialize atomic energy. England today shares our knowledge of the atom and is undoubtedly at this very moment planning to nationalize its energy production.

Russia has a system which will permit of no other economic application of atomic energy. The Scandinavian nations will certainly use it on a nationalized basis. In order to compete in world markets for commodities produced by atomic energy, and in order to satisfy domestic demands, the United States will be compelled as a minimum to keep pace with every possible new step of applied atomic science.

Any plans, Federal or private, which would lead to a situation wherein the British or the Russians or the Danes, or anybody, excel us in mechanical assets or in comforts, luxuries, health or riches, are plans that might as well be dropped cold today. Such plans won't work. Americans are not a people to tag behind the world.

Moreover, since the industrial development of atomic energy will run parallel with and greatly affect military applications, we have a final reason for a swift shift from the old to the new. We shall have to change over to be certain that we are as secure as any other nation—which may not be saying much.

From such glimpses it is evident not only that the bomb is here to stay but that the application of atomic energy to industry and to everyday life should, and likely will, occur as fully and as rapidly as is possible in this country. That means the boldest planning, the most intense realism, the willingness of every person who has a property stake in the Nation to exchange it for a new and different stake, if necessary. It means the loss of capital wealth. It also means the eventual creation of many thousand times the capital wealth lost. It doesn't mean "no work for

coal miners." Rather it means far more work for them—better, cleaner, more interesting work.

A WARNING AGAINST EXPLOITATION

An industry which sets itself in the path of such inescapable revolution, or one which tries selfishly to corner any part of the energy principles for mere exploitative profit, will be literally endangering the whole people of America—in many different ways. And it will be robbing you and me of our chance to witness and enjoy the wonder of a new age that began in the tragic, all too familiar way—by death in Japan. No battle of titan corporations for control of atomic-energy methods or patents can be permitted. Such a struggle would risk our place among nations and our hope of plenty.

That is what we shall risk if we try to use the atom to set up for ourselves a period of greedy prosperity, of isolationist luxury—a society bent upon pleasure and lacking point, purpose, dignity, and awareness. We have been very close to that dismal moral prospect for a long time.

There is still a third problem related to the new knowledge—a problem often discussed by scientists before the discovery of atomic fission—and since, only vaguely mentioned. As the experiments continue, and as atoms other than uranium are split—which they will be—it is conceivable that a disintegrative chain might leap from laboratory material to the furniture, or the earth, and so turn our planet instantaneously into a diffuse globe of radiant heat and light.

I do not know enough physics to suggest a proper gage of the danger of such a fantastic accident. Perhaps no physicist yet knows enough, either. But as long as there is even a hypothetical danger of a slip that would turn us all to gaudy dust, we are utterly dependent upon one another.

Since there is a permanent if remote chance that a new Hitler—a decade from now, or 50 years or a thousand—can threaten the whole earth with vaporization as an alternative to slavery, the need for human cooperation is plain enough. And that is just one possibility. We are, remember, in the Benjamin Franklin stage of our new era; the radar stage is yet to come. The rays, pressures, temperatures, powers, and killing agents to be discovered and harnessed are in the same scale as the possible benefits which we can have—which it is our common right to achieve—instead of universal extinction.

IDEAS FOR A WORLD-WIDE PLAN

With all these facts and suppositions in mind, I have outlined some steps in a tentative plan. This is not to be regarded as a final plan or as a plan I necessarily would want enforced. To make my own plan final even for myself I would need more facts. My purpose here is twofold: to show that we Americans can deal with the atomic present in a rational and intensely hopeful way; and to show the magnitude required in such a design rather than the details of the design itself. Here are the steps:

1. That science be internationalized. That the interchange of scientific information be made automatic and subject to no national restriction whatever. The internationalization of science may have to be delayed briefly in a reorganizing world, but the interval should be held to a minimum. To a year, for example. This would give everyone—and therefore ourselves—many advantages.

Only by this means, for instance, can we protect ourselves from the danger of new secrets—new tyrannies in preparation—new disasters breeding in laboratories inaccessible to men of good will.

2. The bringing of scientists into Government on a par with say, lawyers, statesmen, soldiers, labor, and business. This is vital, because scientists alone can fully comprehend the data upon which all future human existence will depend. What untaught Congressmen or generals say about the new atomic age, what editors or statemen say, will not make sense where it refers to scientific fact unless scientists agree. And all the facts of our lives from now and forever will depend on scientific knowledge of many abstruse kinds.

3. The formation, by all nations jointly, of a permanent international committee which will include representatives of all major provinces of common living and all major branches of science to act as an advisory body to the whole planet. On this committee the best minds of the earth would serve. The judgments, suggestions, statements, and criticisms made by this committee would be published and broadcast periodically for all people in all nations.

It is past time for us to form such a body. We have world banks and international chambers of commerce and leagues of nations arranged by diplomats. Now, we must have a world chamber of intelligence. Such a committee would not govern—it would merely make fact, truth, and common sense available to man. This I told to be the one possible means of expressing and effecting our interdependence in a world that has shown so little intelligence—a world of separate sovereignties.

In science, economics, sociology, psychology, business, labor, and so on—the leaders by and large already have world knowledge and world-wide contacts. To a chamber of intelligence they would bring no meaningless provincialism. Many would already be known to one another. The waste and blunders made by the purely local man in our Congress—and there are many such—would be avoided here.

A chamber of intelligence would furnish the nucleus from which every nation and every human being could learn to live with and to benefit from the atomic nucleus.

4. That America take the lead at once in these affairs. All we have is the opportunity for a gesture. A gesture of sharing information which will make other nations strong—which will show them we do not fear them—and which will end their present terrifying reason to fear us. As realistic diplomacy it would repay us forever, and it is intensely realistic because its alternative is to fight everybody now.

In this connection, a hypothetical human possibility ought to be considered, I think. Suppose a few of the scientists who know all of our new and thus-far secret data come to resent—as free men, as opinionated human beings—whatever secret disposition might be made of the knowledge? Suppose such persons decide a policy of secrecy, or of controlled exploitation, is robbing humanity of benefits to which it is entitled? Suppose then, that these individuals decide their loyalty to man is greater even than their loyalty to this Nation? Can they not turn over their knowledge to any other nation—or to the world at large? Undoubtedly they can.

5. The internationalization of science and the sharing of atomic knowledge is recommended on a still higher plane. To whom can it rightly belong, except to all the people? Principles are involved here, not patentable gadgets. Trade competition cannot involve principles. Knowledge of the nucleus of the atom cannot be regarded simply as a business opportunity. Special military applications—like the bomb—might be kept secret if they could, although we are faced with a kind of knowledge which will slip through the uncomprehending surveillance of all Government agents and all soldiers. Special devices for the uses of atomic energy might be patented, but not principles. For this is a force. An idea. A set of laws.

6. That the committee, now studying the social and political as well as the scientific aspects of the new energy, present at once as many of the relevant facts as can be told without giving the blueprint for bomb manufacture. The American public must know those facts now, because it will decide, as usual, what the Nation will do about them. If decisions made in conference today do not satisfy the requirements of the American people tomorrow, they will be reversed, and at great expense and trouble.

Every individual and every group must be made informed and brought into the picture. That is the definition of our society. It is, indeed, the duty of every person and every organization to demand the basic knowledge and the logical hypotheses. Until we are informed, none of us can operate intelligently. A people capable of making great decisions is not one to live in fear and ignorance.

7. The economic cost of atomic development will be prodigious. It can be borne only by a rich nation or by a socialistic nation. We are rich and we do not want to become socialistic. The American taxpayers invested $2,000,000,000 in the bomb. That is far less than they invested in other war ventures which were less important and less promising. But it gave the public actual ownership. And atomic energy must stay nationalized.

No corporation and no cartel can claim that its capital investment made the bomb. And the bomb principles were discovered mainly by professors and academic researchers. Nationalization will not cost one businessman one cent.

No corporation and no cartel can afford the money that must be spent, in the years that begin now, to develop all phases of atomic energy. The original $2,000,000,000 was a trifle. What we got for it was equivalent to purchasing the continent of North America for a nickel. To obtain quickly the stupendous benefits that are within our very hands, much more money must be spent at once. Money of the magnitude of $10,000,000,000 a year. Peace is worth that, isn't it? Abundance is worth that, isn't it? Power for every man, always, in endlessly increasing amounts, is worth that, isn't it? Such a sum is still only a minor fraction of the cost of the latest war. It would be a mere jot in the cost of any future war.

But only as a whole people can we invest sums like ten billions a year in a project that will have so many long-range aspects. This idea is not new to us. We own the fleets and the air force and the Army equipment. We are pretty good in the war business—we won. We ought to be able to see that we can also win in the peace business. We are in the public-health business. We are in the post-office business. We need to add one more, the power business of the future. It is too big for corporations. Several million times too big. It is big enough to challenge every soul in this Republic.

PREVIEW OF OUR ATOMIC FUTURE

If we American people own our atomic power, we can make a national profit on energy, we can supply ourselves at rates so cheap it would be unbelievable today. With that profit, we could reimburse the owners of business that will gradually become obsolete as atomic energy replaces them. We could finance transitions from coal and electricity to atomic energy. We could erase the war debt. And we could finally use atomic power, a universal necessity, to replace taxation—supplying funds for mammoth projects undertaken in the interest of common people.

Suppose we do not nationalize atomic energy? In that case we will be competing with socialistic nations for world markets in which to sell goods and services produced by that energy. Russia is such a nation. Britain is becoming such a nation. And Britain has the necessary information. I doubt that our corporations would be able to meet the prices and the advances possible to such nations. I believe nationalization of atomic energy alone will solve that problem for us.

At the same time it will keep the rest of our capitalistic system the way it has been.

We thrive on capitalistic competition. And I believe, myself, that socialism is tyranny.

Still another factor is involved here. If atomic energy is not nationalized, it will instead become corporate property. Corporations will use it for profit. They will be more interested in making that profit than in new experiment, replacement of still usable equipment, and so on. They will fall behind the science of socialistic nations—of Communist countries and of countries with any future form of national socialism. That has happened before in this country. In any war from today on, falling behind in research would be fatal. We wouldn't be given time to convert industry—to study and then imitate the weapons of other nations.

This thing is everybody's business. We must own it, finance it, through it maintain the strength that means security and by it become a nation superrich in truth, in dreams and in property.

The carrying out of such plans as these will require boldness, absolute integrity, complete political unselfishness and perpetual guts. And the carrying out of such plans will be hazardous. But I think all other hazards are immeasurably greater.

For we, who have gone so far in two centuries, now own infinity and eternity. We have become the people physically most powerful on earth. Upon what we have deeply believed and upon the new beliefs we shall find, man's fate depends. For 50 years, or thereabouts, we have gravely defaulted. Some of us have lost hope. Many of us have put our faith in looking backward. Still more of us have been unable to discern in the future a proper heritage for Americans—a thing of sufficient challenge and possibility to give us endless incentive and the dignity that belongs to a race which pays its respects alike to Thomas Jefferson and Paul Bunyan.

This is the dream we yearned for. This is the long chance—and the main chance. This is the superlative responsibility which, if shouldered, promises a paradise men can make with their own hands and their own minds. For this opportunity, the globe is everywhere marked with white crosses of our young dead. That is what they fought to earn. That is what they gave to you.

This, somehow, magnificently, is us!

## The Mission of Congress

EXTENSION OF REMARKS
OF

### HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, during my service in the Congress of the United States, I have watched almost daily with increasing interest the general trend of influences in the Congress. It is obvious that the Congress is an institution that must bow to the will of influences.

It has long been my contention that the Congress, however, must bear in mind always that it is one of the three bodies of Government created under the Constitution and that it must at all times preserve its functions. All too often Congress sacrifices its position before the people while this group or that, within Congress, yields to the influence of economic pressure groups, or perhaps yields to political influence from the administration, or gives great consideration to the question of reelection. These are all natural human qualities.

It is my personal belief that the Congress of the United States should at all times bear in mind that it has an important mission, and that is to serve all of the people of the United States, not some special group or some special section.

The tax bill which came to the floor of the House last week from the Ways and Means Committee was a suggestion of great statesmanship on the part of the membership of that committee. It came out with unanimous report and by and large it was fought out on the floor and supported by the membership.

This is an illustration of what Congress must do in many instances. It must think of itself as a unit in the interest of the national well-being. It must submerge political ambition sometimes, and certainly it must check off the influences of economic blocs, while it drives steadfastly toward a goal of accomplishment. That goal of accomplishment must be a greater service for all of the people of the United States of America.

The distinguished gentlemen of the Ways and Means Committee are deserving of the Nation's congratulations for their unanimity of action and purpose on the tax measure recently passed by this House.

All too often the Congress is bitterly condemned by editorial writers and commentators. This is an easy thing to do because condemnation against the Congress does not get an editor in any trouble.

Nevertheless, it is well for the Members of Congress, and especially the lower body, to take due notice of editorial comment throughout the Nation. Times without number Members of the Congress have been criticized because of failure to join hands, not as Democrats or as Republicans, but as Congressmen inspired to render to the Nation a service, and a service that is beneficial to all the people.

Under unanimous consent I ask permission to include herewith an editorial written by Kenneth W. Simons, of the Bismarck Tribune, Bismarck, N. Dak. While in many respects, I am not in complete accord with what he writes here, nevertheless I do feel that he does point the way for a more complete action on the part of Congress in the interest of the people. The author of this editorial is regarded in the northwest section of the United States as among the foremost editorial writers.

CONGRESS SHOULD DO IT

When the Committee for Economic Development was organized in 1942 it set out as its guiding principle that any policy recommended should be "from the standpoint of the general welfare."

To date it has done an outstanding job, bucking the selfish interests of various groups in doing so. There have been no hidden hooks or jokers in the various CED proposals, whereas, in contrast, the suggestions of those who would serve only their own interests are full of them, even though all claim to be interested only in the general welfare.

Analysis of the various CED proposals and of the manner in which they were arrived at also brings out the fundamental weakness of Congress. This is its subservience to lobbies. Of whom was Congress thinking, for example, when it lifted all controls on housing costs? Was it thinking of the average citizen who wants to invest in a home or was it thinking of those who see huge profits in the present strong demand for housing? Was the approach of Congress truly objective?

The answer, in all honesty, seems to be "No."

What Congress needs is an objective approach rather than a political approach. It could and should employ its own experts to advise it what is best for the Nation. It could hire economists and technicians just as the CED has done.

The fact is that what should be the strongest of the tripartite sections of our Government is really the weakest. We are trying to run an atomic-age government with a "horse and buggy" legislative system. The two things just do not go together.

Yet an alert and vigorous Congress is the real hope of the people. It—with the courts—stands as the bulwark of the people's liberties. There is no substitute for it. But it must do its job more effectively or it will, eventually, find itself in the discard. It can do a better job if its Members have a real will to do so.

Proposals for reorganizing—streamlining—the Congress are many. Almost any one of them would be better than what we have now. And any intelligent Congressman or Senator should know it.

But, regardless of the form of organization, the most single desirable end is that Congress learn to see things objectively; that it have a policy of its own and not take its policy second-hand from self-seekers and lobbyists.

The latest proposal of the CED is the establishment of a President's Committee on Full Employment and a Joint Congressional Committee on Full Employment. These would be expected to recommend to Congress measures "to deal with the many problems involved in achieving a prosperous and stable economy."

The main difference between the CED and other organizations is that it seeks, first of all, full employment and advocates steps necessary to achieve that end. The others usually seek high profits or—in the case of some labor organizations—special advantages. Full employment is only an incident—if it is considered at all.

The proposed committee system would, of course, by-pass the present bunglesome, cumbersome organization of Congress and enable it to provide some sort of leadership in the public interest. This is an end devoutly to be wished.

## Can Congress Save Itself?

EXTENSION OF REMARKS
OF

### HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 11, 1945*

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I am including as part of my remarks an article published in the Saturday Evening Post and reprinted in the St. Louis Post-Dispatch by Henry F. Pringle which has to do with the subject of reorganizing the Congress. It follows:

The Seventy-ninth Congress faces an issue as grave as any in the history of the Federal Legislature. The issue is whether Congress can modernize its archaic machinery and thereby regain its historical position of power without which the democratic process will fail.

A handful of men in the House and the Senate have long been aware of the impending catastrophe. Together with private citizens, they have been working for years to prevent it. Their efforts have culminated in the Joint Committee on the Organization of Congress.

What happens to its recommendations will be the test. The worn-out rules, the entrenched privileges, the petty jealousies, and the hollow traditions of the supposedly coordinate legislative branch of the Government may combine to defeat all suggested changes.

HALF CENTURY BEHIND TIMES

Congress, burdened with enormous problems, first of the depression and then war, is understaffed, underpaid, and overworked. It has been ridiculed by the public and kicked around by the executive departments. Its machinery, largely fashioned in 1890, is 50 years out of date.

Congress has largely abdicated its legislative as well as its supervisory duties. Bills are drafted in the White House or some agency, instead of by the lawmakers of Capitol Hill, and are enacted under Executive pressure.

Congress is so afraid of public opinion that salaries of $3,000 and less are paid for work for which the executive agencies give $8,000 without hesitation. Congress spends roughly $16,000,000 on itself each year, about what the Department of Agriculture uses for travel alone.

Congress is still a horse-and-buggy remnant in an age of automobiles, airplanes, and atomic bombs. The peril grows that this frustrated collection of overworked legislators may become permanently, as Senator O'MAHONEY, of Wyoming, has warned, "merely a timid and formal appendix to bureaucracy."

A PROGRAM OF ACTION

Opinions differ, in and out of Congress, on how to prevent this. Nearly everybody agrees that the reforms will come step by step, and not through sweeping changes. The consensus would appear to be that Congress cannot serve the nation adequately until the following things have been done:

1. Reorganize the committee structure of Congress.
2. Lift from the shoulders of Members most of their nonlegislative duties.
3. Improve liaison between the two Houses, and between Congress and the executive branch.
4. Increase salaries or expense allowances of Members.
5. Provide Members and committees with adequate research staffs.
6. Evolve some substitute for the seniority system of selecting committee chairmen.

An effective Congress is utterly impossible without drastic reorganization of its committees. The present clutter is senseless, overlapping, and confusing. Few Congressmen even know how many exist.

Congressmen cannot possibly attend all the meetings. Unable to familiarize themselves with the subjects under discussion, committee members vote by proxy along party lines. It is common for them to hurry from committee room to committee room, distributing proxies, and then attend the hearing which they regard as the most important.

The committee system, having evolved with the years, has no relation to the branches of the executive. It has virtually no relation to anything. The House has three committees on pensions. It apparently operates on the theory that a flood never has any relation to a river; the Rivers and Harbors Committee and the Flood Control Committee work separately.

EVILS OF SENILITY SYSTEM

It won't be so easy to abolish the seniority, often called the senility, system. Advancement by seniority alone keeps men too old for their jobs in committee posts on which the operation of Congress depends. It blocks the progress of younger, more able Congressmen.

Certainly amended rules should strip from committee chairmen some of their arbitrary powers. Today they can block legislation at will. As Congressmen HERTER has pointed out, a one-third minority in a committee should be sufficient to place legislation before the House.

Congress will doubtless agree that more adequate research and technical help should be supplied both to the Members and to their committees. The added cost is utterly insignificant. A mere $83,000 is now paid in both Houses for lawyers to help draft legislation. The Department of Agriculture alone spends $1,600,000 for its legal staff.

WARNING BY MEDICAL OFFICER

None of these reforms will help very much, however, unless Congress divests itself of unessential business. One is governing the District of Columbia. A committee in each house—the great BILBO is chairman on the Senate side—must pass on the most trivial subjects. Last spring, the profound question of an 8-foot increase in the height of a hospital had to be thrashed out while such matters as postwar conversion were shelved.

The alternative to change in the organization of Congress is chaos. In their own interest alone the Members should act swiftly to cut down unnecessary burdens. Senator Maloney served on 23 committees. In pressing for the resolution which created the joint committee, the Senator last December described the overwhelming burden he was carrying. Seven weeks later he died of a heart attack.

During the committee's hearings, Dr. George W. Calver, medical officer of the Capitol, warned that the congressional pace must be slowed down. He made it clear that additional heart attacks and nervous breakdowns would surely come unless Members watched their health more carefully. Perhaps the doctor has frightened the boys into taking some action this fall or winter.

## Dock Workers and CIO Seamen Delay Return of American Soldiers From Europe

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. PITTENGER. Mr. Speaker, one argument or excuse for delay in demobilizing the Army has been the claim that there is a shortage of ships. Boats are just not available to return men from Europe in greater numbers. This handicap, however, is now faced with a still greater obstacle in the return of our soldiers.

NEW YORK HARBOR SHIPPING PARALYZED

Government officials charge that the strike of the dock workers in New York Harbor is responsible for tying up boats in the harbor. This means that American soldiers in Europe will have to stay there until the dock workers get ready to work. In all fairness, we cannot blame this condition on the Army officers.

SOLDIERS' RETURN DELAYED BY STRIKE

Here is what the Washington Post, October 13, 1945, says:

Return home of 15,000 American troops, eagerly waiting in European ports, is being delayed by the tying up of ships in New York Harbor's longshoremen strike, Government officials charged last night. * * *"

Sixteen Liberty and Victory ships, fitted as troop transports, are among the more than 350 ships immobilized by the harbor tie-up.

Other newspapers have carried the same information, and the statements have not been denied. Late Saturday afternoon newspapers indicated that a change of heart had taken place among those responsible for the strike, and the Times-Herald of Washington, D. C., carries an item, in part, as follows:

READY TO CONFER WITH ARMY—DOCK STRIKERS AGREE TO SERVICE SHIPS FOR RETURN OF VETERANS—STEP TAKEN AFTER GOVERNMENT OFFICIALS APPEAL TO UNION TO FREE VESSELS IN NEW YORK

Longshoremen, whose 12-day strike has paralyzed New York shipping, announced early today they would begin immediately servicing ships engaged in supplying the armed forces abroad and returning troops to this country

These statements, Mr. Speaker, are based on facts, for so far as I know there has been no denial, and the dock strikers are charged with delay in returning these troops. I just want the folks back home to know where the blame rests. The situation is further complicated by developments that took place yesterday, Sunday, October 14, 1945. Note the following headlines and news item from the Times Herald:

CIO SEAMEN BLOCK END OF SHIP TIE-UP—REFUSE WORK UNTIL ALL DOCK HANDS RETURN—TROOP REDEPLOYMENT DELAYED BY DISPUTE

A back-to-work movement among striking A. F. of L. longshoremen at New York's harbor was threatened with curtailment by the National Maritime Union (CIO) as the 13-day dispute continued to paralyze shipping and interfered with troop deployment. Approximately 2,000 of the estimated 35,000 strikers reported to the piers for work yesterday. But the CIO maritime union said it would refuse to provide steam to work the winches aboard the ships until all the longshoremen agree to end the 13-day tie-up.

SECRETARY OF WAR PATTERSON COMMENTS

Then, here is a short quotation from a statement by Secretary of War Patterson, showing what results from all this:

Every day lost in turning ships around is delaying the homecoming of thousands of soldiers who have been engaged for several years in combat duty in Europe.

All of us would like to know who is responsible for this dastardly condition, this "stab in the back" of men in our armed forces in Europe, and this unpatriotic refusal to help bring them back home, so they can be discharged from the Army, and return to their families.

WHO IS RESPONSIBLE FOR THE STRIKES

I do not know of anyone more capable of telling us who is responsible for these

strikes than Mr. Joseph P. Ryan, president of the A. F. of L. International Longshoremen's Association. Mr. Ryan gave an interview on October 12 in New York City, and openly charged that the Communists, working through others, were the ones who created the strike situation, and the strikes that followed. The Times-Herald, Washington, D. C., news item is as follows in the October 13 issue:

A. F. OF L. EXECUTIVE SAYS UNITED STATES REDS BACK DOCK STRIKE

(By Charles Gotthart)

NEW YORK, October 12.—The story of the Communist plot behind the New York waterfront strike that has converted the world's busiest port into a "ghost harbor" was told for the first time today by Joseph P. Ryan, colorful president of the A. F. of L. International Longshoremen's Association and arch enemy of communism.

"Communists inspired by Communist-dominated CIO unions have seized this opportunity in another effort to infiltrate into the ILA and gain a dominating position thus far repulsed by loyal American A. F. of L. members," he declared.

PART OF LONG EFFORT

"It is part of an effort carried on for years, uninterrupted by the war years and notwithstanding labor's pledge against strikes during wartime—a pledge our union faithfully maintained.

"The Communists are trying to dishonor our longshoremen and discredit their war record, which has been praised by the Navy. One of their motives is to further the Communist movement in Italy—to prevent the shipment of supplies to that stricken country and thus lay the ground work for a Communist uprising there.

"As usual, they wrap themselves in a false cloak of Americanism. There is unmistakable evidence that the port tie-up is the work of Communists."

SAYS TRIO DIRECTS STRIKE

In an interview openly disclosing what hitherto had been referred to as outside influences, Ryan asserted that Communist agitation behind the strike was directed by Joseph Curran, president of the Communist-dominated CIO National Maritime Union; Ferdinand C. Smith, NMU secretary repeatedly exposed as a Communist supporter, and Harry Bridges, west coast CIO water-front czar whom the Roosevelt administration saved from deportation as an undesirable alien and Communist.

"Communists distributed thousands of handbills printed by the CIO among the longshoremen whom we were trying to get back to work—urging them to remain out and prolong the strike as we were attempting to end it," Ryan said.

In pinning the Communist label on the outside influences, Ryan was joined by Eugene Sampson, business agent of one of the ILA locals who has swung to Ryan's support after having originally led a rank-and-file uprising.

The foregoing news item states things in clear and unmistakable language. Mr. Ryan has nothing to conceal. He does not hesitate to put the guilt on the Communists, or, perhaps, their fellow travelers. We would expect such depredation from the Communists, for, after all, they seek to destroy our country and our flag, and our free institutions. Did I hear you say, "I though that was what our boys in Europe thought they were fighting to preserve?"

WHAT CAN BE DONE TO AVOID DELAYS IN RETURNING OUR SOLDIERS

Naturally, everyone with a son, husband, father, or brother now in our armed forces in Europe wants to know what can be done to get these boats in operation again. The delay is not justified. Well, we still have an executive branch of the Government. It administers the laws. The President of the United States is still Commander in Chief of the Army and Navy of the United States. He still enjoys emergency war powers, for up to date he has not officially declared the war at an end. The President or his representatives can act. If necessary, the Army and the Navy can operate the ships. They did it when they had to face the fire of battle, and death and destruction. That was the time when the ringleaders on the water front were enjoying peace and prosperity in the safety of New York Harbor. The situation calls for drastic action by our Chief Executive. Suppose you tell the President, whose address is "The White House, Washington, D. C.," what you think about this interesting subject. I predict that he will listen, and take appropriate action.

## Freedom Works Two Ways—We Are Always Free For Something as Well as From Something

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. DOYLE. Mr. Speaker, by reason of having been granted unanimous consent so to do, I am pleased to have inserted in the CONGRESSIONAL RECORD of this date the splendid editorial, This Thing Called Freedom. It is printed in the Compton Journal under date of October 16, 1945, which is one of the strongest and ablest publications in the great Eighteenth Congressional District of California, which I have the honor to represent in this Congress. The city of Compton, Los Angeles County, Calif., is the second largest community in the Eighteenth Congressional District in the terms of population, and is one of the most thriving, progressive, patriotic communities in the Nation.

THIS THING CALLED FREEDOM

America and the world has passed through the awful ordeal of universal war, and victory in our time has been won. We have paid a price for that victory—a price in American money and tears and blood. It was not destined to come in the lifetime of those who sacrificed most selflessly for it. These were the men and women who gave their lives in order that those now living might experience this glory of human spirit.

Many of them died when hope of a victorious peace was dim: Americans at Bataan; Russians at Moscow and Stalingrad; British and Canadians at Dunkerque; Chinese on a hundred lost battlefields; the noble men and women of the European underground resistance who died by starvation, torture, and the firing squad. The free peoples of the world cannot repay them; can only accord them an eternal peace in honor with all who have died in the name of liberty through mankind's troubled history.

The atrocities of war are easy to remember and difficult to forget. The things for which those sacrifices were made will be more difficult to remember.

We say we have fought for freedom.

Freedom works two ways. We are always free for something as well as from something.

Let us remember what freedom for self-seeking bought us after the last war. It bought us unemployment, bitterness, strikes, class conflict, race hatred, and war.

Why not use freedom for something different, this time, and win through to a different result? Why not use freedom to build teamwork? Here is the only thing which, in the long run, can bring us happiness at home, peace in industry and security between nations. Here is a greater chance for pioneering than there was for any of the men who crossed our continent or built our industry.

Why not use freedom, this time, for renaissance? Renaissance in art, literature, drama. Renaissance in our underlying ideas about business and the professions. Why not bring freshness out of sameness? Why not employ our energies and talents for creative ends instead of prostituting them for a sensation, or for notoriety or gain?

Why not use our freedom, this time, to work changes in the hearts and minds of people—changes which can turn fear into security, confusion into certainty, and thus really change the conditions under which people live?

Why not, in short, use freedom to remake the world instead of trying to make something from it? If we think only that the world owes us a living we will surely go on living in hot water. But if we think what our living can give to the world then, perhaps, it will not come crashing down again around our ears.

Mr. Speaker, the editorial appears as striking a keynote of thought and action, and I wish all the readers thereof to have the benefit of its splendid interpretation and emphasis.

## Steamship Companies in Air Transportation

EXTENSION OF REMARKS

OF

### HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. PRIEST. Mr. Speaker, there has recently come to my attention an article entitled "Steamship Companies in Air Transportation," written by the late Col. Edgar S. Gorrell, president of the Air Transport Association of America. Colonel Gorrell served as Chief of Staff of our Air Forces during the First World War and was recognized as an outstanding authority on aviation matters. Believing his article on this timely subject will be of interest to the Members, I am inserting it at this point in the RECORD:

STEAMSHIP COMPANIES IN AIR TRANSPORTATION

The major purpose of this article is to comment on one prepared by Paul Hodges, execu-

tive assistant of the Matson Navigation Co., and published in the January 15, 1945, issue of American Aviation. Mr. Hodges' thesis was that the Civil Aeronautics Board, in issuing certificates for international air transportation, should treat steamship companies equally with other applicants. All the steamship companies ask, according to Mr. Hodges, is that the "circumstance of being steamship companies, rather than some other kind of company, be not held against them" in certificate proceedings. This is made to sound insignificant and to cause the unthinking promptly to assent. Actually, of course, they seek a complete reversal of congressional policy as expressed in the Civil Aeronautics Act of 1938. In addition, they seek to impose upon the Board, which is responsible for the development of air transportation, a requirement that it ignore a fundamental disability of a large group of applicants for new international routes.

The steamship companies, by virtue of being steamship companies, are basically disqualified to undertake the responsibility of developing air transportation. Air and surface transportation are competitive. The area of competition is now very limited, to be sure, but it should be the objective of every air-line operator, through improvements in service and reductions in costs, to broaden this field of competition to the maximum extent and as quickly as possible. Within a few years after the war it looks as if the air lines will be able to compete successfully with the steamship companies for first- and second-class passenger traffic and for a very small amount of highly valued or emergency cargo. Even if the air line were operated by a steamship company, the air line would probably get a good portion of this traffic, but this is a very limited market on which to expect to develop air transportation as this Nation must develop it. Our international air transport fleet would be a very small one if this were all it had to carry. The expansion of air transportation will be dependent upon the trade and travel stimulated by the benefits of this new mode of transportation—benefits which will not in all cases be immediately apparent to every traveler and businessman to whom they might be valuable. It is at this point that the steamship-operated air line would fail. It would do so for two reasons.

IMPARTIALITY WON'T DEVELOP AIR TRANSPORT

In the first place, the steamship management would be responsible to its stockholders for a large investment in surface vessels and would necessarily exercise the utmost care in guarding the integrity of that investment. Even assuming that the management would not deliberately set out to retard the development of its air line, it certainly could not be expected to make the tremendous efforts that will be required to expand the air transport market when those efforts might be thought to reduce the value of its much larger stake in surface facilities. This conflict of interest could not fail to produce overcaution and indecision when precisely the opposite characteristics are essential to success in overseas air service.

The second reason that the steamship company would fail in the development of the traffic required by its air line is because of the innate tendency of steamship men to think in terms of slow and relatively cheap ocean transport, and to regard as immutable the travel habits and methods of doing business which have grown up around, and have been adjusted to, steamship service. There is good reason to fear that air transportation, if left to them, would be made to fit that mold rather than being given freedom to realize its full potentialities. If people retain their present travel habits and if businessmen continue to conduct their businesses and ship their cargo in the same way they always have, the available traffic for air transport will be very limited. The objective of the air-line operator must be to demonstrate to the public the benefits of air travel and to convince businessmen that profits may be made through the use of air transportation even though the actual transport rates are high. It seems quite impossible that this type of contribution to the development of air transportation and to the wider distribution of its benefits would be made by a steamship operator. The best that can be expected of the steamship operator is that he will be completely neutral as between the two forms of transportation. This is the best that Mr. Hodges had to offer. He gave assurances that the ocean carriers would not restrain aviation in favor of their surface operations and said that it would be just as advantageous for the steamship company to carry passengers on its air line as on its steamships. Air transportation will not advance far under such a regime because the development of this very speedy and comfortable, but highly expensive, form of transportation requires more than impartiality. It requires the effort and initiative and imagination which can only be provided by an independent management which is convinced of the superiority of air transportation and is determined to persuade the traveler and the shipper that it is right.

This country has the finest air transportation system, the best transport aircraft, and the largest aggregation of operating experience of any nation in the world. These are of immense value to our national security, prestige, and trade, and they were not acquired through the observance of strict neutrality. This development has not been achieved under managements which felt that if people were going to travel they could go by air or rail or ship or bus, and it did not matter much which. It is attributable to the pounding of pavements in search or air-line business—when there was very little—by men who had to fill the airplanes or go broke. These men created business where no business had been before, and if international air transportation is to develop as it should, the same efforts will have to be continued in the international field.

AIR-LINE OPERATIONS COMPLETELY DIFFERENT

Mr. Hodges revealed his fundamental misconception of the air transport problem when he referred to air transport as "a newcomer in the trade," the trade presumably being overseas transportation. Air transportation is just not the same "trade" that he is discussing, or at least it should not be so regarded. The trade he is talking about is the carriage of passengers and goods at 11 knots an hour in a large vessel on the surface, at an average cost of about 2 mills a ton-mile. Air transportation is the carriage of passengers and goods at 250 miles an hour in a small vessel in the air, at 15 cents or more a ton-mile. Air transportation is a revolutionary change from transport by ship and it must be conducted and sold entirely differently. Certainly the actual operation of a steamship line and the air line are completely different. No integration is possible here. The carriage of traffic by air would present an entirely new problem to a steamship line and it is equally, if perhaps not so obviously, true that the sale of this traffic is completely different also.

A limited amount of air-line traffic can be gotten by merely operating the air line, but air transport cannot live and develop on the driblets that would be produced that way. The air-line traffic man must depart completely from the methods prevailing in surface carriage and develop new markets for himself. As an example advantage must be taken of the possibility of persuading the American public to spend a week-end vacation in London, or a 2 weeks' vacation in Switzerland. This market has never been available to the steamship. Completely new thinking will have to govern the sale of cargo transportation by air because it will be necessary in many cases to alter methods of doing business. Air transport is not the same trade as steamship operation and it would be disastrous to the development of the business if it fell into the hands of those who were predisposed to think it was.

COMPETITION MEANS SURVIVAL

In seeking to determine the role of the steamship in air transportation, the objective should be to meet the needs of both air transportation and the surface merchant marine. As has been said, a percentage of the overseas passenger business will go to the air without the exercise of much initiative by those who are responsible for running the air line. It would be most unfortunate if the management of a steamship company also owning an air line should decide to carry passengers by air and to cease its efforts to attract steamship passenger business, for if we are to have a well-rounded merchant marine it must include passenger as well as freight vessels. If the steamship companies are provided with air lines this might well be the result, and Mr. Hodges' assertion that an impartial attitude would be maintained as between the two forms of transportation indicates that this is more than a possibility. Impartiality is just as bad for the proper development of the merchant marine as it is for the proper development of air transportation. Even for passengers, ocean travel has many advantages. As Admiral Land has said:

"To many persons a sea voyage provides an unequaled opportunity for relaxation, social life, and the benefits to be derived from sea air. Appetite-giving ozone and the iodine in the salt spray are not inhaled 10 and 15 thousand feet above the surface of the sea. There will be ships for these people.

"Although I will not argue against air transportation's superiority over surface transportation in certain fields, I will argue that we are going to need just as many ships to carry on world commerce as though the airplane still did not travel over great bodies of water. In fact, I believe that we'll need more ships, because the airplane will develop interior regions of countries which hitherto have been difficult to reach by any other transportation."

If there is no easier way to retain the passenger business the steamship companies will undoubtedly be impelled through air competition to make the most of these advantages, and these efforts will not only provide a better and more varied service for the patron but they will also aid in providing the country with the surface merchant marine which it must have. If the steamship companies, on the other hand, are permitted to acquire their new competitor there will be little incentive for them to create these improvements. It should always be remembered that large grants of public funds are given our steamship operators for the purpose of developing and maintaining the surface merchant marine required by our national interest. With those funds comes responsibility for bending every effort to carry out this public policy.

As Mr. Hodges pointed out, one thing on which we can all agree is that this Nation needs "a sound, adequate merchant marine of the air and sea which will keep the American flag flying high and far in international competition." This is a great objective but he espouses the worst possible method of achieving it, a method which would deprive both air transport and the surface merchant marine of the vigorous, energetic management which must characterize both of them if the objective is to be attained.

## Report on Visit to Army Separation Centers at Jefferson Barracks, Mo., and Fort Sheridan, Ill.

EXTENSION OF REMARKS
OF
### HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. HOEVEN. Mr. Speaker, a congressional committee composed of WILLIAM C. COLE, of Missouri; CHARLES B. HOEVEN, of Iowa; JAMES I. DOLLIVER, of Iowa; and ALBERT M. COLE, of Kansas, visited the separation centers at Jefferson Barracks, Mo., on September 28 and 29, 1945. This separation center is under the direction of Brig. Gen. George D. Shea, and is being conducted in a competent and efficient manner.

A total of 5,668 officers and men were discharged at this center during August, while a total of 16,492 officers and men were discharged during September. It is hoped to discharge between 1,400 and 1,600 men each day on and after about the 10th day of October. That rate of discharge cannot be increased to any large extent unless additional housing is provided, and additional trained personnel are made available for the medical and financial departments. The center is operating 7 days a week, approximately 10 hours each day.

The committee was advised that every effort was being made to discharge men within from 44 to 48 hours. In talking to individuals at random, the committee learned that most of the men were being discharged very promptly, although a few cases were brought to our attention where men were being retained for as much as 5 days. The officers in charge of the separation personnel explained this by stating that in some few instances men had to wait for their service records to catch up with them, and in other instances delay was occasioned by the necessity of X-ray retakes or the necessity of medical or dental attention. We found only one X-ray machine in operation and another ready to be installed, which apparently caused some of the delay. The officers in charge of the separation personnel were most cooperative in every way, and conducted our committee through every separation operation, and they freely answered all questions which were propounded of them.

Our committee next visited the separation center at Fort Sheridan, Ill., on September 30, 1945. This separation center, under the direction of Brig. Gen. J. T. Pierce, is also being operated in a very efficien manner. The separation rate at this center as of September 30 was about 1,475 officers and enlisted personnel each day, operating on a 7-day-week schedule. In the separation center in strictly processing positions there are 148 officers, 2,383 enlisted personnel, and 197 civilians, for a total of 2,728.

The peak load has also been reached at this center, and men are being released very promptly with very few being retained for more than 44 to 48 hours. The efficiency of this center is partly due to the fact that they have adequate facilities in every department and a background of experience in operation work. The committee heard very little or no complaint from the men themselves. The officers in charge of separation personnel were most courteous to members of the committee, and we came away impressed with the businesslike manner in which the center was being conducted.

## Steps Taken for the Benefit of the Members of the United States Armed Forces in France

REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. ANDERSON of California. Mr. Speaker, Members of the House will recall that several months ago I complained about the terrific financial beating our men and women in the service in Europe were taking because of the fact that in France, in particular, they were receiving their service pay in devalued French francs. Since that time the War Department, through its financial division, has been negotiating with the French Government in an effort to arrive at a more equitable method of paying our troops abroad.

Some progress has been made, and I have just been furnished with a brief report of the results as far as France is concerned. For the information of the House, I therefore ask unanimous consent to include the report with my remarks.

STEPS TAKEN FOR THE BENEFIT OF THE MEMBERS OF THE UNITED STATES ARMED FORCES IN FRANCE

In the spring of 1945, M. Rene Pleven, French Minister of Finance and National Economy, at meetings held with the Secretary of the Treasury, conferred with representatives of the United States War and Treasury Departments to consider the problems which had been of concern to the United States Government relative to the general welfare and purchasing power of members of the armed forces of the United States. At that time, an agreement was reached on the broad principles of a program intended to provide more entertainment facilities, greater availability of nonrationed goods on special terms, and some special mechanism for generally improving the purchasing power of members of the armed forces of the United States in France. It was further agreed that the War and Treasury Departments would appoint representatives to work out the details of the program in Paris, in cooperation with the American forces in France and with the French Government.

As a result of these negotiations conducted in Paris by representatives of the War Department General Staff and the Treasury Department, the Government of France has put into operation the following program:

In order directly to increase the purchasing power of the members of the armed forces of the United States in France, the French Government placed at the disposal of the American Government a substantial number of francs for distribution to members of the armed forces of the United States. The distribution of these francs is being accomplished as follows:

Eight hundred and fifty francs per month on each pay day for those who are permanently stationed in France.

Eight hundred and fifty francs upon entering France for those who come from outside of France and are on leave in France.

Eight hundred and fifty francs to any individual arriving in any staging or assembly area in France from a unit outside of France.

Eight hundred and fifty francs to any officer who arrives in France on temporary duty, under competent orders, exceeding 11 days, but such officer will not be eligible for another issuance of 850 francs until he has accumulated 30 days' temporary duty in France.

Eight hundred and fifty francs to any enlisted man who comes into France on temporary duty, but such enlisted man will not be eligible for another issuance of 850 francs until he has accumulated 30 days' temporary duty in France.

Substantial price reductions, ranging from 9 to 40 percent, on articles made in France sold at the Army post exchanges; entertainment and refreshments at greatly reduced prices at centers already opened or to be opened with French Government cooperation; price reductions ranging from 11 to 42 percent on gifts purchased in French shops when exported to an address outside France by the soldier purchaser; and, at no cost to members of the armed forces of the United States, conducted tours to many places of historic and scenic interest in France, starting from the major leave or assembly areas. A partial refund of the prices paid, prior to the agreements, for local purchases in France by the Army Exchange Service will be made to the Army Central Welfare Fund.

Distribution of the adjustment francs went into effect at the end of August when all other features of the above program were already in active operation in certain sections of France and were being actively expanded.

## Atomic Bomb

REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. VOORHIS of California. Mr. Speaker, a few days ago there was printed in the Washington Post a communication signed by Justice Roberts, Bishop Tucker, Robert J. Watt, of the American Federation of Labor, and a number of other eminent people. The article reads as follows:

FOR PEACE BY LAW—A COMMUNICATION

The first atomic bomb destroyed more than the city of Hiroshima. It also exploded our inherited, outdated, political ideas.

A few days before the force of nature was tried out for the first time in history, the San Francisco Charter was ratified in Washington. The dream of a League of Nations, after 26 years, was accepted by the Senate.

How long will the United Nations Charter endure? With luck, a generation? A century? There is no one who does not hope at least that much luck—for the Charter, for himself, for his work, and for his children's children. But is it enough to have peace by luck? Peace by law is what the peoples of the world, beginning with cur-

selves, can have if they want it. And now is the time to get it.

Everyone knows that the Charter is only a beginning. It does not guarantee peace. Yet the hopeful and passionate words of Dumbarton Oaks and San Francisco created one very real danger: that millions of Americans will relax and believe that by ratification a machinery has been set up to prevent another war.

We think it our duty to warn the American people that this is not so. The Charter is a tragic illusion unless we are ready to take the further steps necessary to organize peace. Coming east from San Francisco, President Truman said in Kansas City: "It will be just as easy for nations to get along in a republic of the world as it is for you to get along in the Republic of the United States. Now when Kansas and Colorado have a quarrel over the water in the Arkansas River they don't call out the National Guard in each State and go to war over it. They bring a suit in the Supreme Court of the United States and abide by the decision. There isn't a reason in the world why we cannot do that internationally."

These were historic words, pointing our road to a future far beyond San Francisco.

For thousands of years men have learned that wherever there is government by law there can be peace, and where there is no law and no government, human conflicts have been sure. The San Francisco Charter, by maintaining the absolute sovereignties of the rival nation-states, thus preventing the creation of superior law in world relations, resembles the Articles of Confederation of the Thirteen Original American Republics. We know that this confederation did not work. No league system ever attempted in human history could prevent conflict between its members. We must aim at a Federal constitution of the world, a working world-wide legal order, if we hope to prevent an atomic world war.

It happens that at this anxious moment of our history a small book has been published, a very important book, which expresses clearly and simply what so many of us have been thinking. That book is the Anatomy of Peace, by Emery Reves. We urge American men and women to read this book, to think about its conclusions, to discuss it with neighbors and friends, privately and publicly. A few weeks ago those ideas seemed important but perhaps reachable in the future. In the new reality of atomic warfare they are of immediate urgent necessity, unless civilization is determined on suicide.

In his last address, which he did not live to speak, Franklin Roosevelt wrote words which were his political testament: "We are faced with the preeminent fact that if civilization is to survive we must cultivate the science of human relationship—the ability of all peoples of all kinds to live together and work together in the same world at peace." We have learned, and paid an awful price to learn, that living and working together can be done in one way only—under law. There is no truer and simpler idea in the world today. Unless it prevails, and unless by common struggle we are capable of new ways of thinking, mankind is doomed.

Owen J. Roberts, former Associate Justice of the Supreme Court of the United States of America; Senator J. W. Fulbright; Senator Claude Pepper; Senator Elbert D. Thomas, Chairman, Military Affairs Committee; the Right Reverend Henry St. George Tucker, Presiding Bishop, Protestant Episcopal Church in the United States of America; the Reverend Edward A. Conway, S. J.; Dr. Louis Finkelstein, President, Jewish Theological Seminary; Mortimer J. Adler, Professor of Law, University of Chicago; Charles G. Bolte, Chairman, American Veterans' Committee; Gardner Cowles, Jr., Publisher; Prof. Albert Einstein; Dorothy Canfield Fisher; Albert D. Lasker; Thomas Mann; Lt. Cord Meyer, United States Marine Corps Reserve, Veteran Adviser to Commander Stassen at San Francisco; Christopher Morley; Carl Van Doren; Mark Van Doren; Walter F. Wanger, Motion-Picture Producer; Robert J. Watt, International Representative, AFL.

## Bureaucracy Strangles Wisconsin Cheese Industry

EXTENSION OF REMARKS
OF
### HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. BYRNES of Wisconsin. Mr. Speaker, I am including as an extension of these remarks a statement presented today by L. E. Kopitzke, president, and George L. Mooney, executive secretary of the Wisconsin Cheese Makers' Association, to a conference of the Wisconsin congressional delegation and officials representing the United States Department of Agriculture and the Office of Price Administration. The seriousness of the situation which confronts the Wisconsin cheese industry today cannot be overemphasized. I feel so strongly on this subject that I deem it not only advisable but imperative that I call the attention of this Congress and of the Nation to the problems and ask for immediate action in the direction of their solution.

The production of cheese is one of the principal industries of Wisconsin. It is an industry that the people of the State of Wisconsin are proud of. We are proud of the great contribution that it has made in the war effort.

Today, however, Mr. Speaker, bureaucracy strangles the Wisconsin cheese industry. It is being hampered at every turn by agencies of the Federal Government, and, unless immediate steps are taken to relieve this industry from the shackles which have been placed upon it by the bureaucrats, we shall see its slow but sure death.

The meeting which took place today is neither the first occasion upon which these problems have been brought to the attention of the appropriate Government agencies, nor is it the first occasion upon which the industry has been advised that the departments are conscious of the problems and are discussing them. May I make it clear, however, that sympathy does not give relief and sympathy will not solve the problems.

The administration persists in giving lip service to the desire to solve the various problems incident to reconversion, but, if its treatment of the Wisconsin cheese industry is an example of the way in which it is going to handle the reconversion problems in other industries, I cannot help but be pessimistic about the future.

Here, Mr. Speaker, in the words of Mr. Kopitzke and Mr. Mooney, on behalf of the Wisconsin Cheese Makers' Association, men who know what they are talking about, is the way the reconversion problems of the Wisconsin cheese producer are being handled:

Representing the Wisconsin Cheese Makers' Association, we speak for over 1,000 members representing about 1,200 out of less than 1,600 cheese factories in Wisconsin.

Wisconsin manufactures about 50 percent of the Nation's cheese and exports over 95 percent of its product. This was true before and during the war.

We believe, therefore, that the Wisconsin cheese industry calls for national consideration and sympathetic treatment. This statement is all the more true, because Wisconsin produced about 50 percent of the Nation's Cheddar cheese, of which 50 percent was required set-aside for lend-lease and other governmental requirements.

Many emergency regulations affecting cheese, adversely affected Wisconsin's milk producers and cheesemakers. In spite of this, the production of Wisconsin cheese was maintained, and exceptional credit should be given to the manufacturers of Cheddar cheese. The last statement may need further clarification.

Cheddar cheese production was maintained by the cheese factories in spite of—

1. The price competition without any protection, plus the additional work involved in the reports and regulations affecting Cheddar without affecting other types. Important were the Cheddar subsidy reports. These were not required of any other style of cheese, the price of which has been advanced to meet the low ceiling on Cheddar plus the Cheddar subsidy.

It should be added here that this has, for 3 years, conveyed to the consumers a false criterion of nutritional value of Cheddar cheese, placing it 3¾ cents per pound below its true value. This in the face of no justified excluse for continuing the subsidy after all other cheeses were raised to a price equivalent to Cheddar plus subsidy. The subsidy should have been removed and the price correspondingly increased.

2. Denial to Wisconsin cheesemakers of proper mark-up for direct sales on the "service wholesaler" and "retail" basis.

(a) Wisconsin factories were denied the service wholesaler mark-up if the premises of the purchaser were more than 50 miles from the factory or warehouse of the seller.

(b) Retail sales (of Cheddar) were limited to 5 pounds maximum. This prevented the sale of the customary Long Horn, Daisy, etc., direct to consumers.

(c) Sale on the moisture basis carried an inducement to make "large style" Cheddar, but which automatically limited their sale to United States agencies or to a processor. Result, Wisconsin production shifted from 32 percent small styles to about 6 percent small styles under this pricing system. This percentage still prevails.

(d) Price orders prohibited mark-ups for aged or cured cheese which practically, or completely took aged Wisconsin cheese off the market. This is verified by the United States Department of Agriculture reports for the past 2 or 3 years on available aged natural Cheddar cheese.

(e) Favorable prices granted other types of cheese adversely affected the historic production of nationally established types.

For example: Unexplained price increases in Asiatic cheese, within 90 days, killed the production of brick and munster type of cheese. This hit directly at the Dodge County area in Wisconsin for years producing 85 percent of the Nation's total output. That condition arose early in 1945 and still prevails.

(f) Limitation order W. F. O. 92, was in fact a prohibition order which said anybody manufacturing any cheese other than Cheddar can manufacture any type presently enjoying a price advantage. Statistics will show the results of that order. Manufacturers of Cheddar were prohibited from making any other type. This one order entitled Cheddar manufacturers to an even break in price ceilings, so that they could meet price competition for milk at a profit and produce the only type required set-aside for the Government. This statement may be met with the challenge that cheese manufacturers in other States have not been complaining. That may be true. Why? Because the most unfair price provision of any order placed a price on Wisconsin cheese below that produced in any other State.

No other dairy product was so priced, therefore, Wisconsin, the largest milk-producing State in the Union, with the Nation's lowest ceiling price on cheese, made Wisconsin cheese the easy victim of other competitors for milk.

Result: The Cheddar cheesemakers of Wisconsin were (and are) compelled to pay more for their milk than did the Cheddar manufacturers of any other State, and, still more important, the manufacturers of every other State received substantially more for the Cheddar cheese than did the Wisconsin manufacturer. In support of these representations I attach tables of prices paid milk producers in Cheddar-producing States as reported to DPMA by the manufacturer, and also the prices that DPMA paid the manufacturer for the cheese.

With Wisconsin producing 50 percent of the Nation's Cheddar, and the Government allegedly inducing increased production, it is hard to understand the reasoning that promulgated this penalty-pricing on Wisconsin, and harder still, to understand continued refusal to correct it.

(g) Failure to allow for cost or aging and curing cheese in price ceiling has caused it to disappear from the market.

On numerous occasions we have presented our general complaints to the proper Federal officials during the past 3 years without any basic success.

Peculiar is the fact that we have discovered no opposition to our complaints, just plain refusal to do anything about it.

May I quote from a feature article appearing in the Capital Times of Madison, July 25, 1945, and written by Miles J. McMillan. Referring to complaints lodged with the Office of Price Administration, he says: "Of the 10 allegations made OPA is said to have admitted that 7 were wholly or partially substantiated and to have pledged action to remove faults as quickly as possible." That may carry some satisfaction, but little relief after 3 years under them, and at the same time expected to meet the declared goals of war production.

In another part of the article he makes this statement: "The plus system of determining transportation costs, which are considered in the determination of the price ceilings, benefits the processors who manufacture cheese principally outside of the State of Wisconsin. The benefits arise from the fact their transportation costs are based on the fiction that they ship from Plymouth, Wis. OPA found this allegation of discrimination partially correct and granted the faults of the Plymouth-plus formula, but believes it better than any alternative so far proposed. The question is still under consideration."

The alternative we offered was by price increase or subsidy, or both, and only one-half cent per pound to match the price break at the State line. There is no other alternative and it is workable and practical, and certainly demanded to remove the inequities involved.

Continuing, the article says: "In addition to these charges, the antitrust division alleged that allowances for the assemblying of American cheese were inadequate; that regulations discriminated against distributors; that factory distributors were being discouraged; that penalties on substandard foreign type cheeses were unreasonable."

IN CONCLUSION

Our enemies have surrendered—requirements for dairy products are decreasing in the face of an increased production of milk. The free flow of these products should be permitted when surplus is more threatening than inflation. Fear should prompt action and not inaction.

Our today's large markets are short on cheese generally and entirely without natural Cheddar cheese. (USDA daily reports for October.)

Nearly 95 percent of Wisconsin's Cheddar cheese is sold on the moisture basis and therefore cannot find its way to the retail trade.

We respectfully urge the immediate removal of the Cheddar subsid, and all present controls over the cheese industry, thus permitting prices to seek their own levels on the basis of supply and demand, coupled with a direct Government payment to the farmer in addition to his return, if necessary, to maintain a support price.

These recommendations not only have the support of the officers and members of the Wisconsin Cheese Makers' Association, but of the industry generally throughout the Nation.

It is our opinion the Congress can and will speed these needed measures.

## Inaction in Labor Disputes

EXTENSION OF REMARKS
OF
**HON. EARL C. MICHENER**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. MICHENER. Mr. Speaker, the section of the country from which I come is not only disturbed but genuinely alarmed and angry, about the strike situation, not only in Michigan, but all over the land. The cold weather in Michigan is approaching, many of the coal bins are empty, and the fuel oil storage tanks are far from full. With the mines operating normally and with the usual production of oil, there would be little difficulty, provided adequate transportation were available. However, with many of the oil producers and the refineries closed because of labor trouble, with the coal mines practically out of commission because of strikes, and with transportation stymied because of labor disagreements, the outlook for the winter is indeed discouraging.

It is all very well to point out these things. The case has been diagnosed. What the people want is somebody in authority to do something about it. Just who in authority can do something about it? If there are those in authority who can do something about it, why do they

not act? That is what the people want to know. They want action, not talk.

Nationally, the responsibility rests with the President and his administration and the Congress.

A forthright, courageous demand by the President, addressed to management and organized labor, supplemented by a statement to the Congress indicating what additional authority, if any, he needs at the moment, will, in my judgment, get results. Surely a majority of the Congress will support the President in an energetic, constructive, and fearless program to bring about the termination of present labor disputes.

A new formula should be written at once, to become operative at once, whereby those who, individually or collectively, deliberately plan to bring distress and suffering to our people would be held responsible for their acts—both management and labor.

Our people are not demanding that any of the legitimate and equitable rights of organized labor be taken away. Organized labor is protected by law; therefore, it should be responsible under the same law. There must be responsibility all along the line and legislation to that end is bound to be placed upon the statute books. There must be justice for all and special privilege to neither labor or management.

My people are demanding that the Congress take effective action if the President will not. This reconversion period is no time for labor troubles or anything else that impedes, interferes with, or stops reconversion of our industry to a job-making economy.

Mr. Speaker, my attention has been called to an editorial in the Monroe (Mich.) News which well expresses the way many of our people feel. In short, action is expected and the President apparently does not appreciate the seriousness of the present strikes. The editorial is as follows:

INACTION

The Truman administration's record of dealing with, and attitude toward, the rash of post VJ strikes is growing less and less impressive. While on a political holiday and fishing trip the President, at a press conference, delivered the off-hand remark that widespread strikes have followed after every major war. So has untold misery in devastated regions, but it can be remedied by prompt action.

Significantly, in his home State of Missouri, President Truman was criticized for not staying in Washington and doing something about strikes by members of the legislature, who had to walk through a picket line as a strike held up work on sidewalk repairs. A good many people feel as do the legislators.

There are strikes and strikes. A work stoppage in an industry is not as a rule of immediate public concern. But a labor dispute tha irterferes with vital public functions, such as transportation, communications, power, fuel, or food is an entirely different matter.

Governor Dewey moved promptly and effectively to halt a dispute that stalled vertical transportation in New York skyscrapers. Yet no one has as yet acted to halt a strike of New York dock workers which is interfering with the most vital transportation service in the country today. The longshoreman's strike is preventing the dispatch of ships to Europe to pick up and return homebound American servicemen, and it is keeping food supplies for the Army and for the relief of Allied nations from being shipped. A somewhat similar dispute on the west coast is tying up shipping to the Pacific.

How can Mr. Truman complacently fish in Reelfoot Lake and make speeches about the TVA while high-point men are being held in France and England and Guam by a labor dispute?

Federal efforts are now concentrated on a coal strike. Miners are idle at a time when the maximum production of coal is essential. With the best efforts of every available miner, Secretary Ickes has asserted that coal supplies for the winter will be short, and we are obligated to ship coal abroad. Unless France and other European countries receive some imported coal this winter Army officers predict increasing unrest. In Germany the returning United States commander of the Berlin garrison says fuel is the greatest problem. Yet th miners remain idle and Washington seems unconcerned.

Only the subterfuge of seizure by the Navy halted the oil strike after it was borne home to Washington that all production might cease if workers did not get gasoline for their cars. And nothing has as yet been done to prevent the telephone workers from carrying out their threat to desert the switchboards and leave the country helpless.

Must such strikes be tolerated merely because the administration adheres to the belief that they are an incidental aftermath of war? Mr. Truman would do his party and his political cause far more good by resuming the return of servicemen and the production of coal and preventing paralysis of the Nation's communication system than by going fishing in the border States.

## War Equipment Will Be Given to Hospitals and Schools

EXTENSION OF REMARKS
OF
## HON. HERMAN P. KOPPLEMANN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave given me to extend my remarks, I wish to insert in the RECORD an article which appeared in PM on September 17, 1945, written by Gordon H. Cole, with relation to the discharge of surplus goods to hospitals and schools on a free basis. I think Mr. Cole's article is provocative and the recommendations contained in it deserve the serious consideration of every Member of Congress.

WAR EQUIPMENT WILL BE GIVEN TO HOSPITALS AND SCHOOLS—POOR DISTRICTS TO GET MATERIALS THEY CANNOT BUY

(By Gordon H. Cole)

WASHINGTON, September 17.—Army and Navy equipment worth billions of dollars is being earmarked for immediate postwar service in hospitals and schools of the Nation's poorer communities.

Robert A. Hurley, member of the Surplus Property Board, revealed today that the finishing touches are being put on a vast program to distribute, virtually cost free, much of the material and equipment left over from the war.

Everything from complete hospitals to the latest athletic equipment will be available to counties, schools, charities, labor unions, and other nonprofit institutions that can show:

That they could not afford to buy such equipment through normal trade channels.

That they will provide necessary building and staff to use the material correctly.

NOMINAL COST

Recipients of military surpluses under this program will be asked to pay only a nominal sum, to cover the cost of shipping.

"Any community," Hurley explained, "that cannot afford adequate hospital facilities will be able to get a complete hospital for the cost of the building and the staff.

"Any school," he continued, "can have equipment for health clinic, including X-ray machines, if the school board could not afford to buy the equipment, but can provide a doctor."

Hurley said that many people advocated either dumping the surplus into the ocean or holding and selling it over several years in quantities small enough so that it would not wreck the various consumer goods industries.

MARKET FOR PARTS

"Our idea," Hurley said, "is to use surplus military property as economic seed corn." He explained:

"We feel that most of this material can be put to immediate use without injuring industry. On the contrary, we feel that if we can plant a new hospital in a community that couldn't normally afford it, the community then will keep up the hospital and replace the drugs and pharmaceuticals as they are used.

"Likewise, if we put a motion-picture projector or a radio in a classroom, the school will keep the equipment repaired and replace parts as they wear out.

"In this way, military left-overs can be used not only to raise standards of health and education, but to create new markets for industry."

Hurley said that Congress envisioned such program as possible when it wrote into the law governing disposal of surplus-property provisions permitting sale, lease, or donation of surpluses to any public, nonprofit, educational, or charitable organization.

TWO PROGRAMS

Two separate programs, one covering health the other education, have been worked out during the last 6 months, Hurley said, principally by Jonas Reiner, former Assistant Administrator for the Board.

The regulations in their final form are being circulated among interested Government agencies and are scheduled to be adopted formally when the Board meets tomorrow.

Hurley said that the Board has designated Dr. John W. Studebaker, United States Commissioner of Education, to set up a staff to administer the education program, and Dr. Thomas Parran, Surgeon General, to handle the health program.

Here are the outlines of the health program:

Doctors: More than 20,000 doctors in the armed services have no established private practice. The Surplus Property Board has asked Parran to designate communities which have the greatest need for doctors and dentists. Physicians leaving the armed forces who will agree to set up practice in these needy communities will be able to lease all their equipment at nominal fees.

Hospitals: By cooperating with States, their political subdivisions and nonprofit institutions, the Surplus Property Board hopes to aid in establishing small health centers in areas completely without modern medical facilities. The Board has the equipment to furnish and equip the hospitals. The local authorities must furnish the staff to man the hospital.

School clinics: The Board hopes to foster the use of Army surplus rolling hospitals, which have been renamed "health mobiles," as a means of bringing the best medical care to children and their families in rural areas

where there are no local medical facilities Health mobiles are complete hospital units, equipped with examination equipment, X-ray, and operating tables.

FOR LABOR UNIONS

Labor clinics: The Board proposes to provide medical equipment and drugs to labor unions and other nonprofit institutions that will set up clinics and provide physicians.

Distribution of drugs: A program is being worked out for the distribution of the vast Army and Navy stores of drugs and pharmaceuticals to combat communicable diseases. Of some drugs, Hurley said, the Army and Navy now have more than ever was produced before in history. Officials say that the present supply of penicillin may be sufficient virtually to wipe out venereal disease.

Sanitary equipment: The Board expects surplus military equipment sufficient to permit many of the poorer communities to launch sanitary programs, install new sewers and water systems. The Board will have drainage equipment, sprays, oils, and other material for fighting insects and pests. Quantities will be sufficient to permit what Hurley described as "undreamed-of improvements in health standards."

These surpluses, Hurley explained, will be "distributed for a fraction of their cost, not on the basis of use, but on the basis of real need." Those communities that have nothing will get first choice on the surpluses.

SCHOOL PROGRAM

The school program is just as vast in its scope. Here are the details:

Lunches: Under the National School Lunch Act the Government makes food available for hot lunches in the schools. But children who need hot lunches most are those living in communities that lack funds to set up kitchens. The Surplus Property Board has or will have knives, forks, refrigerators, carving blocks, pots, pans, stoves and all other equipment to set up kitchens so that an estimated 12,000,000 children can get at least one properly balanced meal a day.

Visual aids: The Army and the Navy have hundreds of motion-picture projectors with sound equipment, millions of feet of educational film which will be distributed to schools on the basis of need.

Audio aids: All surplus electronic equipment, broadcasting stations, radio receivers, walkie-talkies—enough to put a radio in every classroom in the Nation—will be made available to the schools. The Board also will distribute its linguaphone type equipment to aid language students under this program.

Physical education: Athletic and physical education equipments from the Army and the Navy will be made available to the children in schools which could never afford the paraphernalia of modern sports. The schools will have to provide teachers and coaches.

Libraries: The Surplus Property Board will have millions of books that were printed for Army, Navy special service force. To get a complete library, a community will have to provide a building and librarian.

Manual training: The Surplus Property Board plans to make available to trade schools and to the Nation's high schools surplus hand tools, machine tools, material to teach industrial crafts. This, Hurley suggested, would bring industrial skills into rural areas.

Scientific research: The Board has for disposal about $60,000,000 worth of laboratory and research equipment, scientific instruments used by the Office of Scientific Development. These will be made available to schools, colleges and nonprofit research institutions.

The Surplus Property Board has made funds available to the United States Commissioner of Education and to the Surgeon General to enable them to carry out their part in the program, namely:

To work out the necessary criteria to determine relative need.

To establish organizations at State levels to assist State, county and local organizations to establish or expand public health facilities.

To make recommendations as to the material required for each program.

## Returning Soldiers

REMARKS

OF

### HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. GROSS. Mr. Speaker, I call the attention of the House once more to some of the things that are going on that are holding up the soldiers from coming home. Let me read a letter I received from a lieutenant stationed in Manila. It says:

This island is so congested with Army personnel with nothing to do that one hears nothing but gripes and bitterness because we can't get home.

About getting home, the lieutenant goes on to say:

When we came into the harbor here there were 496 ships laying out there, some of them for months, and the people here can't understand; neither can I.

They were in transit for 53 days. The letter goes on to say:

We were only 800 miles out of Panama on surrender day, with 17,000 more miles to go, but the trip had to continue. We had a lot of trouble with the ship. It stopped several times, and one time it stopped on the Equator for 48 hours. The ventilators, fans, lights, and water went off, and the merchant marines filled canteens for a dollar each.

The entire letter follows:

MANILA, *September 29, 1945.*

I finally made the trip, and what a trip it was; 53 days from Legnorn, Italy, to here and now I want to fly home. From what we who came here from Europe can see, this theater is in just about as big a mess as it can be. We don't even get mail. This island is so congested with Army personnel with nothing to do that one hears nothing but gripes and bitterness because we can't get home. We debarked here September 15 and now it looks as though we'll sit until after the first of the year since we just heard on the radio that the shipping quota is filled up until then. When we came into the harbor here there were 496 ships laying out there, some of them for months and the people here can't understand it; neither can I. Is Congress doing anything to help get people back home or is it only "hot air" which we read in the paper and hear from the radio. We were only 800 miles out of Panama on surrender day with 17,000 more miles to go but the trip had to continue. We had a lot of trouble with the ship. It stopped several times and one time it stopped on the Equator for 48 hours. The ventilators, fans, lights, and water went off but the merchant marines filled canteens for a dollar each. The ship was run by the merchant marines and they even refused to feed us for 24 hours because it was too hot to work while the ventilators were off. When we finally did get fed it was the Army who prepared and served the food and the marines weren't in sight. They sold sandwiches to the GI's for 50 cents and halves of chickens for $1.50. The food was Government property put on the ship for the passengers. The officers and men came to the conclusion that the merchant marines are a lousy outfit and wonder why the things they do are allowed to go on unexplained. My friend Scottie is also sitting over here twiddling his thumbs and wants to get home to restart his practice. He's been in the Army 42 months but it doesn't look as though he's got a half a chance of going home. Manila is badly damaged and in the same filthy condition as all the Italian port cities. This is the rainy season now; it rains most of the time and sure is hot even though it is the coolest season of the year.

We haven't been doing much sightseeing because of danger from the Japs who are still sticking in the hills nearby. * * *

If you could see the waste over here your eyes would pop.

## Civil-Service Policy

EXTENSION OF REMARKS

OF

### HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. McGREGOR. Mr. Speaker, I desire to insert in the CONGRESSIONAL RECORD a letter received from one of my constituents relative to the civil-service policy. I believe this subject is of the greatest importance to all of us and for that reason I am inserting it in the RECORD at this point. I have deleted the name from this letter for reasons known to all of us. The letter follows:

Hon. J. HARRY MCGREGOR,
*House of Representatives.*

DEAR HARRY: Since an effort is now being made to reorganize Government departments, I have some suggestions that I would like to submit to you for your consideration before you present them to Mr. RAMSPECK who, I suppose, is the man that will more or less watch out for the civil-service policy within the framework of any organization program.

In my observations covering many years of employment with the Government I have come to the conclusion that an employee, assigned to an administrative policy-making position (nonpolitical) should be limited to a definite period of 10 to 12 years of duty in that position. During this time the new appointee is able to establish an up-to-date progressive policy and to maintain work standards. It becomes a natural habit to accept things as is as time goes on and hesitate to do something that may be new or different. A periodic change will fit closely with the natural progressive changes that normally occur in 10 to 12 years. Also, a change will put new blood, new ideas, and a new spirit into an organization. It will have a tendency to create and instill a keen competitive spirit within the personnel when each employee realizes the future possibilities of attaining a higher position after a normal period of faithful and efficient employment.

All Federal career employees should have an opportunity to achieve their ambitions of reaching the top, therefore, no employee, regardless of his position, has the right to hold a public position beyond a reasonable period or at any time consider the job as his to hold as long as he wishes. Present Government policy permits this to be possible

today by extension of service beyond my suggested limit.

To promote full postwar employment and opportunity, I suggest the United States Government establish compulsory retirement after the employee has established 35 years of service and attained the age of 60. This length of service enables the employee to receive the full benefit of the Ramspeck Retirement Act which is half pay for the best paid five-consecutive-year period of employment. No employee is so important that he or she cannot be replaced, and I believe when statements are made that an employee cannot be replaced, they are, in most cases, based upon close friendship and not the fact that there is no one qualified to fill the position. This suggestion is not the question of whether the incumbent can still carry on and do a good job, but is a way to establish an opportunity to the rank and file to move up a step, therefore creating vacancies down the line and for the hiring of new employees. This practice will give the organization new life and extend more opportunity. Rank-and-file employees (those employees not holding or never have held a policy-making position) should be permitted to continue work until the age of 65.

In conclusion I suggest the following: (1) All administrative policy-making positions (nonpolitical) be limited to a period of 10 to 12 years and the appointee to hold office for that length of time, providing he is efficient. Also, no exceptions made for extension of his appointment; (2) to promote full employment, no employee in class (1) above to be carried on the pay roll beyond the time that full retirement benefits has been reached and no exceptions be made for anyone. Any person having completed an assignment under (1) but has not reached retirement age should be transferred to another assignment until retirement age is reached without any reduction in salary.

Sincerely yours.

## Disposal of the Big and Little Inch Pipe Lines

REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 15, 1945*

Mr. VOORHIS of California. Mr. Speaker, I believe every Member of the House received from the Surplus Property Administration a mimeographed release on the subject of the disposal of the Big and Little Inch pipe lines. It includes a letter from the Surplus Property Administrator to Mr. L. K. Davies, Deputy Petroleum Administrator.

I would only like to point out to the House two things in that letter. In the first place, the Surplus Property Administrator stated that it had been hoped that these lines would not be drained and taken out of operation until after they had a chance to dispose of them in some proper way. It is obvious the chance for the Government to lease the lines on a basis advantageous to the Nation and as common carriers will be greatly reduced the moment the lines are drained.

In the second place, Mr. Symington says:

Under these circumstances, the Surplus Property Administration has no alternative but to acquiesce in your program. You will understand, of course, that such acquiescence is not intended as reflecting any opinion on what action should be taken in the light of possible shortages of oil on the east coast in the immediate future, a matter which is completely outside the jurisdiction of this Administration.

It is not difficult to guess what the opinion of the Surplus Property Administrator would have been if he had expressed it. And, for my part, I am in hearty agreement with him.

## Resolutions of the American Legion, Department of Maryland

EXTENSION OF REMARKS
OF
### HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

DEPARTMENT OF STATE,
*Washington, October 15, 1945.*

The Honorable THOMAS D'ALESANDRO, Jr.,
*House of Representatives.*

MY DEAR MR. D'ALESANDRO: I acknowledge the receipt of your communication of September 21, 1945, enclosing a copy of resolutions adopted at the convention of the American Legion, Department of Maryland, held in Baltimore, Md., on August 23, 24, and 25, 1945.

Thank you for your courtesy in transmitting these resolutions for the attention of the officers of the Department of State.

Sincerely yours,

JAMES F. BYRNES.

At the convention of the American Legion, Department of Maryland, held on the 23d, 24th, and 25th days of August 1945 at Emerson Hotel, Baltimore, Md., the following resolutions were adopted:

"Whereas the Allied Nations fought World War I to preserve democracy in this world, in which war many members of the American Legion alongside the sons of other nations, devoted their energy, their health, and wealth, to save the United States of America and other lands and peoples of the world from enslavement by and tyranny of the undemocratic and imperialistic forces; and

"Whereas the United Nations fought World War II to liberate subjugated peoples, occupied lands and invaded countries from aggressor nations, in which war, likewise, members of the American Legion, alongside the sons of other nations, devoted their energy, their health and wealth, to save the United States of America and other lands and peoples of the world from ravishing by and cruelty of the totalitarian and inhuman dictators; and

"Whereas the war-making forces of the reactionary countries were successfully defeated in this the most excruciating war, and the United Nations are about to meet at the peace conference table, to establish once and for all times a just, lasting, and durable peace; and

"Whereas at the close of this war many lands were liberated and the peoples of these lands were given opportunity to establish governments of their own choosing, while at the same time there are lands, peoples, and countries, to whose soil the war came not because of any fault of theirs, yet such lands, countries, and peoples are still under a foreign rule, influence, and domination, and are not permitted to be free and independent, and to establish democratic governments; and

"Whereas it is unjust and inhuman to appease any power, be it even a member of the United Nations, at the expense and sacrifice af small unculpable nations; and

"Whereas a lasting peace in this world cannot prevail, unless it is based on true justice and restoration of freedom and independence to all lands and peoples who were self-governing before the Fascists and Nazi started the annexations rolling; and

"Whereas the Atlantic charter proclaimed and the provisions of the Charter of the United Nations 'reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women, and of the nations, large and small': Be it

"*Resolved*, That the American Legion, Department of Maryland, in convention assembled, hereby voices its opposition against the forceful annexation of small countries by large countries, which small countries were helpful and sympathetic with the United Nations' cause, and which small countries are able and willing to join the United Nations in upholding the principles of freedom, justice, and democracy, and to adhere to the cause of lasting peace; and be it further

"*Resolved*, That these resolutions, when adopted by this convention, be offered to the ensuing national convention of the American Legion for adoption; and be it still further

"*Resolved*, That these resolutions, when adopted by the national convention of the American Legion, that copies thereof be forwarded to the heads of the governments of the countries which are members of the United Nations, to the Members of the Congress of the United States, to the ensuing Council of Foreign Ministers, scheduled to convene in London, England, where the cause of many lands and countries will be deliberated; and to the press."

## Opening of Overseas Mail

EXTENSION OF REMARKS
OF
### HON. EARL R. LEWIS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. LEWIS. Mr. Speaker, although orders were issued to discontinue censorship of mail from members of the armed forces, apparently some sort of censorship, or at least partial censorship, is continuing through the device of opening letters from servicemen in the Navy. This practice, I think, is outrageous and should be stopped immediately. Letters of servicemen should be held as sacred from prying eyes certainly as letters of civilians. I have a letter from a constituent, as follows:

MY DEAR CONGRESSMAN LEWIS: Since discontinuance of the censorship of mail from members of the armed forces, I have received several letters from my boys in the Navy which have been tampered with. Some of this tampering has been done with an evident attempt at concealment. Today I received one which had been opened without any attempt at concealment and had been resealed with transparent tape. In no case was there a censor's mark on the envelope.

A family friend received a letter today from her husband in a different part of the Pacific

which had also been opened. This leads me to suppose that the practice is general.

No amount of espionage now will keep the truth about conditions in the Navy from being made public. Men who have already received their discharge are taking care of that. In the meantime, is there anything that can be done to protect citizens of the United States from this unwarranted snooping into personal correspondence?

I sincerely trust that this warning to those who tamper with the mail from overseas will be sufficient to see that this practice is stopped immediately. If such a practice is continued, I think the Naval Affairs Committee should be asked to make a complete investigation of this situation, and I shall do it.

## The MacArthur Strategy

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John O'Donnell:

(By John O'Donnell)

WASHINGTON.—In that first-rate writing job that Chief of Staff General Marshall has turned out in his current report on how we won the war is the solemn account of American deaths in battle.

It cost the Nation 201,367 deaths in battle to win this latest war. (We won our freedom with 4,044 battle deaths in the long-drawn-out 6 years and 8 months of the Revolution. On the European fronts in World War II we lost a total of 160,945 Americans, in the Pacific, 41,322.

And here is a surprising contrast in the figures. In the fighting in north Africa, Italy, France, and Germany, manpower from the United States bore the brunt of battle. The enemy battle dead, Germans and Italians, amounted to 373,600.

Roughly, this works out to seven German or Italian dead to one American, figuring the preponderance of Americans in action compared to their allies.

Seven to one is a surprising figure. But look at the actual battle deaths in the Pacific. General MacArthur's victory cost us the lives of 41,322 Americans from Pearl Harbor to the finish when the Japs signed the surrender. But the Japs in the meantime lost, in counted battle dead, 1,219,000.

Now this works out to about one American dying for around 20 Japs—making allowances for Australian and Chinese casualties. And it's all the more astounding when you take into account the fierceness of the battles. The report of General Marshall reveals that while we killed 1,219,000 Japs and permanenty disabled 240,000, only 41,464 prisoners were taken.

On the European fronts, in addition to the 373,600 enemy battle deaths, the enemy lost 85,000 in permanently disabled but—and here's the big but—we took 8,108,983 prisoners. And of this huge number only 3,404,949 were disarmed enemy forces that surrendered en masse after the complete German collapse.

The figures seem to bear out the claim of MacArthur's admirers that he won his battles at the cheapest cost in American lives of any general in the field—in this war or any other war our country has ever fought.

All the way up on the long road from New Guinea to Manila, MacArthur was a spendthrift with shells and bombs; a miser with the lives of his troops.

The battle figures seem to bear out the wisdom of the MacArthur strategy:

"Never a costly frontal attack. The basic principle of military strategy is when and where. It's the art of precise timing and surprise. It's the principle of enveloping the flanks of the enemy, of getting behind the enemy and interdicting his lines of supply and communication. It's the art of then pouring down on the enemy everything you have in the way of artillery fire and air bombardment and strafing, of saturating the trapped enemy with bomb and shell and then—and only then—of sending your men in to clean up an exhausted and beaten foe, of never making your troops pay the price in blood of a frontal attack against a strong prepared position."

## Postwar Employment With a Question Mark

EXTENSION OF REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a very pertinent radio talk written and broadcast by Fraser S. Gardner on his veterans' radio program For the Veteran, last December 11, 1944, over radio station WINX in Washington, D. C. Mr. Gardner is nationally known as an authority on veteran affairs, is a past national officer of major veteran organizations. Among other veteran offices now held, he is the commander of the Ernie Pyle Chapter of the DAV and national employment officer of the Army and Navy Union. He conducts the original veterans' radio program, For the Veteran, which he inaugurated in April of 1944, as producer and commentator.

At the close of the war, eight to twelve million men will have risked their lives, broken up their families, suffered economic, physical, and psychological injury to help maintain the freedoms of America. They have looked to us, here at home, to provide them with the means to win it—the guns, the transports, the equipment. When they turn homeward, victorious, they will look to us and to the new and powerful resources of rich America for jobs. They will look to us for the way back—back to a normal productive life in the environment of peace and security. They will not find it in a mustering-out pay check, a preferential rating for nonexistent jobs, or even in generous unemployment allowances. They will find it in the same way as their civilian neighbors, in an expanding economy that provides good jobs for all employables, not because they are veterans, but because they are men.

As news of Allied victories pour in from our battle fronts and the beginning of the end comes in view, some legislative, labor, and social groups have and are, hastening plans for easing the servicemen back into civilian life. A veteran is now entitled to his old job back for 1 year, priority on Government openings, if any, readjustment allowances during certain periods of unemployment, aid in training for and placement into new jobs, and some guaranty on risk capital in a business, home, or farm. Federal, State, and community activities have been initiated to help him find gainful helpful employment, and organized labor has liberalized union regulations and requirements for easy admission of the veteran.

So far all the programs for employing the returned serviceman in our industries are predicated on the general assumption there will be a job for him to do. And, so far, of course, that has been true and the majority of our veterans have chosen to go into war industries. Meanwhile, management and labor, as well as local and Federal governments are taking steps to help the veteran find the kind of job he specifically wants. Most of these steps involve some form of veteran preference, either State, Federal, or both.

But, the economic future of the veteran cannot be solved solely through preferential treatment and Government aid. The jobs have got to be there. The crux of the problem lies in planning for an economy of abundance, a prosperous America.

I am sure you realize a long-time job of all-inclusive postwar planning confronts us in addition to the problems of demobilization and industrial reconversion, and that we must start such total planning here and now. In the course of the war we have geared our economy to an unprecedentedly high level of production and we cannot—we must not—sink back into a lower level of production without inviting unemployment and economic stagnation. In the postwar years, therefore, we must achieve peacetime enterprise and the production of consumer goods and services on a wholly new scale.

It is my supposition that this country will be unable to utilize in the questionable period ahead anywhere near the amount of products which we are now manufacturing for war purposes. In fact, an enriched standard of living and full peacetime employment cannot be achieved wholly by the production of things. As one suggestion, the approach to them can be greatly aided, however, through an expansion of the social services which make for a fuller and healthier community existence, medicine, education, recreation, religion, child care, youth programs, and the like. And these can be supplemented, of course, by soundly conceived projects for the development of our natural resources, the harnessing of rivers to promote navigation, irrigation, and power, the construction of bridges, highways, and harbors, the conservation and exploitation of soil and forests and mineral reserves. Stimulation of small business, civic development, and public works, full use of America's gigantic productive resources, incentive taxes, expansion of foreign markets, low tariffs—all these and more are necessary to assure the veteran sustained suitable employment. A healthy over-all economy will obviously provide a healthier chance for the returning soldier than a sick economy with preferential treatment. Most veterans instinctively sense this fact. Some 3,000,000 servicemen are members of organized labor unions; millions more are members of families which include civilian workers. Many of them recognize the economic and social pitfalls of a preferred class in society, who are able to get jobs only at the expense of a noncombatant's employment.

They don't want to be fed from a nursery bottle. They want an equalized chance in a growing and busy economy.

Disabled veterans should, of course, be entitled to extra protection and preferences for both public and private employment. Pensions are still not large enough for a handicapped veteran and his dependents to live on without outside income.

Disabled veterans have the most to fear from a scarcity economy and unemployment, because they are, for the most part, marginal employees, the last to be employed and the first to go when contraction begins. Their only hope for a decent income and a job, unless preference for them can be really effective, lies in an expanded economy for America, with jobs for all. But, even though we might be successful in securing effective preference for the employment of veterans, disabled or able-bodied, the welfare of any one group of Americans is inevitably linked up with the welfare of all other groups of Americans, and, therefore, we must strive to cooperate together toward the objective of full, useful employment for all Americans.

As I see it, we face a momentous choice in the postwar period. Having experienced full employment during the war, the American people will not tolerate protracted heavy unemployment again. If they cannot get reasonably full employment in one way they will try to get it in another. Thus, the choice appears to be whether we shall achieve our goal by general planning and general management of our economy, creating general conditions in which the people will make their own jobs through private enterprise, or whether failure to do so in that way will lead us into detailed control and management of all our economic activities.

If we are to do it by the general conditions we create, we must do adequate planning to that end and do it now.

We must plan the general management of our economy, or perforce, we shall be planning the management of business. Sustained full employment will not just happen.

## Who Said Tobacco Had Not Been Sent Under Lend-Lease? Who Said This Crop Had Not Cost the United States Treasury a Dollar?

EXTENSION OF REMARKS

OF

### HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the following note and official table from the Foreign Economic Administration shows that 632,559,497 pounds of tobacco costing $243,713,696 have been shipped under lend-lease. Whether the United States tobacco production should have been increased by one-fourth or one-third during wartime, when food was needed, is for you to decide.

One fact is evident, and that is that if this manpower and fertilizer used for tobacco had been expended on corn, we would have had more feed and more food.

There might have been and there could have been fat back where none is available now, if the manpower and fertilizer had been directed to food production.

*United States lend-lease exports of unmanufactured tobacco*

## General Patton's Record

EXTENSION OF REMARKS

OF

### HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. BOYKIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include a letter from my friend and constituent, Hon. Sam M. Johnston, attorney, Mobile, Ala., commending General Patton.

It is as follows:

MOBILE, ALA., *October 2, 1945.*

Hon. FRANK W. BOYKIN,
*Member of Congress, Washington, D. C.*

DEAR FRANK: Everyone would like to hear your voice ringing upon the floor of the House in denunciation of the calumniators of General Patton.

It is hard to believe that a soldier of General Patton's merit can be completely undermined by a bunch of carping critics at home, whose only contribution to world events is the discord which they pour into the public mind. Scandalmongers, keyhole peepers, and armchair strategists are licensed to use the radio networks of this country to tear down reputation, character and virtue on every side; but if a soldier in the field, entitled to the accolades of his countrymen for courage, leadership, and tenacity, makes an innocent allusion to the Democratic and Republican Parties, he is held up to public ridicule and scorn.

The morning's press in a news item states that the Harrison report was entirely false, and that Jews in Germany are being treated with consideration and fairness. Yet, General Patton has suffered keenly from the backwash of this irresponsible report.

The President should exercise better wisdom than to be constantly sending overseas investigators to pry into and check the actions of proven commanders in the field. It conduces to nothing but indecision, lack of confidence, and fear to follow one's better judgment, on their part. If ever a Nation had splendid and capable leadership during a war, America has. In the whole history of warfare, it has never been equaled; and it strikes me that it is about time for us to do homage to such noble and gallant leadership, instead of attempting by every art and wile to establish some defect in it.

Our mutual friend, William C. Taylor, who has just entered my office, concurs 100 percent in the views expressed in this letter.

Sincerely your friend,

SAM M. JOHNSTON.

## National Housing Policy

EXTENSION OF REMARKS

OF

### HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a certified copy of resolution file No. 82812, in which the Common Council of the City of Milwaukee goes on record in favor of bill S. 1342 and urges its early enactment into law:

File No. 82812

Whereas bill S. 1342, amending the existing National Housing Agency laws, has been introduced in the United States Senate, which, among other things, covers research into building costs and methods with the object of lowering costs, also contains provision for land assembly over long periods of amortization for better ratio of land to building costs and also changes the cost per dwelling units from the present $5,000 per unit to $1,250 per room, which would make it possible if the act were passed to complete the sixth ward housing project without change; and

Whereas the passage of this bill would stimulate and improve all housing developments, public and private, in Milwaukee from the lowest subsidized projects up to and including economic redevelopment projects; and

Whereas the passage of this bill would materially expedite the completion of the sixth ward housing project now contemplated and other redevelopment projects: Therefore be it

*Resolved*, By the Common Council of the City of Milwaukee, that it hereby favors bill S. 1342, which establishes a national housing policy and provides for its execution and hereby urges its representatives in the Senate

and House to use their best endeavors to have said bill enacted into law;

*Resolved further*, That duly certified copies be sent to Senators LA FOLLETTE and WILEY, and Congressmen WASIELEWSKI and BIEMILLER.

## The Constitution and the FEPC

EXTENSION OF REMARKS
OF
### HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. BROOKS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Shreveport (La.) Times of October 14, 1945:

THE CONSTITUTION AND THE FEPC

(The Times is indebted to one of Shreveport's learned jurists—a student of the Constitution for many years—for the judicial data in the following editorial.)

"The Constitution was not formed merely to guard the States against danger from foreign nations, but mainly to secure union and harmony at home."

These words were not written by a politician or a propagandist of any sort but by the second Chief Justice of the United States, Roger B. Taney, in a decision wherein he spoke for a unanimous Supreme Court. He was not supported by the Court alone, but by the Declaration of Independence, which charged, among other wrongs perpetrated by the King of England: "He has excited domestic insurrection amongst us." Justice Taney also was supported by the Constitution of the United States, whose preamble proclaims that it was ordained and established, "in order to insure domestic tranquillity."

Does the Fair Employment Practice Committee (or any other proposal to establish social relations unpleasant to either white or colored citizen) secure union and harmony, and insure domestic tranquillity? Or, does it tend to "excite domestic insurrections amongst us?"

Another famed Justice of the United States Supreme Court, Mr. Holmes, only recently retired from the bench, said in an opinion without a dissent: "Constitutions are intended to preserve practical and substantial rights, not to maintain theories."

Fifty years ago, a Republican justice (Brown), in a case coming up from Louisiana, said:

"Legislation is powerless to eradicate racial instincts or to abolish distinctions based upon physical differences, and the attempt to do so can only result in accentuating the difficulties of the present situation."

And again:

"The argument also assumes that social prejudices may be overcome by legislation, and that equal rights cannot be secured to the Negro except by an enforced commingling of the races.

"We cannot accept this proposition."

In that case the Court spoke of its reasonableness as determined "with reference to the established usages, customs, and traditions of the people." And that judge, Justice Brown, was born in Massachusetts.

The people of the South can and will stand upon that conclusion reached by the Supreme Court as to "enforced commingling of the races."

And, in support of the Constitution, and following the reasoning of distinguished judges who had sworn to support the Constitution, we say to the Senators and Representatives who have taken this same oath, "You and we cannot accept the proposition which others are trying to force upon us."

The "slavery argument" would have to be run "into the ground to make it apply to matters of intercourse or business," to quote a judge named to the bench by President Grant—Justice Bradley.

There is a clause in the Declaration of Independence which should be pondered by those who, having sworn to support the Constitution, took vicious pride in speciously violating it. That clause is the one best known to students, but flouted or forgotten by predatory politicians, who justify any offense against the Constitution that may serve to place them or keep them in office. It refers to the inalienable rights—the "natural rights" they are called by some, and often termed "the fundamentals" by others.

The special clause we refer to reads:

"Whenever any form of government becomes destructive of those ends, it is the right of the people to alter or abolish it."

Fortunately, in our republican form of government, the same result can be achieved by defeating traitors to the Constitution.

In a recent case Supreme Court Justice Jackson, who carried the interstate-commerce power to the limit and even beyond by holding that a man had no right to eat the wheat he had raised beyond his quota, said, in the Flag Salute case:

"One's right to life, liberty, and property, to free speech, a free press, freedom of worship and assembly, and other fundamental rights, may not be submitted to vote; they depend on no elections."

No judge ever has held that the fourteenth amendment created any rights.

The most staunch champion of the rights of emancipated slaves was Justice Harlan, and he quoted in a noted case the following language of a distinguished law writer, Cooley:

"It is a part of every man's civil rights that he be left at liberty to refuse business relations with any person whatsoever, whether the refusal rest upon reason, or is the result of whim, caprice, prejudice, or malice.

"With his reasons neither the public nor third persons have any legal concern.

"It is also his right to have business relations with anyone with whom he can make contract, and if he is wrongfully deprived of this right by others, he is entitled to redress."

And in another case that same justice said:

"Whether one person will permit or maintain social relations with another is a matter with which government has no concern."

Mr. Cooley did not mean social equality. There is a great difference between social relations and social equality. The first refers to association brought about by the ordinary relations between men; the other to a status in society which distinguishes classes.

Every burden that has been laid on business under the commerce power has been attributed to "the general welfare," and to "protection against the evils which menace the health, safety, morals, and welfare of the people."

A case can be made for laws limiting hours of labor, for wage laws, for regulations to secure proper work conditions, and—mark this—for laws fixing standards of work and workmen on State and Federal contracts. Should anyone ask why? As the last, the answer is:

"Like private individuals and business, the Government enjoys the unrestricted power to produce its own supplies, *to determine those with whom it will deal*, and to fix the terms and conditions upon which it will make needed purchases." (Quoting Justice Black.)

We have emphasized one phrase in italics above. Now to paraphrase: "Like the Government, private individuals and business enjoy the unrestricted power, * * *" etc., as quoted above.

Must not everyone admit that when the right of the Government is based upon the equality of right it has with private individuals and business, that private individuals and business also may "determine those with whom it will deal?"

The above quotation is from an opinion of the Supreme Court with a majority as at present constituted.

Need our argument go further?

## Demand for 30 Percent Wage Increase

EXTENSION OF REMARKS
OF
### HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. C. E. Wilson, president of the General Motors Corp., to which he attached copy of a letter he wrote Mr. W. P. Reuther, vice president, International Union, UAW-CIO, October 3, 1945:

GENERAL MOTORS CORP.,
*Detroit, Mich., October 4, 1945.*

Representative FRANK W. BOYKIN,
*Washington, D. C.*

DEAR MR. BOYKIN: You probably have read in the public press of the demands made by the UAW-CIO for a 30-percent basic wage increase and of the position taken by General Motors with respect to these demands. This dispute is more than an ordinary collective bargaining quarrel. It is a national problem. For this reason I am enclosing copies of our letter to the union and of a public statement made through the press.

Our country faces critical problems today. The aftermath of war must be recognized. Inflationary forces are rampant in the land. The problem of getting the people of our country back to productive peacetime work must be solved.

Strikes are threatening reconversion and peacetime production. General Motors is singled out for attack. I am enclosing a copy of a Detroit newspaper dated September 14, 1945, showing this extreme position the union is taking. The monopoly power of unions is being used as a tool of aggression to promote industrial strife rather than to safeguard the rights and equities of workmen.

When the Congress passed the National Labor Relations Act to promote industrial peace, it could hardly have conceived such a development.

Great responsibility rests upon the shoulders of the men who are guiding the destinies of our Nation. Important decisions must shortly be made.

I hope this information will be helpful to you in analyzing the situation and in arriving at a sound solution of the problems our Nation confronts. If there is any additional information I can give you on this subject, please let me know.

Very truly yours,

C. E. WILSON,
*President.*

OCTOBER 3, 1945.

MR. W. P. REUTHER,
*Vice President,*
*International Union, UAW-CIO,*
*Detroit, Mich.*

DEAR SIR: We have carefully gone over the demands made by your union for 52 hours' pay for 40 hours' work. This is a 30-percent increase in basic wage costs.

Our agreement with your union before the war called for a basic work week of 40 hours with overtime premium for hours worked in

excess of 40 hours. This was not changed during the war and is still in effect. General Motors expects to follow its usual practice regarding overtime work and will operate more than 40 hours per week in plants where requirements of the customers and the availability of material make this desirable.

Work on reconversion, construction, and modernization of plants has been scheduled at 48 hours per week or more so that employees temporarily laid off can be reemployed more quickly.

Bottle-neck operations also have been working overtime to hasten car and truck production. If many of our suppliers' plants were not on strikes, which have held up needed parts and material, more of our laid-off employees would now be working.

Our electromotive plant at LaGrange, Ill., which had no important reconversion problem, but which your union has closed by strike, has been and is scheduled at 48 hours per week.

Your demands, if granted, would result in more than 67 hours' pay at present rates for 48 hours of work in plants working on such schedules.

While the guns were still smoking and the echoes from atomic bombs could still be heard, your union made these demands for excess wages on the assumption that they could be paid from past profits or from assumed future excess profits, or that they could be earned from current operations with prices frozen at substantially 1942 levels. These assumptions are not sound.

Your charge that General Motors made excessive profits during the war is not true. The average yearly net profit in dollars earned during the war was less than the average pre-war net profit, although sales and employment doubled. Dividends paid to stockholders also averaged less than those paid before the war in spite of doubled sales volume, employment, and pay rolls.

General Motors cannot and will not use money saved up for many years for the purpose of modernizing and expanding its plants, and for providing more good jobs, to pay excess wages for work not performed. This money cannot be spent twice. Neither will excess wages be currently paid from presumed future excess profits when a realistic forecast of costs shows there will be no such excess profits.

Nor can we pay from current income the increased wages demanded when the present OPA policy holds prices at substantially 1942 levels, especially in view of the fact that there have been important increases in wages and operating costs since 1942.

Furthermore, there is no provision in the present OPA pricing formula for increasing prices to compensate for the additional cost that would be incurred if wages were increased at this time.

While your union states that it is against inflation, your demands are definitely inflationary and your union is responsible for trying to start an inflationary spiral of increasing wages, costs, and prices.

Inflation is the worst of all economic diseases. It reduces the value of money in terms of what money will buy. It reduces the value of the savings of the people. It undermines security. It underwrites depression. It destroys confidence. It creates unemployment.

The threat of run-away inflation really comes from three sources: First, the war-time and current deficit spending of our Government; second, the pent-up demand for goods and services to a point where some are willing to pay excess prices, even in black markets, to satisfy their impatient desires; third, the desires of selfish unions to take advantage of the situation and force unreasonable wage increases.

We shall resist the monopolistic power of your union to force this 30 percent increase in basic wages. Such an increase in our plants would soon spread to the plants of all our suppliers and would affect all elements of cost. Automobiles would shortly cost 30 percent more to produce. Prices to customers would have to be raised 30 percent. If wage raises in automobile plants forced such increases in car prices, the market for automobiles would be restricted. Fewer cars would be sold; fewer people would be able to afford and enjoy them, and fewer workers would be employed in making them.

While your union may have the power by coercion to close our plants and those of our suppliers with or without the approval of a majority of the workmen it is not clear that your union can or will live up to its agreements. The sanctity of union agreements is in question at this time. While the strike record in General Motors during the war has been better than the average, it is not too good; and we have plants in General Motors closed right now through unauthorized strikes in violation of our agreements with the CIO.

Your union is threatening to strike the entire automobile industry. General Motors has been singled out as a target, and we and our employes are to be discriminated against by your so-called labor blockade policy, in your attempt to enforce your unreasonable demands on the entire automobile industry. Some plants have already been closed, and shipments of material from the plants of many of our suppliers have already been stopped by the strikes of your union.

In the interest of all the people of our country, a sound and equitable solution must be found that will put people back into productive work and create more good jobs, thereby fulfilling the expectations of all Americans following the war. We have made sound plans and are ready to do our part in achieving this important objective. In its desire to obtain more than its share in such a future, your union is doing its best to destroy the possibilities of that future.

The clean-up, the mopping-up, the reconversion following the war still require hard work, patience, and understanding on the part of all of us. A solution for the problem must be found that is fair, not only to our 400,000 employees, but also to our 426,000 stockholders, our 15,214 automobile dealers who have had no new cars for over 3 years, to the thousands of employees of our dealers, to our more than 10,000 subcontractors and suppliers and their employees, and to the more than 10,000,000 potential customers who are eagerly waiting for new cars and other new products they need so badly.

As part of your demands you have suggested that we take the initiative and develop industry-wide bargaining with your international union. We are not in a position to do this, and do not believe that it would be a sound development for our country even if we were. Our American system and the standard of living we have achieved are based on free competition. Industry-wide bargaining tends to disregard the peculiar or local interests of many groups of employees and of individual employers, to increase costs and prices, and to affect adversely the interests of the people as a whole.

We hope we will not have strikes in General Motors. Closed plants and no business will dissipate the capital we had planned to use to create better working conditions, to increase our capacity, and to provide more good jobs.

This dispute over the wage demands of your union is more than an ordinary collective-bargaining quarrel. It is a national problem. The interests of all Americans must be considered, and if strikes are called and our plants are closed, the strikes will be against the interest of all the people of our country as much as they will be against General Motors.

For all the above reasons, we reject your unreasonable demands.

Yours very truly,

C. E. WILSON,
*President.*

## Jew—Gentile—Arab

EXTENSION OF REMARKS
OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor:

JEW—GENTILE—ARAB

The Jewish-Palestine problem apparently at last is to be placed where it belongs—at the door of the United Nations Organization. Great Britain, ever pressed by Zionist outcry for establishment of a national home in Palestine, has lately been troubled by a renewed American disposition to urge (but refusal to unite in) Palestinian action favorable to the Jews, despite threatening Arab resistance. And Britain is reported to have wisely determined to place the responsibility on the Allies as a whole.

Certainly compassionate and understanding, as well as just, treatment is more than due those Jewish people who managed to survive the dark years of Nazi tortures and terrors. And firm steps need to be taken to eradicate the remnants of Nazi and anti-Jewish policy still rife in Poland, Slovakia, and other areas, where Jews are denied return of their property, deprived of UNRRA assistance, and otherwise persecuted. Many have an understandable horror of being returned to former Nazi-dominated lands. This decidedly calls for United Nations action.

But the UNO cannot force social assimilation or wipe out overnight hatred, prejudices, or the effects of ingrained modes of thought. And it is questionable whether Palestine is either a solution or a big enough solution to the Jewish "problem." Jews themselves are not united in considering Palestine the ideal answer. A responsible body of American Jewish opinion seeks for Jews only "equality of rights and obligations" with their fellow nationals in all countries.

The Arabs, who claim that Palestine has belonged to them for two millenniums, are willing to assume their share of additional immigrants if other nations will do the same. However, other nations clearly are not willing. Few, if any, European countries are ready to accept additional Jewish immigrants. Australia and South American countries, while inviting other immigrants to populate their vast unused lands, have not extended the invitation to Jews. Even in the United States, which has welcomed Pole, Greek, Italian, and Armenian, and assimilated them, there are still too evident expressions of feeling against the Jewish people.

Perhaps the Jews, as well as Christians, need to give more consideration to overcoming the world beliefs which underlie this attitude. What are these beliefs, held even by some who consider themselves free from any trace of anti-Semitism?

They charge the Jew, too often, with the love of money, forgetting his acumen and industry, which begin as virtues. Complaints of Jewish clannishness have obscured an admirable devotion to family and the genuine humanity of the Jewish people. What is criticized as cunning in the Jew is frequently excused as perspicacity in others. Moreover, both these traits in no small degree have been fostered among the Jews by the necessity for survival in a persecuting world.

Yet the Jews have much to do to prove the progress of individuals as well as of their people as a whole, beyond the grasp of human qualities that would not be commendable in any people, and perhaps from their years

of torment there may be learned one thing—that the Nazi delusions about a superior race should silence claims of any racial group to be "God's chosen people."

It is time that the so-called Jewish traits were disassociated from the Jewish race, as they have been successfully in individual instances. They never were inherent in any of God's children, and found no least expression in Christianity's most beloved Jewish character, Jesus. Christians can help by realizing this truth, and by themselves refraining from un-Christian treatment of their Jewish friends and neighbors.

In the long run, what really is needed is not so much a home for the Jews as a home for Christlike qualities in the hearts and thoughts of both Jew and gentile. These are the only real solvents of the "Jewish problem."

## Constitutional Government

EXTENSION OF REMARKS
OF
### HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Paul Jones, Federal district judge of the district court of Cleveland:

The search for a formula upon which to base the United Nations Charter so recently overwhelmingly approved by our Senate has brought about a renewed interest in, and appraisal of, the enduring value and benefits of constitutional government. The United Nations desired a charter of basic principles for their mutual protection and security and for the peace and welfare of the whole world. This in essence is not greatly different from that which the States of North America sought and obtained in the written charter adopted by them as the Constitution of the United States. Let me read the Preamble of our Constitution in support of what just has been said and as a reminder of its principles and objectives:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

No one seriously can doubt but that for several years before the war's end we were being influenced away from representative government in the name of expediency. It was commonly asserted that constitutional government was outmoded; that it no longer served the social advances made and to be made by the people; that modern society required more speed than could be had under the orderly procedure of constitutional law. Thus bureaus and administrative law, by orders and directives, began largely to supplant the legal processes of earlier days and officials clothed with a little brief authority, with no responsibility to the people, were issuing orders for the disobedience of which severe penalties were to be applied.

Bureaucracy is wholly inconsistent with the idea of democracy. They are entirely incompatible. Government by bureaus, commissions, and committees is considerably at variance with the true concept of representative democracy. Bureaucracy has a subtle appeal. It seems to furnish more speedy and expeditious approach to the accomplishment of the governmental purpose than the slower methods of the democratic process. But bureaucracy grows by what it feeds on until its tentacles reach out into every phase of the citizens' life. It is a creeping paralysis which will, unless checked, destroy individual rights, and, as well, all sense of individual responsibility. The ultimate end will be the state in control of the people, rather than the people in control of the state as is provided by constitutional government. This is reactionary and leads to despotism.

You cannot make democracy work by resort to bureaucratic methods. Government by administrative or Executive order is not representative democracy. It is just plain dictatorship. It is a demonstrable fact that people of countries with the least interference in the private rights of the people by the state enjoy the greatest measure of the good things of life.

Nor should we be misled by proposals and promises of high-sounding virtue for the security of all from the cradle to the grave. It has been demonstrated in the world's history that human beings will not long endure hardships or make sustained effort for themselves if their sense of security is adequately fortified by a beneficent state. We do not want financial dependency upon government. We want government dependent upon us.

All of this regimentation, regulation, and so-called planned economy was not to be impeded by mere constitutional limitations. It was asserted in its support that the emergency required it even though the law did not allow it. During those years prior to the war and during the war this Constitution of ours withstood its greatest trial. No greater assault ever was made upon the integrity of its enduring principles than in those prewar years, but it has emerged triumphant, and despite some comment to the contrary, there has come with peace a definite trend and reaction toward constitutional government.

What is constitutional government as we understand it and under which we as a society of free people have prospered to a greater extent than any other nation on earth? The Constitution is not an inflexible and rigid set of rules. It is the embodiment of principles evolved out of man's long struggle for individual freedom. It has never been suggested that the Constitution has brought on any wars or revolutions or depressions. It has not been suggested that the Constitution has provided for any advantage of capital over labor, or for the reverse. It has not been suggested that the Constitution has provided for or permitted the exploitation of any group or race. The fact is that, fairly interpreted, the opposite is true. The Constitution is the guaranty that this shall not happen. It has proved adequate for any emergency, either through application of its existing provisions or when implemented by legislation as provided. It has been in the past adapted to the various crises of human affairs and adjusted to imperative national needs as they arose.

Constitutional government spells the American way of life—time and experience have shown that it holds forth the greatest hope for the benefit and welfare of liberty-loving people; the rule of the people through their chosen representatives; the rule of law and not the rule of men. No thoughtful man is opposed to change or fails to see or sense the need for improvement in the understanding of and provision for conditions requiring expanded constitutional service to the people, but such changes should come through considered amendment of the Constitution to meet such conditions and in the manner provided by the Constitution itself and not by the will or the mandate of the person or administration temporarily in power. Those who drafted the Constitution understood the probability of needed change and wisely made orderly provision for amendment so that the people might in future times further secure their rights, privileges, and liberties. They knew and understood man's long struggle for freedom from oppression not only by powerful foreign states but by the ambitious and greedy within our own society. They knew and understood that plausible men seeking to gain even sometimes laudable ends might take the shortest way, justifying the method in view of the asserted merit of the proposed objective; that inherent prejudice and zealous partisanship sometimes were mistaken for a sense of justice; that superficial mental gymnastics sometimes were substituted for sound legal reason. It was to preserve the rights and liberties of the people that the framers of the Constitution made provision against those and other types of attack or impairment. Thus they established what might popularly be called a representative democracy of limited powers and later made the reservation that powers not delegated to the Central Government were to reside in the several States or in the people. The three branches were to coordinate and check and balance each other as against excessive use of power or the abuse of it. Certainly the accomplishment of our country in resisting and overcoming the forces of destruction is the most outstanding test and argument for the kind of society which has developed under our type of constitutional government.

Unless all hope and prophecy for a better world are futile; unless all faith in man's capacity for self-government is without substance; unless man's aspirations for individual freedom cannot be reconciled with life in the world that is left after the war, our returning, victorious soldiers will have something to say about individual freedom under constitutional guaranties, for their eyes have seen the fearful horror let lose by the bare will of individuals responsible neither to law of God nor man, lusting for power and conquest under the pretense of need for a new world order. Just as we needed all-out unity for the successful prosecution of the war, so we shall need continuing unity for the preservation of constitutional freedom and order now that peace has come.

While no one can look into the seeds of time and say which way and what our growth will be, yet I entertain the justified hope and confidence that this ghastly baptism of fire through which we have passed, this great sacrificial duty performed for the world and for ourselves cannot help but leave its influence upon those of present and succeeding generations who shall give voice, service, and direction to the future greatness of a free people under a Constitution still virile and still the best hope of mankind.

## Taxes Paid by Hawaii

EXTENSION OF REMARKS
OF
### HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

THE LIBRARY OF CONGRESS
REFERENCE DEPARTMENT,
LEGISLATIVE REFERENCE SERVICE,
*Washington, September 7, 1945.*

Hon. JOSEPH R. FARRINGTON,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. FARRINGTON: This is in response to your request for a statement of the relative position of Hawaii and the various States

with respect to internal revenue collections during the fiscal year ending June 30, 1945. We enclose two tables; one shows total collections and the other shows per capita collections in Hawaii, the several States, the District of Columbia, and Alaska.

Total collections of internal revenue in Hawaii increased more rapidly between 1944 and 1945 than collections in all States and Territories combined, the percentage of increase between 1944 and 1945 being 15.4 (Hawaii) and 9.2 (total).

The total internal revenue collected in Hawaii exceeded that collected in 14 States during the fiscal year 1945. The States are: Arizona, Arkansas, Idaho, Maine, Mississippi, Montana, Nevada, New Hampshire, New Mexico, North Dakota, South Dakota, Utah, Vermont, and Wyoming. These States had also provided less revenue than that provided by Hawaii in fiscal 1944.

As shown in one of the tables attached, per capita collections of internal revenue in Hawaii were greater than per capita collections in 39 States (81.25 percent of all States) during 1945. Hawaii's rank was higher during 1945 than during 1944; in the earlier year per capita collections had been larger in Hawaii than in 36 States.

The States in which per capita collections were smaller than in Hawaii are: Alabama, Arizona,* Arkansas,* Colorado, Florida, Georgia, Idaho,* Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine,* Massachusetts, Minnesota, Mississippi,* Missouri, Montana,* Nebraska, Nevada,* New Hampshire,* New Jersey, New Mexico,* North Carolina, North Dakota,* Oklahoma, Oregon, Rhode Island, South Carolina, South Dakota,* Tennessee, Texas, Utah,* Vermont,* Virginia, Washington, West Virginia, Wisconsin, and Wyoming.* Of the States in the list for 1945, Massachusetts, New Jersey, and Rhode Island are new; collections of internal revenues in those States were larger per capita in 1944, but smaller in 1945, than in Hawaii. (An asterisk indicates that both total and per capita collections were smaller in the States than in Hawaii.)

Very truly yours,

ERNEST S. GRIFFITH,
*Director, Legislative Reference Service.*

*Total collections of internal revenue by the United States in each State, the Territories of Hawaii and Alaska, and the District of Columbia*

FISCAL YEAR OF 1945

| States and Territories: | Total internal revenue collections |
|---|---|
| Alabama | $253,910,581 |
| Arizona | 71,282,175 |
| Arkansas | 98,538,418 |
| California | 3,722,459,220 |

## Palestine

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a statement on Concurrent Resolution 95.

The President, desiring first-hand information on the state of the Hebrew people in Europe, dispatched an unbiased, competent observer to report to him. Thanks to this report and the prompt action of the President, conditions in these camps are now improved.

The Harrison report, however, went further. It pointed out the impossible position of the Hebrew people in Europe, expressed their overwhelming desire to go to Palestine, and recommended that they be taken there.

The first part of this report has been proved correct and the Army has taken action to remedy the conditions described. But will we have done full justice to a people that suffered most in our common war against the Axis by merely painting the walls of their concentration camps? Have we not a moral and legal obligation to help the Hebrew people in Europe to achieve a normal, productive existence in the land that is theirs?

A previous Congress—the sixty-seventh—unanimously declared its determination that Palestine should be restored as the homeland of the Hebrew people. Let this Congress, with equal humanity and equal unanimity, reaffirm this just determination. I urge this Congress to approve the Concurrent Resolution 95, urging the Executive to initiate steps to effectuate the immediate transfer of the Hebrew people from the concentration camps of Europe to the freedom of their homeland, Palestine.

## An America Firster

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. HOFFMAN. Mr. Speaker, coming through the park in front of the Capitol on my way to the office this morning, I met four clean, intelligent-looking teen-age Americans carrying small hand satchels. Thoughtlessly, I asked, "What is it, boys—basketball or football?" The youngest, just 18, with a twisted grin, answered, "I wish it was, but it's the Army for us."

Thousands like them, just rotting flesh and shattered bone, lie scattered throughout the world and, while conscription continues, hundreds of thousands of others, if some folks have their

way, will be sent to foreign lands to take over the tasks which the people of other nations should do for themselves.

Whether Churchill and Roosevelt planned to get into this war; whether we went into it because of a justifiable threat of an invasion; whether it was necessary for our own safety to aid Britain and Russia; whether we went in to carry the "four freedoms" to all the world; or whether we were pushed in by warmongers greedy for profits, or internationalists dreaming of a world peace, is at the moment not discussed.

Whatever may have been the reason, America went in. Billions of dollars and millions of tons of supplies were furnished. More than 12,000,000 young Americans sacrificed from 1 to 4 years of their lives. More than 1,070,000 young Americans suffered wounds or death.

The fighting is over, but neither the contribution of America's dollars, material or men has ceased. Conscription is still in force. Whatever America gained out of this war, you can figure as well as I. Already, future wars are in the making, we are told by General Patton and Chief of Staff General Marshall. We are being asked to send an armed force to join the British in opening Palestine. Our soldiers will be required to assist one faction in civil strife in China. It is hinted that a war with Russia is in the cards.

Are we to forever police the world; feed and clothe and set up in business the people of every nation which comes knocking at our door? Are we always to draft American boys to leave their homes, suspend their education, and spend a year, or 5 years, in foreign countries? If the internationalists, who take no part in the fighting, make no worthwhile sacrifice, have their way, that is just what we will do.

This brings me to the cause of the present outburst.

After Churchill forgot that he promised that Britain would do the job if we would furnish the tools and called upon us for millions of young, vigorous, life-loving American fighting men, Britain had the ships to transport them; to carry them across to the battlefields; but, now that the war is over, she refuses to let us use her ships to bring them home.

Today, the fighting over, thousands of Americans, waiting anxiously to return to their wives, their mothers, their homes—homesick boys—cannot get back because of a lack of ships.

This morning we learn that the *Queen Elizabeth*, capable of carrying 15,000 soldiers at a trip; the *Aquitania*, able to carry 8,500 men to America, have been repossessed by the British; can no longer be used by us; that your sons and husbands—23,500 of them—who expected to come to America on the return voyage of these two ships, must wait until shipping is available.

Plenty of ships to carry your sons and husbands to fight and perhaps to die, but none available to bring them home, because Britain wants to use them for the transportation of her own people, for the furtherance of her own trade interests. And to add to the delay, strikers in London and New York refuse to unload ships which might be used for the trip home. Put yourself in the place of the boy waiting on the dock.

The question I am asking you wives and mothers is this: Is it not about time that we begin, not only to think of, but to act in the interests of, America's sons and daughters?

I am an America Firster. I always have been; I hope I always will be, and if perchance St. Peter, if and when I meet him, asks me who I am and where I am from, my answer will be "an America Firster from the United States of America."

It is my hope that the "pinks" and the Reds, the internationalists, who have had altogether too much to say about the policy of our country, will now be thrown out of the Federal Government, and those who believe in our country, in our form of government, permitted to direct and guide her destiny.

## Why Continue to Appease Falangist Fascism?

EXTENSION OF REMARKS
OF
### HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 15, 1945*

Mr. COFFEE. Mr. Speaker, one of the leading dailies in my home State of Washington is the Seattle Star, published by the genial and very able Howard Parish, and edited by Cliff Harrison, one of the Nation's outstanding journalists. In a recent issue there appeared an editorial in which that newspaper summed up the situation with respect to Spain and Argentina and urged the imposition of economic sanctions. The editorial further points out that it is absurd that the United States and Great Britain should continue to foster and encourage the prolongation of power of the two loud-sounding and braying flunkies of the discredited Axis strutting mountebanks, Herren Hitler and Mussolini. The editorial is as follows:

OUR MILD AID TO LIBERTY

A few days ago an estimated 250,000 people in Buenos Aires joined in a demonstration for freedom and against the Argentine military dictatorship which, by restrictions, threats, and violence, maintains itself in power. Political and social differences were forgotten as marchers pledged their continuing support of the constitution and shouted "Death to Peron!"

On the same day a story from Washington said that wartime economic sanctions imposed by this country and Britain were up for review, and might be eased or abandoned.

The governments of these two dictator countries need coal and oil. They didn't get much of either during the war. Both items were scarce. There was little for export, and the bulk of whatever surplus there was logically went to friendly countries.

Now, though coal is still in short supply, oil is reasonably abundant. There seems to be no economic reason why increased shipments could not be made to the two countries. In fact, a good excuse could probably be found for doing so in Argentina's case, since our oil exports are being exchanged there for flaxseed and linseed oils, which are much needed here.

But there are urgent moral reasons why these curbs should be continued. Any relaxation would surely be interpreted by Franco and Peron, and by their countrymen who oppose them, as indicating a softer Anglo-American attitude. It would strengthen the dictators' hands. It would prolong the ordeal of freedom-loving people under their rule.

The situation in Spain and Argentina mocks the great military victory which the United States and Great Britain, with their allies, have won over dictatorship and tyranny. And it is a situation that has been fostered by the general mildness of British and American policy.

It may be hoped that these two powers will not take new steps to prolong the power of two pompous proteges of the defunct Axis. The resistance by Franco's opponents in and out of Spain, though nearly crushed, has not died. The wishes of the Argentine people are unmistakable. It would be a shame if we and Britain should now withhold the mild aid of limited economic sanctions from these people in their fight for liberty.

## Statehood for Territories

EXTENSION OF REMARKS
OF
### HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jacksonville (Fla.) Journal of August 27, 1945:

STATEHOOD FOR TERRITORIES

Florida, in observing the one hundredth anniversary of its becoming a State, might well pause to give thought to two United States Territories which have made major contributions to the winning of this war, and which stand today where Floridians stood a century ago. Both Hawaii and Alaska have played major roles in this crisis, standing as bulwarks in the defense of the continental part of our Nation. Neither has ever had or wanted an independent national existence. Statehood is definitely in the cards for both.

One of the obstacles which has stood in Hawaii's path to statehood has been the large proportion of its population which consists of Americans of Japanese ancestry. But Riley H. Allen, editor of the Honolulu Star-Bulletin, and a keen observer of Hawaiian life for a quarter of a century, shows dramatically how this picture has been put in a new light by the war.

"The two great changes have come about as a result of World War II," he says. "First, the Americans of Japanese ancestry have made so fine a record in combat and in other wartime duties that it has become a matter of national recognition. Our One Hundredth Infantry Battalion and our Four Hundred and Twenty-second Infantry Regiment—both of which are organizations almost entirely of Americans of Japanese ancestry, principally from Hawaii—were among the very best fighting in the European theater, and the One Hundredth Infantry Battalion has been called the most decorated unit in the American Army. The loyalty of these young Americans, and their readiness to face the enemy—not only in Europe but members of their own race, our Japanese enemy—have been well demonstrated.

"Second, the very large influx of war workers from the mainland has drastically

changed the population situation here. Our population growth shows a greater increase in Caucasians than of any other race, and the percentage of our population of Japanese blood is dropping noticeably in the scale. These two things—separately and together—tend to remove the fear that should this become a state the predominant political influence will be Japanese and will be exercised racially."

Hawaii has highly developed wealth and resources, a high quality of public education, and makes a greater tax contribution to the Federal Government than some States. It has a long tradition of democratic government.

Alaska, with its huge undeveloped natural resources, is opening up as a new land of opportunity and an inviting frontier for the young and enterprising. It is expected that large numbers of veterans will seek their postwar fortunes there. Statehood would greatly aid in the full development of this rich land.

Both Hawaii and Alaska are in fact today full-fledged partners in these United States. A prompt granting of statehood to them would be no more than recognition of that fact. There are considerable movements already started to do this in the coming session of Congress. The 48 present States should wish well to these movements, and look forward to an early welcome to two new sister States.

## Polish Question

EXTENSION OF REMARKS

OF

## HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following very pertinent and interesting letter and excerpt indicating continued injustice against the gallant Polish people:

POLISH AMERICAN CONGRESS, INC.,
*New York, October 8, 1945.*

Hon. PHILIP JOSEPH PHILBIN,
*House Office Building, Washington, D. C.*

HONORABLE SIR: On September 25 we forwarded to you a resolution adopted at a meeting of 5,000 members of the Polish American Congress held at Manhattan Center in New York on September 23 of this year.

This resolution stated in part that we "demand the Congress of the United States to investigate officially: (1) the true situation of displaced persons from Russian-occupied countries." The enclosed clipping of the New York Times of October 5, refers only to displaced persons in American-occupied territory, and we are pleased to see that our principal commander in Europe has temporarily refused to send these persons against their will to another form of slavery.

Since his decision is only temporary, we again request of you in behalf of all Americans of Polish birth or descent in downstate New York, that you exert every effort so that our Government will protect these displaced persons from being forced into all the horrors of Communist dictatorship.

Thanking you for your interest and cooperation and asking for the favor of a reply, we are,

Very truly yours,

FRANCIS J. WAZETER,
*President.*

RUSSIA WOULD TAKE BIG PLANTS IN REICH—WANTS ALL OR MOST OF MACHINERY OF OPEL, OWNED BY GENERAL MOTORS, AND I. G. FARBEN—REPARATION PACT IS CITED—SOVIET ALSO SAYS POLES ARE "RUSSIAN" FOR PURPOSE OF FORCED REPATRIATION

(By Herbert L. Matthews)

LONDON, October 4.—Russia is demanding as part of her share of western Germany's reparations the Opel Motors Works plant, which used to be owned mainly by General Motors, and I. G. Farben, the chemical and dye trust that Senator HARLEY KILGORE claims is being groomed for the export trade, according to reports here which came from high foreign sources.

It is not that the Russians want to run these and several other internationally known industries, but they are reported to want all or most of the machinery and plants involved. One thing is certain and that is that Russian reparations demands over western Germany are arousing much friction with Britain and America.

It will be recalled that the Soviet Union under the Potsdam agreement receives "15 percent of such usable and complete industrial capital equipment in the first place from metallurgical, chemical, and machine manufacturing industries as is unnecessary for German peace economy" and "10 percent of such industrial capital equipment as is unnecessary for German peace economy."

RUSSIA ASKS FOR THE BEST

Both are to be removed from western zones of Germany. No break-down into details was made at Potsdam, so Russia is entirely within her rights in asking for what she pleases and naturally she is asking for the best, so that 10 or 15 percent quantitatively could be far more than that qualitatively.

The Opel works were not destroyed by bombing during the war and RAF pilots used to say that was because it was owned by General Motors. At any rate, this whole question of what constitutes reparations and what constitutes restitution was one of the hard-fought problems at the Council of Foreign Ministers just ended, and it was incidentally one of very few subjects upon which genuine progress was made.

The French led the fight, for they found that much industrial machinery that the Germans had plundered from France and set up in Germany were being taken away by the Russians as German reparations. In several keenly argued sessions, adequate definitions were drawn up, and Foreign Commissar Vyacheslaff Molotov gave assurances they would be respected.

QUESTION FOR REPARATIONS BODY

However, the break-down of the Council meeting meant, as Mr. Molotov flatly said in his press conference, that there were no decisions taken in London and that nothing that had been done was binding. That does not means Russia will go on seizing industrial plants partly owned by France, Britain, and the United States, but it is true that the whole question is thrown back on the Allied Commission on Reparations, which is under the Allied Control Council in Berlin.

So far as repatriation of Soviet nationals from outside the Russian zone is concerned the failure of the Council of Foreign Ministers to reach any agreement on the matter had its first fruit today in an attack by Col. Gen. F. I. Golikov, head of the Soviet organization dealing with reparations, who attacked the Allies today in a Pravda article that was broadcast.

"Organizations in the British, American, and French zones whose attitude is hostile to the Soviet Union are trying by every means to prevent us from repatriating Soviet people," General Golikov writes. "They are terrorizing and deceiving our people and spreading various slanders against our country."

The difficulty at the Foreign Ministers' Council was to answer the seemingly simple question, "Who is a Russian?" Mr. Molotov claimed that any person who lived in territory now claimed by the Russians, including Lithuanians, Estonians, Latvians, and Poles were Russian and should be repatriated by force if necessary. Britain, France, and the United States held that such people should have the right to choose their citizenship. No agreement was reached.

Echoes of the Council of Foreign Ministers are still being heard in London, although Foreign Secretary Ernest Bevin along among the Big Five has refused to make any public pronouncement. He is saving that for Parliament, which reopens Tuesday. However, he gave his cabinet colleagues a survey of what happened at the cabinet meeting this morning.

Support for United States Secretary of State James F. Byrnes' compromise proposal for Big Three preliminary discussions, followed by a general peace conference, came today from the Australian Minister for External Affairs, Dr. Herbert V. Evatt, who issued a statement to that effect. He feels that the failure of the Council meeting was "by no means an irreparable setback," but he claimed that, being an extension into the postwar period of the Big Three arrangement of the war, it proved "almost unworkable."

"No one contests that the three great powers must take the leadership in the peace making," Dr. Evatt continued. "What was not fully demonstrated at the Potsdam meeting but has been demonstrated at the Council meeting is that the participation of other belligerents with the Three Powers is also indispensable to the peace making."

The five great powers, he said, "have no standing or functions in the new world organization except as members of a Security Council of 11 members," and he concluded by repeating Mr. Byrnes' proposal in slightly different form, pointing out that the United States and Britain had accepted the idea of a large conference of the five great powers plus other belligerents. "I believe that it will turn out to be acceptable to Russia also," he concluded.

Later, in answer to questions, he said that Eire as a neutral country should be excluded from the peace conference.

In connection with the Council of Foreign Ministers there is another report going around that comes from high quarters but needs checking. It is that Russia, both at San Francisco and here, suggested to the United States and Britain that the surest way to maintain peace in coming years was to have a binding military alliance among the Big Three committed to policing the world the way the Security Council's armed force is supposed to do for the United Nations Organization later on.

This at least would be consistent with the policy that Mr. Molotov pursued here of reducing the peace making to the Big Three.

UNITED STATES UPSETS YALTA TO PROTECT SOLDIERS

FRANKFORT ON THE MAIN, GERMANY, October 4.—Gen. Dwight D. Eisenhower, in an order amounting to temporary abrogation of one phase of the Yalta agreement, has instructed that American troops discontinue forcing Russian nationals to return home unless the United States Government rules otherwise.

The existence of the order, affecting 26,400 Russians still in the American zone of Germany, was disclosed today by commanders of displaced-persons camps. Questioned on reports that troops had fired over the heads or near the feet of some Russians to compel

them to board Soviet-bound trains, one officer said:

"Possibly for a time some of them were being pushed onto trains without our asking many questions, but that's all stopped now."

Many of those left in Germany have threatened to commit suicide if forced to go home, he added, and "we are not eager to risk the lives of American soldiers trying to make them go." He explained that some of the Russians might have hidden arms.

He described General Eisenhower's order as a "temporary abrogation of the Yalta agreement until Washington says specifically whether American troops must be used to make these people go back where they don't want to go."

The Big Three at Yalta agreed to expedite the repatriation of each other's nationals.

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a telegram I have received from Jewish organizations in Chelsea, Mass.:

CHELSEA, MASS., *October 16, 1945.*
Congressman THOMAS J. LANE,
*House of Representatives,*
*Washington, D. C.:*

In harmony with Jewry throughout the United States of America and other lands, our Congregation Agudath Sholom, of Chelsea, Mass., and its affiliated organizations has congregated to protest the British policy in regards to Palestine. We hereby bring to our beloved leader the sentiment and request of our people that we should intercede in behalf of transplanting the remnant of suffering Israel from the soil that absorbed the blood of the millions of their martyred brethren to their ancient homeland of Palestine.

MORRIS WOLPER, *President;*
Rabbi GERSHON ROMONOFF;
Mrs. IDA KRENTZMAN,
*President Ladies' Auxiliary;*
FRANK KLIGMAN,
*President Brotherhood.*

## National Employ the Physically Handicapped Week

EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. VOORHIS of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address I delivered over CBS on October 13, 1945:

National Employ the Physically Handicapped Week is being observed through the United States, first as an observance of the outstanding achievements of our handicapped people, second as a period of awakening for the whole country to our obligation and opportunity to open to disabled and handicapped people constructive employment and a chance to contribute to the Nation's welfare.

One need only mention such names as Beethoven, Milton, and Steinmetz to realize in how many cases in history people suffering from handicaps of one kind or another have not only overcome those handicaps but have actually used them as stepping stones to the achievement of true greatness.

Sometimes we think of handicapped people as different from others. This is wrong. What handicapped people want is the same thing everyone else wants, namely, to live like other people, to have worth-while jobs, to care for their families, and help build their country. It is primarily to make these facts clear that National Employ the Physically Handicapped Week was instituted by act of Congress.

I am proud to have been the author of the bill which set this week aside for these purposes.

In order to give the radio audience a clear conception of what the purposes of this week are I should like to read in full the proclamation issued by the President of the United States in connection therewith:

"Whereas the people of this Nation are determined to foster an environment in which those of their fellow citizens who have become physically handicapped can continue to make their rightful contribution to the work of the world and can continue to enjoy the opportunities and rewards of that work; and

"Whereas Public Resolution No. 176, Seventy-ninth Congress, approved August 11, 1945, provides in part:

" 'That hereafter the first week in October of each year shall be designated as National Employ the Physically Handicapped Week. During said week, appropriate ceremonies are to be held throughout the Nation, the purpose of which will be to enlist public support for and interest in the employment of otherwise qualified but physically handicapped workers':

"Now, therefore, I, Harry S. Truman, President of the United States, do hereby call upon the people of the United States to observe the week of October 7-13, 1945, as National Employ the Physically Handicapped Week. I ask the governors of States, mayors of cities, heads of the various agencies of the Government, and other public officials, as well as leaders in industry, education, religion, and every other aspect of our common life, during this week and at all other suitable times, to exercise every appropriate effort to enlist public support of a sustained program for the employment and development of the abilities and capacities of those who are physically handicapped."

It is altogether fitting and proper that this radio program should have been sponsored by the Disabled American Veterans for not only has this organization been at the very forefront in the task of seeing justice done to the men who have become disabled in the defense of their Nation against foreign enemies, but it has also done an outstanding job in bringing to the attention of the Nation the debt which it owes to all handicapped and disabled people. One of the finest programs that I know of aimed to enable returning veterans to take a worth-while hold on civilian life again is the program of the Disabled American Veterans whereby groups of veterans have been and are being trained in some of the colleges and universities of this country, notably at American University here in Washington, to become service officers of the DAV, and thus to dedicate their lives to helping to meet the needs of their other disabled comrades.

At the outset we may as well recognize that some actual barriers to the employment of disabled and handicapped people are today in existence. A part of the task of those of us who desire to open the way for our handicapped fellow citizens is to remove those barriers. One of these barriers is the fear of employers that under the Workmen's Compensation laws, if a disabled or handicapped person is employed and later becomes injured on the job, the public or private insurance fund which covers that employer's workers will be liable for excessive payments. As a matter of fact, as I shall show later, the accident rate among employed handicapped people is actually lower than among others. But in order to remove any possible obstacle, at least so far as disabled veterans are concerned, I offered an amendment suggested by the DAV to the GI bill of rights, which I have also introduced as a bill in the present Congress. It reads as follows:

"The purpose of rehabilitation is to restore employability lost by virtue of a material and permanent handicap due to service-incurred disability. The Administrator shall have the power and duty to cooperate with and employ the facilities of other governmental and State employment agencies for the purpose of placing service-connected disabled veterans in suitable gainful employment.

"To remove the prejudice against employment of honorably discharged veterans, having 10 percent or more service-connected disability, and to aid in securing employment of such veterans, where an injury or death of such veteran is incurred under such circumstances as to result in payment of benefits under State employees' compensation laws or by recovery from or settlement with or on behalf of the employer, the Administrator of Veterans Affairs shall reimburse the insurer or the fund from which such payment is made to the extent of the net loss suffered by such insurer or fund."

Such a measure has been on the statute books of Canada ever since very shortly after World War I. Were we to place such a measure on our statute books there would be not only no barrier against the employment of disabled veterans, but a positive inducement to their employment because there could be no losses either to the employer or to the compensation fund as a result thereof.

Before I go further with this broadcast I wish to make it clear that while it was Congress which passed the law to create National Physically Handicapped Week, and the President who signed the Proclamation officially designating it, the major credit for this accomplishment should go to the American Federation of the Physically Handicapped and the indefatigable work done by its president, Mr. Paul Strachan; and to the Disabled American Veterans and its outstandingly capable and devoted legislative representative in Washington, Mr. Millard Rice. Without the support of these two organizations and without the hard work done by these two men, it is altogether possible that National Employ the Physically Handicapped Week might never have become a reality.

It is quite impossible for me to acknowledge on this program the contribution of all the organizations, public and private, of the armed forces and the civilian governmental agencies, the employers, the labor organizations, and the civic groups which are today making so fine a contribution to the solution of this problem. I cannot refrain, however, from mentioning the splendid work being done by a House subcommittee under the chairmanship of Congressman AUGUSTINE B. KELLEY, of Pennsylvania, which committee will in my judgement before it has completed its work be prepared to present to the nation a comprehensive picture of the whole problem of all our handicapped people and means toward its solution.

The Disabled American Veterans have estimated that there are some 400,000 service-connected disabled veterans of World War I,

and that there will be as many as two and one-half million disabled veterans of World War II. To these we owe a greater debt than to any other group of our citizens. Indeed in my view we owe them a debt prior to and superior to any we owe on war bonds or in any other direction. But the Disabled American Veterans itself has pointed out that it is not only to the men and women disabled in war that we have an obligation. For this organization composed entirely of disabled veterans has pointed out that without the outstanding contribution of physically handicapped workers in the mills and factories of our country, America's war production would have lagged substantially behind the high level which it achieved. In an official release prepared for use in connection with National Physically Handicapped Week, the Disabled American Veterans has brought together the most significant testimony to show how nearly impossible it would have been for us to have successfully prosecuted the war itself if we had not been able to tap the resources of skill and ability to be found among blind, deaf, and other handicapped people among our population.

The DAV cites, for example, a survey conducted by the United States Office of Education which sent questionnaires to somewhat over a hundred employers consisting of a cross section of American industry. Here is what that survey showed:

Out of 97 employees reporting on absenteeism, 53 found there was less absenteeism among handicapped people than there was among other people. Thirty-nine said it was the same for both groups, and only five reported that absenteeism was more among the handicapped.

With regard to the accident rate, which is most important, out of 87 employers reporting on this subject, 49 found the accident rate was lower among the handicapped, 36 said it was the same for both groups, and only 2 reported a higher accident rate for the handicapped than for those who did not have handicaps.

On the question of productivity, 105 employers answered that question. Twenty-five found that the output of the handicapped people was actually greater than that of the others. Sixty-nine reported that there was no difference between the two groups, and only 11 reported that it was lower among the handicapped.

In other words, the evidence is convincing that the handicapped people of the United States have produced as much or more per person than other people have been able to do. We have instances in connection with the war effort of the Nation where, for example, a certain company hired blind people after a little experimentation to do an inspection job and found that those blind people did this particular type of work better than sighted people had been able to do it.

In other instances we have whole departments of corporations which have been staffed entirely by people who are deaf, where it was found that those people could do that job better than others were able to do it.

It is not enough to provide compensation for disabled veterans or support for other handicapped people. It will not even be enough for Congress to pass legislation for dependents' allowances for disabled veterans though this should have been done long ago. Our handicapped people have earned the right not only to rehabilitation, training, and help but to honest-to-goodness jobs. Some have earned this through service in the armed forces where their disabilities have been incurred in defense of their Nation, others by the fine production record of many of their number during the war. The only way we shall be able to make good on our obligations to them is by united national effort. Those employers and those labor organizations which have gone out of their way to open job opportunities to handicapped people are entitled to the thanks and gratitude of the whole Nation. May their tribe increase, as I believe in time it will. But I hope most earnestly that every one of us will observe this week not only with word of mouth but also in our acts and in our hearts and that there will go out through this Nation, over the radio, in the press, and through the observances carried on in the communities of the country, a message to the disabled veterans and to the other handicapped people which will be a message of hope.

## Demobilization Too Slow for Servicemen

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. HOFFMAN. Mr. Speaker, this morning comes a letter, no doubt similar to many received by other Members, excerpts from which are as follows:

Now I have been relying on the point system for my release, and I feel that since you are the people's representative of your respective State, that it is your duty therefore to represent them and their interests in our National Government. There are thousands of soldiers here in the States, of which I am one, who feel this is not being done.

Now, if this letter so far has misled you to think that it is a letter of individual complaint, then let me assure you that it is not. The Army's current point system meets with our approval in many respects, but there is definitely something seriously wrong with speed in which Army personnel are being discharged by it. Let me state you a few facts that you may or may not know are existing in camps and air bases throughout the country. Those conditions are serious and definitely calls for some probing and investigation and, last but not least, some noticeable changes. We have been in three different bases from the north, and west coast, to our present location here in South Carolina, and a number of the men here concerned with this letter are and have been eligible for discharge for some time, while some are in my category of sixty-some-odd points. We have all been overseas for a period of time ranging from 4 months to 2½ years. I personally have 2 years overseas and 3 years in the service.

These men now eligible for release are being forced to wait for several more weeks before they will even be called for from their respective separation centers. Eighty- and ninety-point men are still going gradually through these centers and because of that slowness are holding up thousands of men with points ranging from 70 to 79 from being sent to and separated from these centers. These men know not when they will finally get out. They have no specified date to look forward to. It may and could very easily run into sometime in 1946.

Next month, November 1, the points I understand are supposed to drop to 60, enabling men in that class with 60 or more points to be discharged. It stands to reason at this rate a man with 63 points will not get out in November or December or January, but more than likely November of the following year.

We have absolutely no duties to perform here, and have done nothing since we reported back from our 30-day leaves. There is nothing to do. We are no longer needed in this group, field, or any other field. There is no necessity of our being forced to remain in the service doing nothing but bunk fatigue, when most all of us could be home with our families, wives, and jobs. Certainly we are all anxious to get out, but at the rate we are being released, it would be as well if we, each and every one, signed up for another 3 years. The war is over, Mr. Hoffman. There is certainly no excuse for making thousands of men suffer now, to enable some high-ranking officers to retain their present rank. It is imperative that these conditions be changed and that we be released on a much larger scale, if a serious national military situation is not desired. I am requesting you to see that there is immediate action taken to remedy these circumstances immediately.

The undersigned are the names of men who will verify all that I have written and whose desires and interest are the same as my own. We are sincerely expecting at least some consideration.

## H. R. 3615

EXTENSION OF REMARKS
OF
### HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in connection with the captioned bill, I wish to submit to the House a telegram I have received from Hon. James H. Davis, Governor of the State of Louisiana, which telegram I think is self-explanatory.

The telegram is as follows:

BATON ROUGE, LA., *October 16, 1945.*
Hon. HENRY D. LARCADE, Jr.,
*House Office Building:*

I am in favor of the adoption by House of Representatives HOWELL'S amendment to House Resolution 3615 and any other House legislation establishing national system of airports whereby Federal authorities would deal with the State instead of directly with local subdivisions, as this will enable our department of public works with its planning division to more adequately supervise and plan the proper construction of any new system of airports. You will recall that the Senate bill was amended in the Senate to make such provision. Your assistance and support in this respect would be greatly appreciated.

JAMES H. DAVIS,
*Governor of Louisiana.*

## Secretary of War Robert Patterson Favors Single Department of Defense

EXTENSION OF REMARKS
OF
### HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Secretary of War Robert P. Patterson before Senate Military Affairs Committee October 17, 1945:

INTRODUCTION

The subject matter of the proposed legislation, the unification of our armed forces,

is of prime importance to the people of the United States.

The maintenance of the future peace of the world will depend on the attitude and policies of the United States in world affairs, and also upon the measure of strength which the United States continues in the future to retain in order to lend vitality to those policies. Our people's undoubted desire is for a world at lasting peace. But their mere urge for peace will have no significance in a world that is conscious of power, without a ready and effective strength with which to back up that urge. The providing of that strength should be the keystone of our national policy.

After every great war, we see a popular revulsion. The inclination of the American people now is to blot out and forget the horror and brutality and privation of World War II. But we who have directly laid upon us the responsibility for the future security of our country cannot run away from that responsibility. We must constantly give our best thought and our unremitting effort to safeguarding the peace which has again been restored to the world.

POSITION OF THE SECRETARY OF WAR

In my opinion, the unification of our armed forces is an essential step in the development of a sound program for the future security of the American people. The adoption of such a system of organization of our armed forces is best calculated to maintain that security and the continuation of world peace. As Secretary of War, I wish to place on record my earnest advocacy of the principle of unification of the armed forces.

This position is not a new one on my part. I have consistently advocated a consolidation of the War Department and the Navy Department into one team. In April 1944, the Select Committee of the House of Representatives on Postwar Military Policy, generally referred to as the Woodrum committee, held hearings on proposals to establish a single department of the armed forces. At those hearings, I had occasion, as Under Secretary of War, to express my wholehearted approval of the joining together of the War and Navy Departments into a single military establishment, including as the three major coordinate forces the ground, the sea, and the air arms. Because of my then position as Under Secretary, charged with responsibility for procurement and supply for our Army of over 8,000,000 men, my discussion related primarily to the great assistance which such a unity would bring to industrial mobilization and planning, as well as to the manner in which it would eliminate duplication and excessive cost in research developments, procurement and other business functions. The select committee signed a report urging that the matter be kept under continued study, and commented favorably on the action of the Joint Chiefs of Staff in setting up in May 1944, a special committee to pursue the matter further.

SPECIAL COMMITTEE OF THE JOINT CHIEFS OF STAFF

The special committee set up by the Joint Chiefs of Staff was composed of generals and admirals of long experience. It conducted hearings over a period of 10 months. It visited the European, Mediterranean, India-China, Pacific, and Southwest Pacific theaters of war. Its members talked on the spot with the theater commanders and the responsible ranking officers of our services throughout the world. The committee's report to the Joint Chiefs of Staff recommended a single department of the armed forces. Three of the four members signed the report. One member submitted a minority report of nonconcurrence.

This report represents the dispassionate study of an able group of men, with professional military experience, who have available to them the best military and naval opinion in our entire services. It is the product of the thinking of those who in the field have borne the responsibilities of World War II. While there may be disagreement on various matters of detail included in the report, there should be only approval of the basic principle of service unification which it recommends. I am in favor of giving vitality to that basic principle through the prompt enactment of the necessary legislation.

LESSONS OF WORLD WAR II

The elementary lesson which we have learned from the hard experience of World War II is that there must be single direction of the Nation's land, sea, and air forces. While the foundation of our organization is three coordinate arms—air, land, and sea—these arms must operate as a single team under single direction, which has responsibility and final power of decision over all.

In 1941, when Germany and Japan declared war upon our Nation, we had two services, the Army and the Navy, each with its independent mission, its independent field of operation. No unified over-all command existed, short of the President himself. Our system was the same as it had been for 150 years. Each service had independently developed a type of organization that it believed essential, with little or no collaboration with the other service. Each service was tender on the point of its own prerogatives, not only in the ranks but in the higher command and staff levels. There was no way of compelling cooperation or the exchange of information, except through the interposition of the President himself.

In addition to the lack of unified direction of the armed forces we entered the war with our air power in the position of an auxiliary to our land and sea power.

We recognize now that the basic air power of the United States must be established as an arm of our national-defense coordinate with our land power and our sea power—all, of course, under supreme direction. We know that control of the air—our own and that of the enemy homelands—was essential to victory. The capabilities and requirements of basic air power are such that air power must be accorded coequal status with land and sea power and hence the Air Force must have the same degree of autonomy as the land and naval forces. Development and exploitation of our basic air power should be the major preoccupation of a coordinate component of a tripartite team—all under a single department of the armed forces.

The United States entered the war without adequate cooperation between its two armed services, without plans for a unified command in the field, and with its air power established as an auxiliary to the Army and Navy.

The history of the early pre-war and war period is a story of attempts to overcome these defects through makeshift arrangements. Within a month after the attack upon Pearl Harbor, the President moved to establish the Joint Chiefs of Staff, composed of the heads of the land, sea, and air forces, as an agency designed to exercise control over our military efforts on the basis of mutual consent. On the industrial, technological and scientific side, a multitude of joint boards and committees were formed in attempts to bring coordination in those fields. But mutual agreement fas for practical purposes the only means of getting things done; and it was not possible, even with the best will in the world, for these improvised organizations to function as well as we would have liked.

The United States had to learn the hard way. But we learned. We learned that team play brought success. We learned that any military effort of consequence required unified control to exploit the maximum capabilities of ground, sea, and air forces. The urgency of war imposed upon us, in every theater of war, the principle of a unified command for operations. MacArthur in the Southwest Pacific, Nimitz in the Central Pacific, Eisenhower in Europe were, both in name and in fact, supreme commanders. The sound instincts of the American people would not have tolerated a situation where the responsibility for military action in a theater of war was divided among land, sea, and air commanders. Had we ignored in the actual areas of combat the compelling principle of a sole, over-all authority, our efforts might have met with failure

But the unified direction so necessary to waging successful war was largely limited to the strategic and tactical employment of the major forces overseas. It did not, except in unusual instances, extend to the elimination of duplicating facilities and lines of supply overseas. And here in Washington there was no single military command.

To sum it up: We had single direction, single command, in the overseas theaters on strategy and tactics; we did not have single direction in those theaters on facilities and lines of supply; and we did not have single direction in the over-all military services, save by recourse to the President as Commander in Chief.

Now that peace has come once again, we must not forget, in devising ways and means to improve the organization of our forces, the lessons that we learned in the war just ended. I submit that the considerations that led us, under spur of necessity, to set up unity of authority in the field point, by every element of logic, to the establishment of unity of authority at headquarters in Washington.

REASONS FOR A UNIFIED COMMAND

Let me state simply the reasons that move me to advocate so strongly a unification of the military services.

1. Integration of our military program: The primary objective of our organization for war is to establish an integrated program of national security. Such a program must be based on the best available military thought, weighing the relative capacities and limitations of our sea, air, and land forces. From the deliberations of our senior military leaders there should evolve the basic military policy or posture which the Nation should assume in order to guarantee its security and peace. The military strategy to implement this policy and the allocation of responsibilities to the respective components of the armed forces must be worked out carefully to achieve an integrated balanced progrom. Only after such an integrated program is developed can there be any sound allocation of appropriated funds to the respective components. But these matters of policy, strategy, and budgetary allowances all require decision as between the capabilities and requirements of the major elements of the armed forces. These decisions can best be reached with soundness and dispatch by placing our armed forces under one head and in one department.

In the past, the separate departments have presented their separate views and requests before separate committees and subcommittees at separate times. There are obvious dangers in handling the national security on the basis of piece-meal presentations. The problem of national security is an over-all problem and should be studied and determined on an over-all basis. The merger of the Departments of War and Navy in a common department of the armed forces will give the Congress the great advantage of receiving and considering a single, coordinated, and comprehensive presentation of budgetary and other requirements for the national security.

2. Economy: The consideration of cost is of paramount importance. In time of peace and increasingly so with each succeeding year, the dominating factor will be money—the size and character of the military budget. The strength of our armed forces in time of

peace in the past has been controlled, not by forward planning or anticipated dangers, but by the size of the allowance for the services from the public funds.

Yet we are all agreed that the United States must now and for some future years maintain in constant readiness such military strength as will impress the leaders and professional soldiers of other nations that this Nation is really determined to achieve a lasting peace. This necessary strength must be maintained as economically as possible. We are all concerned that for each dollar spent for security we obtain as much security as that dollar can buy. Because of our high standards of living, our costs of maintaining an armed force are, man for man, the highest in the world. In the years to come, the expense will be far less that during the war, but it will still be large.

We ought not, then, to tolerate in our budget for national security any items that relate to those duplications that are inherent in a separation of the services, duplications that no joint board with equal representation of the Army and the Navy has been able to eliminate. We simply will not be able to afford two lines of supply, two hospital systems, two procurement agencies, two air-transport systems, where one will do the job as effectively and for less money.

We ought not to tolerate in our military budget overlarge sums for one purpose and insufficient sums for another which must inevitably result from a lack of a single direction over the planning of all the constituent service elements. Within the limits of our expenditures we must have a balanced security program. All the constituent elements should be given the strength which our best military planners under single direction assess as appropriate to their relative importance in an integrated security program.

The combination of the armed forces in a single department is businesslike and will bring economy. The savings will not perhaps be realized at once. But in the evolutionary process more and more ways can be found to combine services and facilities and procurement and the like, and out of these combinations major economies are certain to be realized.

And we must always have in mind that our modern warfare is not only total and global, but it moves in new realms of science and technology. There must be ample funds for technological research and development in the future years. The American people will not be willing to take from those funds merely to perpetuate wasteful practices in our traditional organization of a separate Army and Navy.

3. Efficiency: In the third place, it is my belief that the unification of the two services will promote efficiency in planning, in administration, and in operations.

In my appearance as Under Secretary before the Woodrum committee last year, I reviewed in detail cases of conflict, overlapping, and duplication between the War and Navy Departments in vital phases of the procurement program. There were conflicts for raw materials and production facilities. There were variations in methods for determining military requirements, uncoordinated research projects, lack of standardization of specifications, and many other unfortunate difficulties.

Under the existing organization of our services, each service maintains its own self-sufficient operating plant. Right here near Anacostia we have an Army depot and a Navy depot, an Army hospital and a Navy hospital, Army shops to service Army motor transport and Navy shops to service Navy motor transport, two adjoining air fields—one for the Navy and the other for the Army. Hundreds of similar examples can be referred to.

With a single department of the armed forces, the overlapping of physical facilities should be eliminated through proper allocations between the component forces, and the waste of time and effort in preparing separate plans would be avoided through the preparation of a single comprehensive security program.

4. Research and development: The advent of the atomic bomb, which has so stirred the imagination of everyone, forcefully impressed on all of us the necessity for a vigorous, well-directed program for the development of new weapons and of the means for defending against them. The outstanding development in modern warfare is the destructive force and the speed and range of the weapons that science and industry are making available. These weapons—and more will come—will profoundly influence military planning, strategy, and tactics. A form of organization that was suited to horse-drawn transport, to sailing vessels, and to firepower with a 2-mile rangs must be adjusted to the conditions that these weapons present. Full advantage cannot be taken of them, nor can the most effective measures of defense against them be developed, unless we have unified direction of our research and development program.

The cannon was first used by the Army of one nation which thus achieved great advantage over a surprised enemy. The military leaders of that nation were of course delighted with their discovery. They were, however, convinced that the function of the cannon was to scare the horse. Such a view persisted until it was exploded by an enemy which employed the cannon as a basic weapon in its own right—and turned the tide of battle. Had the prophetic voices of the potential artilleryman of the day been heard, it might have been otherwise, but these prophets were not then in the family of services.

And we came to see the cannon mounted on carriages, later on ships, and finally on airplanes. But there was no pooling of talent and knowledge among the services which employed the cannon. The men who sailed in ships developed their cannons and the men who fought on land developed theirs. The improvements discovered by one group were seldom shared by the other. Such a system, with all its inherent waste, worked reasonably well when oceans were barriers and while navies operated separately and armies fought alone.

But the weapons of today are no respecters of land or water barriers. Such weapons are used interchangeably on land or on sea. And the means employed for interception are common means, whether launched from the land or from vessels on the sea. The day is past when we can longer delay a welding of scientific-military research and knowledge. Such a welding, as I see it, can come only out of a straightforward unification of the military forces.

5. Organizational preparedness: When war came, it found us in a state of organizational unpreparedness. Much has been said about our lack of readiness in terms of trained manpower, ships, airplanes, guns, tanks, and critical materials. But relatively little has been said about our organizational deficiencies.

We had passed through the precious years of peace with two great establishments engaged in separate training programs which provided almost no indoctrination or preparation for team play. But we found that team play—the combined employment of air, land, and sea power—was vitally necessary. And so in war we had hastily to improvise the methods and procedures for unified direction and of employment of the armed forces in battle.

It should be obvious that the training and indoctrination of the Nation's security establishment should not be based on one organization in peace and another in war. Only by unified control can we hope to maintain a security force of constituent arms well versed in all of the elements of combined operations.

DISCUSSION OF CERTAIN OBJECTIONS

It will be said, I suppose, that no man can handle the job of secretary of the armed forces because of its size and complexity. It will be said that the organization will be too big, too unwieldly, and too diversified in its problems to operate effectively.

This argument is not impressive. In the industrial world, experience has proved otherwise. And the history of our national governments is filled with examples of the success of large organizations with concentrated authorities.

An over-all organization confines itself more firmly to policy decisions and delegates more extensively the operating functions. Size is a relative thing. One of Washington's generals might well have doubted that anyone could direct armies of the size and complexity of those that fought in the War Between the States. The United States has one Executive, the President, who is responsible for the entire management of the executive side of the Government. One man, the Secretary of the Treasury, is responsible for the vast and intricate financial policies of the Nation. One man, the Secretary of State, is responsible for the manifold and vital relationships of this Government with foreign nations. I think it reasonable to conclude that a single individual can, by proper organization and delegation of authority, effectively administer the country's armed services.

Again, you may hear it suggested that a single department of the armed forces would concentrate too much power in one man and that such power would tend to develop militarism. Can such a suggestion be made in real seriousness? Our safety from militarism does not rest on any fabric of multiplicity of departments dealing with military affairs. It rests upon the solid conviction of our people and upon the basic democratic principle that the leaders of our armed forces are subordinate to the civilian department head, and, through him, to the President, to the Congress, and to the people. Throughout our national life, we have concentrated authority over all our armed forces in the President of the United States and in his Cabinet officers. Frequently, the President has himself been a military man. There has not been the slightest threat to our democracy in the past from that institution. Nor will ther be any threat in the future from the creation of a single department to unify our military policies under a directing civilian head.

The point may be made that this is a proposal which would peremptorily discard the traditional organization of our military and naval forces—an organization with great traditions of long standing which has won for us a victory in two world conflicts. It might be argued that we would therefore reject a unified department of the armed forces.

I believe firmly in the great traditions of our fighting forces. Those traditions should be preserved in a unified Military Establishment. But the dead hand of tradition must never be allowed to obscure defects in a system or to prevent improvement in that system.

My time in the military service was spent in the Infantry. I have a pride in the traditions of the Infantry that will be an inspiration to me so long as I live. But I know that the Infantry alone does not win a war. It operates most effectively as part of a team, a team that comprises all the armed forces, a team under a single directing authority. I am certain that Infantry traditions will not be damaged by the creation of a single department of the armed forces.

The proposal before us does not suggest a merger of Army, Navy, and Air Force personnel into one huge force with consequent loss of identity among the members of the great services. On the contrary, there must

be preserved the maximum autonomy, consonant with efficiency and economy, for each of the three coordinate arms.

It may be put up to you, too, that coordination can be attained by leaving the two departments as they are, under separate command, but connected by a host of interlocking committees—top committees, middle committees, and bottom committees. I will concede that coordination by committees is better than no coordination at all. But in military matters action by committee is not the equivalent of action by a single authority. There should be in our Military Establishment a final voice that takes the full responsibility and determines the policy to be pursued. Someone has said that one poor commander is better than two good commanders sharing a command. That is an extreme statement, but it does point up the vital importance of having a single command. The same thought has been expressed in the statement that action taken by a council of war is likely to be the most ineffective action possible. In the War Department reorganization of March 1942, the greatest gain was the substitution of action by command for action (or inaction) by committees.

ESSENTIAL ELEMENTS OF A SINGLE DEPARTMENT

I shall not take your time to present now any particular plan for unity of the armed forces. That can be done later. The basic elements, as I see it, are these:

1. A single executive department of the armed forces, charged with the national security and comprising all of the services now separately included in the War Department and Navy Department.

2. A civilian head of this single department, who would be a member of the Cabinet with the rank of Secretary. To assist him in the performance of his duties, there would be a civilian Under Secretary, to act as his principal assistant, and there would be civilian assistant secretaries. To the assistant secretaries the Secretary would have authority to delegate the following, and other functions: Supervision over scientific research and development in weapons and equipment; supervision over procurement and planning for industrial mobilization; the handling of legislative matters affecting the national security; supervision over public relations and dissemination of information.

3. A Chief of Staff of the armed forces, the chief military adviser of the Secretary and responsible to the Secretary for all military matters.

4. Three major and coordinate branches: the Air, the Ground, and the Naval Forces to include the Marine Corps and the Fleet Air Arm, each with the maximum autonomy consonant with efficient and economic operation. Suitable provisions should be made for common supply and hospitalization.

CONCLUSION

I submit that the benefits which would be obtained from a single Military Establishment would be:

First, unity of over-all civilian and military direction—true unity of our security forces.

Second, full recognition that modern war is conducted in three elements—land, sea, and air—and that the respective land, sea, and air forces must be coordinate and subject to supreme over-all direction.

Third, single determination and direction of business and adminstrative policy, with resulting elimination of duplication and important savings in manpower, material, and money.

Fourth, centralized supervision and planning of scientific, industrial, and physical resources and development.

Fifth, preservation of the traditions of the existing forces, as coordinate divisions of a single department.

The adoption of such a plan, I firmly believe, will constitute a great step forward toward assuring the national safety in the years that lie ahead. Finally, I urge that you do not permit the great objectives of unification at this time to be obscured by a cloud of details. If we attain the objective, the details will fall into proper perspective and will be capable of ready settlement in the evolutionary process.

## Cotton Has Export Bounty of $20 Per Bale—Cotton Appears to Enjoy Import Quotas as Well—Where Does the Good-Neighbor Policy Come In?—Where Does the Reciprocal Trade Come In?

EXTENSION OF REMARKS
OF
## HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, although our cotton friends may be exceedingly vocal about reciprocal trade treaties and great vocal promoters of a good-neighbor policy, their expressions and their legislation do not coincide. You will note that in 1940 the eighth year of the more abundant life, and after two campaigns with their hymn of hate about the Smoot-Hawley Act, they turn about face and put a limitation on imports. By limitation, I mean a limitation that is a near embargo. The near embargo will continue "unless changed by Presidential proclamation."

I presume Congress could change the situation if it so desired. All Representatives from cotton districts may vote for the reciprocal trade treaties, but that has not prevented them from enacting "fence me in" or "fence you out" legislation.

One hundred and twenty thousand bales as imports is about 1 percent of the United States production of ten to eleven million bales.

Is this near embargo an integral part of reciprocal trade or of a good-neighbor policy? The $20 per bale export bounty, where in the last 10 months over 600,000 bales were shipped under surplus disposal costing over $12,000,000, is also in this reciprocal trade-good-neighbor policy picture as well. Consider the women's clubs and the League of Women Voters that have been deceived by the New Deal in regard to the trade treaties and the good-neighbor policy.

I include the following letter and official table from the United States Tariff Commission:

UNITED STATES TARIFF COMMISSION,
*Washington, October 10, 1945.*

The Honorable REID F. MURRAY,
*House of Representatives.*

DEAR MR. MURRAY: I have your letter of October 1 requesting statistics on cotton production and imports from January 1, 1940, to date and information relating to the size of the cotton quotas and the date on which the quotas became effective.

Enclosed is a table entitled "Raw Cotton: United States Production, Imports for Consumption, and Annual Import Quotas, 1940–45."

Information relative to the date on which quotas became effective and concerning important changes in the quotas is given in the notes accompanying the table. You will observe that in several consecutive years imports were larger than the total of the annual quotas. An excess of imports of quota-type cotton over the total annual quotas would be possible in any one year because the quotas are not on a calendar-year basis. The excess in several consecutive years, however, is due to the importation of certain types of cotton, described in notes to the table, which are not subject to quota limitations.

The total figures for production in 1940 to 1943 differ slightly from the totals as recorded by the Bureau of the Census because, in order to show production of long-staple cotton more accurately, running bales of Sea Island cotton, which average about 400 pounds each, have been converted to equivalent 500-pound bales.

Sincerely yours,

OSCAR B. RYDER,
*Chairman.*

*Raw cotton: United States production, imports for consumption, and annual import quotas, 1940–45*

| Year | Cotton under 1 1/8 inches | Cotton 1 1/8 inches and longer | Total |
|---|---|---|---|
| | Production (running bales)[1] | | |
| 1940 | 11,614,236 | 682,746 | 12,296,982 |
| 1941 | 9,719,281 | 774,901 | 10,494,182 |
| 1942 | 11,633,218 | 804,631 | 12,437,849 |
| 1943 | 10,569,552 | 558,897 | 11,128,449 |
| 1944 [2] | 11,491,000 | 348,000 | 11,839,000 |
| 1945 [2 3] | | | 9,779,000 |
| | Imports for consumption (equivalent 500-pound bales) | | |
| 1940 | 108,787 | 49,865 | 158,652 |
| 1941 | 221,173 | 93,120 | 314,293 |
| 1942 | 86,767 | 132,021 | 218,788 |
| 1943 [2] | 43,457 | 93,604 | 137,061 |
| 1944 [2] | 61,892 | 49,715 | 111,607 |
| 1945 (Jan.-July) [2] | 49,532 | 75,855 | 125,387 |
| | Import quotas for year beginning Sept. 20 [4] (equivalent 500-pound bales) | | |
| | Cotton under 1 3/8 inches except rough cotton [5] | Cotton 1 3/8 or more, but less than 1 13/16 inches [6] | Total |
| 1940 | 29,034 | 91,313 | 120,347 |
| 1941 | 29,034 | [7] 91,313 | [7] 120,347 |
| 1942 | 29,034 | 91,313 | [7] 120,347 |
| 1943 | 29,034 | [7] 91,313 | [7] 120,347 |
| 1944 | 29,034 | [7] 91,313 | [7] 120,347 |
| 1945 | 29,034 | [7] 91,313 | [7] 120,347 |

[1] Bales of approximately 500 pounds each. Sea Island cotton was converted from bales of approximately 400 pounds to equivalent 500-pound bales; for this reason the total bales here shown is, in most years, slightly less than the total bales reported by the Bureau of the Census.

[2] Preliminary.

[3] Forecast as of Oct. 1, 1945. Crop Reporting Board release of Oct. 8, 1945.

[4] The import quotas have been in effect since Sept. 20, 1939. Unless changed by Presidential proclamation, they remain the same for each succeeding quota year.

[5] Quotas on short-staple cotton are allotted by countries of origin and total 14,516,882 pounds. They cover cotton under 1 1/8 inches other than harsh or rough cotton less than 3/4-inch in staple length and chiefly used in the manufacture of blankets and blanketing, and other than linters.

[6] The quota on long-staple cotton (1 3/8 inches and longer) amounts to 45,656,420 pounds. Originally allocated by countries, it was changed to a global quota effective July 29, 1942.

[7] Quota limitations have been suspended from application to cotton 1 13/16 inches and longer since Dec. 19, 1940.

Source: Production data compiled from grade and staple reports of the U. S. Department of Agriculture, except as noted; import data compiled from official statistics of the U. S. Department of Commerce.

## Atomic Power

EXTENSION OF REMARKS
OF
**HON. ELLIS E. PATTERSON**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., October 16, 1945.*

The President, Hon. HARRY S. TRUMAN,
*White House, Washington, D. C.*

DEAR MR. PRESIDENT: I have received a number of communications which express the concern in the minds of Americans over the isolationist trend we seem to be reviving. I have felt it myself, in following the outmoded procedure used at the London Conference, and in recent statements relative to atomic power.

Those of us who have the responsibility of making judgments on this tremendous new development, have the fate of the world in our hands. The utmost caution is indeed necessary, in determining our position and avoiding premature judgments.

I feel that the scientists who have worked on and with this development must be given the fullest expression in determining our decision. They have not been allowed to speak. The military must of course be concerned with the national defense and present their case The ultimate judgment concerning the policy on atomic power must come from the people through their representatives in the National Legislature, after we have been thoroughly apprised of all the factors involved.

The trend toward isolation of any of our allies is a rebirth of the reaction which led us into this past war. I do not think that the American people will agree with those who are trying now, at the end of one world struggle, to throw us into another. It is a danger to be watched and considered in each evaluation pertaining to national and international problems.

The program you outlined on September 6, which I again pledge to support, will be as nothing if we allow the momentary superiority we have in atomic methods to lead us into international strife.

I thought I would express myself to you this way, in order that you may know the feeling of the residents of my district who have addressed me on the subject.

Kind personal regards.

Sincerely yours,

ELLIS E. PATTERSON.

## Justice for Poland

EXTENSION OF REMARKS
OF
**HON. PHILIP J. PHILBIN**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

POLISH AMERICAN CONGRESS, INC.,
*New York, N. Y., September 25, 1945.*

Hon. PHILIP JOSEPH PHILBIN,
*Member of Congress, House Office Building, Washington, D. C.*

HONORABLE SIR: I have the honor of enclosing with this letter a copy of a resolution adopted unanimously by 5,000 Americans at a meeting at Manhattan Center, New York, held under the auspices of our organization last Sunday, September 23, protesting against the injustices being perpetrated upon Poland as a result of the weak policy of our Government toward Russia.

The resolution, you will please note, calls for a congressional investigation of not only the terrible hardships this policy is bringing upon Poland, but also the ultimate dangers involved therein to the United States.

Thanking you in advance for your cooperation and assuring you of our interest in your response to this letter, we are,

Yours for no more appeasement.

FRANCIS J. WAZETER,
*President.*

RESOLUTION ADOPTED AT THE RALLY "JUSTICE FOR POLAND" SEPTEMBER 23, 1945, AT MANHATTAN CENTER, NEW YORK

Americans of Polish descent recognize the President of the Republic of Poland and the Constitutional Polish Government in London as the only true and legal representation of the Polish State and Nation. This has been unequivocally stated in a resolution adopted by the Polish American Congress on March 9, 1945, and in a memorial of May 11, 1945, presented to the Government and Congress of the United States.

We, therefore, regard our Government's decision to recognize as the Government of Poland a Soviet-sponsored gang of Stalin's agents and pro-Soviet Quislings, who are not the representatives but the hangmen of the Polish people, as contrary to the ideals expressed in the Atlantic Charter, as well as to international law and to the interests of the United States.

United States appeasement of the Soviet dictatorship at Teheran and at Yalta placed a responsibility upon the American people in regard to the future of all nations of eastern and central Europe—among them Poland—our brave and martyred ally. And after the great injustice to Poland in the Yalta territorial settlement, the lone ray of hope in the Yalta promise of freedom in what remained of Poland, has not been fulfilled.

We see with deep sorrow that the United States Government—after having committed itself at Yalta to tacit approval of Soviet crimes in Europe—is now forced to use harsh methods against millions of men and women, who do not want to be slaves of red totalitarianism. Facts relative to the situation in the American zone in Germany reveal that our military authorities have adopted a policy toward these persons which should not and cannot be tolerated by the American people.

It is a policy of moral terror consisting of:

1. Separation of these displaced persons from all communication with the outside world (mail and financial aid from the United States are not permitted to them nor are American or Polish papers and books from America and England).

2. A severe limitation of individual liberty of these persons.

3. In many cases subordination to their former German persecutors is forced upon them.

4. In a few cases displaced persons have already been sent against their clearly expressed will to the Russian occupied Poland.

5. Representatives of independent American opinion are denied access to these displaced persons.

The above-stated facts show that our recent foreign policy leads logically, step by step, to the abandonment of traditional American standards of humanitarianism and freedom. We consider this a dangerous symptom of disintegration of the foundation of our democracy.

The American people should know the full truth: Therefore

Whereas the policy of our Government at Tehran and Yalta was a policy of secret, personal commitments still not fully known to the American people;

Whereas this policy made the nations of eastern and central Europe victims of our appeasement of Soviet Russia's dictatorship;

Whereas coresponsibility for the Soviet crimes thus has been placed upon the American people without our people being informed of the true facts; and

Whereas in further efforts to appease Stalin some of our noble American traditions are being disregarded: Be it therefore

*Resolved*, That we, Americans of Polish birth or descent, representing all Polish-Americans in down-State parishes, clubs, organizations, and societies in the region south of Albany, including all of New York and Long Island and metropolitan New Jersey, gathered at Manhattan Center on September 23, 1945, under the auspices of the Polish-American Congress, down-State New York division, demand the Congress of the United States investigate officially:

1. The true situation of displaced persons from Russian-occupied countries.

2. The United States policy regarding Poland.

3. The secret commitments of the United States Government toward Russia.

4. The probable and foreseeable danger to the well-being and safety of the United States arising from the abandonment by our Government of the freedom-seeking peoples of eastern and central Europe to the tyranny of Soviet Russia.

## Patrick W. McDonough

EXTENSION OF REMARKS
OF
**HON. GEORGE P. MILLER**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. MILLER of California. Mr. Speaker, Mr. Patrick W. McDonough, of Oakland, Calif., owner of the McDonough Steel Co., is a product of the American system of free enterprise and a credit to it.

Mr. McDonough, starting from scratch, has made a great deal of money. Measured by the dollars and cents standard he has been an eminent success, but Mr. McDonough is also a human individual who does not like to see unnecessary hardships or suffering inflicted on people. He is no maudlin sentimentalist who preaches theory—he is a realist who has risen the hard way and he has suffered from the usual buffeting and hard knocks successful men receive on the way up He learned to rock with the punch, to absorb the blows without wilting under them.

Pat McDonough wants to pass this information on for the benefit of those who follow him. He has done this very well in his testimony before the Senate Committee on Education and Labor.

Mr. Speaker, under unanimous consent, I insert at this point in the RECORD an article that appeared in Labor on October 13, 1945:

SOLONS WERE STARTLED—EMPLOYER DECLARES HIGH WAGES MEAN BIGGER PROFITS—CALIFORNIA STEEL MAN DECLARES BOSSES NEVER WILLINGLY HIKE PAY; INCREASES ALWAYS WON BY UNIONS

Members of a subcommittee of the Senate Committee on Education and Labor got a remarkable lesson this week—from an employer—on why high wages mean lower costs.

The testimony, some of which literally startled the Senators, was given by Patrick W. McDonough, head of the McDonough Steel Co., Oakland, Calif., during hearings on the bill by Senator JAMES M. MEAD, Democrat, of New York, for establishment of a 65-cents-an-hour minimum wage in American industry now, with a 75-cent floor in 2 years.

Blunt spoken, McDonough described the 65-cent minimum as "just a pittance" and insisted it ought to be much higher.

"It's really not American to pay as little as 65 cents an hour," he declared.

In his own plant, which has been making invasion boats during the war, but in peacetime manufactures steel smokestacks, barges, and other steel products, the rock-bottom wage for unskilled labor is $1 an hour, McDonough revealed.

For years, he has had collective-bargaining relationships with the International Brotherhood of Boilermakers, and he gave the union much of the credit for boosting wages in his plant and in other industries.

"Employers never raise wages unless they are forced to," McDonough frankly asserted. As proof he cited the experience of his industry.

"When I learned the boilermaking business 40 years ago, wages for practical boilermakers were 25 to 30 cents an hour," he said. "At present, a boilermaker gets $1.28 or more an hour.

"During these 40 years, not one of the increases in the industry was ever granted freely. They were always gotten by the union."

The steady advance in wages has cut costs, not hiked them, McDonough stressed.

WAGES UP, COSTS DOWN

He presented some convincing examples. On a particular type of tank, he said, wages paid workers were 30 cents an hour 30 years ago, but had risen to $1 an hour in 1940.

"Despite that, the labor cost on that tank has dropped from $120 to $80," he pointed out. In the boiler-making industry as a whole, though wages now are five times the level of 40 years ago, "the cost of product is less," he said.

Incredulous committee members asked McDonough how that was possible.

"It's no secret," he replied. "In my plant I pay men high wages and they work harder at their job They are more interested in their work. Consequently, they produce more. Besides, when you pay high wages, you got to use your noodle and begin figuring out ways of doing the work cheaper, by mechanizing or otherwise.

HUNGRY MEN CAN'T PRODUCE

"It is indisputable that our country, which pays the highest wages in the world, has also the highest production per man. That's not a matter of some unknown economic law. High wages and high production are synonymous, just as a well-kept machine is more productive than a run-down one.

"People who don't have enough to eat or lack proper clothing aren't in a position to produce, and the only way they can attain a higher standard of living is to give them enough money so they can buy the necessities of life."

McDonough blasted the greediness of some of his fellow employers and contended that enactment by law of a higher minimum wage is essential to prevent cut-throat wage cutting. During the depression, he recalled, wages in his industry fell as low as 20 cents an hour in some plants.

BOSSES NEED PROTECTION

"There was no check on the avariciousness of the employer," McDonough recalled. "Everyone was damaged by those conditions, most of all the employer. He, too, needs protection from such unscrupulousness."

McDonough also drove home the point that high wages for the workers invariably mean high profits for the employer, too. "Profits absolutely increase with a raise in wages," he said.

As a final clincher, he revealed that his own plant earned a million dollars in profits annually during the war, after turning back a couple of millions to the Navy because of reduced costs—and even the million, he said, was too much.

---

## Strengthening the Congress

REMARKS
OF

## HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. VOORHIS of California. Mr. Speaker, the St. Louis Post-Dispatch is running a series of editorials on the strengthening of the hand of the Congress and the improvement of some of our machinery to that end.

To my mind there is no problem of Government more urgent than the one to which the Post-Dispatch is directing its attention in these articles and to which many Members of this body have been addressing themselves. Never in all history has any parliamentary body carried responsibilities so heavy and so fraught with the possibility of great good or great ill for the future as does the American Congress today.

The task of equipping ourselves with the knowledge necessary to act with conviction and correctness upon these issues, the necessity of so arranging our work that we will have time for the all-important things and will not become lost in details of the job, and finally and most important, measures to strengthen the hand of Congress in its dealings with both the executive branch of the Government and also with pressure groups—these are the minimum essentials for those who care deeply about the continuing position of the Congress as a co-equal branch of the American Government.

I ask consent to include with my remarks herewith one of the series of Post-Dispatch editorials:

AN 1893 CONGRESS IN 1945

The tremendous size of the task of modernizing the machinery of Congress, and the formidable obstacles to be overcome before it can be achieved, are brought out in Washington comments on the Post-Dispatch editorial of last Sunday, A Letter to the Congress, urging action on this necessity.

Representative MIKE MONRONEY, cochairman of the committee now at work on reorganization, calls the editorial a challenge to do something about it before it is too late. Mr. MONRONEY, whose position is stated in our Mirror of Public Opinion today, says that, once the joint committee has made its recommendations, "only an informed public opinion can insure that needed reorganization is given proper attention and action."

So, on the word of a congressional leader exceptionally well informed on the problem, it is clear that this issue presents a challenge to both Congress and the public.

Representative ESTES KEFAUVER, of Tennessee, author of legislation to introduce on Capitol Hill the question hour for public officials, says: "I am afraid there is very little disposition on the part of the Members generally, particularly those who are chairmen of committees, to reorganize outmoded procedure. It is an alarming situation."

So Congress, this able Member fears, is not aware of the necessity for revising its archaic methods. Here again, the issue is viewed as a challenge.

Representative JOHN J. COCHRAN, of St. Louis, another of those deeply concerned with the inefficiency, undemocratic structure and creaking procedures of Congress, properly points out that the resolution creating the joint inquiry placed limitations upon what the special committee could do.

These restrictions, of course, will prevent the committee from recommending the sweeping changes that should be the long-range objective However, as we pointed out last Sunday, there are many important reforms that come within the orbit of its authority. It can concentrate on those steps for the time being. If they are enacted—and that will be no easy job—the committee will have a large achievement to its credit and Congress will be far on the way to modern efficiency. After that much is accomplished, the campaign can be expanded to the further changes on the long-run agenda.

Desirable as a transition in one leap from horse and buggy to streamliner would be, there is the real danger that planning for too much will result in no achievement whatever. There is plenty of hard, step-by-step plugging to be done to move Congress from its present inertia and to prove publicly the necessity for putting its machinery into condition to cope with the demands upon it.

Mr. KEFAUVER'S alarm lest change-resistant members balk at improvements that are minimum essentials is known to be widely shared both inside and outside Congress. This reluctance should stimulate the committee to frame a courageous report, going as far as its authority permits, rather than causing it to pull punches.

Some individual privileges and partisan advantages will fall if the committee recommends, and Congress enacts, the changes obviously required. Each change, however, will be for the greater good of the membership as a whole, for the strengthening of congressional authority to equalize its position in relation to the executive branch, and for the better execution of the public's business.

All are obvious steps: the consolidation of sprawling and overlapping committees; the development of stronger leadership and greater responsibility in both Houses; better liaison between Congress and the executive branch; enlarged staffs and improved research service to lessen the burden on individual members; better relations between Congressmen and constituents; abrogation of the custom (not a rule) that puts seniority ahead of competence in choosing committee chairmen, and the dozens of other important reforms on which action is possible.

Considered objectively, it is a strange thing that Congress, in a day of progress and change in a myriad other fields of endeavor, still clings to a system last revised in 1893. Such is the power of inertia, the dead weight of awesomely regarded precedent.

It will take a formidable demonstration to jolt the majority into action. That demonstration can come from inside Congress, on the part of Members who have concerned themselves with the problem, and it can come from the outside, from an enlightened and active public opinion.

In the last analysis, it is up to Congress itself—up to the committee to present the maximum program possible, up to its sponsors to push for action, up to the majority to vote its adoption. And the voice of an aroused public calling for these changes in the archaic system can be a mighty force in bringing them about.

## The Atomic Bomb Is the Property of the American People, Paid for by Them, and It Should Be Held for Their Protection, and Not Given Away

EXTENSION OF REMARKS
OF
### HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. JENNINGS. Mr. Speaker, the atomic bomb is the property of the American people. Their Government is under the solemn duty to hold and to guard it in inviolate trust. At Oak Ridge, in Anderson and Roane Counties, in the Second Congressional District of Tennessee, under the supervision of Gen. Leslie R. Groves and his able staff of Army engineers, aided by 1,000 scientists, the ablest industrialists in the Nation, and 100,000 devoted men and women who were their colaborers, the atomic bomb was developed, manufactured, and completed. The cost of this vast, unprecedented, and complicated plant was $2,000,000,000.

So intricate and highly technical were the many processes by which this wellnigh impossible result was accomplished that those who performed the miracle were fearful to the very last that their efforts might result in failure. It is not an overstatement to say that no other nation in the world had or has the industrial ability, the manufacturing resources, the mechanical skill, and the scientific attainments to produce the elements of this bomb and to combine them successfully and to explode it with safety to those who used the bomb and with disaster only to our enemy.

Even the most wildly enthusiastic and eager givers-away of our resources say that the Russians could not make and use an atomic bomb in less than 5 years. Anyone who has gone through the complicated and heretofore unheard of plants at Oak Ridge may well doubt that Russia could construct, equip, and man such a plant. It would seem to be but the exercise of common sense and prudence that we hold inviolate the secret processes by which we made and assembled the elements of this bomb. The project and everything connected with it was guarded by the FBI, the Army, and by everyone who knew anything whatever about it. Anyone who might have attempted unlawfully to invade or pry into the premises or processes where the work was carried on would have been shot, or at least taken into custody and severely dealt with.

Why all the hullabaloo and hot haste to give it to the Russians? Have we not been generous with them? If the material assistance we have lavished on them has not made the men who control that country cooperative in our efforts to bring permanent peace to the nations of Europe and Asia, what grounds have we for jumping to the conclusion that their possession of this terrible weapon of destruction would change their mental processes and arbitrary and one-sided actions?

Self-defense is the first law of nature, and as long as we have this weapon no country is going to attack us. Even if Russia succeeds in making such a bomb, knowledge on her part that we have such bombs in countless numbers will deter her from using them against us. Besides that, Russia has no earthly cause for warring against us. Nor have we any reason for war with Russia.

We have the secret of the bomb, and we have the bomb in abundance. We are safe and the world is safe so long as we keep it under our control. And the Congress, for the people, is charged with the duty of holding the secret processes of its manufacture and the bomb itself.

I include as part of my remarks the following editorial of the Knoxville Journal:

UNIVERSAL POSSESSION OF WAR SECRETS HAS PROVED NO PREVENTIVE OF CONFLICTS BETWEEN NATIONS

There are two arguments advanced by proponents of sharing the atom bomb secret with all and sundry nations that seem to us particularly grounded on fallacy.

We are told that it is up to this country to immediately provide our friends and potential enemies with the bomb-production method in order, first, to allay suspicion of our intentions and, second, to prevent a new armament race based upon the perfection of the atomic process.

There is certainly nothing either in our knowledge of human nature or in the history of international relationships to indicate that suspicion of our intentions would be in the slightest allayed by giving out the atomic secret at this time. There is no record, for example, that the mastery of gunpowder manufacture by all warring nations contributed in the slightest to peace in that day. The same can be said for all other offensive or defensive weapons. As the information got around the world as to their manufacture they were fitted into the armament picture of each nation, but there is no indication that the knowledge thus scattered did anything for peace.

On the contrary, the quicker the information got around, the quicker armament races were started. What the various war departments throughout the world will do, immediately after they have the atomic secret well in hand, will be to undertake applying the new process to new weapons. They will do so on the theory of defense but the ideas perfected will also be adaptable for use in offense.

We remain unconvinced that there are safer hands for the awesome atomic process secret to be in than ours and that, even if other nations are able to perfect it within a period of years, the world will have gained at least that many years of peace.

## Address of Hon. Margaret Chase Smith, of Maine

EXTENSION OF REMARKS
OF
### HON. CHARLES M. LaFOLLETTE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. LaFOLLETTE. Mr. Speaker, under leave to extend my remarks, I include an address given by our respected colleague, Mrs. MARGARET CHASE SMITH, on October 12, 1945, in ceremonies marking the seventy-fifth anniversary of Wilson College in Chambersburg, Pa.

The gentlewoman from Maine [Mrs. SMITH] was awarded a doctor of laws degree by Wilson College, and her profound statesmanship as reflected by her serious and frank address testifies to the wisdom of Wilson College in conferring this degree of honor upon her.

The address follows:

The individual freedom enjoyed by citizens of a democracy such as ours carries with it the responsibility of not only thinking individually but also of "thinking out loud"—of making ourselves articulate together with those who share our beliefs and opinions. What I have to say on this important subject is keyed to four words: (1) democracy, (2) citizen, (3) think, and (4) articulate.

One of the best definitions of a democracy is "a government by the people, either directly or indirectly, through a system of representation and delegated authority periodically renewed." Democracy is the rule by the majority—theoretically the real majority but practically the articulate majority. Like everything else, we get out of government only what we put into it.

The fourteenth amendment to the Constitution defines citizen, but I like better the Webster comment: "A citizen as such is entitled to the protection of life, liberty, and property at home and abroad, but is not necessarily vested with suffrage or other political rights."

We of America are vested with suffrage and political rights by the Constitution, but many of us are not true American citizens in the full sense of the word because we do not fulfill our role as such; we do not exercise our franchise or most of our political rights and duties; we are content to "let the other fellow do it."

To "think" is to exercise the faculties of judgment, conception, or inference—to put our common sense into action. When the German people defaulted their thinking to Hitler, they surrendered their freedom. When we accept the statements and proposals of demagogs because we are too lazy to think and test their statements and proposals, we can blame no one but ourselves for subsequent events.

But thoughts, to be effective, must be disclosed. We must have confidence in our opinions and cherish the belief that they will guide others as well as ourselves. We should so proceed as to merit leadership and then not be timid about claiming it.

It is the articulate majority that runs a democratic government. But the articulate majority does not always represent the real majority. Quite often the real minority by "thinking out loud" makes itself the practical, effective, articulate majority.

For proof of this, one need only look at the Presidential election figures, where he will find that usually the victorious candidates and party not only have small margins of victory but poll considerably less than 51 percent of the eligible electorate.

Elections are the times when we establish a policy of government for the next 2 or 4 years—a policy that public officials whom we have elected are to follow. If maximum voting is combined with our two-party system there is a greater assurance of effectuating the will of the majority.

In contrast, the multiparty system of France before the war contributed greatly to her internal discord, made her a country against itself and an easy target for the militant dictatorship of Germany. The multiparty system resulted in a discordant and weak government by minority representatives

making the formulation of consistent government policy most difficult to attain.

Yes, in elections we should vote for policies on vital issues for the candidates are merely symbols and media of action. We must know our candidates and what they stand for, even at times force candidates and parties to reveal their positions on vital issues. The best time to exercise the pressure is before and during the election.

There are two ways to determine whether a candidate's views and opinions on vital issues agree with our own—(1) by his past record or (2) by his promises and professed position. Both are of value but the record tells a much more dependable story.

Too often votes are carelessly cast on personalities, really pseudo personalities, rather than on character. There was a startling instance of this not long ago in the election to Congress of a man of unknown ability and views, solely, it appeared, because his name was the same as America's best beloved humorist. This is rendered yet more ludicrous from the fact that he was not so registered as to be eligible to vote in the election in which he prevailed. And in the same State where this namesake election occurred a "Mae West" was nearly elected commissioner of charities and corrections.

How can citizens make candidates take a stand and express their beliefs and views on matters of vital interest? By participating in forums and public discussions such as this. They can organize or affiliate themselves with articulate groups that represent their views. They can get out the vote.

The best example of this is the controversial Political Action Committee of the CIO. Some complain that there is too much vote-getting activity among the members of such labor groups.

Even though the PAC of the CIO supported my opponent in the last election, I cannot agree with this view as long as the individual members of labor vote their own convictions and are not led into the political trap that all members of one party are anti-labor and all members of the other party are pro-labor. They should first examine the voting and performance record of each candidate. I think that the PAC with its get-out-the-vote technique has made a valuable and constructive contribution to American Government—a lead that other groups could well follow.

To those who complain about the PAC, I would say, do less complaining and make yourself "articulate" by doing the same thing that the PAC has done—get out the vote of those who agree with you in your opposition to the views of the PAC. The more effective and articulate groups like the vote-getting PAC, representing the various views of the electorate on vital issues, the greater the vote, the clearer the position of candidates, and the truer the democracy.

But the articulate action of a citizen, or group of citizens, must be constructive, must seek to improve, to build instead of destroy. There is not only too much silent or negative thinking; there is too much boisterous demonstration prompted by unenlightened partisanship. As I said before, we should think first, then make ourselves articulate—in other words, think before we speak.

We should not criticize unless we can offer something better, because if we cannot offer something better, it is a good sign that we are not well informed on, or have not thought enough about, what we are criticizing. Citizens should elect those they want rather than defeat those they dislike. In other words, we should make our articulation informed and positive, not ignorant and negative.

To summarize, the greatest contribution that citizens of a democracy can make to the preservation of peace is living up to the full meaning of their status as "citizens." They can best do this by (1) independent thinking, (2) making that thinking articulate by translating it into action at the polls, in the forums, and in everyday life, and (3) being constructive and positive in their thinking and articulation.

## One GI Expresses His Thought in Verse

EXTENSION OF REMARKS
OF
**HON. CLARE E. HOFFMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. HOFFMAN. Mr. Speaker, from a little city, Allegan, in the Fourth Congressional District in Michigan, this young man was one of the first to enlist. His opinion of the strikes is expressed in the following words:

SYMPATHETIC
(By Waldo H. G. Larsen)

My fox hole is full of water,
My seabag is full of mold,
But the weather here is really warm—
In the States you complain 'cause it's cold.

I eat chow three times daily
And don't need a ration book.
I only wish that Spam
Wasn't all our marines had to cook.

At night I have my own little bed,
I can make it up as I please.
There's plenty of room so I don't mind
The lizzards, chiggers, and fleas.

My work takes place in the great outdoors
Behind the firing range.
I wish that my next casualty
Would be a small marine for a change.

We pharmacist's mates travel for nothing,
Civilians pay money to roam,
We live in a different hole daily,
While they have only one home.

Keep a stiff upper lip, poor civilian,
Take this war on the chin like men.
If we're lucky enough to live to get back,
We'll take care of your troubles again.

Some folks strike for an ungodly wage
To procure their daily bread;
Think of the percent of the boys over here
Who can't draw pay—'cause they're dead!

## Bottlenecks in the Discharge of Servicemen

EXTENSION OF REMARKS
OF
**HON. JOHN TABER**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. TABER. Pursuant to the unanimous-consent request granted me, I submit the following broadcast by me on the Columbia network last evening:

One of the problems that is disturbing the American people most at this time is the problem of discharge from the armed forces of those men who are no longer needed because of cessation of hostilities and the approaching end of the war. What are some of the reasons why these men are not being more rapidly demobilized and what can be done to help that situation?

We all must recognize that the Army and the Navy need a certain number of doctors to examine the men who are up for discharge. We all know that they need a certain number of doctors to take care of those who are sick and wounded as a result of their service and to take care of the current operations of both services. Much progress is being made by the Army and the Navy in getting rid of bottlenecks that have interfered with discharges. For instance, since September 1, the discharge rate has increased in the Army from an average of 15,000 per day to an average of nearly 40,000 per day and those men who are coming in from overseas who are eligible for discharge are receiving their discharges more promptly. On the other hand, we have some other situations which are bothering us. For instance, today the Navy has 51,000 reserve officers not eligible for sea duty, and of these, 33,000 are known as specialists and 8,400 are Wave officers, and 10,000 are staff officers. A considerable portion of this last group are medical officers who cannot go to sea. With the end of the war, they should be able to get rid of almost all of these specialists and a failure to reduce that group is the thing that is tying up the discharge of a large number of Navy enlisted personnel. If you have a certain number of this type of officers around, you have a certain number of enlisted men involved with them and that is how the discharge of enlisted men is affected. It should be the object of the Navy to discharge these specialists just as rapidly as it can be done. The longer we wait, the longer this will be a bottleneck to the reduction in size of the enlisted personnel in the Navy.

There are a great many other things that cause bottlenecks. For instance, 20,000 men have been continued for 14 months in radar and sonar schools by the Navy when the Navy felt that they were not needed. Of these, only about 400 are enlisted in the Regular Navy and the rest are reserves. We might need the 400 in the school but the others are surplus and are being kept in the Navy 14 months just because of pressure from the outside. The Navy will not listen to pressure, and very properly so, for special privileges for a lot of things, but in this particular case it has listened to pressure to keep the thing going instead of releasing 20,000 men. The story appeared in the Washington Post a couple of weeks ago, and I have verified it.

In the Army in the continental United States there are presently approximately 500,000 officers and 2,875,000 men—nearly one officer for each five men. Of these 500,000 I am satisfied that 250,000 are rated not eligible for overseas. Outside of the settlement of contracts and renegotiation which might take 10,000 or 15,000 officers, and the doctors necessary for the discharge centers, these officers should be promptly reduced in number and that will result in the discharge of many more of the enlisted men.

I ran across this situation in the Army. In one camp over 4,000 men have been kept for the last 4 months with nothing to do. In other camps men are being given repeated furloughs because there is no place for them to stay in the camps. Nothing could be more demoralizing than this and a prompt reduction in the number that are in the camps in the United States ought to be made. Men who are not eligible for overseas duty and are not going to be kept in the Army for any particular purpose ought to be discharged. Men who have served long enough so that they would not be sent overseas again ought to be discharged. The 300,000 that the Army has in training and the 100,000 that they might need to prepare to go overseas and occupy the stations in this country should, of course, be kept, but the

rest should be discharged just as rapidly as possible. The sooner they are discharged the better for the Army.

I want to see an active, vigorous, fighting Army. I want to see the Army get rid, just as rapidly as possible, of those officers and men who are not going to be able to be an active part of the Army after the war is over. I want to see the Army and the Navy made up of effective fighting forces. After the last war a mistake was made in keeping a lot of over-age officers. We had lieutenants up to 60 kept in the Army in droves and they were there for 15 or 18 years after the first war was over before the picture was cleaned up. I do not want to see any such situation prevail this time. I want to see both services cleaned up just as quickly as it can be done. I think that there is the disposition on the part of the armed forces to do this. On the other hand, if it is not done, and right away, we are going to have delays in discharges of enlisted men and those delays are going to affect adversely the situation of the Army and the Navy in the future.

Efforts must be made at once to get rid of all surplus officers who are not really needed for the functions that the Army has to perform. I can see why it is necessary to maintain a certain number of men to operate the separation centers and a certain number of officers to go with them, but how there can possibly be any excuse at this time for the officer personnel running up to 18 percent of the enlisted personnel in the Continental United States is beyond any intelligent figuring. How the naval officer personnel in the Continental United States could on the 31st of July have been over 120,000 as against about 1,000,000 men at that time is beyond understanding. We are never going to get the men out of the service and have them properly discharged and functioning in civil life unless we limit the number of reserve officers on active duty that the Army and Navy can keep. If the Army and Navy will not do it themselves it is going to be necessary for the Congress to do it, and I hope that it will not require legislative process to do it, but it can be done.

I have wondered for a long time how much delay there was in the discharge of men as a result of political pressure. Each time a man overseas is shifted in his assignment as to the schedule of the boat he will come home on, the return of a great many other men is delayed. Every time a man is let out who has insufficient points by political pressure, the release of more than one other serviceman is delayed because it takes so long to adjust the situation that has been created by this operation. I notice that a University of Georgia football star with 41 points was recently released from the Army. This was in the Washington Star last Friday. Why the War Department feels obliged to listen to that sort of thing and to delay the release of the ordinary soldier is beyond understanding. That is the sort of thing that brings the wrath of the ordinary soldier down on the Army, and it is the sort of thing that brings the Army into disrepute in Congress.

I am in hopes that both the Army and the Navy will cease this irregular operation which delays the discharge of the ordinary fellow.

The Navy does not need now an officer personnel equal over-all to more than 6 percent of the enlisted personnel. The Army does not need now an officer personnel of more than 8 percent of its enlisted personnel.

The immediate reduction of the large excess of Reserve officers on active duty is the first requirement for the large reduction of enlisted personnel in both the Army and the Navy. The discharge of the enlisted men will come about at the same time.

The Congress must see that this is done.

## Pit Props for Belgian Mines

EXTENSION OF REMARKS
OF
### HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following from the Savannah (Ga.) Morning News of October 13, 1945:

BELGIAN MINES PLACE $2,500,000 ORDER HERE—ALBERT ERNEST TO SUPPLY PROPS TO REOPEN COAL PITS, RELIEVE SUFFERING EUROPE—200 CARS PER WEEK TO LEAVE—ROADSIDE PICK-UP PLANNED—CONTRACT SIGNALIZES RENEWAL OF FOREIGN TRADE

The Belgian Government has contracted with Albert Ernest, president of Dixie Wood, Inc., to furnish $2,500,000 of southern pine pit props, for the coal mines of Belgium, it was announced yesterday.

The contract is between the Belgian Economic Commission, 1780 Massachusetts Avenue, Washington, and Mr. Ernest personally and does not involve Dixie Wood, Inc., which is a corporation dealing mostly in wood for the paper industry.

Through the economic commission, the Belgian Government has agreed to purchase 125,000 long tons of the props, and Mr. Ernest stated that before the ink was dry his forest representatives began cutting the timber.

Delivery will begin at once to two assembly areas, Savannah and Mobile, Ala., he said.

The deal is the largest single contract between an individual and foreign governments or individuals in the history of the port of Savannah, according to Savannah shipping interests who pointed out that more than 20 large cargo vessels will be required to move the cargo to Belgium.

Mr. Ernest said that the Belgians will use the props to shore their coal mines, thus permitting resumption of the mining of coal in a nation sorely beset by a fuel shortage.

"With these pine logs from Georgia," Mr. Ernest stated, "we hope to warm the people of Belgium and Holland at Christmastime."

The contract, Mr. Ernest said, provides for shipment of 25,000 long tons per month for a period of 5 months, and he hopes to send the first shipment overseas from the port of Savannah, about November 15. He said he was informed at the Belgian Embassy in Washington that the material would be dispatched from shipside direct to the mines in Belgium, and that they would be in place in a day or two after arrival at port.

The pit props will be 6 to 10 feet in length of peeled pine about 8 inches in diameter.

"The price we will be able to pay will enable the farmers and small wood-lot owners to make shipments in small quantities at a substantial profit to them," Mr. Ernest said.

He said his organization would purchase the timber in any amount from one truck, or even a wagonload to a thousand or more truckloads.

The timber will begin moving from the forests of eastern Georgia and South Carolina, western Florida and Alabama, and Mississippi, at once.

A feature of the huge movement will be a pick-up system, Mr. Ernest said, explaining that arrangements are now being made for farmers and small woods owners to carry a wagonload or a truckload or two to the roadside, where Mr. Ernest's trucks will pick them up and carry them to the staging areas at Savannah and Mobile.

The cutting job alone, he said, would require 150,000 man-hours, and he said he wished to impress upon anyone engaged in the vast enterprise that "every tree felled may mean a life saved in the homeland of a gallant ally."

Mr. Ernest said that the southern forests were called upon to supply the mine props, because the Belgians, French, and Dutch feared to work their own forests because of the millions of booby traps and unexploded artillery shells in the forests of Belgium, France, and Germany. The terrible rail situation in Europe has rendered impossible the importation of the material from faraway Russia or other continental supply sources.

Movement of the logs to port will amount to 200 carloads per week, Mr. Ernest said, which, he pointed out, is about four or five ordinary freight trainloads.

Mr. Ernest said that he had established offices at the Liberty National Bank building in Savannah and at the Downtown Theater Building in Mobile to direct the operation.

This is a brand-new business for the South, Mr. Ernest said, adding that "it marks also the first positive resumption of foreign trade on a strictly cash basis between southern industry and European countries."

Mr. Ernest said he wishes to acknowledge publicly the assistance given to him and the southern forest operators by Secretary of Interior Harold Ickes, and Congressmen Frank Boykin, of Mobile, and Hugh Peterson, of Ailey.

Mr. Ickes was intensely interested because as Solid Fuels Administrator he is anxious to get the mines of Belgium in operation, so that we can end or reduce United States coal exports, until the American situation becomes normal.

To get the mines working again it was necessary to secure the timber to prop them up, and that's why the people of Belgium, Holland, and parts of France will be kept warm later this winter and for many winters to come.

Mr. Ernest's attorney in the transaction was Col. J. McHenry Jones, of Pensacola, Fla.

## Home Buyers' Protection Necessary—Washington Daily News Calls for Action to Save Little Man From Shrewd Dealers

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. PATMAN. Mr. Speaker, an editorial appearing in the October 10 issue of the Washington Daily News quotes from a letter received from a corresponding reader which reaffirms my own expressed fears on the coming inflation in the housing field unless steps are taken immediately to better police the price control of new homes than is now contemplated. I do not believe the information in the first part of the editorial is correct, to the effect that President Truman is trying to scuttle Mr. Bowles' plan. The remainder of the editorial is so timely and persuasive I am inserting all of it.

The editorial reads as follows:

HOME BUYERS' PROTECTION

As Ned Brooks, in an article on page 5 of this newspaper, reports that President Truman has intervened to scuttle Price Administrator Bowles' plan to impose price fixing

on homes, we believe this letter from a reader is timely. Our reader believes in the Government price, inspection, and financing controls over sale of homes in order to protect the buyer of moderate means.

"Wealthy people usually know how to protect themselves," he says. "But families that want homes costing less than $10,000 too often are at the mercy of shrewd builders and real-estate dealers. It's easy to say, 'Let the buyer beware.' But a buyer who has had no experience to teach him what to beware of needs better advice than he now gets.

"He can't afford high-paid private experts to tell him whether a house is worth what is asked for it, or whether the price represents only the builder's or seller's idea of what the traffic will bear; whether the house is soundly built; whether the financing plan is suitable to his income. He can't depend on local building codes for protection, because in many cases they have been rigged to compel use of needlessly expensive materials and construction practices.

"I hope most of the Government's wartime economic controls will be dropped soon. But there is need for more, not less, Federal control over the sale of homes. Home buyers are the foundation of stable Americanism. They reserve every protection the Government can give them."

We commend what this reader says to the earnest attention of the new Construction Industry Advisory Council, soon to meet in Washington at the call of the United States Chamber of Commerce. If the home-building industry wants freedom from Government control, we believe it must do a better job than it has ever done of controlling its own activities.

Many conditions are now favorable to the greatest, soundest building boom in this country's history. But the boom is not inevitable. If the home-building industry grabs for big, quick profits and neglects the huge market for good homes at low cost; if it allows home buyers to assume inordinate risk of disappointment and loss; if it fails to protect its own customers—then it will surely invite drastic Government controls. And it will kill its own best chance for prosperity.

## UNRRA

EXTENSION OF REMARKS
OF
### HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. CARNAHAN. Mr. Speaker, I received today a very commendable and worthy though quite unusual petition. It is included as a part of my remarks. This petition shows that the citizens back home are concerned about the destitute millions of war-ravaged people all over the world. I strongly recommend the attitude of those who signed this petition to all of us, and again urge adequate support for UNRRA, the agency created by the United Nations for the sole purpose of doing this big relief and rehabilitation job.

As a Congressman who recently observed conditions in Europe and Asia, I find that the good points in UNRRA far outnumber the weak points. In peace we have a chance through UNRRA to fulfill an obligation to mankind which is an opportunity we cannot afford to miss.

If freedom and the right to live means enough to us to cause us to fight such a total war as we have just successfully completed in the defense of this principle, then certainly there is an obligation to make an honest attempt at applying the principle Why fight to retain a principle and then not even make an attempt to apply the things for which we fought? Hungry and destitute peoples endanger peace, but peoples enjoying some of the privileges of freedom will defend their position even with life itself.

The petition follows:

HIGH RIDGE, MO.,
*October 14, 1945.*

DEAR CONGRESSMAN CARNAHAN: As Christians living in a land of relative freedom and plenty, we are deeply concerned about our hungry and homeless fellowmen in the war-ravaged countries of Europe and Asia. We urge you to lend your utmost influence toward having sent to them every ton of food and of clothing and of fuel that can possibly be spared from our own stores. As a token of our earnestness, we declare our willingness to have kept in operation whatever remains of the rationing program or to have restored whatever rationing may be necessary to achieve the desired ends.

We propose to give of our own time and money and energy in an effort to prevent starvation and to keep alive the spirit of hope among our brethren across the seas. We pledge you our support in whatever you may do to make of our Nation a good Samaritan among the stricken and sorely wounded nations of the world.

Your compatriots and fellow Christians,
Fred Delbruegge, A. J. Hunbler, Estelle Beavers, Lucille Lofinck, H. P. Baur, Ralph Wallach, George A. Werner, Edwin Nollman, Aug. Kleienhedar, Clara Boemler, Nelle Hefti, Anna C. Szofron, Mrs. E. Biehl, Wm. A. Nollman, I. W. Dautenbahn, John Szofron, Clarence M. Boemler, Mrs. Alvin Delbruegge, Ben E. Schroder.

All of the signers of this letter are residents of Jefferson County, Mo.

Mr. Speaker, I also include the following from the editorial page of the St. Louis Post-Dispatch for October 14, 1945:

UNRRA OR WHAT?

The coming debate in Congress over a second $1,350,000,000 appropriation for the United Nations Relief and Rehabilitation Administration will not seriously question the proposition that the United States should provide relief in Europe and the Far East, for that principle is pretty well accepted. It will question the proposition that UNRRA should be the agency in charge. In the long run, the two propositions may turn out to be the same.

President Truman has asked Congress to make $550,000,000 available at once, which, added to the $800,000,000 already supplied, will complete its initial commitment of $1,350,000,000 to UNRRA. Congress will also be asked to make a second appropriation of $1,350,000,000.

Several Members of Congress who toured Europe last summer were unfavorably impressed with UNRRA's work, and attacked it in statements ranging in violence to the assertion by Senator RUSSELL, of Georgia, that the agency was "a cause of confusion," "a waste of manpower and money," and "should be abolished."

UNRRA has had its meed of abuse. Lord Strabolgi, in the House of Lords, wittier than Senator RUSSELL but no angrier, dubbed it "UNRRA the unready." The London Daily Express branded it a "top-heavy, muscle-bound bureaucracy." It has been continually compared, to its disadvantage, with the food commission headed by Herbert Hoover in the First World War.

UNRRA has boggled enough, in all patience. Its Director General Lehman may be somewhat less incisive and dynamic than a man needs to be to perform one task that is roughly the equal of all 12 tasks of Hercules. But consider that in less than 24 months it has drawn together a staff of 3,000 persons of 30 nationalities and set them to work all over the world. It is providing relief supplies, repatriation services and the first essentials of rehabilitation to the peoples of 7 countries, and operates 6 refugee camps in the Middle East for 40,000 persons. It has distributed more than a billion dollars' worth of supplies.

Consider that, while the Hoover commission was accountable to only one sponsoring nation, the United States, and could deal on a take-it-or-leave-it basis with the nations needing relief, UNRRA must work under the orders of 44 nations and cannot tell any nation to take or leave anything. It can operate in any nation only after that nation invites it. It depends on the military authorities for transportation of its supplies. As if that were not enough, it has had to struggle with political obstacles in several countries, such as Poland, Yugoslavia, and Greece.

The wonder is that UNRRA has accomplished anything, and the fact seems to be that for all its faults it has accomplished a great deal. Quite possibly it needs some reorganization and shaking up, but it is the only organization the world has to do the job, and now is no time to be throwing a going concern overboard and starting again from scratch. The Army, to which some critics would turn over UNRRA's functions, has neither the time nor the talents for the job. Relief and rehabilitation are civil affairs, and the Army has already shown its understandable ineptitude for civil administration. Representative HERTER, of Massachusetts, recently back from a European study of UNRRA, is offering some amendments—principally to encourage recipient nations to begin relying on themselves as quickly as possible, and to require publicity for the facts about relief—but he is persuaded UNRRA is the only agency equipped for the task.

When the expected clamor over UNRRA breaks, there are two reasons why it cannot, without heavy loss, be allowed too long to hold up the flow of funds.

The first reason is the great humanitarian need of the stricken nations, many millions of whose people will go cold and hungry this winter—even freeze and starve—in spite of all we can do. Coal and food must be supplied. Assistant Secretary of State Clayton has warned that the $550,000,000 remainder of our present commitment is required at once and that "a delay of even a few weeks will be extremely serious."

A second commitment of funds is needed immediately in order to keep the flow of supplies moving after the first appropriation is exhausted. For the supplies to be available in time, arrangements must be made very soon for their purchase, and that is what gives urgency to the request for Congress to make a brand-new appropriation of $1,350,000,000.

The second reason why Congress cannot afford to waste much time about the appropriation is plain self-interest. While the wheat crops have been reduced by half by the worst droughts of more than 20 years in Greece, Italy, and Rumania, the United States shore line bulges with surplus grain. Unless our surpluses go to help feed the world's needy, they may stay home to plague us in the form of depression prices for wheat, eggs, potatoes, and the lower grades of beef. And 90 percent of every nation's donations to UNRRA must be spent in purchases in the donor nation.

Conveniently, humanitarianism and self-interest both will be served by a single good deed. It is a deed worthy to be an act of Congress.

## Army Should Regularize Overseas Shipments for Returning Servicemen

EXTENSION OF REMARKS
OF
**HON. GEORGE H. BENDER**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. BENDER. Mr. Speaker, I have received literally hundreds of letters in the past few weeks denouncing the failure of the War Department to recognize its own point system for discharge. Apparently thousands of men overseas are being held at their stations while others with fewer points are shipped home.

The recent discharge of a former football star with only 41 points has given rise to a barrage of sharp criticisms of War Department policies.

There can be no justification for shipping men home out of turn, unless there is some emergency which warrants special consideration.

I call upon the War Department to investigate at once the procedures being used overseas in this connection.

## Pipe Lines Versus Tankers

EXTENSION OF REMARKS
OF
**HON. JOSEPH J. MANSFIELD**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. MANSFIELD of Texas. Mr. Speaker, the Washington Post of Sunday, October 7, contains an article by Mr. Drew Pearson in which he deals extensively with the subject of the so-called Big Inch pipe lines extending from Texas to the North Atlantic seaboard. I desire to take issue with Mr. Pearson on one paragraph in the article. It is as follows:

Significant fact is that shipping oil east by pipe line is much cheaper than by tanker: nearly 28 cents a barrel for crude oil and 11 cents a barrel for gasoline. In contrast, rail shipment costs $1.60 per barrel from Texas to New York, while tanker shipment costs 60 cents per barrel.

I consider this paragraph so grossly erroneous in point of fact that it should not be permitted to go unchallenged. Certainly Mr. Pearson has been misinformed by someone.

Before the war, the normal shipment of oil and gasoline to the Atlantic seaboard was about 1,600,000 barrels per day. Approximately one-third of this was gasoline, and the other two-thirds was crude and fuel oil, the crude being generally converted into gasoline or kerosene at the eastern refineries. Practically all of it was shipped to the East by tanker ships.

The German submarine menace soon put a stop to tanker-ship operations for domestic use, and internal transportation had to be provided. No method was readily available. No pipe lines extended to the Atlantic; no inland waterway channel was available; and the railways had no tank cars; nor did they have any locomotives to spare for the gigantic operation.

Rationing was applied in the East, and every possible means of transportation was resorted to. More than 80,000 tank cars owned by the oil companies were turned over to the railroads, but they were generally in a more or less dilapidated condition from a long period of nonuse. Overhauling and repairing these cars was a big undertaking, and for many months about 2,000 at a time were constantly in the repair shops. More than a thousand new locomotives were required by the railroads.

The few tank barges available were put into operation. Gasoline was barged up the Mississippi and Ohio to Cincinnati, then hauled by rail to the Atlantic. Other shipments went over the Great Lakes, then through the Erie Canal and down the Hudson River. The comparatively small Plantation pipe line was extended from a point in North Carolina to Richmond, where the gasoline was taken over by barges for delivery to the northern seaboard. An 8-inch pipe line was laid across Florida from St. Joe to Jacksonville, through which about 26,000 barrels per day were moved. This gasoline went over the Intracoastal Canal from Texas to St. Joe, and at Jacksonville, was taken over by barges on the Atlantic intracoastal waterway for delivery to all points south of Wilmington, N. C.

All these methods of transportation combined could only supply a small proportion of the eastern needs. The two Big Inch pipe lines were installed, which were designed to move about 300,000 barrels of crude oil, and 235,000 barrels of gasoline per day. The pipe lines, the railroads, and the inland and intracoastal waterways together performed the job. The relative cost of transportation by the different methods is so well known to all who are familiar with it that there has been no room for controversy. I will give a few extracts from official documents, which show the opinions of our greatest transportation experts.

On page 17 of the digest of the hearing before the Temporary National Economic Committee as approved and published by the American Petroleum Institute, appears the following:

1. Lisle, an authority on tanker transportation, estimates the cost of transportation by various methods, as follows:

Per ton-mile:

| | |
|---|---|
| Rail | $0.0083 |
| Pipe line | .0032 |
| Tanker | .00125 |

2. Pew introduced the following table showing the costs for the year 1937 of various methods of transportation to his company:

Per ton-mile:

| | |
|---|---|
| Water | $0.00063 |
| Barge | .00259 |
| Rail | .0164 |
| Crude pipe line | .00477 |
| Gasoline pipe line | .00527 |
| Trucks | .04873 |

3. Walsh introduced figures based on sworn figures of pipe-line operations filed with the Interstate Commerce Commission comparing the cost of transportation by various methods from group 3 to various destinations. The following is typical:

Costs per gallon, group 3 to Chicago:

| | |
|---|---|
| Rail | $0.02805 |
| Crude pipe line | .00636 |
| Gasoline pipe line | .01202 |

On page 274, in the statement submitted by Howard Pew, president of the Sun Oil Co., appears the following:

TRANSPORTATION COSTS

The importance of the industry's specialized transportation system will be best illustrated by a comparison of transportation costs by different facilities. Our company employs all of them, and for 1937 I have tabulated the ton-miles and the costs of carriage by each facility. The figures follow:

*Year 1937*

| Type of transportation | Ton-miles | Percent | Cost per ton-mile |
|---|---|---|---|
| Water | 10,378,739,263 | 87.92 | $0.00063 |
| Railroad | 244,388,473 | 2.07 | .01640 |
| Pipe line (crude) | 744,174,550 | 6.30 | .00477 |
| Pipe line (gasoline) | 372,962,210 | 3.16 | .00527 |
| Trucks | 64,219,988 | .55 | .04873 |
| Total | 11,804,484,884 | 100.00 | [1].00162 |

[1] Weighted average.

To recapitulate, the per-ton-mile truck-transportation cost is three times that by rail. Rail transportation in turn costs more than three times that by pipe lines; while it was over 26 times that by water.

On page 317, in the statement of Fayette B. Dow, showing comparative costs by the several methods of transportation is the following:

Approximate costs per ton-mile of 8.3 mills by rail, 3.2 mills by pipe line, and 1.25 mills by tank vessel appear in a recent publication.

These figures as to costs have been found by the Army engineers to be substantially correct. In a speech delivered by Maj. Gen. Eugene Reybold, Chief of Engineers, at Corpus Christi, Tex., on April 18, 1942—embraced in the CONGRESSIONAL RECORD of April 23, 1942—appears the following:

A moment ago I mentioned the specific problem of transporting oil of the Southwest to the consuming centers of the East and Northeast. This can be accomplished by tank car, by oceangoing tanker, by shallow-draft barge, and by pipe line. Ordinarily, the method of transportation chosen would be dictated by economic considerations. If it costs (as it does) 8 mills per ton-mile to move oil by rail, and 1½ mills per ton-mile to move oil by deep-draft tanker, it goes without saying that most oil will move by tanker. And if it costs (as it does) 3 mills per ton-mile to move oil by pipe line, there never will be many pipe lines competing directly with deep-draft tankers. Those are considerations which enter normal peacetime decisions.

Further in the same speech General Reybold said:

A few moments ago I quoted some figures for the normal cost of moving oil by rail, by deep-sea tanker, and by pipe line. Let me complete that set of figures by stating that an average cost for the transport of oil by shallow-draft barge over long hauls is 2 to 2½ mills per ton-mile. You will recall that this is slightly in excess of the cost by deep-sea tanker; but below the cost by either pipe line or rail. In fact, the cost of barge transportation is so low as to be very attractive at any time. I am sure that, even under peacetime conditions, we would have witnessed a constant increase in oil traffic on inland waterways.

Maj. J. R. Parten, a man of great ability and wide experience in the transportation of petroleum, was Director of Transportation in the Office of the Petroleum Coordinator. He had charge of the construction of the Big Inch pipe lines. On page 218 of the hearings before the Committee on Rivers and Harbors of May 18, 1942, he shows the costs per ton of critical steel of the different methods of oil transportation. He then says:

From the above it should be noted that the least efficient method in terms of the use of steel is steel barge expansion, although it may still be the cheapest method in money cost.

On page 221 appears the following colloquy:

Mr. PETERSON. I was very much impressed with your statement with reference to the movement of oil per ton of steel that would be used.

Major PARTEN. That was not true, I might say, prior to the war conditions. Tankers in normal times were more efficient than pipe lines prior to the war conditions. Tankers in normal times are more efficient than pipe lines.

On pages 228 and 229, the following:

Mr. CULKIN. This committee has heard that transportation by water is the lowest cost transportation; at least that is the history of it in the East, where, as you understand, there are certain types of specialized carriers; is not that true?

Major PARTEN. That is generally true.

Mr. CULKIN. You are departing somewhat from that theory, are you not?

Major PARTEN. We must, because we have lost our ocean transportation. We have no choice.

The Railroad Commission of Texas has supervision over railroad and pipeline transportation in that State. Col. E. O. Thompson for many years a member, and several times chairman of the commission, is a recognized authority on costs of transportation of petroleum. He agreed with the cost figures compiled by the Petroleum Institute. In the hearing before the Committee on Rivers and Harbors on May 18, 1942, on page 43, with reference to those figures, appears the following colloquy:

Mr. SMITH. Who prepared those figures that you gave, Colonel?

Colonel THOMPSON. Those figures were prepared for testimony before the TNEC in Washington in 1939, and they are found on page 274 in the testimony given before TNEC.

Mr. CULKIN. Who gave that testimony?

Colonel THOMPSON. That testimony was given by a man by the name of Pugh.

Mr. CULKIN. That is the Sun Oil Co.?

Colonel THOMPSON. Yes; the Sun Oil Co., but the testimony was compiled by the American Petroleum Institute and not by the Sun Oil Co.

Mr. CULKIN. Less than one-third of a mill per ton-mile?

Colonel THOMPSON. About that; yes.

Mr. MILLER. The figures on the cost of moving oil by these various methods as given by the Chief of Engineers are as follows: 8 mills per ton-mile by rail; 1.25 mills per ton-mile by deep-draft tanker; 3 mills per ton-mile by pipe line; and 2 to 2.50 mills per ton-mile by barge.

The CHAIRMAN. According to that the tanker is the cheapest, barge next, and pipe line next?

Colonel THOMPSON. Yes, sir; that is correct.

The CHAIRMAN. And then rail is next.

Colonel THOMPSON. Yes, sir.

The CHAIRMAN. It does not give it by highway truck?

Colonel THOMPSON. That will be still higher.

Mr. RANKIN. The cost of transporting oil by truck would be the highest, by railroad the next highest, by pipe line next, and water transportation would be the cheapest.

Colonel THOMPSON. Yes, sir.

In House Document No. 731, Seventy-seventh Congress, second session, on page 8, is the following table of transportation costs:

13. Advantages of barge transportation over other transportation: Under normal conditions average unit costs of transporting oil, as reported by the National Petroleum Association, are as follows:
Mills per ton-mile:

| | |
|---|---|
| By tank vessel | 1.25 |
| By pipe line | 3.2 |
| By rail tank car | 8.3 |

This document was by Col. Earl North, former resident member of the Board of Engineers of the War Department, and later commandant at West Point Military Academy.

In Report No. 59 of the Seventy-eighth Congress, first session, Senator Maloney, chairman of the Special Committee to Investigate Gasoline and Fuel-Oil Shortages, states, on pages 7 and 8, as follows:

Since Pearl Harbor, we have lost many tankers. At the same time the need for tankers to transport oil and gasoline to the fighting fronts has absorbed practically all of the tanker facilities which remain. For domestic civilian consumption we must rely on railroads, pipe lines, and inland waterways.

PIPE LINES

Pipe lines are much more expensive than tankers; railroad tank car movement is even more costly than pipe line.

On page 168 of the hearings before the House Subcommittee on Appropriations for Civil Functions for 1944, Mr. George A. Wilson, Director of Transportation, Petroleum Administration for War, estimated the cost of transportation of oil through the Big Inch pipe line at 35 cents per barrel, and the war costs by tanker at 40 cents, but the prewar tanker costs at 21 to 23 or 24 cents. The following colloquy is recorded:

Mr. ENGEL. When these pipe lines are completed how will the transportation of this product by pipe line compare to rail transportation costs? Will it be less or more per barrel?

Mr. DAVIES. Well, the comparison as between pipe-line cost and tanker is this——

Mr. ENGEL. Yes; let us take that way first.

Mr. DAVIES. The comparison there is what? Mr. Wilson, what would you say it was?

Mr. WILSON. It would be about 35 cents a barrel on the 24-inch line, assuming full volume of operation, as against $1.65 average for rail.

Mr. ENGEL. And how much would it be by tanker?

Mr. WILSON. The total shipping charge by tanker is approximately 40 cents a barrel.

Mr. ENGEL. Forty cents a barrel?

Mr. WILSON. Yes.

Now, before the war the tanker cost varied between, say, 21 to 23 or 24 cents.

Mr. ENGEL. In other words, your present tanker cost is 40 cents a barrel?

Mr. DAVIES. That is the rate set by the Maritime Commission.

The above colloquy occurred in the testimony of Mr. Ralph K. Davies, Deputy Petroleum Administrator for War. The tanker operations in the domestic trade where convoys were not available had become practically impossible on account of the German submarine menace. Many tankers with their cargoes had been destroyed and hundreds of lives had been lost. Of course, the operation had become very costly, the 40 cents per barrel mentioned by Mr. Wilson being practically double the prewar cost.

On page 725, part 3, of the hearings before the Maloney Special Committee to Investigate Gasoline and Fuel-Oil Shortages, Seventy-eighth Congress, first session, Mr. Joseph B. Eastman made reference to certain costs of rail transportation that should not be borne by the railroads. He said it was for facilities that would not be of benefit to the railroads after the war, because the movement would then go back to the tankers. The amount of these expenditures was approximately $10,000,000. His language on this point was as follows:

It is my own opinion that the Government ought to bear that cost, because it is a cost that will, in large part, not serve any necessary purpose after the war, because after the war the movement will certainly go back to the tankers.

Just as Mr. Eastman predicted, since the war the petroleum movement has gone back to the tankers. Major Parten, the promoter and builder of the Big- and Little-Inch pipe lines as a necessary war measure, realized that this would be the case, as his testimony shows. He stated, however, that the pipe lines would not become obsolete after the war, but would still be useful for natural gas, and possibly for other petroleum products.

## The Lawyers' Oath

EXTENSION OF REMARKS

OF

### HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include herewith the sermon delivered by Rev. Francis J. O'Reilly, S. J., professor of philosophy of St. Louis University, and chaplain of the Catholic Lawyers Guild of St. Louis, on the occasion of the third annual Lawyers' Red Mass, October 12,

1945, at St. Louis University in St. Louis, Mo.:

"I do solemnly swear that I will support the Constitution of the United States and the State of Missouri; and that I will faithfully demean myself in my practice as an attorney and counselor at law to the best of my knowledge and ability, so help me God."

After a clerk of the supreme court of Missouri had notified you that you had successfully passed the bar examination, as an eager young attorney you were introduced to the court. A judge set before you the words which I just pronounced. As one of the truly solemn moments of your life, you took that oath of allegiance to the Constitution; the court, believing in the sincerity and seriousness with which you enunciated these words, allowed you to begin the sacred duty of practicing law in the State of Missouri.

This morning, as we assemble for our third celebration of the lawyers' red mass, it seems most fitting and proper that this oath should be chosen almost as the text of my sermon. Those are solemn, serious, and sacred words. By them you became a member of the only group in this country who by profession swear to support that great document by which these United States are legitimately constituted a democracy. This is in no sense of the word a political gathering; it is a religious assembly of men, men, who, by that oath, have dedicated their lives to the protection and propagation of law. This makes your duty in life a religious, and not a political duty.

Fo., dedicated under oath to support the Constitution of the United States, you have dedicated your lives to support a document which was conceived by religious ideals, which was brought forth by religious and God-fearing men, which has matured under the special protection of a divine providence which has ever blessed this land of ours, which will always remain healthy and strong as a successful instrument of government only as long as it is a way of life by which religious men are attempting to live. Irreligious men simply cannot live by our American Constitution. They must destroy it, change it, or at least circumvent it lest it prevent their ungodly machinations. For, the solid foundation of our American Constitution is the recognition of the fact that the law of God is the foundation of all law.

Our American Constitution rests its case before the bar of the nations of the world, and even before the judgment seat of God, with its famous Bill of Rights, guaranteeing the basic freedoms which make decent, human living possible among men and nations. The framers of our Constitution were wise enough, with a wisdom born of humility, not to speak of our Government granting these rights or conceding these freedoms. No, they dared to think of them as inalienable, which no government could grant nor no power on earth could ever take away; at best, they laid upon government as its primary function and responsibility to guarantee the protection of these rights. They could be that daring, because they were also logical enough to think first of these rights as an endowment, not by governments, not by men or groups of men, not even by nature, but as the endowment and inheritance which every man receives from his Creator. There is only one keystone in every arch; and, whether every American would admit it or not, it is a fact that the keystone of the beautiful arch which is our Constitution is God. You simply cannot escape it. Take God away as the foundation of all of our law and constitution, and what do you have left? Let us, then, quit talking about inalienable rights, let us discard the precious word "freedom," let us then even forget what right means. Freedom becomes the paternalism of a benevolent government at best, law becomes a politics which permits anything to serve its own purposes, and right, as its only foundation, becomes might—whether the might be military, economic, political, or social.

Thus, dedicated by oath to support the Constitution of the United States, you have not only dedicated yourselves to a work which rests solidly upon God; you have, even more, dedicated yourselves to an important work for God and for religion in this country. For, by profession, you are sworn to keep God, religion, and God's law in public and political life. Otherwise, you could never fulfill your sacred duty to support this Constitution which is the law of our land.

Thus, it is not surprising that a group of men, vowed to such a life and consecrated to such principles, should assemble to beg divine assistance in the fulfillment of the truly noble profession which is theirs. Thus, we are here this morning out of a sense of need. To do work pleasing to God, to achieve goals which are worthy of godly men, would be idealistic dreaming unless we would look to divine wisdom for guidance and to heavenly inspired fortitude for execution. Knowing, too, that we are engaged in a work for God, we come to Him for a special blessing for which our profession has all but given us a special right before God.

Thus, it is not surprising either that the Catholic Church has encouraged this Mass of the Holy Ghost for all engaged in the legal and judiciary profession. Thus, we understand why the hierachy of the United States has encouraged the formation of a Catholic Lawyers Guild in every diocese throughout the United States. That desire is about to be achieved in the archdiocese of St. Louis. Next month, on November 8, we shall have our first organization meeting. You are the men who have inspired our Archbishop to approve of our plans and constitution which will be presented to you that evening. You have proven that you want such an organization, for the simple reason that you have come to realize your own need for a closer cooperation with God and with Catholic principles in your professional life.

The Catholic Church is happy to give a special benediction upon those men who have consecrated their lives to the support of the Constitution of the United States. The Catholic Church would never want to see this Constitution changed. Its framers, perhaps, all unconsciously have woven a golden thread of Catholic thought into its pattern. The Constitution of the United States and the Declaration of Independence, which together constitute the source of all our American political tradition, whether by accident or by an inspiring providence of God, are simply the expression of the best of Catholic political thought. The great St. Robert Bellermine could have written both of them.

With these thoughts in mind, then, realizing that God's blessing is upon your work, appreciating the need of God's help in executing it, here, in the presence of God, I am now going to ask you to stand and, repeating after me, phrase by phrase, in a body, renew that oath of allegiance to the Constitution which you solemnly took that day when you began your law career.

Ladies and gentlemen, will you all please rise.

(The lawyers then recited the oath in a body.)

## A West Point for Diplomats

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article which appeared in the Boston Post, Boston, Mass., on October 12, 1945:

WOULD TRAIN UNITED STATES DIPLOMATS—THOMAS DORGAN URGES WEST POINT FOR ENVOYS

Establishment of a West Point for diplomats, where carefully chosen young men could be educated and trained in international affairs, to implement American diplomacy toward solution of the problems which beset us in a warlike world, was proposed last night by Thomas Dorgan, clerk of the Suffolk Superior Civil Court.

Addressing the Winthrop Post of the American Legion Auxiliary at the Dugout on Hermon Street, Winthrop, Mr. Dorgan reviewed war and postwar developments, and then said:

"The best answer to all these vital problems would be a more careful selection of our diplomats. All the European nations have a diplomatic corps who are masters of international problems—their only concern is the benefit of their country—and they do a good job for their country, no matter who gets hurt in the bargain.

"Under our system, we appoint men to be ambassadors who, although very often brilliant men—and, of course, they have to be moneyed men—do not possess that worldly wisdom which is typical of European diplomats.

"We could very well establish a school, such as West Point and Annapolis, where carefully chosen young men could be educated and trained in international affairs. We are, from now on, an important factor in world politics and we need the best diplomats the Nation can produce."

## Unemployment No Problem in North Dakota During Reconversion

EXTENSION OF REMARKS

OF

### HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, I am concerned to ask the question: Is not the promise so generously made by the propagandists of the CIO movement that we will soon have unprecedented numbers of unemployed in the United States a question that must be viewed in the light of propaganda?

At this date we are told long before the men have all returned from the armed forces that there are vast numbers of unemployed, and still in the midcontinental section of America, a section very important to the welfare of this Nation, there is today, as there has been during the war, great need for manpower. Certainly those who are returning from the armed forces are not returning, or not going into the midcontinental section of the Nation where help is very much needed.

Under the privilege of unanimous consent, I include herewith an article, a report of the committee of economic development for the State of North Dakota:

UNEMPLOYMENT NO PROBLEM IN NORTH DAKOTA DURING RECONVERSION

WASHINGTON.—A sampling of communities in North Dakota shows that unemployment

curing reconversion apparently will not be a problem in that State.

The Committee for Economic Development (CED), an organization of businessmen recruited from the principal industrial centers of the Nation, undertook by telegraphic survey to determine just what the impact of peace will mean.

Replies from local CED chairmen and other officials, made public Sunday, are "generally encouraging" for North Dakota.

Replies from various towns and cities in the State include:

Banks (McKenzie County): This being a strictly ranching and farming district, our employment problems in past years have been seasonal. Our need of help will be amply supplied by our returning veterans. We do not expect, however, any unemployment to develop.

Bottineau: No unemployment in this community. We could use 50 workers in building trades.

Devils Lake: Practically no unemployment here now. Peak will come when defense workers and servicemen return.

Dickinson: Not over 30 unemployed now. Expect peak unemployment next winter. Workers of all kinds needed today.

Enderlin: There are no unemployed in Enderlin.

Grafton: Unemployment no concern this area. Community could use 600 to 800 workers.

Grand Forks: At the present time approximately 650 men could be placed in industrial employment in Grand Forks City and East Grand Forks and most jobs would be fairly permanent. Also could use from now to December 1 from 500 to 2,000 seasonal employees in agricultural pursuits.

Harvey: No unemployment.

Lisbon: We do not have any problem here at present as there are no unemployed. We ar going to be able to absorb and take care of all that return to our county.

Minot: No unemployed and will not have any this winter or for several years because of the Garrison Dam and Missouri-Souris irrigation project construction.

Mott: Could use 200 men. Demand will increase.

Valley City: No unemployment. Completed survey shows 185 jobs available now.

Wahpeton: No unemployment. Could use 50 to 100 workers now.

## Lts. Edward A. Silk and John J. Tominac

EXTENSION OF REMARKS

OF

### HON. HARVE TIBBOTT

OF FENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. TIBBOTT. Mr. Speaker, under unanimous consent, I place in the RECORD the following remarks regarding First Lts. Edward A. Silk and John J. Tominac, two young men from Johnstown, Pa., who have been awarded the Nation's highest honor by having conferred upon them the Congressional Medal of Honor. It is only natural that we should be proud of these young men, who have distinguished themselves by gallantry by risking their lives for their country above and beyond the call of duty for the Nation which all of us so dearly love.

On Friday, October 12, First Lt. Edward A. Silk was awarded the Congressional Medal of Honor. Lieutenant Silk won this honor for storming a German fortress and single-handedly killing 4 of the enemy and capturing 12 others. President Truman, when conferring the Congressional Medal of Honor on Lieutenant Silk and 14 other soldiers, said:

When I look out and see these boys, I know I am looking at the greatest country on earth. They didn't think of themselves as heroes, probably didn't think there was anything unusual in what they did. They were doing their duty. They will help us take this Republic to world leadership where it belongs and has belonged for 25 years.

Lieutenant Silk returned to his home in Johnstown, Pa., on October 5 to see for the first time his infant daughter. No one but his wife knew that one of the country's outstanding heroes of World War II was returning home from the war front. He walked into his modest home and held in his arms for the first time his daughter, Judith Ann, and his two-and-a-half-year-old son, Jerry. Lieutenant Silk is a member of a family of 11 children. Their father died in 1918 and the children were reared in Mooseheart. Their mother passed away in April 1941, 3 days after Edward entered the armed forces.

Lt. John J. Tominac, Franklin Borough, Greater Johnstown, Pa., was awarded the Congressional Medal of Honor in April 1945. Lieutenant Tominac, while fighting in Italy, led the first platoon of Yanks into Valmontone, thus assuring its capture from the retreating Germans. The soldier, who served as the platoon leader, ordered his platoon into the lead against the enemy. He then led one squad down the road into the Germans, going out ahead of a supporting tank. While the enemy scored direct hits on the tank, he manned its machine gun. Even though wounded in the shoulder, he continued with his platoon to attack the enemy.

Following his transfer to France in 1944, he was instrumental in the capture of 52 Nazi prisoners when the Sixth Army took Cleurie Quarry, a granite fortress on the Seventh Army front.

Lieutenant Tominac received the Congressional Medal of Honor from Lt. Gen. Alexander Patch at Nuremberg on April 22, 1945. He is married and a resident of Greater Johnstown, Pa.

## Oleo Not Provided for Pilots or the Armed Forces

EXTENSION OF REMARKS

OF

### HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the effect of vitamin A on the human eyesight has long been known. World-famed nutritionists such as Dr. E. B. Hart, of Wisconsin, and others were consulted by the war authorities in regard to nutritional foods. The consumption of vitamin A was one example.

On September 26, 1945, I wrote the following letter to the Surgeon General, Dr. Thomas Parran:

SEPTEMBER 26, 1945.

Dr. THOMAS PARRAN,
*Surgeon General, United States Public Health Service, Washington, D. C.*

DEAR DR. PARRAN: In reading various newspaper articles all during the war I noted in many instances the stress placed on foods with a high vitamin A content as part of a pilot's diet.

Pilots have told me that they have always had plenty of butter and that they used it freely.

I have never heard mentioned in my conversations with pilots nor have I read in the newspaper articles any reference to the consumption of oleomargarine.

Would you be kind enough to give me the information as to whether oleomargarine was prescribed as part of the diet for pilots at any time during the war.

Sincerely yours,

REID F. MURRAY,
*Member of Congress.*

On September 28, 1945, I received the following letter from Dr. Parran:

FEDERAL SECURITY AGENCY,
UNITED STATES PUBLIC HEALTH SERVICE,
*Washington, September 28, 1945.*

Hon. REID F. MURRAY,
*United States House of Representatives, Washington, D. C.*

DEAR MR. MURRAY: Your letter of September 26, concerning the use of oleomargarine by pilots has been received.

I am informed by the Surgeon General's Office of the Army that oleomargarine was not prescribed as part of the diet for pilots at any time during the war.

Very sincerely yours,

THOMAS PARRAN,
*Surgeon General.*

The fact that butter contains 11,000 to 18,000 international units of vitamin A and oleomargarine has only 9,000 international units of vitamin A injected into some of it, although not injected in all the oleomargarine made, was realized by the armed forces.

The point I wish to bring out is that the Oleo Trust did not have the ability to influence the medical profession so far as the armed forces were concerned. The false oleo propaganda, where they have been advertising that oleo had as much vitamin A as butter, is proving of little value.

## A Matter of Justice

EXTENSION OF REMARKS

OF

### HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include editorials from two of the leading newspapers in my district regarding my bill, H. R. 4051, to wit: The Palm Beach Post and the Fort Lauderdale Daily News.

The Palm Beach Post adjudged this bill to be a matter of justice and comments on H. R. 4051 as follows:

A MATTER OF JUSTICE

Enlisted men in the armed forces have a good friend in Representative DWIGHT L. ROGERS.

The Sixth District Congressman believes they should receive equal treatment with commissioned officers in the matter of furlough or leave time. A bill he introduced in Congress to bring that about has received much favorable attention.

The Rogers bill would give enlisted personnel leave time equal to 2½ days per month, or 30 days per year. It provides that when an enlisted man or woman is discharged from the service, they shall be entitled to full pay and allowance of accrued leave that has not been used, at the rate of pay for the rank held at the time of separation from the service.

A retroactive clause in the measure provides that enlisted personnel discharged before its passage shall have 90 days after it becomes a law in which to file application for any pay that may be due under its provisions.

Commissioned officers already enjoy the benefits so that making them available to enlisted personnel can in nowise be regarded as a gratuity.

Opinions may differ as to the payment of bonuses but there cannot well be much disagreement over the injustice of the discrimination which Representative ROGERS is trying to have eliminated.

The Fort Lauderdale Daily News designates H. R. 4051 as a bill giving equal rights to all and comments as follows:

Recently Mr. ROGERS introduced H. R. 4051, a bill to grant to enlisted personnel of the armed forces certain benefits in lieu of accumulative leave.

The purpose of this bill is to provide for enlisted men furlough or leave time equal to 2½ days per month, or 30 days a year; it further provides that when GI Joe is discharged, he shall be entitled to receive reimbursement for full pay and allowance of accrued leave that he has not used at the rate of pay for the rank held at the time of discharge.

All this bill does is put the enlisted man on a plane to enjoy the same benefits as the commissioned ranks (officers).

The provision of this bill certainly is just and fair and accords the same and equal treatment to GI Joes to which they are entitled and should be given.

## Study of Coal Resources Necessary—Minerals Vital to Our Economy—Funds Should Not Be Cut

EXTENSION OF REMARKS

OF

### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. RANDOLPH. Mr. Speaker, the United States, as well as many other industrial powers of the world, has been developed around coal resources. Coal is the priceless ingredient that protects the economic health of the Nation and is essential in the production of steel and power—the two primary requirements of industrial strength. From the time that the first coal mine was opened in this country and the first iron furnace put into operation, our history and progress have been inseparable from coal.

No better example of the importance of coal in our national existence can be cited than the vital part coal played in World War II which has just ended. Millions and millions of tons of coal wrested from the earth kept our blast furnaces roaring and the wheels of industry turning, and provided chemicals, medicines, synthetic rubber materials, and hundreds of other essential products. Coal, perhaps more than any other resource, enabled the United States to prove again that it was a bulwark of strength and power against the forces of aggression in this world.

West Virginia produces almost one-fourth of the bituminous coal of the United States and is the leading bituminous-producing State of the Union. Coal is the life blood of our people and our industries. I have been closely associated with the problems of the industry for many years. I realize how much coal means to my State and to the Nation, and I am deeply concerned about the future of coal.

MUST STUDY ALL FEATURES

In boasting of the fact that America has enough coal to last 2,000 years at the present rate of consumption, we are prone to overlook some of the more unfavorable features in the coal picture. For instance, our reserves of high-grade coking coal needed for steel manufacture are none too plentiful and present a scarcity problem in the immediate future.

I include the following recent news story bearing directly on this point:

CUTS COKE FOR GAS USE

WASHINGTON.—The War Production Board today directed gas manufacturers to conserve byproduct coal through maximum operation of all facilities for the production of water gas.

Water gas is manufactured from oil and coke. This process, WPB officials said, results in smaller consumption of coke than other processes.

WPB also ordered gas manufacturers to make full use of other fuels where stand-by facilities are available.

Beginning October 15, industrial users of coke, including utilities, will be restricted to a 20-day supply. This restriction, WPB said, is in line with its policy of "taking any action necessary to prevent stock piling of scarce materials."

This country of ours is broad and spacious, and there are some areas where the production of coal is insufficient to sustain the population, resulting in the shipment of coal into these areas by long rail hauls. The many different kinds of special coals, both for generating power and for metallurgical uses, are not always close enough to existing or potential industries to encourage healthy industrial growth.

It is true that we have plenty of coal as far as quantity is concerned, but that certainly is no reason why we should fail to use it prudently, conserve some of the best coals for posterity, exact every possible unit of energy from our coals, and otherwise see that none of this valuable resource is wasted. In the history of the world, and in our own history, we have many examples of the unwise use of natural resources and the dire consequences that inevitably follow. We cannot afford to take chances with coal, the mainspring of our industrial economy.

My great concern about the future of coal springs from the knowledge that the Congress, in the urgency of cutting down wartime expenditures and restoring the Nation to normalcy, is soon to be asked by a committee to eliminate a small appropriation which provides funds for exploring sources of coking coals in the United States and finding new deposits of coal in critical areas. This money—about $375,000—had been appropriated to the Bureau of Mines, to continue its coal exploration work in 1946 and to add more valuable knowledge about coal to that already assembled, both during the critical years of the global conflict and during the preceding generation.

I believe there are numerous wartime activities of the Government which should be curtailed immediately—emergency offices and agencies that have been set up to perform a specific task, Government-owned factories and plants, and many other items for which the need has disappeared. Most of these projects were operated solely during the emergency and it was understood by all concerned that as soon as the war was over they should be liquidated.

EXPLORATION IS NEEDED

An inventory of American coal resources—begun years ago and still being worked on—and a wise use of coal resources throughout the years to come certainly is not to be considered as an emergency wartime expediency and something that should be dropped like a hot potato the minute peace returns. To wipe out this meager amount for coal exploration along with the cancellation of the vast plans for war plants and projects would, in my opinion, be a sad mistake. Coal, as the basis of our national economy in war and peace, deserves the best consideration from the Congress, and I sincerely hope that this small appropriation for coal exploration will not become a victim of the mass demands for cutting down wartime expenditures.

The appropriation for coal exploration which may come before this House in the near future is included in a 1946 appropriation passed by the Congress and entitled "Investigation of Deposits of Critical and Essential Minerals in the United States and Its Possessions." The bulk of the moneys appropriated under this bill was for work on many of the metals and minerals needed in war production, manganese, chromite, copper, lead, and many others. I know that there is a need for continued investigation of our coal deposits if we are to return to an orderly peacetime industrial scale and if the coal for synthetic fuels, chemicals, and dozens of other newly found uses is to be forthcoming.

It is well known that the Bureau of Mines, an old-line research agency with a reputation for integrity and producing results, has for more than three decades

devoted a large part of its work to cataloging our coal resources, testing the qualities, finding new uses for coal, and otherwise promoting the interests of this our greatest natural resource. Its staff of technologists was thus well prepared to assume a vital task during the war. The Bureau of Mines sought new sources of coking coal and deposits of coal in critical areas. The records will show many important achievements to its credit in this field, despite the limited funds available.

A number of exploration projects were under way at the beginning of the current fiscal year when the new appropriation of $375,000 was approved. Withdrawal of this money will result in immediate stoppage of all of these projects, the payment of heavy forfeits to contractors doing the drilling, and worst of all, a set-back to scientific and technical advancement—the very thing that our people are demanding.

ALASKA BEING TESTED

In Gunnison County, Colo., the Bureau of Mines is drilling holes to find coking coal suitable for the expanding steel industry of the West. In Lewis County, Wash., the Bureau is drilling and testing coal in an effort to provide additional coal supplies in a region notably short on low-cost coal. In Alaska—now and for many months past—the Bureau has explored many areas in the search for coal to sustain the armed forces in that region and to provide fuel and power for the coming industrial expansion of that great territory. Specific appropriations were made for an extensive survey of the Coosa in Alabama coal field, to find new coking coal to support the steel industry in the Birmingham district—our second greatest steel-producing area. Another project in North Carolina in the Deep River area is designed to find coal for local domestic uses, for there is very little coal mining in that section and most of it must be shipped in. In the Georges Creek Basin, near Frostburg, Md., two beds of coal have been practically exhausted and the Bureau plans to explore six other beds known to exist deeper down in the earth.

These are but a few of the representative projects which will be affected by a curtailment of funds. It is obvious that this type of work, while of great value to the war these past 4 years, also is of vital interest to the peacetime economy of the country and should be continued perhaps even on a larger scale than provided for in the 1946 appropriation which I expect to come before us for review in the near future.

All of us are familiar with the uses to which coal has been put in the building of our vast industrial empire. The three general classifications are for domestic fuel, for the production of heat and power, and as a source of gas, coke, and chemical products. For domestic heating, coals of almost any kind can be used, but I reiterate that there are many areas in the United States where coal has to be shipped in via long and costly rail haulages.

In generation of heat and power, a coal from which the greatest amount of heat can be obtained per dollar expended is desired. High-rank coals are not freely distributed throughout the country, and in many cases they have to undergo special preparation and be shipped hundreds of miles. Coal exploration of the kind I am discussing could possibly disclose many additional sources of coal for heat and power in regions closer to the industries needing them.

It is in the third category that special purpose coals are required—for gas, coke, and chemical products. These coals must be low in ash and sulfur content and capable of producing the carbonized product termed coke which is vital in producing iron and steel. It is in this field of endeavor that a long-range, wise exploration program will pay most dividends to the United States, by seeking out new sources of coking coals for the iron and steel industries springing up all over the country.

SYNTHETIC FUELS ARE COMING

In addition to the three foregoing common uses of coal, we are now on the verge of an era which may see a good portion of our gasoline and oil derived from coal, bringing new and heavy demands on the resources and calling for most exacting inventories of the types and quantities of coals in the United States. You are familiar with the synthetic liquid fuels program now being inaugurated in this country and with the Government's plans to build demonstration plants for the production of synthetic liquid fuels from coal, lignite, and other materials. The known reserves of petroleum are said to be about 13 years, and it has been accepted both by the Congress and the people that now is the time to begin laying the foundation for the time when we may have to depend upon coal to propel our vehicles and machines and to provide the lubricating oil for the wheels of industry. No one can say just how much coal will be needed to accomplish this purpose, but the total in tons could well reach into the hundreds of millions. Inasmuch as we have appropriated $30,000,000 for research in the technical aspects of how to make synthetic fuel, should we not realize that an inventory and classification of the various grades of available coal is essential? We know from past experience that the yield of gasoline per ton of coal varies widely in the different coal fields of America, and the Bureau of Mines has published the figures on about a dozen beds. But this is not enough. There are more than just a dozen coal fields in this country, and we should have the facts and figures on every one of them, ready and waiting against the time when we are ready to mine the coal and convert it into gasoline and oil. The coal exploration work of the Bureau of Mines fits into the synthetic-fuel picture very closely.

I could go into detail about how the widely separated industrial areas of the United States need this or that type of coal, and how the economy balance is tipped too far when costly imports are necessary, but I will not do so at this time. The greatly increased demand for fuels of all kinds has demonstrated beyond a doubt the need for locating and providing minable reserves of special-purpose fuels and for determining the quantities of coal in critical areas. Do not think for one minute that the end of the war has removed the need for such work, for I firmly believe that we shall need it more in peacetime if we are to maintain a healthy industrial picture. It is all well and good to say that we have enough coal to last us 2,000 years, but the minable reserves of coals and the purposes for which the coals are best suited must be determined in advance of the depletion of the high-rank coals, and if we do not do it, we are headed for trouble.

My remarks heretofore have concerned the immediate need for continuing the coal exploratory work and finishing up the projects now underway. Before closing, I wish to cite briefly two aspects of the situation which are closely related to the current work and at the same time are vitally important in the long-range coal program. One is the need for an over-all survey of coking coals in the Appalachian region, and the second is the desirability of a complete inventory of the quantity and quality of coals on the public domain.

The Appalachian region, where some high-rank coals have been exhausted, still is believed to be our greatest potential reserve of coking coals. However, there is a definite need for a complete survey to determine once and for all where these additional reserves are and what their qualities and quantities are. A survey of this type should be a part of a long-range Government program.

MUST DETERMINE THE SUPPLY

With regard to the millions of acres of public domain—Government-owned land—the United States has only a sketchy idea of the quantity and quality of the coals underlying the land. We know that there are large but undetermined reserves of coal in western public lands which are subject to leasing by the Government. By failing to inventory this coal, the Government not only is passing up a possible source of revenue, but it is also neglecting to give proper thought to the future of the Nation's industries which depend upon coal. As an example, on one coal exploratory project on public land in the State of Wyoming, the Bureau of Mines and the Geological Survey discovered approximately 12,000,000 tons of coking coal. This was in an area where the prevailing royalty was 15 cents a ton. Thus, the coking coal found there might provide the Government with a future income of $1,800,000.

The search for coals of all kinds and especially the coking coals, the Appalachian survey, and the inventory of public domain coal lands, all are a part of a program of great importance to the future welfare of the United States. Let us view this coal exploratory work not as an emergency wartime project, but as a long-range, peacetime program necessary for the industrial health of our great Nation. I hope that when the reduced appropriation bill for the Bureau of Mines comes before us, my colleagues will join me in supporting a continuation of the coal exploratory work.

## The Atlantic Islands

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 17, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial which appeared in the New York Journal-American on September 21, 1945:

THE ATLANTIC ISLANDS

The current discussions in Washington, having the proposed lending to Great Britain of $6,000,000,000 as their object, should be broadened to include consideration of acquisition by the United States of some—perhaps all—of the strategic Atlantic and Caribbean islands which are vitally important to the security of the United States, but which are now British possessions.

The British delegation pleads that Britain is in most pressing need of the money.

While it does not acknowledge solicitation of the money as a gift, it acknowledges probable inability to repay if it should be tendered in the form of loans.

The frank intention of the British delegation is to persuade the United States that a very great American stake, in addition to the obvious British interest, is involved in letting Britain have the money—and thus to be relieved of the obligation to pay it back and of the humiliation of being unable to pay it back.

The head of the British delegation, Lord Halifax, in fact said in all candor:

"We have no intention of coming to the United States as suppliants, asking them to accept any arrangements to help us which they do not honestly feel to be in the best interests of the United States and the rest of the world."

If the British are sincere in this profession of concern for American interest, there is an honest and feasible way to prove it.

There are many British islands off the North and Central and South American shores which the United States needs for security and without possession of which the United States can never be entirely secure.

For that matter, there are numerous French and Dutch islands in the same region similarly vital to American security—and since the question of loans to France and the Netherlands will eventually arise, the proposal for American acquisition might very well be considered at the same time.

And there is the vital matter of Greenland in the north Atlantic, which is a Danish possession, and of Iceland—the latter being only nominally Danish, in reality, a republic.

None of these many important islands are capable of defense by their present owners in the event of war, as was demonstrated in the recent conflict.

Whenever it is in the interest of the United States that they be defended, the United States has to do it—and did do it in the last war at great expenditure of money and materials and manpower.

Now all of these nations are in as desperate need for American money in peace as they were for American help in war.

Why, therefore, does the United States not propose a deal for permanent American possession of the Atlantic and Caribbean islands, which otherwise will always be a constant menace to the United States?

Why, indeed, do not Britain and France and the Netherlands and Denmark themselves propose such a deal, since they need American money so badly, and since they could not hope to retain possession of the islands anyway in a war in which they did not have American help?

Let us take Lord Halifax at his word, and offer Britain financial assistance—if it must be done at all—in a form that will be "in the best interests of the United States."

For once, in any event, let the discussions of American financial assistance to foreign nations be conducted by American negotiators with due account of our American interest.

## David Lawrence Supports Full-Employment Bill

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. VOORHIS of California. Mr. Speaker, few men in the United States enjoy more universal respect for their integrity and sincerity than the editor of the United States News, David Lawrence.

No problem except that of future peace is of nearly as much importance to the future of our country as that of maintaining full employment of the people of this Nation.

I therefore take great pleasure in including with these remarks Mr. Lawrence's editorial of October 19 in which he urges passage of the full-employment bill by the House:

FULL EMPLOYMENT
(By David Lawrence)

We had full employment and full production during the war and it meant full pay envelopes and full profits.

Having accomplished this for a destructive purpose, why can't we have it for a constructive purpose?

This is the basic urge back of the many and varied demands for full employment which has become a slogan for the left wing and a bugbear for the right wing.

Plainly the phrase deserves to be regarded with no such ambiguity. For full employment is a goal—not a formula. It is an objective. It must not be relegated, however, to that category of objectives which human society is always too preoccupied or too selfish to attain. It must become a part of our thinking—a realistic part.

The debate over full employment unhappily has been more concerned with implications and imaginary ills or benefits than with realities. We may start with the premise that the conservatives were frightened when they construed the plan as compelling them to furnish jobs even if they didn't have them to allocate and when they thought, alternatively, that we were about to enter another era of WPA boondoggling and leaf-raking.

SPONSORSHIP CAUSED SKEPTICISM

Possibly much of the alarm came because the CIO and other left wing organizations sponsored the full employment bills in Congress. But the conservatives sooner or later must get over the feeling that because the CIO sponsors something it must necessarily contain Marxian torture for the private-enterprise system. After all, the CIO and the AFL are interested in good salaries for their organizers and full-time officers and they have a huge business to maintain now—the business of collecting millions of dollars of dues. They have a stake in the private-enterprise system. Strikes and work stoppages cost them money, too. Their union business thrives on full employment because it means more dues from members.

Management, however, has a bigger stake in full employment than any other group. For full employment could mean a consumer purchasing power that would absorb a substantial part of the capacity of our machines. It could mean that we would have a surplus to spend in foreign countries, and this would tend to achieve the economic equilibrium for the world which is so much to be desired as a basis for international peace.

But conceding that everybody agrees on full employment as a goal, how shall we attain it? At the expense of our freedoms and liberties? At the expense of our solvency and national credit? Certainly not.

ECONOMIC SHIP NEEDS RUDDER

We know that totalitarianism can bring full employment and we know that, by analogy, the urge of national patriotism in war provides a submissiveness, if not a coercion, that represents the supreme will of the people. We have had economic planning during wartime, with some Government controls that would be obnoxious in peacetime.

The problem presents its dangers, to be sure, but it also presents a challenge. Is there not some way by which we can achieve full employment and yet not subject ourselves to the coercion of the State or the intrusion of governmental power into those fields of endeavor where initiative and incentive must remain if progress is to be made?

There is such a way. A nation which organized itself for maximum production in war can organize itself for peacetime prosperity. But unless all groups are willing to make certain concessions—as was the case during the war—there can be no blending of economic forces so as to produce full employment.

The concessions are relatively simple. They involve a friendly rather than a hostile attitude toward governmental guidance. Our economic system is like a fleet of ships. The fleet as a whole has a definite objective but all movements must be synchronized toward the goal.

The national Government can be the rudder of our economic system. It can keep the Nation from steering into the shoals of depression. It can guide the economic forces away from the rocks of economic anarchy. The national Government must, however, be fair and honest and be the umpire or mediator or judge—not the ally or tool of any group.

When one contemplates the vastness and the intricacy of our economic system, one wonders how the gears can ever mesh. Certainly unless all elements possess the desire for cooperation—and this means mutual concession—there can be no fitting of production into the consumption. It is not just a question of marketing the products we make nor is it a question of just increasing purchasing power so that the people will have the money to buy the goods.

Artificially created purchasing power is bound to bring in its wake ills worse than those sought to be cured. We cannot authorize public funds for nonproductive work. We cannot increase wages without some corresponding gain in output unless, of course, the wage scales are not commensurate with the production already being given.

We cannot select an arbitrary standard of living and decide that all economic forces must be united to achieve that standard. The Nation is too big to permit a minutely controlled economy. Full employment at high wages will bring its own improvement in the standard of living provided we put under wages a minimum consistent with human needs. Forty cents an hour is an obsolete minimum today.

We cannot, moreover, look at the idle machines and, bemoaning the fact that they are standing idle, urge that we must keep them going just for the sake of production. The "production for use" theory which the Socialists proclaim is predicated on the idea that the State operates all the machines and assesses the losses on the citizens as a whole. No form of State Socialism has been tried anywhere that didn't in the end point to totalitarianism and a State-control of individual liberties and freedoms.

VOLITION VERSUS COERCION

What we can do to achieve social objectives in America must be done by volition rather than by coercion. This merely means that the National Government as the spokesman for all the people can educate us all to the programs needed by industry and labor to attain full employment. This is a task of analysis—of introspection and statistical survey of our economic mechanism. This requires Government direction and funds—a trivial amount, possibly not a one-hundredth part of the sums we are paying in unemployment compensation by the States and Federal Government.

We knew little about our economic life before World War I. We made use in the postwar years of the lessons learned. We have learned much more this time and that is because the war lasted longer and we harnessed huge segments of economic power and directed them into productive channels. Our production job during the war is the marvel of all times. It really won the war for us and helped other nations to victory, too.

With this enormous capacity and skill, shall we go back to the prewar days and drift along on a hit-or-miss basis or shall we have a program? Who can provide the program?

The first step is to bring the representatives of large and small economic groups and interests together under Government auspices to study the things that make for full production and the things that repeatedly slow down or interrupt our economic machine.

A BALANCED ECONOMY

Sometimes it is maldistribution of workers. Sometimes it is maldistribution of credit. Sometimes it is the simplest thing in the world—lack of information about markets, both domestic and foreign. Sometimes it is monopolistic interference or unfair competition. There are dozens of factors that can eventually produce a catastrophe.

We cannot fix our minds on any one factor but must survey all factors. To say, for instance, that in every year the Federal Budget must be balanced even if it means eliminating certain vital functions of government is to put us in a strait-jacket which no private business would tolerate. Would any management accept from its owners the mandate that there must never be a deficit year? Would it be fair to place on any single business the responsibility for the failure of some other related business or industry which supplies the raw materials and which may be hit by something over which the first business has no control?

Nobody of responsible thought wants another WPA economy, yet in a time of widespread distress due to unemployment, political pressure compels the starting of WPA's. To prevent such extremes, it is better to plan ahead.

Democracy can be organized for efficiency in peacetime as well as in war. Organization can be democratic and self-controlled. But only government can provide the stimulus and the means for organizing the rudderless elements of our economic society.

Full employment can be attained by an American spirit of fair play and simple honesty applied to the facts of our economic life. The best agency to gather those facts and proclaim them each year is the Federal Government. That's what the full employment bill really means and that's why the House of Representatives should pass the Senate bill and help the American people take the first constructive step toward the building of a balanced economy.

## Streamlining Congress

EXTENSION OF REMARKS

OF

### HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. MONRONEY. Mr. Speaker, under leave to extend my own remarks, I would like to call the attention of the Congress to the excellent article on streamlining Congress published in the October issue of the magazine Tomorrow. This article was written by one of the foremost students of House organization, the Honorable JERRY VOORHIS, Member from the Twelfth District of California.

The article follows:

STREAMLINING CONGRESS

(By JERRY VOORHIS, Member of the House of Representatives, Twelfth District of California)

During the past few years it has become more and more evident that a new spirit of independence and initiative has been needed in Congress. This legislative body of our Government was never intended to depend so completely upon the direction and guidance of the Chief Executive as it has been doing over the past decade. As the law-making branch of the Government, the primary responsibility of Congress is to formulate as well as pass upon the statutes of the land. Yet in recent years Congress fell into the habit of either adopting or rejecting the President's proposals, without contributing to any considerable degree constructive proposals of its own. Thus, Congress became divided between the friends of the President and his enemies, and almost every issue was thrashed out, in part at least, on this unsound basis.

What was urgently needed in Congress was a new spirit, a spirit more in keeping with the true nature of democracy, a spirit requiring more effort and more devotion on the part of each individual member, and of Congress as a whole. With the growing realization that its rightful and normal official duties had been neglected, Congress already began to stir itself. Recently it has been taking preliminary steps toward increasing its own effectiveness and strengthening its position in the National Government.

Already, a special committee has been appointed, consisting of Members of both the House and Senate, to consider all proposals along these lines, and rather exhaustive hearings have already been held by this committee. In addition, a good deal of discussion has taken place on the floor of the two Houses, as well as in the public press, and a widespread public opinion has existed for a long time which demands that Congress organize itself more efficiently in order to meet the staggering load of problems and decisions it has to face.

With the present new administration, all these issues have been brought sharply into the foreground. What had been prior to that time a matter of good governmental policy has now become a matter of urgent necessity. For in this profound moment in world history, the duty of justifying parliamentary democratic government in the eyes of this and future generations rests squarely upon the shoulders of the Congress of the United States. That justification can be given only if Congress develops, on its own initiative and by its own effort, a constructive program for placing the United States in its proper position with the other nations of the world for the maintenance of future peace and for solving at home the insistent and complex problem of maintaining a full domestic market for as much goods as America can produce if all her people are employed. And these two great goals must be reached without the loss of the liberties which lie at the core of American political and social life.

Fundamental to all proposals for the streamlining or reorganization, or better, the strengthening of Congress, is the necessity of having Congress do its primary job as the national legislature of the United States. That job consists of much more than simple approval or disapproval of proposals made by the Chief Executive. It consists mainly in taking an over-all view of America's present and future problems, and devising the best possible legislative measures to meet those problems. The position of Congress in our National Government will ultimately depend upon how well Congress performs this task. And the issue is even deeper than that, because the heart of democratic government and the only ultimate protection of the people's constitutional liberties reside in the vigor of the national legislature. No dictatorship has ever tolerated a national legislative body. And no nation possessing a vigorous national legislature has ever yet been threatened with the loss of its people's liberty or the establishment of dictatorship. The stronger the position of the national legislature, the more secure will be, therefore, the traditional freedoms which we have always known.

Some idea of the magnitude of the task that confronts Congress will be obtained if we list some of the major problems with which it must deal in the next few years as well as those problems which continue to arise year after year:

1. American participation in a world organization directed toward the maintenance of peace.

2. American foreign trade policy.

3. American cooperation with other nations in such fields as the relief of human destitution in devastated areas, the increase of the nations' food supply, the raising of standards of health, welfare, education and labor.

4. Present and future American military policy.

5. The question of island military bases.

6. The problem of the governments of colonial territories.

7. A fair, just, and generous provision for enabling the veterans of this war to make a worth-while readjustment to civilian life and to protect adequately the disabled among them in their right to a decent standard of living.

8. The absolute necessity of finding a reasonable answer to the problem of a national debt in excess of $300,000,000,000.

9. Development of a coordinated effective national social-security policy which can provide at least a minimum of health and decency for groups in our population who cannot or ought not to be employed, including the aged, widowed mothers and their children, the disabled, etc.

10. The whole field of future agricultural policy aimed to preserve the American family-sized farm and to assure to agriculture generally its fair share of national income.

11. Conservation and restoration of natural resources, such as the soil, water power, forests, etc.

12. The problem of dealing with the colossus of monopoly in both its domestic and international ramifications.

13. The development of a national policy of combating undernourishment, improving nutritional and health standards in all parts of the Nation, and expanding the market for agricultural products.

14. A well-devised policy to make certain that the technological advances of the war period result in the sort of expansion of American small enterprise and industrial activities which they should properly bring to the Nation.

15. Development of a simplified and coordinated, equitable, sound tax system which will not only raise necessary revenues but which will also contain elements of incentive to full employment and full business activity.

16. Over and above all these domestic problems is the overriding one of developing measures whereby a sufficient over-all volume of buying power in the hands of the people can be maintained, if necessary underwritten by the Government, so as to give a general assurance of full employment in America.

Even the foregoing list is, of course, inadequate. It omits the immediate problems of reconversion, such as the disposal of surplus property, the disposal of Government-owned war plants, the problem of contract termination, the immediate problem of demobilization, and all the rest of the difficulties of the immediate postwar period.

The magnitude of these tasks assumed by Congress is tremendous. Yet it is clear that this work must be done if the America we have known is to survive. It becomes apparent, therefore, that Congress must equip itself with adequate sources of information about all these matters. At present, congressional committees are dependent primarily upon two sources for that information—executive departments and so-called pressure or special interest groups. Valid as these two sources are, if Congress is to fulfill its manifold duties, it must be in a position to check data and add to it by means of independent sources of factual, scientific, and analytical information of its own. Individual Members cannot possibly do an adequate job in this field.

Each congressional office ought to include on its staff, then, at least one person able to devote most of his time to research work on legislative problems. Every committee of Congress should be staffed not only with a clerk, but with a competent attorney capable of acting in somewhat the same capacity as solicitors of executive departments, and with a reasonable number of research assistants for the committee. Aside from these, there must be a general congressional staff of highly trained and thoroughly competent people brought together in some such body as the Legislative Reference Service of the Library of Congress, which may be called upon at any time, either by committees or individual Members, for reports and analyses on any phase of a problem that Congress is trying to solve. There is no reason why the Legislative Reference Service cannot be transformed into such a general congressional staff. It will take money to do it, and it will take imagination on the part of Congress itself. Both can be made available.

The very magnitude of the congressional job, however, necessitates extreme simplification of machinery. This subject has been widely discussed and some of the answers to it are rather obvious. The clerk-hire allowances for Members of the House and Senate should be made sufficiently large so that each Member can afford the services of a person who might be known as an executive assistant and whose entire time would be devoted to what could be termed the representative functions of Members as distinguished from their legislative functions. For the altogether legitimate and extremely pressing demands of every congressional district upon Members of Congress to assist individual citizens, organizations, communities, or businesses in the working out of their problems with the Government are an integral part of the job of being a Representative today. Today such problems are vastly more numerous and complex than was the case only a few years ago. Such an executive assistant would have nothing to do with the work of passing legislation, but would concentrate on rendering services of a general nature to the congressional district. Thus the Member of Congress could devote himself, in a manner which at present is utterly impossible for him, to a more consistent and careful study of national problems and their proposed legislative solutions.

In addition, the number of committees should be reduced as much as possible, but not to such an extent that important phases of national life would be neglected. Detailed proposals for such a combination of committees, and reorganization of the committee structure, have been advanced by a number of Congressmen themselves. By way of illustration, there are at present five committees in the House of Representatives that deal with matters affecting war veterans. Obviously only one committee is needed, and it should be a major, not a minor, one.

H. R. 628, a bill introduced by the author of this article, covers not only the matter of providing adequate staffing of Congress, but also a proposed broadening of the functions of the regular standing committees of the House and Senate, which is, in my judgment, pretty close to the heart of the problem of modern democratic government. Briefly this proposal is that congressional committees should assume, in addition to their present function of reporting legislation to the House and Senate, the parallel and equally important task of continuously reviewing and supervising the administration of the laws Congress enacts and which result from bills reported by such committees.

The full importance of this proposal is not immediately apparent. In the first place, it would give to Congress, in the most logical manner possible, the means of seeing that the laws it passes are carried out in accordance with congressional intent. Under this proposal, it would be far more difficult for an executive agency to place its own interpretation upon language written into the law by the Congress, to impose arbitrary decisions upon the people, or to take to itself powers not duly granted by Congress.

In the second place, in the operation of such a system, there would inevitably be built up, both in Congress and in the executive agencies, an increased degree of understanding of the problems of each branch of government. Under this proposal also, very great progress would be made toward welding the legislature and executive into a true working team, with the right relationship existing between them.

The problem of administrative law, so closely connected with the task of making modern democracy function effectively without imposing arbitrary governmental restraints upon the people, might be largely solved in this way. Likewise, the congressional committee, confronted with the duty of overseeing the administration of the laws it had created, would find it absolutely essential to staff itself adequately for this purpose. And finally, granting to regular standing committees this logical function would remove the necessity of large numbers of special committees, thus making the job of each individual member somewhat simpler. Actually, many of these special committees have been set up for the purpose of investigating various executive agencies to determine whether they are doing their work properly, and also to act as a convenient forum for the airing of congressional dissatisfaction with the manner in which a given agency is conducting itself.

If Congress is to maintain its rightful position in the American form of Government, much more legislation should be conceived and drafted by Congress itself, and less of it should be handed to Congress from outside sources simply for congressional approval or disapproval. In short, if Congress is to be a true national legislature, it must be primarily responsible for national legislation. Obviously, this will require a programing of the work of Congress with a view to making the legislation to be acted upon fit into the pattern of the national needs of the United States.

For this purpose, there must be a steering committee in both Houses whose responsibility it shall be to make these decisions. There should be such steering committees in both the majority and minority parties. They should meet at regular intervals. At the head of the majority steering committee in the House there would, of course, be the Speaker and next to him the majority leader. With them should sit the chairman of the more important committees of the House of Representatives. The steering committees of the Senate should be organized in similar fashion. Before such committees, each Member of either the House or Senate should be able to come to appeal for the inclusion of particular legislation in the action program. The decision of the steering committees would thus constitute the judgment of the Congress as to the type and scope of legislation which would meet the needs of the Nation.

The minority steering committees would be composed of minority leaders in the House and Senate and the ranking minority members of important committees. The function of the minority steering committees would obviously be somewhat different from that of the majority, but it is to be hoped that there would be occasions when there could be agreement of both groups on matters of transcendent national importance. Furthermore, the advancement by such minority committees of their own program would have the healthy effect of giving the people of the United States continuous opportunity to judge the relative merits of the majority and minority programs.

These are a few of the important and urgent elements which are an integral part of this problem of streamlining Congress. In essence, the clarification of this problem is one of the functions of democratic government. Accordingly, if Congress would at its next session proceed to take some of the steps outlined here, it will have tackled the major part of the job of efficiently preparing itself for the most momentous decisions that perhaps any legislative body has ever been called upon to make in the history of the world.

---

## Man's Relation to the Land

EXTENSION OF REMARKS

OF

### HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. HAYS. Mr. Speaker, a group of 75 distinguished students of rural life recently issued a statement Man's Relation to the Land, setting forth certain principles which the signers believe should underlie our national, State, and individual actions. The statement was made public on August 24, 1945, by Rt.

Rev. Msgr. L. G. Ligutti, National Catholic Rural Life Conference, 3801 Grand Avenue, Des Moines, Iowa; Dr. Benson Y. Landis, Committee on Town and Country Life, Federal Council of Churches, 297 Fourth Avenue, New York; and Dr. Gabriel Davidson, the Jewish Agricultural Society, 386 Fourth Avenue, New York.

Under leave to extend my remarks, I include the full statement and commend it to the thoughtful consideration of the Congress in connection with legislative aids for the advancement of American farm life, and especially direct attention to the timely reference in paragraph 15 to help for returned veterans seeking opportunities on the land.

The statement follows:

MAN'S RELATION TO THE LAND—A STATEMENT OF PRINCIPLES WHICH SHALL UNDERLIE OUR NATIONAL, STATE, AND INDIVIDUAL ACTIONS

We hold

God created the world, of which the earth is a portion, with a purpose, and through His loving providence He maintains the world for the good of human beings. Therefore, all human beings possess a direct natural right to have access to created natural resources.

God's intention in creation is to enable man to live with dignity in accord with his noble nature and destiny, to develop his personality, to establish and maintain a family, and to be a useful member of society. Society exists to fulfill these aims.

THE GOOD EARTH

The land is God's greatest material gift to mankind. It is a fundamental source of food, fiber, and fuel. The right to use such elemental source of life and development is essential for human welfare. No law or contract is superior to natural law. A fundamental human right is not to be denied or rendered ineffective by any legal ordinances, apparent previous rights, or obligations.

STEWARDSHIP

Land is a very special kind of property. Ownership of land does not give an absolute right to use or abuse, nor is it devoid of social responsibilities. It is in fact a stewardship. It implies such land tenure and use as to enable the possessor to develop his personality, maintain a decent standard of living for his family, and fulfill social obligations. At the same time, the land steward has a duty to enrich the soil he tills and to hand it down to future generations as a thank offering to God, the giver, and as a loving inheritance to his children's children.

THE FAMILY AND LAND

Since the family is the primary institution, access to land and stewardship of land must be planned with the family unit in view. The special adaptability of the farm home for nurturing strong and wholesome family life is the reason for the universal interest in land use and rural welfare. A unique relationship exists between the family and the vocation of agriculture. The farm is the native habitat of the family. The family's welfare must therefore have the first consideration in economic and social planning. Throughout the history of the United States these fundamental principles have been worked out through National and State legislation, and they have been upheld by court decisions and popular acclaim.

LAND USE AND HUMAN WELFARE

Efficiency in land is not to be judged merely by material production but by a balanced consideration of the spiritual, social, and material values that redound therefrom to person, family, and society. The land is not to be a source of benefit to a favored few and a means of servile labor to the many.

Second only to making land available to the family is the responsibility of society to encourage and to educate the land stewards in the proper and most efficient use of the land and in such techniques as will make them masters of their own economic destiny.

THE TILLER'S RIGHTS AND DUTIES

The worker on the land and his family possess the first right to the fruits of their toil for a decent standard of living. Second to such right come the rights of any nonoperating owner and of the State. Rural people have the right to receive directly their just share of the economic, social, and religious benefits in organized society.

The stewards of the land owe sacred duties and obligations to God, the community, and humanity. A faithful and honest fulfillment of their responsibilities goes hand in hand with their rights and privileges.

SUGGESTED METHODS FOR THE PRACTICAL APPLICATION OF THE DECLARED PRINCIPLES ON LAND POLICY

1. Make use of the land an integral part of socio economic planning and thinking.

2. Insist that education for land stewardship and the productive home be outstanding features of rural education.

3. Emphasize a special program of enlistment and training in secondary, liberal arts, technical, and professional schools for professional service to the rural community.

4. Make the family-type farm operated by the owner a major objective of legislation and planning.

5. Reform the system of taxing land and improvements so as to facilitate access to natural resources, security of tenure, and proper land use.

6. Revise land sale and rental contracts, mortgage obligations, and other debt instruments so that no loss of ownership or insecurity of tenure be possible except through negligence or injustice on the part of the farmer-operator.

7. Discourage large land holdings as undemocratic and unsocial.

8. Where large-scale production is necessary and advisable, encourage the use of cooperative techniques with local ownership and management.

9. At all times encourage cooperatives as a means of intellectual, moral, and material advancement.

10. Where and when large-scale industrialized farming exists and requires employment of seasonal or year-round labor, demand for such labor group a living family wage, decent housing conditions, and collective bargaining.

11. Urge that wages and housing for the laborer on the small farms be decent and just. (Low wages and poor housing for the farm laborer tend to lower the reward and standards of living of the family-type farmer, bringing his own family labor into competition with the poorly paid hired hand.)

12. Extend social security provisions, particularly health, old-age and survivors' insurance, to farm people and other rural dwellers.

13. Develop locally owned and controlled business and industry in rural communities.

14. Encourage development of the "one foot on soil and one foot in city" type of living as greatly advantageous to the family when adequate cash income is secured from work in industry or commerce.

15. Make land settlement possible for returned soldiers and displaced war workers through proper financial and educational planning, provided qualified people so desire and sound arrangements can be made.

ALPHABETICAL LISTING

(All individuals signed in their personal capacities)

THE ROMAN CATHOLICS SIGNING

Rev. A. J. Adams, S. J., Campion High School.

Dr. Thomas J. Aroeneaux, South Western Louisiana Institute.

Frank Bruce, publisher, Milwaukee.

Mrs. Albert Eisele, Farm Homemaker—Rural columnist, Blue Earth, Minn.

Most Rev. William A. Griffin, D. D., bishop of Trenton.

Rev. George G. Higgins, National Catholic Welfare Conference.

Prof. Emerson Hynes, St. John's University.

Rev. John LaFarge, S. J., editor, America.

Very Rev. Hubert Lerschen, regional director of rural life, Rayne, La.

Rt. Rev. Msgr. L. G. Ligutti, National Catholic Rural Life Conference.

Will Lissner, the American Journal of Economics & Sociology.

Rt. Rev. Donald A. McLean, professor, Catholic University of America.

Prof. William J. McDonald, Catholic University of America.

Most Rev. William T. Mulloy, bishop of Covington.

Rt. Rev. Msgr. John O'Grady, National Conference of Catholic Charities.

Most Rev. Edwin V. O'Hara, D. D., bishop of Kansas City, founder of National Catholic Rural Life Conference.

Rev. Charles Philipps, St. Mary's Church, Oakland, Calif.

Rev. Patrick T. Quinlan, regional director of rural life, Brookfield Center, Conn.

Rev. John C. Rawe, S. J., author and teacher, Ridge, Md.

Martin L. Salm, dairy farmer, Chilton, Wis.

Rev. Martin E. Schirber, O. S. B., dean, St. John's University, Collegeville, Minn.

Edward Skillin, Jr., editor, Commonweal.

Joseph J. Trainer, sales manager, Roller Bearing Co. of America.

Rev. Joseph V. Urbain, pastor, Millerville, Ohio.

Dr. Lydwine van Kersbergen, Grail Workers, Loveland, Ohio.

Rev. Leo R. Ward, Notre Dame University.

Most Rev. Charles D. White, bishop of Spokane.

Dorothy Willmann, the Queen's Work, St. Louis.

THE PROTESTANTS SIGNING

Dr. Joseph Ackerman, Farm Foundation.

Rev. O. O. Arnold, United Brethren in Christ.

James C. Baker, bishop, Methodist Church.

Dr. O. E. Baker, University of Maryland.

Rev. Edwin L. Becker, Disciples of Christ.

Rev. J. Eurt Bouwman, Michigan Council of Churches and Christian Education.

E. R. Bowen, Cooperative League of the United States of America.

Rev. Leonard M. Bramm, Reformed Church in America.

Dr. Mark A. Dawber, Home Missions Council of North America.

Dr. William V. Dennis, Pennsylvania State College.

Rev. Francis A. Drake, Friends of the Soil.

Rev. Shirley E. Greene, Merom Institute.

Stanley Hamilton, Rural Life Association.

Rev. Hilda L. Ives, N. E. Town and Country Church Commission.

Rev. John B. Ketcham, International Council of Religious Education.

Dr. Benson Y. Landis, Committee on Town and Country.

Dr. Kathleen MacArthur, national board, Y. W. C. A.

Dr. Henry W. McLaughlin, Presbyterian Church in the United States.

Rev. I. W. Moomaw, Church of the Brethren.

Dr. Hermann N. Morse, Presbyterian Church in the United States of America.

Rev. Donald F. Pielstick, Home Missions Council of North America.

Dr. Henry S. Randolph, Presbyterian Church in the United States of America.

John H. Reisner, Christian Rural Fellowship.

Dr. Mark Rich, American Baptist Home Mission Society.

Rev. Clifford L. Samuelson, Protestant Episcopal Church.
Dr. Martin Schroeder, Midwest Synod, United Lutheran Church in America.
Dr. Rockwell C. Smith, Garrett Biblical Institute.

Dr Solomon Liptzin, College of the City of New York.
Dr. Julian Morgenstern, Hebrew Union College.
Rabbi Stephen S. Wise, Jewish Institute of Religion.
Dr. Joseph Zeitlin, rabbi, Temple Ansche Chesed, New York.

## Puerto Rico

EXTENSION OF REMARKS
OF

### HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. CRAWFORD. Mr. Speaker, from the Economic Review, presented by the Chamber of Commerce of Puerto Rico June 1945, I have clipped an editorial.

For approximately 45 years the Puerto Rican people have been under what might be termed the control of the United States. We can look back to the experience of our original Thirteen Colonies with the mother country of England. From the pages of history we can read some of the things that were said at that time by our own people with respect to the treatment they received from England.

These are days in which we are maintaining vast armies, particularly in Japan and in Germany, in the hope of compelling some of the people in those countries to conform to some of our ideals and institutions. What success we shall have in Germany and Japan I am unable to say. At times many of us have some doubts about how far we shall go, and to what extent the American people will sufficiently interest themselves in the undertaking to make it a success.

Perhaps if we would give more real attention to that portion of our own family which is represented by 2,000,000 fine Puerto Ricans, we might get more satisfactory results from them, and perhaps the Puerto Ricans would have greater respect for our honesty, integrity, and fair-mindedness. The editorial which I submit for the RECORD is at least thought-stimulating at this particular hour when we speak and act in such broad terms with respect to peoples located outside the continental area.

The editorial follows:

Whether one considers the matter as a member of the Puerto Rican community or simply as an American citizen interested in the preservation of democracy and the American principles of government, the apathy with which the House of Representatives has received the report of the Bell committee on its investigation of social, economic, and political conditions in Puerto Rico excites rather disconcerting and disheartening reflections.

To us of Puerto Rico such apathy can have but one explanation: The indifference of the average Congressman toward the island and its affairs. The realization that this indifference is fundamentally the consequence of widespread ignorance concerning us cannot in any way minimize our natural chagrin and profound concern over a situation that constantly and adversely affects our legitimate interests and our relations with the mainland. Unquestionably we are in a very large measure responsible for such a state of affairs. Our government and our people should have made it their policy to acquaint the Members of Congress and the people of the United States with Puerto Rico, its people, its resources and potentialities, and the true mutual value of the relationship existing between the island and the mainland. We have failed to realize that ignorance breeds indifference, and must now admit that we are to blame for such apathy.

In all fairness we cannot very well impugn Congress if it has come to believe that Puerto Rico is a poverty-stricken pesthole beyond redemption. We have either overemphasized our poverty ourselves or abetted outsiders in grossly playing it up. It is no wonder that with notable exceptions everyone in Congress has a very distorted picture of the island.

Such indifference is certainly discouraging but we could not very well take offense at something we are mostly responsible for. What is really disconcerting about it is not so much its significance to us as Puerto Ricans with respect to the relationship existing between the Nation and ourselves, but the import of such indifference on the part of the representatives of the greatest democracy in the world. What must really and profoundly concern every public-spirited citizen in America is what such apathy suggests.

Woodrow Wilson once said that "Freemen need no guardmen," which is very true. But it is also equally true that the price of liberty is eternal vigilance. In a democracy such as the American commonwealth, which depends upon a system of checks and balances between the three powers composing the government, it behooves the Congress as the direct representative of the Nation's electorate to exercise such vigilance; to see to it that the executive power follows and respects the principles of government on which the American democracy and the American way of life are founded.

The moment Congress neglects this paramount duty with complacency while the Executive, carried away by improper zeal, or oblivious of such principles, sets out to regiment every activity of society or individual initiative virtually surrounding its freemen with guardmen, the people are faced with a very real and serious threat to the principles on which their liberties are based.

The report of the Bell committee contains clear and conclusive indication, to say the least, that there is an American community, people by American citizens, where in open violation of the Organic Act a totalitarian form of government has been set up that is wholly inimical to the fundamental principles of American government.

How the House of Representatives can remain unperturbed by such a grave charge is something which to us seems inexplicable; all the more so in view of the fact that the Territories are the direct charges of Congress, who lacking direct representation must look to it for the adequate protection of the rights of their people.

As American citizens we must confess our inability to understand the House's failure to react to the very serious state of affairs disclosed by the report. To the cynical observer such apathy must appear as inconsistent with the declared motives of America in the present war. Obviously, the threat to the American principles of government and way of life from the inside should be and, we are sure, are of equal concern to the people of America as the outside menace which the Nation is fighting bitterly to destroy.

We find it impossible to conceive that the House of Representatives should treat such a question as that poised by the Bell committee report of May 1, 1945 (House Rept. No. 497) as a purely academic one. The members of the committee charged with the duty of conducting the investigation and reporting to the House, and who devoted considerable time and energy to the task certainly did not go about it as men who felt that they were dealing with an academic question.

Considering the gravity of the question involved and the seriousness of the situation revealed by the report, there can be little doubt that it constitutes one of the most important matters submitted to the consideration of the House of Representatives in particular and to the Congress in general. Its failure to act would indeed be not only a serious mistake but an inconceivable neglect of its duty to their fellow citizens in Puerto Rico.

FOOD DISTRIBUTION

The announcement recently made by the Secretary of the Interior in connection with the Department's so-called food program for Puerto Rico to the effect that the recent curtailment by Presidential order of the funds available for the some had made it necessary to increase the price of rice, codfish, and beans 1 cent per pound, is highly illuminating and significant. This food program is nothing less than a monopoly established here in violation of the law under various pretexts which have been advanced as circumstances seemed propitious. First, it was the shortage of shipping tonnage. When it became obvious that this argument could no longer be used, it was the alleged inability of private trade to supply the needs of the island. When it was shown the supply problem did not exist, then it was the matter of subsidization. With the virtual elimination of the alleged subsidy those responsible for the program now find themselves in a dire predicament. However, it is quite clear that they will not admit their utter failure and discontinue the socalled food program except by compulsion.

Back in April 1944 the Bell Subcommittee of the Committee on Insular Affairs of the House of Representatives, after an extensive and thorough study of the matter submitted a report (H. Rept. No. 1399, 78th Cong. 2d sess), strongly recommending that the Federal Government retire from that field of

endeavor because of the excessive cost of the program, its tendency to wipe out private enterprise, and because the shipping crisis had passed to such an extent that there was no longer any justification for its continuance.

Again referring to this program in its final report to the House (H. Rept. No. 497, 79th Cong. 1st sess.), the Committee on Insular Affairs has this to say: "Despite the strong recommendations and despite the assurances of private business that they could carry on the food importation and distribution satisfactorily without further governmental expenses, the Department of the Interior has continued to persist in handling its Federally financed program, although legislation has barred the usage of lend-lease funds in any way in this connection. * * * Subsequent study of the food problem has indicated that there now are adequate supplies of food stuffs and adequate shipping for Puerto Rican trade to assure successful supplying of Puerto Rico's needs through channels of trade. The subcommittee's early recommendation that food handling be returned to private business is hereby reaffirmed."

In spite of such strong recommendations and of the fact that the Department of the Interior has not attempted to contradict the conclusions arrived at by the Bell subcommittee, it has nevertheless continued to ignore the very strong condemnation of its actions and the recommendation that the so-called food program be immediately discontinued.

In so doing it has undoubtedly counted on the passive support given it by the indifference of public opinion here, which was bound to look complacently upon an activity regarding which it was supinely ignorant. The arguments advanced in its support have seemed all the more plausible since it had been sold on the idea that the program was designed to reduce the cost of basic food commodities here.

Those who are in a position to know had become convinced long ago that the real and fundamental purpose of the so-called food program was purely political and designed to carry out socialistic theories. Anyone reading the Bell committee's report is bound to arrive at the same conclusion, but unfortunately the report has received scant publicity and the majority of the people here are blissfully ignorant of the same.

But even to the uninitiated the recent announcement of the Secretary of the Interior is an eye opener. It has become quite obvious to everyone that an advance in price affecting stocks already in the Island and paid for prior to the reduction of the appropriation cannot be explained in the face of the oft repeated claim that the purpose of the program was to subsidize the food of the masses.

After a careful and dispassionate analysis of all the factors in the case we became convinced prior to the price advances recently announced that such subsidization could under no circumstances exceed $3,000,000 per annum. Obviously a subsidy of $1.50 per capita, or $7.50 per family per annum is incapable of solving or even contributing to the solution of any social or economic problem.

When it is considered, on the other hand, that the subsidy was being extended indiscriminately to everyone whether or not he needed it and, furthermore, that such scant and meager help was being extended at a terrific cost to the American taxpayer in response to no demand whatsoever from the people of the island, who during the past 3 years have seen the most prosperous years of their lives, it becomes quite apparent that the subsidization argument bears no scrutiny and carries no weight.

The advance in prices recently announced definitely kills the argument.

Estimates made by the Chamber of Commerce of Puerto Rico conclusively establish the fact that the current wholesale prices of the Office of Supplies, of the CCC, which administers the food monopoly, allow a margin of profit that on the basis of the 1944 imports will produce an income of over three and a half million dollars per annum and that, with the single exception of codfish, regarding which the chamber did not feel that it had conclusive evidence as to price, the OS has now a fair and more than a fair margin of profit on every item still being handled by it, including rice.

Indeed, it is shocking to find that this agency, with the approval of OPA, is charging prices on which the margin of profit runs anywhere from 15 to 50 percent. Such margins are unheard of in the trade and greatly in excess of the margins that private trade is being allowed under existing ceilings. The reader will naturally ask what sort of subsidization is this that allows such outrageous profiteering.

We doubt that the list of excesses committed by the administration under extraordinary wartime powers and regulations reveals a more sorry episode than this arbitrary and irritating monopoly established by the Department of the Interior.

## The Farmers' Stake in Full Employment

EXTENSION OF REMARKS

OF

### HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Farmers' Stake in Full Employment, which I delivered at Trenton, N. J., last Thursday before the convention of the Farmers' Educational and Cooperative Union of America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a privilege indeed to come to my neighboring State of New Jersey to pay my respects to your valiant leader, Jim Patton, and his courageous colleagues. It is refreshing to know men like Jim Patton, men who can and do understand the problems of our country as the problems of a whole people and not of a mere segment of our American life. I like Jim Patton because he sees clearly the vision of true American citizenship and refuses to segregate the interests of his group from the interests of all the people America is strong only when we subordinate our personal interests to the common interest. Jim Patton and his colleagues believe in a strong America.

I can remember pretty vividly the condition of agriculture when we saw agricultural prices collapse immediately following the last World War. The men who controlled farm prices then were interested in tax reduction for the rich. Andrew Mellon was more concerned about the tax burden of his millionaire friends than about supports for the price structure of agriculture. The three Presidents who served under him and a subservient Congress cut taxes, repealed appropriations, abolished price guarantees to farmers, and brought depression to the farmers 10 years before it caught up with the rest of the country.

I can remember very vividly the dark days of 1932. My sister purchased a Pennsylvania farm in the administration of Woodrow Wilson for cash, mortgaged it under Hoover, and redeemed it under Franklin Roosevelt. She could not meet expenses on the milk she sold because the steel workers of Pittsburgh had no money to purchase it. She could not purchase farm machinery and therefore was unable to help the steel mills open. This transfer of money from town to country and from farm to industrial workers is the key to our national prosperity. Herbert Hoover did not know that. He thought America lived on a one-way street. He let traffic move only in one direction and Andrew Mellon was the chief traffic officer. Jim Patton believes in two-way traffic I have seen him in action in Washington He believes fair wages for industrial workers brings prosperity to farmers and he believes high income to farmers brings work and fair wages to industrial workers.

In the past 11 years I have been amazed by the testimony of many farm leaders before congressional committees. One would expect these men to be men of wisdom who might envision the interdependence of all people under our American system of free enterprise. One would expect them to liken our economic system to the human circulatory system where blood moves from arteries to veins in a never-ending cycle of exchange but when these certain agricultural leaders get before a committee and testify for or against legislation a puzzled lawmaker must infer from their arguments that they believe in arteries only or in arteries clogged with clots of inactive capital. These men believe in economic thrombosis—that is, all except Jim Patton.

In the early days of my legislative experience I believed in getting the opinion of all the farm leaders. When the President called them to Washington to write a farm program many of us felt that representative men could and would write a program that would be satisfactory to all the farmers of the Nation. Some of the plans sounded a little crazy to many of us, but we accepted the proposals suggested and supported their legislation to a man—hoping thereby to solve agriculture's ills. Some of us city fellows thought surplus food should be purchased by the Government and donated to the hungry, undernourished children of the depression, but the farm leaders who came to Washington told us to "kill little pigs" and "plow down cotton." The very fellows who devised this plan and persuaded Henry Wallace to follow their advice are strangely silent now when their political bedfellows lambast the New Deal for policies of profligate waste, but their names are in the record and they hide only in the reactionary press where the truth of accusations never makes the headlines.

Jim Patton's policy is to get wages for industrial workers. They will provide abundant markets for all the food farmers will produce. His theory of economic freedom is adequate nutrition for all the people of the world. His ideal for economic security is abundant food for the underprivileged as an investment to protect the Nation against the support of tuberculosis sanitoria and the inefficiency of undernourished labor. He believes it to be the duty of government to provide universal nutrition on the same scale that government has furnished universal education. He is ridiculed by the same class of citizens who 100 years ago predicted that public education would bankrupt the Nation. We now know that public education is a national asset. Some day we will learn that universal nutrition will pay cash dividends also.

Forty million Americans are not properly fed today. If we were able to properly supply these people with the food they need our medical and dental bill would drop on a national scale. Our factory efficiency would increase, our schools would graduate more and better students, and our hospitals and sani-

toria, to say nothing of our mental and penal institutions, would shrink and shrivel to the point of insignificance. Possibly most important for the purpose of this discussion is the fact that adequate nutrition for these 40,000,000 people would require the peak production of American farms plus 8,000,000 acres; that is, our greatest war production and 8,000,000 acres beside. Prosperity for agriculture depends on prosperity for all of us. High wages and full employment provide a full-dinner pail and a satisfied stomach. We need 60,000,000 jobs to keep the farms of America producing to capacity.

I will not, I hope, be branded as a radical if I quote from the conservative Brookings Institution publication America's Capacity To Consume. The authors cited surveys made following the last World War which showed that families making $800 a year spent $400 for food, families with $1,300 annual income spent $560 for food, families with annual income of $1,800 spent $700 for food, and families with $2,700 income spent $900 for food. The study showed that 70 percent of our families made less than $2,500 in 1929. If the annual income of these people had been lifted to $2,500 they would have consumer 40 percent more food. This would have provided American farmers with between ten and fourteen billion dollars additional income. We need to find a way of feeding our own people well. Sixty million jobs and high wages will supply the money for adequate nutrition and agricultural prosperity.

When I speak of agricultural prosperity I understand that I am using a very relative term. We have never known real agricultural prosperity that is prosperity for all the farmers. When I speak of undernourished people I speak of both city and rural people. In fact, many farmers in America do not have enough to eat and in many cases farmers who eat enough in bulk find evidences of malnutrition in the teeth and bones of their children. Two hundred years of weathering and profligate farm practices have taken from the soil the very essentials of well balanced food. Proper interest in the restoration of fertility is a major responsibility of society. The annual expenditure of $300,000,000 in AAA payments during the past 7 years has been an investment in fertility as well as nutrition. Rural slums must be abolished. The underprivileged farmer must be the ward of the Government until he becomes a self-supporting, self-reliant, and self-sufficient member of society.

When we consider the war production years we assume that 6,000,000 farms produced standard quotas of food. This is by no means the case. Three million farms produced 90 percent of the food during these bumper years. These naturally received 90 percent of our agricultural income. Think of it—the other half of the farms of this country produced 10 percent and received 10 percent of the income. In analyzing these figures we find that only 313,000 farms are classified as large scale operations with total income of $4,000 or more while 2,818,566 farms are classified as family commercial farms. When these are divided by income groups we find that 375,973 farmers made between $2,500 and $4,000, 1,389,018 received between $1,000 and $2,500 income, and 1,053,575 showed an income of between $600 and $1,000. Two million nine hundred and twenty-five thousand part-time farmers received less than $600 annual income.

When we consider that less than three-quarters of a million farms earned $2,500 a year or over and about two and one-half million full-time farmers make less than $2,500 annually there is no difficulty in determing where our national interest lies. If agriculture is to survive and if we are to look confidently to the future for enough food we must adopt a national policy for the protection of the family-type farm. From our personal observation the lawyer who spends his excess cash to satisfy his love for the soil has no claim on the assistance of Government. The farmer who inherits a patrimony of fertility and stability has no need of support. The farmer who by thrift and experience has been able to accumulate a substantial backlog of security may ridicule the needs of the fellow who is lifting himself by the boot straps of success. But the fact remains that north or south, east or west, black or white, young or aged, we have no equality of opportunity in the field of agriculture today.

The young man who begins his agricultural experience in the field of tenancy makes a noble struggle. All the lease and tenancy practices are against him. He needs to own a farm but unless the tenant purchase or farm-ownership farm loans are extended beyond their present limits he is handicapped. Mortgage payments and unprotected markets together combine to dispossess him at a moment's notice. Price supports and liberal credit are necessary to prevent disaster when these young men attempt to get a foothold in life. A father of growing children views with dismay the combined effects of frost and drought in his struggle to provide for his flock. Crop insurance is a basic need of agriculture and especially the handicapped youthful operator. Who is to help when disaster threatens; when prices tumble around these brave souls; when economic security vanishes into thin air. Our forefathers came to American to enjoy religious freedom. They fought the Revolutionary War to guarantee us political freedom and now in this age of world unrest we owe it to our own people to provide economic freedom; freedom against want, freedom against monopoly, freedom from traditional standards of rental, tenancy, and crashing markets, freedom from the devastation of the law of supply and demand.

In this age of scientific development we have conquered many of the laws of Nature. In this age of economic development we have conquered the many superstitions of the ancients. In this age of social struggle we have come to believe in tolerance and brotherhood as a means of national and international safety. Having accomplished so much as a nation, it is unthinkable for us to suppose that we cannot harness the law of supply and demand as we have harnessed the law of gravity. We need not be slaves to any tradition. We have shown that we can direct the laws of Nature and economics as servants of mankind. We can and must overcome the handicaps of the family-type farm and we must utilize the agencies of government to do it.

Ten years of progress point the way to success. We have learned that we cannot trust the farm leaders who subscribe to the economic philosophy of Wall Street, the American Manufacturers Association, or Pew's Farm Journal. They are the fellows who would kill pigs in 1934 and then squeal to the high heavens in 1944. They are the fellows who plow down cotton in 1935 and plow down industrial production in 1945. They are the fellows who would accept fourth-class mail subsidies at the post office and condemn farm subsidies at the farmers' mail boxes. Our Government has found it necessary to go to the farmer himself for his version of needs. Through community elections and meetings we now secure public-opinion polls to guide our policy. The basic democracy of America speaks for farmers, and Jim Patton has his ear to the ground as he listens with us to the heartthrobs of America. The American farmer who toils for his family's welfare and the American worker who toils for his family's bread are partners. Their interests are inseparably welded together in a common interest. The focal point of their common interest is food.

## Speech of Herbert Brownell, Jr., Before Advertising Club of Washington

EXTENSION OF REMARKS

OF

## HON. WALLACE H. WHITE, JR.

OF MAINE

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. WHITE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a speech delivered on October 16, 1945, by Herbert Brownell, Jr., chairman of the Republican National Committee before the Advertising Club of Washington.

Mr. BARKLEY. Mr. President, reserving the right to object, I wish simply to comment that what little I saw of that speech in the newspapers did not impress me, but I shall not object to its being printed in the RECORD.

Mr. WHITE. May I say, in response to the observations of the Senator from Kentucky that I have sometimes had a suspicion that he was not the best possible judge of the excellence of speeches?

Mr. BARKLEY. I always yield in that respect to the Senator from Maine, especially if it is a Republican speech.

The PRESIDENT pro tempore. Is there objection to the request of the Senator from Maine?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

No greater glory inures to the citizens of any country in the world than to the American people in their right to participate in their own Government. The instances in which the exercise of that right has been specifically provided for in our Constitution are numerous and quite generally understood. There remain yet other cases, however, where the lack of such a specific provision has given rise to misunderstanding and, often enough, to very great confusion. An illustration is to be found in our dealings in the field of foreign relations.

The Supreme Court has held that the President is the sole organ to represent the United States in the sphere of negotiation in our external relations. The Constitution is completely silent on this point, yet no one would suggest on that account that there is no agent capable of acting or lacking the power to act as occasion may require. The Constitution specifically provides that treaties to bind the United States shall be made by and with the consent of the Senate. While all treaties represent agreement, it by no means follows that all agreements are treaties. Consequently, great discussion has attended attempts by our people to follow and understand when executive action resulting in agreement with another nation constitutes executive agreement or when that agreement must be submitted to the Senate for action by that body.

Yet other acts of the Chief Executive in the conduct of our foreign relations have precipitated controversy, and of late years vastly increased importance attaches to the conduct of our foreign affairs. There is bound to be conflict between a strong executive who insists upon prerogatives which he believes belong to his office and a Senate which attempts to assert its claimed responsibility in the same field.

The Constitution says that Congress shall make all needful rules and regulations regarding disposition of the property of the

United States, and certain assertive Members of that body inquire by what authority the President presumes to present to General de Gaulle an American C-54 airplane valued at several hundred thousand dollars. A heady Congress could insist upon a congressional investigation, but a President of similar attitude could refuse to appear before such a committee of investigation. Such an incident is offered simply as illustrative of the course that a determined conflict between the Congress and the Chief Executive could produce.

Parliamentary governments have not encountered any such impasse. The Prime Minister is constantly amenable to the inquiry of the parliamentary body. No better illustration of the extent of this power comes to mind than when the Parliament of Great Britain in the midst of the war called before it their own great leader, Prime Minister Winston Churchill. He was bound to defend himself under the circumstances which led to his appearance, and the whole incident high lighted the vast distinction between what can happen under our system of government and what did happen under the parliamentary system in Great Britain. The occasion was the loss of the *Prince of Wales* and the *Repulse*, which were sunk off Malaysia under attack by Japanese bombers, not long after Pearl Harbor.

Accordingly, Mr. Churchill appeared before Parliament on January 27, 1942. He pointed out that at the time of the Atlantic Charter Conference in August 1941 he and Mr. Roosevelt had discussed the problems likely to arise in the Far East. "What was the likelihood of the far eastern theater being thrown into the war by Japanese attacks?" he asked. "I will explain how very delicately we walked and how painful it was at times—how very careful I was that every time we should not be exposed singlehanded to this onslaught," he continued. After discussion of how he and Mr. Roosevelt appraised the rationale of the likelihood of Japan's conduct in this area, Mr. Churchill said:

"On the other hand, the probability since the Atlantic Conference at which I discussed these matters with President Roosevelt, that the United States even if not herself attacked would come into the war in the Far East and thus make the final victory assured, seemed to allay some of these anxieties; and that expectation has not been falsified by the events."

What were the questions resolved by the two Chiefs of State? At what point are the American people, at least through their Congress, entitled to information as to commitments made in their name by the President? Interestingly enough, the New York Sun, on January 28, 1942, editorialized on the paragraph from Mr. Churchill's address which I have just quoted. The Sun was of the opinion that Americans were caused "to look to Washington for enlightenment."

"On its surface this is a somewhat startling disclosure," said the Sun. "Does this mean that as long ago as the first fortnight in August the President and Prime Minister had an understanding not only that the United States would participate actively in the war but that participation would begin with some overt act in the Far East? If it does not, Mr. Churchill's allusion is scarcely intelligible; if it does mean that, elucidation of the mystery is something to which the American public is clearly entitled."

We know now that the Roberts commission gave us only such facts as it was permitted to glean with reference to conditions at Pearl Harbor on the morning of December 7, 1941. The joint committee of Congress to investigate the entire situation will find questions to exist which far antedate the events of that fateful Sunday.

Much has been said of late about General Marshall's most recent report concerning the events of the biennium from July 1, 1943, to June 30, 1945. As we consider the proper relationships between the Office of the Presidency and the Congress in that indefinite area of their overlapping authority in the international field, we might more appropriately turn to General Marshall's report for the biennium which terminated on June 30, 1943. In that comparatively neglected document we find much material which bears upon the point of our present inquiry. Let me quote a pertinent portion:

"During the late summer of 1941 arrangements were made for the improvement of the landing strips at Rabaul, Fort Moresby, and Port Darwin, and the commanding general of the Philippines (Gen. Douglas MacArthur) was directed to deliver gasoline and bombs to these points and to Balikpapan in Borneo and Signapore in Malaysia. Deliveries to all but the last two points had been completed when the Japanese took the offensive December 7."

The reference to the "late summer of 1941" coincides with the date of the August meeting between Prime Minister Churchill and our Fresident. It becomes perfectly evident that none of the points mentioned in General Marshall's report can be found on American soil. Clearly, our Nation had no right of its own to improve landing strips on the soil of other and sovereign nations, much less to deliver gasoline and bombs to such points throughout the fall months of 1941. Inevitably, therefore, top-level decisions were made between our Chief Executive and the representatives of other nations involved in the area described. Under what circumstances, for what consideration, with what commitments, the American people have never been told—unless Mr. Churchill told us.

As though sensing the persistent question in these respects, July 1942 brought us a partial answer with the publication entitled "How War Came," by Forrest Davis and Ernest K. Lindley. In announcing this piece the editors of the Ladies Home Journal said:

"The story of how and why this Nation—with no aggression in its heart—is now fighting for its life on all continents and on all oceans, is told in this semi-official report, revealed from files in the White House, the State Department, and other Government agencies, as well as from the lively recollections of those history-making men who actually took part in the events leading up to war."

I may remind you that Mr. Lindley is the biographer of President Roosevelt, and one of the trustees he named for the Hyde Park Foundation. Discussing the matter of Far Eastern policy considered at the time of the Atlantic Conference in 1941, the authors record:

"Churchill wished to meet the issue head on. He asked the President—as the British, Australians, and Dutch repeatedly had besought this Government before—to join in an ultimative declaration to Japan. For some time the other Pacific powers had sought to establish a deadline in the Far East, serving notice on the Nipponese Empire that thus far, and no farther, might they go; a deadline political as well as geographical, setting bounds to pressure on other states as well as to the enlargement of Japanese forces in Indo-China. While such a move entailed the risk of war, Churchill, mistrusting further procrastination, believed it might bring the Japanese to book."

The authors point out that Mr. Roosevelt lacked the constitutional capacity to make a commitment involving the possibility of automatic hostilities, and that only Congress can declare war. Mr. Roosevelt was said to believe in August "on evidence in the hands of the State Department, that war in the Pacific was a matter of weeks or months. Yet he knew the country's unreadiness. The President, therefore, temporized."

It is a well-known fact that the President may not be quoted directly without his permission. Messrs. Davis and Lindley then attributes to the President this question:

"'Wouldn't we be better off in 3 months?'

"Churchill agreed, still doubting, however, that such a respite would be forthcoming without concerted action now."

"'Leave that to me, said the President, 'I think I can baby them along for 3 months.'"

It is to be hoped that the congressional committee, consisting of six members of the majority party, and four members of the minority party, will insist upon recognition of the congressional prerogative that the American people may yet find their answer in the facts.

Military decisions among the chiefs of state of Allied Nations in the prosecution of a war are entirely proper and within their appropriate powers, certainly, at least, so far as the United States is concerned. Political and economic decisions involving the fates of other nations and commitments in behalf of the United States with reference thereto fall into a completely different category. The distinction is such that congressional participation in America's future course cannot safely be denied. Respectful regard for our constitutional processes requires that much, and it is my fixed belief that the American people, speaking through their Congress, should be satisfied with no less. Political decisions independently arrived at by chiefs of state in secret meeting may or may not receive that support from the nation which the importance of such decisions must necessarily require.

In this connection I turn now to a matter of deep interest to the American people—the question of whether we shall have a peace conference dealing with Germany and, if so, what it will amount to.

Even before the United States entered the war Mr. Roosevelt had formed the habit of personal meetings with Mr. Churchill. Some day there will be disclosed the nature of the commitments, or moral obligations, or gentlemen's agreements which resulted. With our entry into the war meetings of the Big Three became historic landmarks. These meetings did much to correlate and synthesize the military effort of the United Nations. They contributed to the development of a general strategy which resulted in the crushing of the enemy. The three principals were accompanied by their leading military advisers, and the public emphasis was on the prosecution of the war.

But regardless of the emphasis, political decisions of enormous importance were made at these personal and secret meetings. Ad hoc decisions have fixed the destiny of nations. Many of these decisions are characterized as subject to eventual review by the peace conference, but decisions made during hostilities in accordance with elements of force and fact have a way of becoming immutable. The frontiers of Poland illustrate the case. The Curzon line has been fixed as the eastern frontier. The fate of East Prussia seems assured, a partition between the U. S. S. R. and Poland. Silesia and the territory west of the Oder fall to Poland. The three small Baltic nations have ceased to exist as nations.

A further instance, by decision, of the Big Three, a reparation commission was set up in Moscow on which Mr. Pauley represents the United States. Press reports state that within the zones of occupation machines and machine tools are being seized and evacuated. Thus the highly controversial question of Germany's industrial future is being decided by Executive act and that no peace conference in the future can undo what we are told is being done in act.

I think it is pertinent to add that the inexorability of these executive decisions is reinforced rather than mitigated by the San

Francisco Charter. Article 107 declares, "Nothing in the present Charter shall invalidate or preclude action in relation to any State which during the Second World War has been an enemy to any signatory to the present Charter, taken or authorized as a result of that war by the governments having responsibility for such actions." I bring in this reference to the Charter to demonstrate that there is little likelihood under its terms that the organization can bring about rectification of ad hoc decisions now taken.

In the past our wars have been followed closely by peace treaties, where the Senate was called upon to give its advice and consent to the terms. Thus in the past the people of the United States had an opportunity during the Senate discussion of expressing their views and approval or dissent to the way in which the Executive had terminated the conflict. In the present circumstances I see no immediate prospect of a peace conference. In the present circumstances I think it more probable that decisions will be taken in the future as in the past, by Executive determination only. Thus the administration will have assumed the sole responsibility for the terms of the major settlement of Europe, there will have been no expression of choice on the part of the American people, there will have been no advice and consent from the Senate as provided in the Constitution for international matters of this moment. This at the end of a war in which we have exhausted lives and wealth in a manner unprecedented in our history. These settlements are of vital concern to millions of our citizens, and someday, through the only political device remaining to us, in an election, the American people will express its satisfaction or dissatisfaction, will hold the administration to accountability.

## Centennial Memorial Sermon at the Naval Academy

EXTENSION OF REMARKS
OF
### HON. DAVID I. WALSH
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an inspiring sermon delivered by Chaplain W. N. Thomas, Chief of Chaplains of the United States Navy, at the centennial memorial service for graduates of the Naval Academy who have given their lives in line of duty while serving their country. The religious services which were largely attended were held on Sunday, October 7, 1945. The sermon is entitled "The Creative Force of the Great Dead."

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

THE CREATIVE FORCE OF THE GREAT DEAD

"So Elisha died and they buried him. Now bands of Moabites were in the habit of raiding the land at the coming in of the year. And while they were burying a man, suddenly they saw a marauding band. So they cast the man in the grave of Elisha and went on. But when the man touched the bones of Elisha, he revived and arose and stood on his feet." (II Kings 13: 20 and 21.)

This strange story from the life of an ancient people is so remote from anything that we can conceive of as happening in our modern age that it may seem out of place in this service. Not only is the story told in the Bible, but Josephus relates it in his writings. It probably belonged to the folklore of generations and was recited by the firesides of homes, in the market places of villages and towns, and carried by pilgrim bands across the boundaries of provinces and kingdoms.

Elisha was a great man. He served at the court of six succeeding kings. The enemies of his country feared him. When they were tempted to invade the land, they thought of Elisha and changed their plans. It was said that he was worth more than a thousand generals. The people felt secure as long as Elisha was near. Then, the day came when the great patriot of indomitable spirit died.

But alien armies were still afraid of the land in which his body was buried, and his countrymen still believed that his spirit protected them. So, the story was told to friend and stranger of how a man who was dead touched the bones of Elisha, was revived, arose, and stood on his feet. It was their homely way of expressing a great truth which the centuries have affirmed—the creative force of the great dead.

No subject could be more appropriate for this day when we gather in these sacred walls to pay grateful tribute to the graduates of this Academy who, during the century of its existence, have given their lives in the service of their country. Yet, we cannot help but approach this hour, set apart from all the hours of a century, and dedicated to lives that are particularly sacred to us, with mixed emotions of sorrow and joy, humility and pride, and a consuming sense of inadequacy.

Other schools hold memorial services for their graduates—graduates who have gone out from the school. But, these belong to our firesides. They are fathers and husbands, friends and brothers—and sons. Their sacrifices make every inch of these grounds on which they once walked, hallowed earth. Their glory is beyond the poverty of our language. In the words of Abraham Lincoln at Gettysburg, "It is beyond my poor power to add or detract. The world will little note nor long remember what we say here, but it will never forget what they did."

The world does not forget what the great dead have done. Theirs is a creative force that revives, leads, inspires. Without them history would be as monotonous as the march of trading caravans across the desert. Therefore, they live. They must live because they silently reveal to us the creative elements of human character that defy circumstances and conditions, and grow more lustrous with the passing of the centuries.

The great dead live because their lives embody imperishable and indestructible components of life that are indispensable in the upward march of the race.

In the first place, they are alive in the creative force of their ideals. A French nobleman and philanthropist of the eighteenth century wrote the first rule of greatness when he said, "Great souls are not those who have fewer passions and more virtues than the common lot, but those only who have greater designs." As Lowell expressed it, "To have greatly dreamed precludes low ends."

As we mark the deeds of the great dead we soon discover that their deeds are great because their aims were great. Their ideals are the woof of their work. As these ideals are tested by a century of loyalty through alternating peace and war, they gather the allegiance of succeeding generations until they are molded into high tradition, the legacy of the great dead.

Nothing is more real than the power of this intangible force. The difference in the value and the influence of the Naval Academy of 1945 and the school that opened its doors here 100 years ago is not primarily the difference in material equipment. It is the difference made by men who have proved, whatever the cost, the excellency of its purpose. And indeed, as we are the inheritors of their designs, they, in their day, built on the great purposes of those who lived before them.

In the classrooms of October 1845 there were silent teachers—Jones, Lawrence, Peary, Decatur. That they have never been absent since that beginning is written in the records of the century's heroic dead. One hundred and thirty years after James Lawrence, dying of battle wounds, set the standard with his famous words, "Don't give up the ship," that standard was reechoed by Howard Gilmore, as he lay mortally wounded on the bridge of his submarine, "Take her down."

The spirit of these and countless others is appropriately inscribed on the bronze doors of this chapel—Non sibi sed patria—Not for self but for country. The creative force of the great dead lingers through the motives by which they lived and for which they died.

In the second place, the graduates of the Academy who have given their lives in the service of their country live in the creative force of unselfish action. High resolves may be expressed in the eloquence of language: Great living can only be expressed in great deeds. In the words of Lord Lytton, "That man is great, and he alone, who serves a greatness not his own."

Measured by this exacting yardstick those on the roll of honor of this institution demand a "Well done." We would not paint them in saints' garments who like Francis of Assisi exchanged all their desires and possessions for penance and beggars rags. They were too human for that. But they met Shakespeare's challenge, "Be great in act as you have been in thought." Like saints they proved their faith by their works.

On the walls of this chapel are two examples of a unique nobility—the nobility of first place. The inscriptions on two plaques are strikingly similar. One reads, "Bagley, the first American officer who fell in the Spanish-American War." The other reads "Thomas, the first officer of any of the armed forces of the United States to lose his life in conflict in the World War." Would that we could call all the names of those who have exemplified Henry Ward Beecher's lines, "Greatness lies not in being strong but in the right use of strength."

It is fitting that they should be honored in this house of prayer in the dedication of the window, the Commission Invisible: "In reverent tribute to all the sons of their alma mater who in war and peace have realized her ideals of honor, courage, loyalty, and duty in the service of God and country this window is placed here."

We have mentioned the creative force of the ideals and the unselfish actions of the Academy's honored dead. There is still another, the creative force of their dying—the creative power of the supreme sacrifice. Kidd, and many after him in the war now about to fade into history, made it silently. On the base of this beautifully carved pulpit are two significant words—an appreciation, a memorial—and many of you thing of Young. Chandler's last words on the bridge of his ship were, "This is the price we pay." It is the price they all paid—the price of their ideals and their unselfish service. It is also a never-dying inheritance bequeathed by them to their school, their Navy, and their country.

As the figure of the Christ stands on the waters of the sea, in the window back of the altar, that symbolizes our faith in the God of goodness and justice, we dare to believe that this Man of Galilee, so perfect in

ideals, unselfish service, and great dying, accepts the companionship of our beloved dead who followed Him in proportion to their knowledge and strength.

You will forgive me if I close with a special reference to the young graduates who in the past 4 years have proved their right to wear the blue and gold. Time has not yet written their names among yesterday's great. In the language of Sala, they are "Heroes without the laurel and conquerors without the triumph." They went from these peaceful walks to the terrors of war, with their uniforms new and their insignia bright. With thousands of other young men, "theirs to do and to die." They did both in keeping with the century of traditions behind them. Russell Davenport in his great book, My Country, writes of an immortality that belongs to them.

"On the shore where the stiff white crosses
work a design for eternity,
And the infantry of sleep is forever enrolled
in silence,
And the lives of men are but numbers, and
an alien wind
Comes up to the beaches, caressing
The fallen sons of a distant country:
Here, at last the meaning of truth and freedom
Opens, unsealed, before the eyes of the Nations;
Where death has merged the memories of
Maine and Nebraska,
Of Indian fires in the desert, of bearded live
oaks,
The motion of Texas grass when the wind is
moving,
The dusty roads that lead to schools and
churches.
Here they merge like a stream—ranches and
orchards,
Court houses, banks, shops, railroads, and
factories,
Memories of faces, of lips parted with passion,
Of hands like sunlight on the nerves, of hair
fallen
Over the shoulders of someone beyond the
ocean.
Here in the name of freedom all have been
gathered
Into the perfect union of purposes united—
A brotherhood of men in the arms of death.

* * * * *

Open these graves to discover
The secret of liberty shoveled under the
earth.

* * * * *

The boys return to our hearts, like shadows
of ourselves;

* * * * *

To reinhabit the land where they cannot live.

* * * * *

Who are with her no more in the shape of
their hands and their faces,
But are in us forever a part of her being:

* * * * *

Let us live therefore, in the name of those
who have fallen,
That in our lives they may be resurrected:
Let us search for the light by which to find
them
Within ourselves and in one another.
Let us uncover the graves. Let us pray."

Almighty God, our Father, in whose holy keeping are the living and the dead; we thank Thee for the valor of those who have gone down to the sea in ships, for the glory of their deeds on the great waters, and for the everlasting benefits of their sacrifices. Help us to so live that we shall have a right to claim the noble franchise they have left to us—through Jesus Christ our Lord.

## Analysis of Wisconsin Unemployment Compensation Law

EXTENSION OF REMARKS
OF
### HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the October issue of the American Federationist which presents a critical analysis of the Wisconsin unemployment compensation law.

The article was written by Prof. Walter A. Morton, of the University of Wisconsin. In view of the fact that Wisconsin enacted the first unemployment compensation law in the Nation, it is important to analyze the Wisconsin experience.

I believe that this article, as well as the experience of other States, proves that we must have a single Federal system of unemployment insurance instead of the hodge-podge of 51 different systems which we have at the present time. Senate bill 1050, which the Senator from Montana [Mr. MURRAY] and I have jointly introduced, along with a companion bill by Representative DINGELL in the House of Representatives, would bring order out of the chaotic State-by-State system which now exists, by establishing a single Federal system of unemployment insurance.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNEMPLOYMENT AND THE "FUNCTIONAL" VIEW

(By Walter A. Morton)

(Because it was the only State with an unemployment compensation law prior to the enactment of the Social Security Act, Wisconsin long held a position of leadership in this field. In recent years, however, the situation has changed and today labor can no longer look to Wisconsin's unemployment compensation "experts" for leadership.")

Now that unemployment insurance has become an acknowledged institution in American life, we are likely to forget the conditions existing just prior to its enactment. At that time the unemployed worker had no right to compensation of any kind; when his resources were exhausted he was forced to go on relief.

It was therefore a great accomplishment, back in 1932, when the Wisconsin Legislature passed the first unemployment compensation act in the United States.

At the time the Wisconsin law was enacted many of its supporters believed it would be an effective device to save labor from the worst ravages of unemployment and to take the cost of relief off local units of government. Analysis of the statistics of Wisconson's Department of Public Welfare and Unemployment Compensation Department shows, however, that the law has failed in both these respects.

While it is hoped that the unemployment compensation system in Wisconsin will make a better showing during the postwar period, this hope may be dashed because of the opposition of the unemployment compensation department to a liberalization of benefits.

In the past there were three stops on the road to demoralization—unemployment, pauperization, relief. We have now inserted another stop, unemployement compensation, but upon its termination pauperization follows and relief is still the ultimate destiny of the jobless.

We should now go the whole way and try to avoid pauperization altogether by extending compensation for the entire period of unemployment. Instead of having three or four tops stops to pauper relief, we should block off the road completely and provide adequate unemployment compensation to cover all industrial unemployment.

During the war the Wisconsin unemployment compensation fund grew to $170,000,000. If the rates of contributions were maintained at the full 2.7 level which the Federal law permits, the fund should be ample. The present legislature and the Wisconsin Compensation Department, however, still look upon the Wisconsin law as a stabilization measure and have steadfastly opposed measures to make the law effective as a substantial aid to the unemployed.

EMPLOYERS' CONTRIBUTIONS CUT

The Wisconsin law has done little for the unemployed. Relief costs have been shifted to local communities, while the average rates paid by contributing employers have been lowered. In 1940 this rate was cut to 1.4 percent, which is only about half the maximum permitted by Federal law.

The Wisconsin Compensation Department, instead of paying only 6 percent of the cost of industrial unemployment in the State, should pay 100 percent of this cost. The pauperization principle should be completely annihilated. The unemployed should never again become a burden on the local community.

Up to now the Wisconsin act has been a great boon to the employer and as great a bane to the property taxpayer and the worker.

Some of the votaries of the Wisconsin theory of unemployment compensation have contended that they were fighting the Wagner-Murray-Dingell bill simply because they were opposed to federalization. It is significant, therefore, that when they had an opportunity to throw their weight behind amendments to improve the Wisconsin law—with no question of federalization—they chose to stand against them and to use their influence for existing standards.

This may indicate that, in part at least, the opposition to Federal legislation is due to the desire not to raise present standards.

The amendments were sponsored by Assemblyman Mullen. He proposed to increase weekly benefits about 20 percent to make up for the higher cost of living, to make a $2 per person allowance for dependents up to $6 per week and to increase the maximum length of benefits to 40 weeks. He also sought to delete the cut in employers' contributions sponsored by the compensation department.

These proposals not only were a step in the direction of taking the relief burden off local governments, but they also embodied the philosophy that it is desirable to maintain purchasing power during a period of depression and to provide benefits on such a scale as will encourage a higher standard of living.

Opposition to the program which I have outlined as well as to the Mullen amendments is based upon a philosophy of social security which I do not share, but which, I think, should be understood in order to grasp the forces at work. This philosophy dominates unemployment compensation in Wisconsin. It is expressed by Miss Elizabeth Brandeis, in an article entitled "What Road Is Forward in Social Security?" appearing in Problems of the Postwar World, a book edited by Prof. T. C. T. McCormick.

This article states the unique philosophy underlying the Wisconsin law, which the author shows is at variance with that held

by other authorities, such as Sir William Beveridge, the Social Security Board, Senator Wagner, the A. F. of L. and the CIO.

Miss Brandeis espouses what she designates as the functional theory of social security.

It is a part of this theory that the responsibility for unemployment relief should not be unified but should be kept on a lower level than unemployment compensation.

In the words of Miss Brandeis:

"Proponents of a distributional approach of social security have been greatly concerned because relief payments, especially in some States, were so far below unemployment compensation benefits or WPA wages. From the functional point of view (i. e., the view of Miss Brandeis), such differences were necessary and desirable."

Now in applying this doctrine, let us remember that in some States minimum unemployment benefits are as low as $5 per week regardless of the size of the family. Under the functional theory, relief payments should be even less than this amount.

In Wisconsin the highest possible unemployment compensation rate is $20 per week. An unemployed person, regardless of the size of his family, would be asked to take a cut as soon as he went on relief. This would apparently be in conflict with the present relief law, which requires that families be maintained according to the prevailing standards of health and decency. Welfare administrators say that, in some cases at least, this actually requires higher expenditures than are received as unemployment compensation.

How is a family to get along when on relief on a smaller amount than is necessary when receiving unemployment compensation? Perhaps when they go on relief children cease to cry when hungry, or to suffer when cold or sick.

In truth, relief standards ought to be higher than unemployment compensation standards. For while on compensation families still have a little money left over from the recently ended period of employment, their clothes and furnishings are still in good condition, and they can take care of emergencies out of their own funds. But on the meager compensation they get, their savings diminish and then when unemployment benefits cease altogether, they must continue to spend whatever funds they have until they approach a state of destitution.

When their clothes are threadbare, the bin is empty, and the cupboard bare, they go on local relief.

Now when they get to this tragic state, according to the "functional" theory, they must be given even less than they received in the form of unemployment compensation. If there is anything designed to drive people to desperation, it is the application of these ideas. Just at a time when their vitality has been impaired and their spirits are low, we are told that we should push them down another notch in the scale.

For what purpose? What functions do such low standards serve? Who benefits by them? Or are we to sacrifice our fellow citizens simply for some peculiar obsession?

There is, indeed, a strange spirit of asceticism brooding over the functional theory but, peculiarly enough, it is not those who preach this austere gospel who practice it—that privilege they reserve for the unfortunate members of society.

Let us have done with such theories and accept the common-sense viewpoint. Our aim should not be to treat the unemployed niggardly, to press crowns of thorns down upon their heads, but to provide for them in accordance with the productive powers of society.

This is not to make unemployment attractive or to relax the rule that he who will not work shall not eat, but to assert that one who is willing to work but is denied the opportunity is entitled to live in such a manner as is made possible by the productive power of the Nation.

Depression is created by lack of effective demand. Why, then, should we depress demand further at the expense of the unemployed and accelerate the downward movement of the business cycle? Will this help other workers who still have jobs? Will it help farmers? Will it help professional men? In whose interest is such a policy proposed?

The concept of social security as a glorified slumming expedition by magnificent and well-meaning ladies ought to be relegated to the limbo of archaic ideas to make way for the enlightened economic and social philosophy which modern science has made possible of fulfillment. That this may also coincide with the ethical ideals of a Christian society is not the least of its merits.

A humane view of social security which also coincides with modern economic theory may need implementation by new laws and institutions, but new instruments without a new spirit are not enough.

An institution is justified by its function; it should not be an end in itself, merely a means of making a showing in its own terms or to provide pleasant tasks for those connected with it. The Sabbath was made for man, not man for the Sabbath; and if, as I believe, the time has come when obsolete ideas, traditions, and values should give way to others more worthy of our loyalty, we can engage in the task of social reconstruction with confidence and pride.

## World Foreign Policy

EXTENSION OF REMARKS

OF

### HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George E. Sokolsky entitled "It Makes No Sense," published in the New York Sun of October 3, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THESE DAYS

(By George E. Sokolsky)

IT MAKES NO SENSE

How long can the failure of policy in Europe and Asia be covered up in widely publicized but meaningless platitudes? The meeting of the Council of Foreign Ministers in London has failed to accomplish anything at all although it was essential that this meeting should succeed. It has failed because the United States and Great Britain desire a democratic, liberal solution of the territorial problems of Europe, and Soviet Russia pursues a strictly imperialistic course, holding what she has taken no matter what hardships, physical and spiritual, such occupation imposes upon the native population. The Patton incident is symbolic of the confusions of policy and purpose and the inability of a straight shooter to discover why a Communist is preferable to a Nazi, when they are a pair of a kind. The United States is told, in effect, to keep its nose out of the Balkans, but Soviet Russia demands a voice in the American management of the occupation of Japan, and Senator PEPPER'S visit to Soviet Russia launches a campaign to encourage this country to lend Russia $6,000,000,000. There is no limit to what that country wants and no point at which it gives.

Then, in Asia, Americans discover, as though by accident, that half of Korea was presented to Soviet Russia. By whom? When? Apparently at Yalta, the apogee of appeasement, the American Munich. Half of Korea and all of Manchuria—because that country is dominated by its railroads—have been given to Soviet Russia for 5 days' fighting in the Japanese war. Then a vast campaign is conducted in the United States to malign General MacArthur, to lower his prestige among his own people, to give the impression that he favors Filipino Fascists and the Japanese, and he is booed by Communists in Madison Square Garden gathered to endorse Bill O'Dwyer for mayor of New York. Simultaneously comes the Russian demand for greater participation in the occupation of Japan. Who directed the booing of MacArthur in New York? Was it the ally who was demanding that his authority be circumscribed by a council and at the same time conducting a propaganda campaign to get this country to put up $6,000,000,000 of credit?

During the war, the United States was kept in ignorance for the sake of national security. The deals of Teheran and Yalta were covered by the opaque scum of national security. The horse trading at Potsdam was obscured by national security. But now we are at peace. Or are we? If we are at peace, why do we know so little about what is happening to our country, to its destiny, its dignity, its wealth, the lives of this and succeeding generations? Precisely why has this Council of Foreign Ministers at London failed? What is the complex of purposes that caused failure?

To say that London was just a dress rehearsal is to repeat a lie, for that meeting was called to write a peace treaty at least with Italy, Rumania, and Hungary. That could not be done. Why does not the President of the United States tell his people why nothing could be done at London? Why should we be kept in a roseate ignorance? The American people believe that this war is over, that the soldiers are coming home, that taxes will be reduced. But nothing is happening in world affairs to justify such an optimistic conclusion. But what is happening? Let Mr. Truman tell us.

Twenty million human beings are homeless. Twenty million innocent men, women, and children are homeless because they have been despoiled and abused by the politicians of Europe. They have a right to ask, How much longer? How long are those who were sacrified on the altar of Hitler's pride and power to continue to be sacrificed in the struggle among the Big Three or the Big Five or the big anything? How long are people to die while politicians seek formulas to fool their own citizens?

Let us have an honest report on all this from the President—a report that will stand up before the facts that do creep out, as though by accident, from beneath the dunghill of propaganda.

## The Drift Toward Chaos

EXTENSION OF REMARKS

OF

### HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "The Drift Toward Chaos," published in the Omaha (Nebr.) Morning World-Herald of October 15, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"THE DRIFT TOWARD CHAOS"

"In a world more broken than Americans realize" the English are "nearer than we in the drift toward chaos."

This simple statement with its implications makes unpleasant reading. It is contained in Anne O'Hare McCormick's report from London to the New York Times.

It is a bleak picture of postwar England that this outstandingly able and wise reporter affords us.

"She tells of "a people who live on rations and have to line up and stand waiting for every ration—food, shoes, the smallest article of clothing, an ounce of candy, a handful of cigarets. They queue up besides for newspapers, buses, places in lunchrooms, and suburban trains. London is one vast network of interwoven queues."

And what do they look like, these people standing for hours in line in the midst of a universal dearth, waiting for a chance to buy one of the simple necessities of life?

Here is the picture, in a paragraph:

"Certainly London today has the aspect of a proletarian capital. In appearance there is little to distinguish the rich, if there are any left, from the poor. All alike carry bags and bundles. All alike wear old clothes and talk of such things as sugar or makeshift curtain materials or the arrival of a ration of oranges."

Then this penetrating comment:

"There is not much inducement to keep up the capitalist system where most of the capital has disappeared. The people of Britain are nearer economic equality today than ever before."

The economic equality of a common poverty. The poverty of a society from which capital has all but disappeared—confiscated by taxation and shot away in war.

The process of confiscation has been under way for a long time—since years before the war. It explains why British industry sank year by year in efficiency and production. Why its techniques deteriorated, its machines became obsolete, why, as old wealth was exhausted, there came to be less and less of new wealth to divide. With capital bled white, the instruments and methods of production failed to keep pace with the needs of the people.

And so, with an exhausted capitalism—struck down by the powers of government—England has turned, as a last despairing recourse, to the ways of socialism. The means with which to finance the new order have been wiped out. But the ever-present help in time of trouble—the United States—remains.

The appeal is for the United States to do a large part of the financing—with a loan of $5,000,000,000 on top of the twenty-seven billions that went to England by way of lend-lease, and of the unpaid World War I debts.

The same appeal is coming from Russia—not only and for an even larger loan—but from practically every other European nation that is embracing communism or socialism, and those people are in quite as desperate condition as are the English.

Whatever else may be said of the situation, there is in it a wonderful compliment to American capitalism and free industry, which provided the dollars and the materials to win the war and is now urgently invited to provide the dollars and the materials to make the peace of Europe endurable.

Nor is this the whole of the strange situation.

For while an incessant propaganda at home urges that we give without stint, not alone to feed hungry Europe, but to reestablish its industry—on a Communist or Socialist basis—there are determined efforts to weaken, to strike down our own capitalist industry that has done the job. To turn, ourselves, to the onsweeping European system of economics and politics.

There is an old story about the drunk man trying to help another drunk man out of the gutter. He wasn't strong enough to do it. So he got down there into the gutter with him.

Regardless of how much we can do, should do, for Britain, Russia, and all the rest, should we join them in their political and economic gutter while trying to help them out of it?

It seems a fair question in a world of the utmost confusion—confusion of thinking as well as confusion of doing.

Poor old bedeviled Uncle Santa Claus.

## The Race Problem

EXTENSION OF REMARKS

OF

### HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18 1945*

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the distinguished columnist, Miss Dorothy Thompson, of New York City, written by Hon. W. Hume Logan, of Louisville, Ky. In this letter Mr. Logan, in a very clear, concise, and informative way, discusses a question of vital interest to the American people. Therefore, I as asking that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LOUISVILLE, KY., *April 24, 1944.*

Miss DOROTHY THOMPSON,
*New York City, N. Y.*

DEAR MISS THOMPSON: Your letter of the 17th instant received.

Having been entertained many times by you over the radio, I am willing to concede your sincerity in your efforts to improve race conditions.

There is no problem in America with any race except the Negro, and the war naturally brings the two races closer together since they have a common enemy. In the North where the colored people are scarce, it is a theory; in the South where in some parts the colored race exceeds the white, it is a real problem. We people of the South who have lived with them for generations, are the ones to suffer if we handle the situation wrong. We know more about the colored people and their needs than the North will ever know. There are those in the North with the very best of intentions who want to be helpful to both black and white, who undertake to meddle with this problem and by doing so are making it much harder for the whites of the South to solve. They are exciting jealousy and envy which never helped a man, a nation, or a race.

Of course you know that the northern people brought the Negroes here from Africa and sold them in the South, and then in the Civil War freed them. Now, they want to tell us how to live with them.

If some chipmunk were to undertake to criticize you and tell you how to write and speak entertainingly, you would tell him to go soak his head, and correctly so. Now, the activities of the North on the race question come in the same category. The inference is either that the South is down on the Negro and has no sympathy with him, or that the people of the South are not intellectually competent to handle the problem, and need assistance from the know-it-alls of the North, when the facts are that the South has a deeper sympathy for the Negroes and are doing more for them of real benefit than are the people of the North.

Things such as sleeping in the same bed at a hotel that a Negro occupied the night before do not elevate the Negro nor benefit the whites.

Ninety-five percent of the money necessary to carry on the excellent system of public education for the Negroes is contributed voluntarily and willingly by the whites in the South; the buildings and appliances are equal to those occupied by the white children, so that their chances for an education are equal to those of the whites. In addition to these free public schools, the whites have supplied colleges, so that an ambitious Negro for a small fee can secure a higher education. It is the education that the Negro gets at these schools and colleges that raises his standard; the mere act of sitting by the side of a white child while getting an education does not elevate the Negro. It is what the Negro learns while in school and how he uses it that improves his condition.

The white people of the South are trying to instill a race consciousness into the Negro, a desire to improve and elevate the colored race, to take pride in doing so. The North is teaching the Negro false pride and a desire to associate with and socialize with the whites rather than with their own race. In other words, the whites of the South are putting up the money and supplying the means for the Negro to improve himself and his race, and it is up to the Negro to accept the challenge. You can lead a horse to water but you can't make him drink.

The white people give the colored employment and every opportunity to build up a business or profession among their own people. The colored race has made wonderful progress, but they have yet far to go. Booker T. Washington, George Washington Carver, and Paul Dunbar are outstanding examples of what an ambitious and energetic colored man can do within his own people to uplift his race.

In my opinion, the one race should never socialize with the other. It leads to intermarriage and finally to the absorption of the weaker race—a thing certainly not to be desired by a colored man who has pride in his race. Some years ago a traveling man in Detroit told me that he and several other white boys very much admired a beautiful young white lady of their acquaintance, and that a colored man was also paying her attention at the same time. The colored man pleaded his case successfully and the girl married him. Now, if the people of the North like that sort of thing, let them keep it to themselves, and not try to force it on the South.

Certainly, Miss Thompson, there are many ways in which you can employ your great talents that will please and uplift rather than exciting discord and degrading your own race.

In closing, may I suggest that the Federal Council of Churches drop politics, preach the Gospel, and follow the example of Paul, who said, "When I came among you I was determined to preach nothing but Jesus Christ and Him crucified."

With the very best of good wishes, I remain,

Yours sincerely,

W. HUME LOGAN.

## Ernie Pyle

EXTENSION OF REMARKS
OF
**HON. HOMER E. CAPEHART**
OF INDIANA
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered by Mr. J. Frank Lindsey on October 13, 1945, at Indiana Gamma of the Sigma Alpha Epsilon fraternity at Indiana University, on the occasion of the unveiling of a portrait of Ernie Pyle painted by Mathias Noheimer. This portrait was presented to Indiana Gamma by Mr. Frank B. Shields, of Indianapolis, a fraternal brother. Ernie Pyle was a member of Sigma Alpha Epsilon during his collegiate career at Indiana University.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Were Ernie Pyle present today he would be deeply embarrassed by these rites in his behalf. Throughout his life he held an innate and sincere distaste for any place in the spotlight of public acclaim. Humility and friendliness were outstanding traits of this red-headed farm boy from Dana, Ind., who became affectionately known as the Hoosier Vagabond. These traits formed the foundation for his journalistic greatness. In peacetime it was reporting for the common people that drove him to all corners of the earth, and in War II it was selfless service for the GI that held him steadfastly to his war-reporting job, though he hated war from the depth of his great soul. But Ernie Pyle was more than a writer, more than an artist. He was a friend who dropped in to sit by the fireside, or in the fox hole, and chat about simple, moving things. And when he left after a little while, his presence and his personality lingered on, making the lives of those he touched warmer, and richer, and better.

While World War I was developing, the same harassing conscience that sent him off to World War II as his contribution to the world struggle sent him in 1918 to the University of Illinois to join ROTC. The armistice cut short this episode in his life, and the urge to become a journalist sent him the next fall to Indiana University and Sigma Alpha Epsilon. Despite his shrinking-violet shyness, Ernie got around at Indiana. He was an outstanding leader in his fraternity, became editor of the Daily Student, senior yearbook Arbutus, and Smoke Up. He belonged to Sigma Delta Chi, journalistic fraternity; Aeons, leaders in scholarship and activities; Sphinx Club, a social organization of campus leaders; Cootie Club, composed of World War veterans and leaders; and the Boosters and Travelers Club.

Ernie had courage and resourcefulness, too. In the spring of 1922 the Indiana University baseball team went to Japan. So he decided to hitchhike to Japan. He did just that, and added China and Manila to his itinerary. While in the Philippines he became interested in an orphan Filipino boy. With cash limited to wages he received as a cabin boy on the *Keystone State*, he brought back the orphan boy to this country, educated him, and remembered him generously in his last will.

There was also auto polo. The Indiana band needed money for a football trip to Purdue. So he promoted an auto polo match. With two Fords stripped to the chassis, and two huge steel hoops bolted to the frame to protect the drivers from spills, or turn-overs, he and a student buddy drove Methuselah to a smashing victory and bruises—but for cash for the depleted band fund. In the field of sports during 1922 the university inaugurated the student-manager system, and Ernest T. Pyle became the first senior manager of football, for which he was awarded the varsity "I."

After leaving the campus at Indiana, Ernie plunged into newspaper work and went from reporter in LaPorte, Ind., to managing editor of the Washington News. An attack of flu in 1935 sent him to Arizona where he started writing travel pieces, and said a prominent editor, "They had a Mark Twain quality and they knocked my eyes right out." Between then and 1941 he covered, in company with "that girl," Geraldine Siebolds Pyle, 200,000 miles on five continents, crossed two oceans, and delved into every country in the Western Hemisphere.

Then came the war and once more the Pyle conscience set to work. It seemed to him there was occurring a "spiritual holocaust" and that to detour around an opportunity of sharing in the most momentous happenings was simply to be disinterested in living. "At first," says Time, "he tried to be more or less a conventional war correspondent, covering news as others did. The change began one day in Africa when the press corps was invited to meet Admiral Darlan. He was hurrying across an air strip to the interview when a swarm of Stukas swooped down, and began spattering bullets around him. He dived into a ditch just behind a GI. When the strafing was over, he tapped his companion on the shoulder and said, 'Whew, that was a close one, eh?' There was no answer. The soldier was dead. Pyle sat through the interview in a daze, went back to his tent and brooded for hours. Finally, he cabled his editor he could not write the Darlan story. Instead he wrote about the stranger who had died in the ditch beside him. For days he talked of giving up and going home. But when the shock wore off he knew for sure that his job was not with the generals, and their strategems, but with the little one-time drug store cowboys, clerks, and mechanics who had no one else to whom to tell their stories."

As author John Steinbeck explained it, "There are really two wars, and they haven't much to do with each other. There is the war of maps and logistics, or campaigns of ballistics, armies, divisions, and regiments—that is General Marshall's war. Then there is the war of homesick, weary, funny, violent, common men who wash their socks in their helmets, complain about their food, whistle at Arab girls, or any girls, for that matter, and lug themselves through as dirty a business as the world has ever seen, and do it with dignity and courage, and that is Ernie Pyle's war. He knows it as well as anyone, and can write about it better than anyone."

Well, on his way from the European war to the Pacific theater of operations, Ernie was caught long enough to be awarded the honorary degree of doctor of letters by his alma mater—Indiana University. He said he was scared stiff to wear that cap and gown and seemed truly relieved with the 2 hours spent in a warm and informal visit with his own Sigma Alpha Epsilon chapter. There he reminisced at length, reviewed trophies won during his day in school, and explored the house from dorm to dining room.

Then to the Pacific and the Great Beyond. Millions of people at home have read his pieces avidly, wrote letters to him, prayed for him, telephoned their newspapers to ask about his health or safety. Abroad, GI's and generals sought him out, confided in him. Congress, the War Department, and the high command in the field rated him as a top morale builder, and scanned his columns for hints. The Nation, fellow citizens, and fellow newsmen heaped honors on him.

On a tiny isle in the far Pacific lie the mortal remains of Ernie Pyle. Of him it can be said he feared the sight of death, but wasn't afraid to die for the ideals of a free and rich life. His crusading spirit in behalf of the yearnings and aspirations of the common man of the world stands enshrined in the hearts of all members of Sigma Alpha Epsilon.

## The Spirit of the Revolution: Equal Opportunity for All

REMARKS
OF
**HON. HELEN GAHAGAN DOUGLAS**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, I have today regretfully introduced a bill to condition the tax exemption accorded to the Daughters of the American Revolution on their not denying the commercial use or rental of Constitution Hall by reason of race, creed, color, or national origin.

Remember what is inscribed on the Statue of Liberty, given us by France:

Give me your tired, your poor,
Your huddled masses, yearning to breathe free,
The wretched refuse of your teeming shore:
Send these, the homeless, tempest tossed, to me:
I lift my lamp beside the golden door.

The golden door is this democracy; this democracy that has grown up from 13 weak, sparsely populated colonies to the most powerful nation in the world. Today this democracy will be tested as never before in its history. If we meet that test we will give moral leadership to the peoples of the earth.

We cannot fail if we draw our source from the principles which have withstood the years and have carried us so far. We cannot fail if we are true to the spirit of our great Revolution. Our platform then and our platform now must be the same if we are to succeed in this perilous hour of mankind. True, we have never quite fulfilled the promise, but we have struggled toward it and we have come a long way.

We must now fulfill that promise.

The words sing out today as they did when in 1776 they were drafted by Thomas Jefferson:

We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed.

One can be justly proud to be a descendant of those who fought in that famous Revolution because it gave birth to this great Declaration, to the Constitution, to the Bill of Rights; yes, and to the pledge of allegiance to the flag: "one nation indivisible, with liberty and justice for all," which we and

our children offered daily not only as a pledge but as a prayer wherever we gathered in these last terrible years.

Yes; one can be proud. As a child, I fed on that pride. My grandmother was an active member of the Daughters of the American Revolution from the State of Ohio. Much of the joy of her life came from her association with that organization. I remember one of the stories she used to tell of one of the first men who died in the Revolution—Crispus Attucks. He was a Negro.

One can be justly proud that those before them in direct line helped lay the foundation for this society of free men. But this pride is meaningless if the spirit and word is lost.

It is not easy to be freemen, for to be free you must afford freedom to your neighbor, regardless of race, color, creed, or national origin, and that, sometimes, for some, is very difficult. Freedom is not won on the battlefields. The chance for freedom is won there. The final battle is won or lost in our hearts and minds.

No; freedom is not easy, but it is infinitely precious.

We cannot legislate equality, but we can legislate, and we must legislate, as freemen, equal opportunity for all.

## Disposal of Surplus Property to School, Health, and Hospital Organizations

REMARKS
OF
### HON. ELLSWORTH B. BUCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. BUCK. Mr. Speaker, a year ago, October 1944, the Surplus Property Act of 1944 became law. That law clearly set forth that States and political subdivisions and instrumentalities thereof would be given priority in the disposal of surplus property.

In the administration of this law, however, local governmental agencies not only have failed to receive priority but have actually been excluded from many sales and have even been asked to pay prices higher than those charged commercial customers. Section 13 implied that school, health, and hospital organizations would receive surplus materials at nominal prices. This provision of law has been ignored. Only now, after 1 year, does the Surplus Property Administration make the announcement that it is in process of compiling regulations to cover school, health, and hospital disposal. The pious hope has been expressed that these regulations will be ready in the near future.

The intent of Congress, Mr. Speaker, has been clearly flouted. I now read a memorandum on the subject which was prepared jointly by the commissioner of purchase of the city of New York and the superintendent of school supplies of the board of education of the city of New York:

Section 13 of the Surplus Property Act of 1944 states that the Surplus Property Board, now the Surplus Property Administrator, "shall take into consideration any benefit which has accrued or may accrue to the United States from the use of such property from any State, political subdivision." The section also states that surplus property shall be disposed of "so as to afford public and governmental institutions an opportunity to fulfill in the public interest their legitimate needs." Subdivision f of section 13 states: "The disposal of surplus property under this section to States and political subdivisions and instrumentalities thereof shall be given priority over all other disposals of property provided for in this act except transfers under section 12."

We have the authority of purchasing agents throughout the United States that so far as local governmental units are concerned, surplus property disposal in this country simply does not exist. They are excluded from many sales; they are offered useless merchandise, they are asked to pay prices far higher than are charged commercial customers.

Section 13 implied that schools, health and hospital organizations would receive surplus materials at nominal prices. This provision of law has been completely ignored. No regulations giving effect to an implementing of the section have ever been issued by the Surplus Property Board.

In May, 8 months after the law was placed on the books, the Surplus Property Board adopted Regulation No. 2, which was supposed to provide priorities for governmental agencies. The National Institute of Governmental Purchasing demonstrated before a committee of the United States Senate on Thursday, October 4, that Regulation No. 2 had become a dead letter, and that a revision of this regulation issued by the Surplus Property Board 2 weeks ago completely nullifies section 13 of the law.

It was the intent of Congress that local governmental agencies be given priorities in the disposal of war surplus materials as provided in section 13. Failure of governmental agencies to comply with the intent of the law constitutes a challenge to Congress. What will the Members of Congress do to see to it that the communities which they represent receive the consideration to which they are entitled?

## High-School Diplomas for Veterans

EXTENSION OF REMARKS
OF
### HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Second Lt. Hugh A. McNeill, Jr., of Billings General Hospital, Fort Benjamin Harrison, Ind., under date of October 6, 1945, dealing with a plan for issuing high-school diplomas to veterans.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PUBLIC RELATIONS OFFICE,
BILLINGS GENERAL HOSPITAL,
*Fort Benjamin Harrison, Ind.,*
*October 6, 1945.*

Hon. HOMER E. CAPEHART,
*Senator from Indiana, Capitol Building, Washington, D. C.*

DEAR SENATOR CAPEHART: The Indiana State Department of Public Education, Dr. Clement T. Malan, superintendent, is doing something for the veterans that we feel should have widespread publicity. This is something concrete, something in the hand—not a promise or a plan on paper—this is here right now—a fact.

The State department of public education has made it possible for veterans to receive a high-school diploma and to date some 134 men and women from Billings General Hospital have received diplomas under this plan. Seventy-three of that number were out-of-State individuals who were given diplomas from Arsenal Technical High School in Indianapolis.

The plan is this: The soldier takes a general test, under strict supervision, and, if he passes, and his character and conduct are worthy, he is given the diploma either by his home-town high school or Arsenal Technical High. The individual must work for the honor; there is no diploma factory idea in the plan. The diploma is for work done and is recognized everywhere.

Everyone is enthusiastic about the plan and we at Billings General Hospital are more than grateful. The State of Indiana has earned the gratitude of all concerned, for they have put words into action, something badly needed these days.

Am not sure that I should be writing in this fashion, but since there is no security involved, no complaint to register, I see no harm in telling you about it that you may point out to others the manner in which your State moves to be of help to the veterans.

Enclosed is a copy of the Fifth Service Command News with a story and picture concerning the latest Purple Heart graduation. See pages 1 and 7. Sending a program and two pictures taken at the exercises.

Thanks and with all best wishes, I am
Sincerely yours.

HUGH A. MCNEILL, Jr.,
*Second Lieutenant, MAC, Public Relations Officer.*

## Our Liberals and MacArthur

EXTENSION OF REMARKS
OF
### HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Liberals and MacArthur," published in a recent issue of the Washington Times-Herald. The editorial is self-explanatory and supplements the statement of the position which I took with respect to our foreign policy and in support of General MacArthur.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR LIBERALS AND MACARTHUR

Gen. George S. Patton, Jr., was removed recently from command of his famous United States Third Army and given charge of the paper Fifteenth Army. In plainer English, Patton was kicked out of his command in disgrace, after hanging up as brilliant a record in the German war as was hung up by any Allied commander of like rank.

Patton was removed and disgraced largely because "liberals" in the United States did not like the way he talked about his postwar job of running the military government of Bavaria. Patton openly said he was using petty civil service officials in the German towns regardless of their previous Nazi party connections, because they knew their little

jobs and he considered it essential to keep town and city machinery running.

The German ins and outs, said Patton, reminded him of the Republicans and Democrats at home. When Patton made that remark the liberal hunt for his scalp was on in full cry. The sensible thing to do when a man in such a position talks indiscreetly is for the President or Chief of Staff to send him a quite "don't talk so much, Georgie" message. But Patton was removed in disgrace, and our liberals rejoiced. Why?

Well, our liberals are trying to get the official scalp of Gen. Douglas MacArthur as Supreme Allied Commander in Japan; and it looks as if the same motives and hates are at work in MacArthur's case as were at work in Patton's.

United States "liberal" dislike of MacArthur goes back to the eviction of the bonus marchers from Washington in the Hoover administration. MacArthur was Chief of Staff at the time. He was ordered by the President to get the bonus marchers out, and he did it in orderly fashion and without killing anybody. Whether our "liberals" feel that MacArthur should have killed a lot of people, or have let the bonus marchers take over the Government, we don't know. But they have had it in for MacArthur ever since.

Their dislike of him has intensified manyfold since Bataan. Every time MacArthur took another long jump toward Japan, sewing up large Japanese forces in his wake, "liberal" hatred of him rose several degrees in temperature.

MacArthur and Nimitz between them were able to eliminate most of the old Army-Navy mutual dislike and get superb cooperation from all their forces for the winning of the Japanese war.

At last MacArthur led a big invasion army into Japan—the first time such a thing has happened in 2,000 years of Japanese history. More extraordinary still, he was able to accomplish this without firing a shot. Had the Japanese stood and fought in their home islands, we would have suffered hundreds of thousands of casualties, and might have been thrown out of Japan again.

Maybe our "liberals" are not satisfied with our World War II total of about 1,070,000 casualties, and would have liked several hundred thousand more. Whatever their reasons, they hate MacArthur more fiercely than ever, and are currently trying to get him removed and disgraced just as they got Patton.

MOSCOW VERSUS MAC ARTHUR

It may be coincidence, or it may not; anyway this "liberal" line agrees exactly with the Russian propaganda which has been building up against MacArthur since the Japs quit. Russia has grabbed huge hunks of eastern Europe, and won't even let Allied delegates into those areas to look around. Yet Russia, which played no part in bringing Japan to defeat, now is trying to cut itself into a share of the control of Japan. From there, obviously, the next step would be to demand a share in control of all those Pacific islands we took from Japan.

To get back to our "liberals"—we see them, then, attacking two of our best generals of World War II, and largely because these men were such good generals. Why? Is it the "liberal" conviction that when you get into a war you should try to lose it instead of win it, and therefore should keep your best fighting men from getting a chance to put out their best efforts?

"LIBERAL" OBJECTIVES

We think the pattern goes deeper than that. Looking over the "liberal" campaigns against MacArthur and Patton, with their technique of trying to label these great war leaders "Fascists," we think our "liberals" are out to overturn the American system and Government—just as are the American Communists from whom our "liberals" get so many of their ideas and so much of their strategy.

## America Must Be on the Alert

EXTENSION OF REMARKS

OF

## HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Baltimore Sun:

COMMUNIST PARTY HERE REORGANIZED

(By N. T. Kenney)

WASHINGTON, October 17.—Evidence of the revival of the Maryland Communist Party was received by State congressmen today in the form of a letter asking abolition of the House Committee on Un-American Activities.

The Communists in Maryland, along with those in the rest of the Nation, had disbanded as a political party some while back, and were in existence only as a sort of educational organization. Recently, however, the national group reinstated itself as a political group, threw out Earl Browder, its erstwhile leader, and started up again under the leadership of William Z. Foster.

Now, it appears, the Maryland group has re-formed, printed stationery, and is urging courses of action upon the Maryland legislators. Only two names appear upon its letterhead, one that of Albert E. Blumberg, as vice chairman, and the other Al Lannon, chairman.

RAN FOR GOVERNOR

Lannon signed the letter asking abolition of the House committee. Blumberg will be remembered as a long-time State Communist leader and as former Communist candidate for Governor.

The letter was reminiscent of the prewar statements of the local Communists. Drawn up in the form of a resolution, it claimed that the "Committee on Un-American Activities has shown itself from the outset to be a continuation of the infamous Dies committee."

"This committee," it continued, "by its subpenaing of leaders and members of the Communist Party, shows that it intends to follow the same path as the Dies committe, beginning by attacking the Communists, but extending its persecution to trade-unionists and progressives generally."

POLICIES ASSAILED

It deplored this tendency in this time both of national domestic crisis and "when our Government's foreign policy is taking a grave turn toward aggressive imperialistic expansion at the expense of the democratic peoples of the world."

"We believe the activity of this so-called Committee on Un-American Activities," it closed, "is part and parcel of the policy of reactionary forces in the United States to smash the labor and progressive movement."

Representative D'ALESANDRO, Democrat, of Maryland, lost no time in issuing a statement destined to show where he stood on the question.

"SINISTER" FORCES HIT

"There is abundant evidence," he said, "in the files of Congress to show that we have sinister and mischievous forces and influences within our borders seeking to inject into the minds of our children and less-educated adults destructive doctrines, and to incite rabid racial, social, and religious hatreds.

"Despite the fact that we enjoy the highest rights and privileges and the highest standard of living in the world, there are undesirable aliens in our country who would tear down these rights and privileges.

"America has too long closed its eyes to those who while enjoying the best that is in our land have been secretly plotting its downfall. The Communist, the Fascist, and Nazi in our midst, bent on spreading discontent, must be ferreted out and exposed.

CURB IS DEMANDED

"Freedom of speech, freedom of opinion, we must preserve. But the abuse of these liberties by those who are boring from within, and who seek only the destruction of the American way of life, must be curbed by a firm Government hand and by a sound public opinion."

Representative FALLON, Democrat, of Maryland, simply routed his copy of the Communist resolution to the Committee on Un-American Activities itself and informed the Communists he had done so.

LANNON IN MARYLAND ABOUT 3 YEARS

Al Lannon has been in Maryland about 3 years, identified with either the Communist Party or the Communist Political Association all of that time.

He came here from New York, where he was State organization secretary of the Communist Party for several years. When he first came here, he was secretary of the Communist Party. He later became president of the Communist Political Association, when the organization took the place of the party several years ago.

JOINED PARTY IN RUSSIA

Some months ago, when there was a reorganization, he became chairman of the Communist Party.

He was born in Brooklyn, N. Y., on September 14, 1907; was a seaman for 14 years, and joined the Communist Party in Russia, where he had gone on a voyage.

He figured in disputes with the Reverend John F. Cronin, S. S., in the spring of 1944 when Father Cronin said Communists were trying to control labor unions in shipyards and war factories.

## Treatment of Veterans in Mental Hospitals

EXTENSION OF REMARKS

OF

## HON. PAT CANNON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. CANNON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the newspapers throughout the Nation reported in July of this year the killing of two Navy enlisted men who were patients at St. Elizabeths Hospital, Washington, D. C.; and

Whereas said killings were presumably committed by attendants at this Government mental hospital; and

Whereas the newspaper PM had earlier exposed great violence and brutality at the veterans' mental hospital at Lyons, N. J.; and

Whereas the manager of the veterans' mental hospital at Northport, Long Island, N. Y., has testified to many acts of brutality committed by attendants at the institution under his control against helpless inmates; and

Whereas, the sworn statement of Basil H. Pollitt, a Miami attorney (who is a former special assistant to the Attorney General of the United States and who is also a past national judge advocate of the Marine Corps League), has revealed numerous instances of

terrible brutality by attendants against helpless inmates at St Elizabeths Hospital and at Lyons, N. J., and also at the veterans' mental hospital at Perry Point, Md.; and

Whereas it is common knowledge among businessmen in the Miami area that numerous returning discharged World War II veterans take a job and then are unable to hold it for more than a few days or weeks, due to the mental strain caused by battle fatigue; and

Whereas it is the policy, not only of the American Legion but also of the other veteran groups, to make certain that these young men of World War II receive the very best care and treatment medically that a grateful Government can supply; and

Whereas the affidavit of Basil H. Pollitt proves that this intolerable condition of brutality by attendants to inmates of mental hospitals is not a new thing, but is a chronic condition of long standing: Now, therefore, be it

*Resolved by the Harvey W. Seeds Post, No. 29, Department of Florida, American Legion, in meeting regularly held at the post home in Miami, Fla., on September 14, 1945, as follows:*

That the House World War Veterans' Committee continue its investigations of acts of brutality committed against inmates who are veterans in Government hospitals and specifically that it widen the scope of its inquiry so to include St. Elizabeths Hospital.

That swift and stern punishment be meted out by the courts to all persons responsible for acts of brutality committed by Government employees against inmates of veterans' mental hospitals, no matter how high the rank or position of the guilty person may be.

That the House World War Veterans' Committee permit Basil H. Pollitt to testify in detail as to all the charges made by him in his sworn statement at as early a date as it may be practicable by the committee to hear him.

That copies of this resolution be sent to Gen. Omar Bradley, Administrator of Veterans' Affairs, to the two United States Senators from Florida, to the Congressman from this congressional district, and to all members of the House World War Veterans' Committee.

Unanimously adopted this 14th day of September A. D. 1945.

J. MARTIN DEER,
*Commander.*
JERRY GANZ,
*Adjutant.*
LYNN M. SHAW,
*Chairman, Resolutions Committee.*

## Socialization of Industry in England

EXTENSION OF REMARKS

OF

### HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a reproduction of the Round Table column by Wilbur J. Brons, published in the September 11, 1945, issue of the Chicago Journal of Commerce.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

You can be sure that the recent speech of Herbert Morrison, Lord President of the Council of Britain's new Government, will not be widely reprinted in the press of this country. Nevertheless, Mr. Morrison's remarks deserve widespread circulation because they bear so directly upon our own major problem of the moment.

Morrison spoke at Leeds, Englands, before the National Conference of Labor Women. He received very little publicity from the American press associations, but several special correspondents—including one for whom the writer can vouch personally as a thoroughly objective reporter—cabled the substance of the speech.

The British cabinet member addressed himself to a fallacy which is becoming even more popular in this country than it has been in England. This is the somewhat infantile argument that the biggest problem of the peace will be to increase industrial efficiency so that the individual worker can pass more hours loafing in the sun. With this delightful buncombe goes the corollary premise that the chief obstacle in the path toward Utopia is backward management. Millions of Americans seem to have swallowed this nonsense hook, line, and sinker.

Mr. Morrison came right out in the open with a challenge to his country's new Labor Government, of which he himself is a part. He told the unions that their restrictions on production would have to come off. He warned them that the tendency toward shorter hours will have to be reversed, adding that the unions were 100 percent wrong in assuming that management owned all the blame for laggard industrial efficiency in Great Britain.

Socialization alone, he said, is no magic cure. It won't be enough for people merely to depend upon the Government to assure them larger participation in the fruits of production; workers themselves will have to produce the goods by which England hopes to raise her standard of living. In other words, if British workers have deluded themselves with the hope that a Labor Government means complete freedom from all industrial discipline, they are doomed to disappointment.

The speaker said as bluntly as he knew how that if the British people want more, they will have to produce more. And he warned that the socialized segments of industry in Britain cannot live on the proceeds of taxation of unsocialized industry because to attempt to do so would kill all incentive to produce.

As we remarked at the beginning of this discussion, Morrison's remarks deserve wider circulation in this country than they are likely to get. Some of our own Government agencies, including the Department of Labor, would do well to write to London for a copy of the speech and refer to it frequently when they are about to make some profound statement about how to improve living standards in the United States.

## Full Employment Bill

EXTENSION OF REMARKS

OF

### HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. RICH. Mr. Speaker under leave to extend my remarks in the RECORD, I include the following statement made this morning before the Committee on Expenditures in the Executive Departments by George S. Benson:

My name is George S. Benson. I am president of Harding College at Searcy, Ark. I am also chairman of the executive committee of the Arkansas Public Expenditure Council, a taxpayers' organization. I came here as a private citizen who is interested in the future of our country. I have been authorized by officers of the Arkansas Farm Bureau and by officers of many other Arkansas organizations to say that these organizations are in agreement with the principles of my testimony. I have been asked also to represent the Arkansas Public Expenditure Council.

With regard to the full employment bill recently passed by the Senate (S. 380), I wish to confine my testimony to three items in the bill.

First. This bill states in section 2 (c): "The Federal Government has the responsibility * * * to assure continuing full employment, that is, the existence at all times of sufficient employment opportunities, for all Americans able to work and desiring to work."

When Mr. Albert Goss, master of the National Grange, testified before the Banking and Currency Committee of the Senate, he recommended that this be changed to read: "It is the responsibility of the Federal Government to pursue such consistent and openly arrived at economic policies and programs as will prevent monopoly and encourage economic returns to its citizens in approximate proportions to what each contributes to the general welfare, as the basic means of securing the highest level of consumption of consumer goods, and personal services, thereby assuring the highest level of employment opportunity through private and non-Federal investment and expenditures."

I should prefer amending it so as to read: "The Federal Government has the responsibility to assist always in providing conditions which will enable competitive private enterprise to provide at all times sufficient employment opportunities for all Americans able and willing to work."

In event it is not so amended, I would then suggest the change which I have just read, recommended by Mr. Goss.

Second. I would eliminate section (3), which provides that the program of the Federal Government shall provide for an income for the aged sufficient to enable them to maintain a decent and healthful standard of living, and promote the retirement from the labor force of the older citizens.

This section has come to your attention many times vested in various verbiage. It is probably best known as the Townsend plan.

Third. I would eliminate section 4, which requires Federal investment and expenditures for the purpose of providing full employment.

SOME GOOD FEATURES

In my opinion, this bill is neither wholly good nor wholly bad. It contains provisions which can help America reach new heights of prosperity for all of its citizens, and it also contains provisions which can destroy the main spring—that motivating force which has brought to America a measure of prosperity never attained by any other nation anywhere at any time.

Briefly, the bill provides three things, namely:

1. Cooperative planning.
2. A guarantee by the Federal Government that even though an individual is a lazy, untrustworthy drunkard most of the time, yet whenever he sobers up and looks for a job, one will be waiting for him.
3. An income for old people, usually called the Townsend plan.

I strongly approve of the principles behind the first item mentioned, "cooperative planning," which in this bill is called the national production and employment budget. My experience does not qualify me to discuss this portion of the bill in detail. I do hope, however, that you will see fit to retain these principles of planning and that Congress will create a Joint Committee on the National Budget.

Naturally, I am in sympathy with the idea of continuing full employment and want to see it assured in the fullest possible measure. I, therefore, wish to urge the elimination of section 2 (d) 3 known as the Townsend plan because I believe it would bankrupt the country, undermine the spirit of self-reliance, which is responsible for America's greatness, result in lower wages, and more unemployment. I suggest that this subject be referred to the groups in Congress and in Government who are studying social security.

I also urge the elimination of the statement that the Federal Government has the responsibility to assure continuing full employment for all Americans able to work and seeking work, and I urge the elimination of section 2 (d) 4 which underwrites public works and other Federal expenditures for the purpose of providing these jobs. I believe these sections would weaken national morale and actually prevent continuing full employment.

SLUR AT OUR BEST PEOPLE

Gentlemen, I believe that if Congress passed a bill stating that our Government has the responsibility of providing a job for everybody able to work and desiring to work, it would be resented by a majority of our citizens. It would be received as a direct, personal insult by every independent, self-reliant individual in this country, both native and naturalized.

I was born on a frontier farm in western Oklahoma, when our nearest railroad was 60 miles away. My father worked hard and the whole family worked. After finishing grammar school, I was granted permission to leave home, to attend high school and college. Neither one existed in our community. I had the privilege of earning my own way while acquiring an education. We all rejoiced in this, and our other opportunities. Not a member of the family thought Uncle Sam or anyone else owed us anything.

If somebody had spread a rumor in our community that my father was no longer willing to be personally responsible for himself and his family, that he thought the Government ought to accept the responsibility of providing him a job at good wages, he would have felt indignant. He would have been disgraced.

From my position as president of Harding College I know that whenever you place responsibility upon the Federal Government to provide jobs, you will be injuring American citizenship; injuring a constantly increasing proportion of them, just as much as if you cut off a leg and substituted a crutch. This is a strong statement but it is one which I can prove—one which I have seen demonstrated hundreds of times while serving as head of a college.

Most of the young people who attended Harding College during the great depression had to work for a part or all of their college expenses. They knew that finding a job after leaving college was their own responsibility. On the other hand, Harvard and Yale enrolled many sons of wealthy men, who felt confident that when they graduated, the responsibility of finding a job was dad's, not theirs. When these young men graduated in the midst of a long depression and dad couldn't get them jobs they were helpless, knowing neither how to find a job nor make one for themselves. Many of them were jobless for months; even years.

A POINT OF PRIDE

Do you know how many of the graduates of Harding College failed to find jobs or make jobs for themselves during the depression? Not a single one. Everyone who wanted to work found work or made work. Why could every Harding College graduate do this while many graduates of great universities could not? What was the difference? Simply this: We emphasized to our students every day the necessity of self-reliance, individual responsibility, and individual initiative. We did in student assembly and in classroom what was done in almost every American home in the days of Abraham Lincoln.

Suppose, however, that our students had been taught at home that it was the responsibility of dad or of Uncle Sam to find jobs for them, and we had not corrected this false teaching. What would have happened when they graduated in 1934 or 1938? They could not have earned a living; just as the person who has never tried to stand on his own feet can't walk. I wonder how many members of this committee understood at an early age that they would have to find their own jobs and earn their own living.

I cannot believe that any man would be a stronger, more capable, more self-reliant citizen for being taught in childhood that, regardless of what he did, the Government would always have a job for him; that no matter how often he was fired for drunkenness, for dishonesty, or for laziness, the job would always be there whenever he became disposed to return to work and was able to work.

For Government to assume the responsibility of providing a job for each and every individual is ridiculous and injurious.

It would create almost immediately a nation of dependent weaklings. It would destroy initiative, limit production, and reduce the national wealth.

Gentlemen I say if this Congress tells the world that the American people are no longer self-reliant, tells the world that our two-fisted, two-legged upright Americans have accepted the old crutch upon which decadent civilizations have traditionally hobbled to their graves, it will administer the most damaging blow that this generation of mankind has ever sustained

These words are not guesses. I am not dreaming. The proof of these statements is available to everybody. If you want an illustration, look at the pathetic remnants of that sturdy race of Americans who were here when the Pilgrims landed. As wards of Uncle Sam, without a thing to worry about, they are moving through decadence toward extinction.

WHERE CAN I" STOP?

If this Congress announces to the world that it is the duty of the Federal Government to guarantee to all workers, continuing full employment, we must assume that by next year the Congress will be ready to make the guaranty all-inclusive by assuring every farmer, every merchant, every businessman, and every corporation a continuing annual profit. If not, why not?

Gentlemen, if you are considering such a fundamental change in our established philosophy—a change from self-reliance to dependence upon Uncle Sam, let us look for a minute at what we have achieved under our present way of life, and view what we would be giving up

ACHIEVEMENTS OF PRIVATE ENTERPRISE

Self-reliance in America has developed the greatest wealth this world has ever known. For instance, at the beginning of World War II, the national income of America exceeded the combined national incomes of the six next highest countries. America's average per capita income was twice that of any other great country. We had more young people in high school and college than had all the rest of the world put together. Industrial wages in America in 1939 were twice as high as in England, Germany, or France, and five times as high as in Russia. Agriculture made use of abundant machinery, making it possible for one man to farm 100, 200, 300, and even 400 acres. An American farmer produces much more than he and his family can consume. He exchanges his surplus for manufactured things—clothing, an automobile, a telephone, a refrigerator, a radio. Both labor and agriculture in America have enjoyed the highest standards that wage earners and farmers ever have been known to experience.

In turn, industry has created material wealth in great abundance. The average American is richer than was Solomon, who with all his wealth, didn't have enough money to buy a daily newspaper. Solomon in all his glory had no electric lights, no telephone, no radio, no refrigerator. The royal chariot was horse-drawn.

TIE NOTHING TO FAMILY TREE

This singular American prosperity is not due merely to our heritage, excellent though it is. We are chiefly of European stock. Our unique achievements are not due merely to our varied natural resources, abundant as these resources are. The American Indians had the same resources for centuries without creating any considerable wealth. England, since the destruction of the great Spanish Armada, has not wanted for her share of the world's natural resources, yet even in England wages have never been more than half as high as the scale developed in our country. Russia has as wide a variety of natural resources, and twice the quantity that we possess. She has about 160,000,000 people and much more territory than we have. If it were merely a matter of resources, Russia would be paying higher wages than we, and would have attained a higher standard of living than America. But no—her wages are only one-fifth as high as ours and her standard of living correspondingly low.

IT IS OUR SELF-RELIANCE AND FREEDOM

What's different in America is our measure of individual initiative, freedom, and liberty. Under the freedom guaranteed by the American Constitution, each man is at liberty to dream his own plans and to materialize his own visions. Every man is free to set about fulfilling his aspiration. Moreover he is individually responsible for its fulfillment. Exceptional individuals, who have struck off from the beaten path and accomplished what no one else thought possible, are the men who have developed our American way of life. Henry Ford is a good example. When he resolved to pay $5 a day for common labor, other employers thought he was crazy. When he decided to make an automobile that farmers could afford to buy, people laughed at the idea. But Ford succeeded in making and selling the inexpensive automobile. He revolutionized private transportation in America. Just such accomplishments by free enterprisers have made America different and better.

No country with a government guaranty of jobs, which by its very nature requires a government-planned economy, ever has achieved an average per capita income half as high as America's. No country, using even a partially government-managed economy, has achieved income more than half as high as ours. Our self-reliance, our freedom, our liberties—these are the secret of our prosperity.

It was during the days of Athenian democracy that Greece attained her highest achievement. It was during the days of the Roman republic that Roman justice reached its zenith; when men sought Roman citizenship; bought Roman citizenship It was following the Magna Carta that England developed her great empire. It was under a still greater measure of freedom, liberty, and self-reliance in the Western Hemisphere that man's highest economic achievements have been realized.

Gentlemen, I have mentioned some of the things which self-reliance and the system of free competitive private enterprise have created in this country. I should hate to see us take even one step in the direction of foreign philosophies. I do not want to see that foreign camel get even his nose under our tent. I know that when we accept, as a national policy, a statement by Congress

that Uncle Sam has the responsibility of providing jobs for all able to work and seeking work, we will have taken the first step.

THEN COMES REGIMENTATION

The second step follows naturally and certainly. In order to guarantee successfully, continuing full employment, any nation finally will be compelled to control production and consumption. This would mean telling each manufacturer and grower what to produce and how much. It would mean telling each consumer what to buy and how much. It would mean permanent price fixing and rationing. It would finally mean controlling the location of factories and the compulsory assignment of workers. It would mean telling our children what training they may get and what jobs they may enter.

This whole question is extremely real to me. It is not based upon hearsay or theories read in books. I witnessed extreme poverty during the 11 years I lived in China, poverty which was caused solely by governmental policies. There were ample natural resources but there was no opportunity for individual achievement. Men of means and vision buried their money in the ground instead of using it to make jobs and produce goods. It was necessary, therefore, to import coal, oil, and iron, even though all three lay in abundance beneath the soil of their own country.

From personal observation under 15 flags, it is plain to see that the chief hindrance to greater prosperity in every backward country is lack of individual freedom and individual opportunity. When I think of how regimentation and poverty go hand-in-hand, I am extremely anxious that the United States shall not take a single step in the direction of these foreign ideologies.

Gentlemen, I regard very seriously the trend already evident in this country toward state socialism; with our younger generation the following slogans are being constantly popularized: "Planned economy," "Production for use not for profit," "Guaranteed jobs and guaranteed wages," "Ceilings on incomes," etc. The youth of today are not being told frankly, however, that these ends can be attained only through Government control of industry, agriculture, and transportation. They are not being told that it means regimentation—the end of individual opportunity.

Gentlemen, this attack on our American way of life is more dangerous than the frontal attack made by the Axis Powers, which we crushed only with great loss of blood and treasure. Allow me to illustrate:

AN INSIDIOUS ENEMY

When our soldiers landed on Guadalcanal, they were attacked by Japanese bombers, naval guns, and land troops. All of these powerful weapons of opposition, our men succeeded in locating and in destroying.

But there was a very different enemy; one that came near defeating our men. I refer to mosquitoes and other small insects. These worked quietly, but with devastating results. Each bite appeared insignificant, but a parasite or virus was planted in the blood stream. Malaria, yellow fever, and other diseases followed and took their toll in life, destroying morale. These were the same enemies that defeated the French in their attempt to dig the Panama Canal. General MacArthur realized the seriousness of these little enemies and made a vigorous and successful campaign against them, and a war was won.

I believe we can properly compare the dangerous malaria mosquitoes to the insidious campaigns of those who would substitute production for use not for profit, guaranteed jobs, ceilings on individual incomes, etc., for free competitive private enterprise. If this bill were enacted in its present form, it would greatly help our most dangerous enemies.

You can imagine how in each community they would point out the comfortable home or the prosperous business of a man of character—someone who had started without capital and acquired financial independence through a life of toil, sobriety, and thrift—and say, "Now look at that man. He has no more right to that home or that business than you have. Congress is going to use his savings, and those of other men like him, for public works that will guarantee good jobs for all of you. You will not need to be thrifty or industrious. You will not need to be honest or reliable. You won't even have to be a steady worker. You can drink, squander, and gamble. But any time you do want to work and are able to work Congress has guaranteed that a job will be waiting for you."

This bill in its present form would thus help the little enemies, boring from within. Just as jungle fever produces, first, indifference, then laziness, and, finally, death, a guaranty of jobs for all would first kill ambition, then produce laziness, and, finally, destroy the greatest economic order history has ever known.

THINGS WORTH HAVING

I want to see full employment, but I also want to see good wages and a progressively higher standard of living. I believe that if the good sections of this bill are retained and the changes discussed on pages 1 and 2 of this report are made full employment and a continually higher standard of living can be obtained. It is my firm conviction that America already has the possibilities of full employment, higher wages, and a higher standard of living than this Nation has ever experienced. I say this because we have—

1. Fifty-percent greater productive capacity than ever before.
2. Adequate raw materials.
3. Adequate labor.
4. The know-how.
5. The market.

But history shows that all of these have little value if we lose the spirit of self-reliance and individual initiative.

Continuing full employment must come through cooperation of all; through a feeling of mutual responsibility. Only two fundamental steps are required at this moment to make our superior private-enterprise system work so smoothly that we shall have an abundance of jobs, good wages, and a still higher standard of living than even America has yet known. This is what the American public wants and what it deserves.

1. First, we need the right taxes to make the most jobs and produce the most goods. The present tax structure which was created to take the profit out of war will certainly take the prosperity out of peace, unless it is revised.

2. Second, we must have improved industrial relations. Instead of creating discord, we must promote peace between capital, labor, and agriculture. Instead of fighting one another, they must be shown that their real objectives are identical. Not one of these three groups can profit for long at the expense of either or both of the others.

THINGS EVERYBODY WANTS

Agriculture can prosper only when labor is fully employed and able to eat well. Labor can prosper only when capital is encouraged to invest freely in good tools and equipment for higher and higher production per man-hour. Industry can prosper only when both labor and agriculture are able to buy lots of goods. So with identical objectives the three groups should sit down around a common table voluntarily and work out their mutual problems to their common interest. That is the American way. The Federal Government can create the atmosphere in which it will succeed.

With the proper tax structure and with industrial peace, private enterprise, founded upon American initiative and self-reliance, will function in this emergency better than any other system man has yet invented, assuring for our generation and for posterity the best living conditions that man has ever experienced. That will give us something far better than a Federa' guaranty for full employment through a plan loaded with threats of state socialism and backed by a nation that would soon be in debt for its total intrinsic worth.

The responsibility of Congress is great in this emergency, with so many conflicting proposals being presented. May God give you wisdom to pilot safely through this crucial hour, the world's greatest Nation. May you ever keep in mind that individual freedom is God given. Only a free people can become or long remain a great people. It has been well said that "when a man becomes imbecile, his friends place him in an asylum. When a people grow decadent and imbecile, they place themselves in the hands of the state."

May we preserve freedom of individual opportunity, with prosperity for all, rather than turn into the road which leads to state regimentation with poverty for all—this is my prayer.

## Controlling Atomic Energy

EXTENSION OF REMARKS

OF

### HON. BRIEN McMAHON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Controlling Atomic Energy," delivered by me on Tuesday, September 25, and broadcast over the Columbia Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Seven weeks ago the bomb-bay doors of a B–29 opened over Hiroshima and a few pounds of uranium encased in some steel gently swayed toward the ground. Before it landed this object exploded in the most fateful and terrible explosion that the world has ever known.

A previously unscarred city was leveled off, most of its population consumed in the blast. You have undoubtedly seen pictures of it in the news reels and the newspapers.

When we recovered from the impact of the news of this monster, our people began to think about the future of atomic energy in war and in peace.

What are we going to do about it?

Obviously, we must bring to the handling and solution of this problem our best intelligence, brains, and thought.

On how it is used, on how it is controlled, may well rest the fate of every man, woman, and child in America; in fact the very fate of our country will be involved in our decision.

Since I introduced the first bill into the Senate of the United States to deal with atomic energy, it might be helpful to you if I quickly reviewed my thinking and reasoning which resulted in the McMahon bill on the subject.

I do not claim perfection for this bill. It may well be improved on further study and consideration, which I am sure the Congress will give it. But I introduced it because I wanted to get started immediately, now, on the consideration of the most important, the most momentous, question of our whole national history.

The problem seems to me to be more easily considered if we divide it into two parts.

First, how is atomic energy to be used in America in peacetime?

Second, how are we going to prevent the power which we unloosed on Japan from being unleashed on us, to our destruction, by some future aggressor?

Let us examine first, as I did, the question of the peacetime use of atomic energy.

Every scientist with whom I have talked has sensibly refused to be nailed down to any predictions as to the date when peacetime use of atomic energy will be accomplished. And yet every one of them say they are certain that on some not too distant day atomic energy will be the source of all of our power, which will drive our trains, our autos, our ships, and our planes, heat our homes and run our factory machines.

Some guess this will happen in 5 years, some 10, some 25.

I am satisfied that we can't stand by and gamble America's economic stability on the fact that it won't be done, because the odds apparently are overwhelmingly in favor that it will. In fact, it must be done. The American people have already invested $2,000,000,000 in splitting the atom to destroy. That investment if turned into peaceful work could bring a fabulous return to the whole human race in health and prosperity.

It was immediately apparent to me, however, that the unregulated and uncontrolled displacement of coal, of oil, of gas, of hydroelectric power and steam as sources of our energy would wreck our economic system. Not only would the jobs of millions of Americans dissolve overnight, but the securities represented by now valuable properties would become worthless. Our banks and insurance companies would crash. Our system of free enterprise would collapse—in fact, it is difficult to see how we could maintain a free and solvent government in the absence of an orderly transitional period.

Obviously then, atomic energy must not be turned loose to fall into private hands for unlimited private exploitation and gain. On the other hand scientific progress and invention which enhances the wealth and comforts of the people cannot and must not be hindered or delayed.

What's the alternative?

The only one that I am so far aware of is to create a Government board, which is representative of all the people, to control it.

I realize that a great many people claim that this would result in socialism and a socialized state. It would if we were to permit the Government board which I have proposed to engage in actual operation of Government factories with atomic energy. I do not provide for this, however, in the bill which I have suggested. I would vigorously oppose such a suggestion. I want atomic energy to be used in a free enterprise system. I have provided that the board shall be composed of a chairman to be appointed by the President, the Secretary of State, the Secretary of War, the Secretary of the Navy, the Attorney General, the Secretary of Commerce, the Secretary of Labor, and the Chairman of the Federal Power Commission. This board will have the power under the bill to develop, control, and supervise the use and application of atomic energy. It will be empowered to license its use on an equal basis to all comers. Frankly, I have been able to devise no other satisfactory way to handle this particular phase of the problem. I appreciate the fact that this Government board will have a tremendous power, but I would rather have this power in the hands of the chosen servants of the people whose will they would be obliged to carry out than in the hands of a predatory and grasping few over whom we would have little, if any, control. So much then for what we shall term the internal problem.

Now what shall our foreign policy be on atomic energy? There are so far three schools of thought. First, the United States should hold on to the atomic process and endeavor to maintain it in secrecy. The second school of thought, which is slightly more realistic, says, since you can keep the bomb secret for only a very short period of time, we should use this period in which to drive bargains, that is, to make the world accept our system and concepts of morals and beliefs. The third view of the matter, and the one to which I hold, says, since the secret is really not a secret, since three nations already are fully informed, since in 2 or 3 years practically every nation will know all about it, any attempt to use this weapon as a club to get other nations into line with what we stand for and believe in will fail. The very certainty that other nations will soon apply what is now supposed to be secret will lead them to resist bitterly even a short period of domination. The effort to bring to bear the very temporary power which America, England, and Canada now have in common would be bound to develop those very prejudices and passions and hates which would burst into flame as soon as the war-making power became equalized by other nations' application of the secret.

Now, I have tried to state the three widely held opinions on this vital problem. When I drew my bill, I rejected theory number one because we just can't lock up this atomic energy in a national lockbox. All scientists with whom I have talked agree that it is impossible to keep this business a secret. How in the name of common sense could we make any peacetime use of it and keep it a secret anyway? And does anyone believe that the American people would stand for the locking up of a possible source of wealth and comfort beyond the dreams of man? Obviously, then when people say let the United States keep it, they are unrealistic and talking utter nonsense to boot. The people who hold to the proposition that America should say "We've got the bomb and we are going to do as we please with it" are significantly enough the isolationists of yesterday. They have, however, been joined by some good people who have been more enlightened in the past. These are the people who are dissatisfied with the United Nations Organization as it is now set up in its infancy, although they are very much for it in principle and believe that it should be very much stronger. This group believes that we should use the temporary hour that is ours to strengthen the United Nations Charter.

I sympathize with the good intentions of these people but what do they really mean? They really mean that we should say to all nations, now you'd better adopt all our concepts of morals and economics or else. To be frank about it, that's an implied threat. The threat obviously is, you'd better do these things or else we'll use our temporary power on you. I know and you know that the American people would never accept such a program. All of us would like to see free speech and a free press and many others of our blessings enjoyed by the people of the world, but you could never get this country to set off atomic bombs and weapons of destruction in order to accomplish this purpose. The atomic bomb is not exactly an instrument of education.

When you make a threat you had better carry it out, and if you don't intend to carry it out, don't make the threat. Therefore, I adopted the proposition that we should turn over to the Security Council of the United Nations what we know about atomic energy in return for every member of the United Nations making available to us and to the other members of the Security Council all information and know-how that they might have on armaments and weapons of war.

I also provided, and this is very important, that the Security Council would have the right to inspect all plants and laboratories or operations in every country of the world to see whether the agreement was being kept.

I also provided that after the agreement was made it should not become effective until it was approved by the Congress of the United States. If we follow this proposal we will strengthen the organization of the United Nations. We will demonstrate our complete faith and trust, and by our good example, I would hope to dissipate the fog of suspicion and distress which is now being generated and which will inevitably arise to envelop us if we insist in attempting what is after all impossible, the holding to ourselves of the power to dominate the world. Let's be blunt about it. How would you feel tonight if some other nation had this weapon and announced that they were going to hold on to it? I am telling you that there would be the biggest convention of scientists called in Washington that the world has ever seen and that the National Treasury would be opened up overnight for 10 times the two billions that we spent on it. We would be literally scared to death.

Now, could any other nation say to the nations of the earth, "Oh, you need not be afraid of us, we will not make war. We will hold this power in trust for the betterment of people everywhere." Well, there are two things wrong with that.

First, it is not in the nature of peoples, least of all the people of the United States, to be willing to be subject completely to any foreign power; and, second, and I emphasize it again, they wouldn't be able to keep it for any length of time anyway. On the other hand, if we go through with my suggestion, as embraced in my bill, we will, in my opinion, be making the best of necessity. We will allay suspicion that we intend to dominate the world. We will demonstrate to the world that we intend to use our scientific gains for the betterment of people everywhere. We will strengthen collective security which is the only hope of permanent peace. We have given it lip service; this would be a practical demonstration of our sincerity, demonstrable proof of the greatest dimensions the world has ever known. If we can lead the way in turning atomic energy to the production of higher standards of living for the peoples of the world you can be certain that the atom bomb dropped on Hiroshima contained a guaranty of future peace as well as immediate destruction.

## Back-to-Work Propaganda

EXTENSION OF REMARKS

OF

### HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Merritt Fields, executive manager Indianapolis Association of Credit Men, and editorial comment by Mark Gray, dealing with back-to work propaganda, published in the Indianapolis Commercial of September 12, 1945.

There being no objection, the statement and comment were ordered to be printed in the RECORD, as follows:

"This country needs a new brand of propaganda—the kind that will cause people to go back to work."

Here is another editorial by Mr. Gray. In passing, these strikers, or rather strike leaders, wouldn't dare to tie this country up economically without administration backing. The politicians apparently think our Nation's credit can't be wrecked. It can. Let's do something about it. What do you say?

MERRITT FIELDS,
*Executive Manager, Indianapolis Association of Credit Men, Indianapolis, Ind.*

EDITORIAL COMMENT
(By Mark Gray)

This country needs a new brand of propaganda—the kind that will cause people to go back to work.

Political leaders of both parties have guessed wrong. They apparently believed that once the war was over that people would suffer because of a lack of employment.

That unemployment may come later on—as a result of the fact that not enough people are willing to work to make the job of business reconversion really effective.

The "guns and butter" slogan under which our war economy was conducted worked perfectly. We had plenty of guns and we also had plenty of butter.

The quantity of "butter" dished out to millions of people was so generous that many of these men and women no longer feel that it is necessary to work. And that attitude is not helping with the job of reconversion.

Every employer and almost all of the curbstone observers realize by this time that this "buttering" of war workers has created false values which will not and cannot be maintained under our peacetime economy.

And we are not referring to the trained and experienced industrial employees. They are going to get along all right. In fact, the best of them were on pay rolls and were drawing good money during the worst days of the depression of the 1930's.

We refer to the millions of workers who were promoted far beyond their abilities and who received pay out of all reason beyond their real worth.

The inefficient "hired girl" who took home $40 a week for serving as a back slapper in a woman's rest room in an industrial plant feels that she was underpaid before the war, and it will be a long time before she will be able to convince herself that a less remunerative wage is not an insult to her ability.

And this will remain true as long as politicians in high places propose to pay her more than she ever received in peacetime or will ever receive again for remaining home and grouching over the fact that the gravy train finally left the track of wartime generosity.

Since VJ-day our national propaganda has been aimed in the wrong direction. The politicians have made it known in no uncertain language that their hearts are bleeding for the hash slinger who became Suzy the riveter and that they believe she should be permitted to dip her hands into some public treasury merely because she can no longer be paid a weekly sum that she never was entitled to earn.

As a result of all of this misspent sympathy several million people throughout the country are refusing to accept jobs offering certain future employment and are storming the unemployment compensation offices in quest of money that will permit them to remain at home and to remain "mad at the world."

If we want to reestablish prosperity and security in this country the people should be induced to go to work. It should not be necessary to keep German war prisoners employed in order that the Nation's work can be done.

No one in the position of national leadership is telling these people the facts of life.

Instead, it is being proposed over and over again that Congress pass laws to provide that the inefficient can get something for nothing—or something out of the hides of useful citizens who work and try to pay the bills.

There is an indication that Congress may rebel against some of these plans. And if Congress does display some common sense in this emergency, it will be saving the country a lot of trouble later on.

Meanwhile, someone should be advising the people who have their hands out for any gift that Government will drop their way to go to work.

They should be told that there are jobs available. The people should accept those jobs and they should be told to "accept them or else."

## Veterans' Hospitals

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following release today by Gen. Omar N. Bradley, Administrator of Veterans' Affairs:

General Omar N. Bradley, Administrator of Veterans' Affairs, announced today that President Truman had approved locations for 19 new Veterans' Administration hospitals, and additions to 15 existing hospitals, and 4 existing domiciliary homes. The hospitals and the additions approved will provide altogether 15,276 new beds for Veterans' Administration patients. All will be of new fireproof construction of permanent type.

These beds are a part of the 29,100 bed program approved by President Truman on August 4, 1945, at which time approval was given to the program without commitment as to the location of any of the beds authorized.

Funds for the new hospitals and additions being announced will be requested for the current fiscal year (1946). The remainder of the program, which will be announced at a future date, will be requested for the 1947 fiscal year.

The location of the new hospitals will be in or near the cities designated on the attached pages. The additions will be made to hospitals already existing or to be built at the locations indicated.

(a) The new hospitals authorized are as follows:

| | General medical and surgery | Tuberculosis | Neuropsychiatric |
|---|---|---|---|
| New Haven, Conn. | 500 | | |
| Albany, N. Y. | 1,000 | | |
| Buffalo, N. Y. | 1,000 | | |
| Newark, N. J. | 1,000 | | |
| Baltimore, Md. | | 300 | |
| Washington, D. C. | [1] 750 | | |
| Gainesville, Fla. | | | 1,000 |
| Clarksburg, W. Va. | 200 | | |
| Louisville, Ky. | 750 | | |
| Decatur, Ill. | 250 | | |
| Duluth, Minn. | 200 | | |
| Southern Minnesota | | 200 | |
| Iowa City, Iowa | 500 | | |
| Omaha, Nebr. | 500 | | |
| New Orleans, La. | 500 | | |
| El Paso, Tex. | | | 500 |
| Oklahoma City, Okla. | | | 1,000 |
| Phoenix, Ariz. | 200 | | |
| Cincinnati, Ohio | 750 | | |
| Total | 8,100 | 500 | 2,500 |
| Total new hospitals, 11,100 | | | |

[1] A new 750-bed hospital replacing all or part of 325 beds now in Mount Alto.

(b) Additions to existing and authorized hospitals:

| | General medical and surgery | Tuberculosis | Neuropsychiatric |
|---|---|---|---|
| Northampton, Mass. | | | 50 |
| Bedford, Mass. | | | 500 |
| Lebanon, Pa. | | | 1,000 |
| Atlanta, Ga. | 150 | | |
| Downey, Ill. | | | 500 |
| Lincoln, Nebr. | | [1] 20 | |
| Minneapolis, Minn. | 150 | | |
| Sioux Falls, S. Dak. | 150 | | |
| Biloxi, Miss. | 50 | | |
| Gulfport, Miss. | | | 50 |
| Tuskegee, Ala. | | | 104 |
| Salt Lake City, Utah | 50 | | |
| San Fernando, Calif. | | 150 | |
| Portland, Oreg. | | 150 | |
| Roseburg, Oreg. | | | 104 |
| Total | 550 | 320 | 2,308 |
| Total additions at hospitals, 3,823 | | | |

[1] Gain of 20 beds by conversion; see Lincoln, Nebr., (a) below.

(c) Additions to domiciliary facilities:

| | Beds |
|---|---|
| Bath, N. Y. | 100 |
| Mountain Home, Tenn. | 100 |
| Bay Pines, Fla. | 33 |
| Dayton, Ohio | 100 |
| Total | 333 |

2. That the Administrator of Veterans' Affairs be authorized to make the following conversions:

(a) From general medical and surgery to tubercular hospitals:

| | |
|---|---|
| Batavia, N. Y. | 204 |
| Lincoln, Nebr. | 220 |

(b) From tubercular to general medical and surgery hospitals:

| | |
|---|---|
| Minneapolis, Minn. (beds in general medical and surgery hospital) | 200 |

3. That the authority for a 140-bed addition to the Newington, Conn., hospital included in the general 1946 program be canceled.

It is understood that this authority permits the Veterans' Administration to make tentative site selections, but that it will submit to the Federal Board of Hospitalization for its consideration and appropriate recommendation to the President requests for authorization to acquire the specific sites for the 19 new projects enumerated above.

## Silent Scientists

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. ROWAN. Mr. Speaker, the University of Chicago, which is located in the Second Congressional District of Illinois, which district I represent in Congress, is the scene of many interesting discussions on the atomic bomb and its potentialities. One of my personal friends at the University of Chicago wrote me recently on the subject, and, although I do not have permission to use his name, I am including in the Appendix of the CONGRESSIONAL RECORD three pertinent paragraphs from his comments on the bomb the explosion of which was heard around the world:

As you are more aware than I, the question of control of the atomic bomb and the

control of future research are very important and very hot problems. Around here, where so much of the development of the bomb was carried out, the scientists—as well as other university members—are gravely concerned about the implications of the bomb, for they know too well what its potentialities are. The scientists also are concerned about the conditions under which they will conduct their research in the future. So are scientists all over the country.

There are bills pending in Congress, such as Senator JOHNSON'S, which would direct research from above, impose such secrecy as would prevent free exchange of scientific information, and do many other things—all based on the notion progress in such research can be confined to the United States. American scientists did not themselves make the bomb possible; theoretical work which was applied during the war to make the bomb was the product of international science, and it is no misstatement to say that the most important contributions were not made by American scientists. Sterilization of our scientists will fail to achieve the end in view; even worse, it will mean that we will be outstripped by other nations.

No scientist objects to the principle that the research has fundamental relation to the welfare of the Nation and its future safety, so that certain applications and methods must be safeguarded. There is, for instance, no desire by the scientists that the industrial process for production of plutonium should be announced, nor the amount that is being produced, nor any similar information. But control envisaged by some bills would go far beyond this, into the realm of abstract scientific research and its dissemination. It is that which the scientists do not want, and under which it will be difficult to get them to work.

## Problems of Military Demobilization—Views of a Serviceman

EXTENSION OF REMARKS
OF
### HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a few excerpts from a letter which I have received from a serviceman, a distinguished lawyer from my State, who is now in Europe. He expresses his view in regard to certain problems of military demobilization.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

FRANKFORT ON THE MAIN, GERMANY,
*September 7, 1945.*

DEAR SENATOR MORSE: I would like to pass on to you just a few observations as a long-suffering serviceman in Europe. It will be my effort to be very objective, because I recognize the immense nature of the problem. However, unless something is soon done by Congress to end our involuntary servitude now that nostilities have ceased, we see no chance of the speedy return to our homes that should now be possible. It is no idle talk that the military hierarchy fears the end of the honeymoon era—the day when the captain generals will be general captains. We cannot depend on the military to give those of us who are civilians in uniform our freedom as quickly as it should be given us. Until Congress acts forcibly directing the reduction of the military, and the release of those who have already served long periods away from home, it will not have fulfilled its obligation to us, because it is on Congress we rest our hopes, and justly because Congress passed the law by which we are here. Further, when we came into the service for the duration plus 6 months, we thought that the "duration" was something to be determined on a factual basis, not left to the whim and caprice of the Executive, as determined by the military. The war is over. The duration is over. The time is here when we should be able to plan for the future with the knowledge that certainly we should be separated from the service by a certain time without fail. No system of points can be universally fair. The one in operation now is definitely fallacious, perhaps as much as a result of inconsistent administration as in theory. In theory it is defective in that it fails to consider at all the relative hardship caused by protracted periods of overseas service. The twenty-fourth month overseas was worth only two points, no more than the first month. It is long absence from home and family which tears at the heartstrings of man, and incalculably frustrates him. Yet under the point system, men may be over here more than 3½ years without being able to go home. The only solution is 100-percent rotation and discharge of all men who have been overseas, and their immediate replacement by men who have never served away from home, and by volunteers, until the occupation problems have ended. It seems to have been completely overlooked that men without wives have families who vote, as well as the men themselves. They may also have fiancées or friends. I do not like to see any group favored over another. The time has come for all of us to be separated from the service without delay if we have served overseas or longer than 2 years.

The drain on the resources of the Nation that a large, unhappy army now causes is greater than the civil population of the United States should be long willing to bear. We are parasites on the efforts of others, for our supply, our compensation; and the day that we perform a useful or necessary function for the Nation has been ended. It is time to have us start producing rather than destroying, to start ending shortages instead of causing them.

## Humanitarian Work of UNRRA

EXTENSION OF REMARKS
OF
### HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. DE LACY. Mr. Speaker, I would like to make a few statements for the RECORD about one of the most humanitarian and widely supported undertakings ever accomplished by the American people. I refer to last spring's Nation-wide collection of clothing, shoes and bedding for overseas relief. I wish to bring this work to the attention of the Congress at this particular time because President Truman has said that the appalling conditions in Europe and the Far East justify a second appeal to the generosity of our people. Therefore, from January 7 to 31 the Victory Clothing Collection will make a concentrated effort to get 100,000,000 garments in addition to shoes and bedding for overseas relief.

Last spring's collection was a magnificent success. About $120,000,000 worth of clothing was collected, and collected at the phenomenally low cost of about one-fifth of a cent a pound. Seven thousand six hundred and seventy-one communities reported 150,000,000 pounds of clothing, shoes, and bedding contributed.

I take pardonable pride in the fact that the nonprofit corporation created to alleviate suffering overseas was directed by a State of Washington businessman, Dan A. West—and another State of Washington businessman and former resident was its very active national chairman—Henry J. Kaiser.

These two Washington businessmen are entitled to recognition by this House and by the country for the efficient, economical, and successful conduct of what appeared last spring to be a most fantastic undertaking.

This was an expenditure of UNRRA funds which had the active support of every family in America, for every family in America contributed its share toward the success of the United National Clothing Collection. The common sense of the American people, faced with a vast emergency relief problem, reduced a seemingly fantastic undertaking to the asking and answering of a plain question, "What can you spare that they can wear?"

The Honorable Herbert Lehman, Director General of UNRRA has declared that this clothing spared by the American people has formed the backbone of UNRRA's clothing-relief program. Now, UNRRA places a money value of from 75 cents to a dollar a pound on this clothing. But actually no one can estimate its value to the people who received it. It was worth its weight in—I was about to say in gold—but I will amend that and say it was worth its weight in that most precious of all substances today—plutonium. For who is to say what furnishes the atomic energy of man's spirit.

To 25,000,000 desperate victims of the devastation and horror of war, stripped of everything they possessed, having lost the fruits of their life's work, these clothes brought courage, a pledge of friendship and hope. What price have these? And what is the reciprocal rate of exchange on the gratitude and good will they have engendered?

Scientists say there is no defense against the awful destructiveness of the atomic bomb. No material defense. It behooves man to strengthen his spiritual defense. Surely the steadfast helpfulness and kindliness and humanity of the American spirit will generate its own energy of constructiveness.

I have seen letters from the bombed, looted, unhappy people of France, Greece, Yugoslavia, Italy, Czechoslovakia, Belgium, Holland, and the Philippines. These were simply thank-you letters from the common man overseas and from his wife and his children to the common man and his wife and his children here in America. They reached toward each other regardless of political or national or other differences. They spoke of their homes, their babies, their hopes for the future, and they all blessed our already blessed land.

In the January collection contributors are encouraged to include friendly letters with their gifts of clothing as an expression of international good will.

I have seen pictures of smiling, happy children from Russia and Norway and Holland and China and many other war-devastated countries, wearing good, serviceable clothing sent from America.

I would like to append this copy of the auditor's report on the United National Clothing Collection, Inc.:

DELOITTE, PLENDER, GRIFFITHS & CO.,
*New York, September 25, 1945.*

*To the Members and National Committee of United National Clothing Collection, Inc., New York 7, N. Y.*

We have examined the balance sheet of United National Clothing Collection, Inc. (a membership corporation) as at August 31, 1945, and the statement of revenue and expenses for the period from February 10 to August 31, 1945, have reviewed the accounting procedures of the corporation and, without making a detailed audit of the transactions, have examined or tested accounting records of the corporation and other supporting evidence, by methods and to the extent we deemed appropriate.

In our opinion, the accompanying balance sheet and related statement of revenue and expenses, together with the notes thereon, present fairly the financial position of the United National Clothing Collection, Inc., at August 31, 1945, and the results of its financial operations for the period then ended, in conformity with generally accepted accounting principles.

DELOITTE, PLENDER, GRIFFITHS & CO.

*United National Clothing Collection, Inc., balance sheet as at Aug. 31, 1945*

ASSETS

| | | |
|---|---|---|
| Cash on hand and at banks: | | |
| On hand | $1,514.15 | |
| At banks | 49,044.59 | |
| Total | | 50,558.74 |
| Accounts receivable: | | |
| Travel advances | 1,172.76 | |
| Canadian National Clothing Collection | 2,572.26 | |
| Community canning program | 3,194.77 | |
| Sundry deposits | 439.00 | |
| Total | | 7,378.79 |
| Office equipment | 699.25 | |
| Less reserve for depreciation | 116.54 | |
| | | 582.71 |
| Grand total | | 58,520.24 |

LIABILITIES

| | | |
|---|---|---|
| Accounts payable and accrued expenses: | | |
| Accounts payable | 3,600.05 | |
| Accrued expenses | 6,131.64 | |
| Federal income tax withheld | 1,623.15 | |
| Total | | 11,354.84 |
| Excess of revenue over expenses, as per attached statement (see note) | | 47,165.40 |
| Grand total | | 58,520.24 |

NOTE.—The agreement between the corporation and United Nations Relief and Rehabilitation Administration (UNRRA) provides that, upon termination of the activities of the corporation, any funds contributed by UNRRA which shall remain unexpended in the hands of the corporation shall be returned to UNRRA.

*United National Clothing Collection, Inc., statement of revenue and expenses for the period from Feb. 10, 1945 (date of incorporation) to Aug. 31, 1945*

| | | |
|---|---|---|
| Revenue: | | |
| From United Nations Relief and Rehabilitation Administration | $400,000.00 | |
| Personal contributions | 566.50 | |
| Total | | 400,566.50 |
| Expenses: | | |
| Personal services | 145,499.30 | |
| Living allowances | 15,626.27 | |
| Printed matter, supplies, etc. | 55,540.38 | |
| Publicity material and services | 46,497.99 | |
| Postage | 26,719.90 | |
| Office rent | 6,803.00 | |
| Rental and repair of equipment | 5,145.02 | |
| Telephone | 11,448.94 | |
| Telegrams | 10,598.94 | |
| Insurance | 2,628.60 | |
| Freight and express | 711.62 | |
| Transportation | 9,336.19 | |
| Representation | 4,591.45 | |
| Collection and warehousing | 3,006.99 | |
| Legal, auditing, and incorporation fees | 6,537.86 | |
| Depreciation of equipment | 116.54 | |
| Miscellaneous | 2,591.11 | |
| Grand total | | 353,401.10 |
| Balance, being excess of revenue over expenses for the period | | 47,165.40 |

Note 1: This statement reflects certain revenue received and expenses incurred in anticipation of the formation of the corporation and in its behalf during the period from January 10 to February 9, 1945.

Note 2: Expenses of the character indicated below, relating to the national clothing drive, were not disbursed by the corporation and accordingly are not reflected in this statement:

(a) Salaries and certain travel expenses of personnel whose services were loaned to the corporation by United Nations Relief and Rehabilitation Administration.

(b) Expenses incurred and borne by local clothing collection committees.

## Let's Promote Americanism

EXTENSION OF REMARKS

OF

## HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. HICKENLOOPER. Mr. President, the junior Senator from Wisconsin [Mr. WILEY] recently submitted Senate Resolution 165 to create a Special Committee on the Promotion of American Activities. The resolution is now pending before the Senate Judiciary Committee. Comment upon the resolution of the Senator from Wisconsin has been made by former Congressman Samuel Pettengill in his syndicated release of October 18, 1945. I ask unanimous consent that the text of Mr. Pettengill's article on this subject be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S PROMOTE AMERICANISM

(By Samuel B. Pettengill)

How much did it cost us to educate a bombardier to drop a bomb on Berlin? Counting planes smashed up in training, etc., it is estimated that it cost $65,000. When peace comes, we get no further return on this investment.

In 1938, our States and cities spent $1,600,000,000 to run our public schools. For war we have spent $300,000,000,000, or 187 times as much as we spent for constructive living for millions of children. To kill our enemies we spent enough to run our hospitals for 751 years. And our enemies—what might they have done for themselves—and the world—with their cost of war?

Mules have far more sense than men. Geese are Solomons in wisdom compared with this two-legged maniac who works at fever heat on atomic bombs but doodles and yawns over the blueprints of peace. Except for his hallucinations he would never use the words "crazy as a loon" or "bats in his belfry." Loons and bats are not fools. They never butcher 20,000,000 of their kind to prove that the winners are all pious and the losers all wicked.

But even demented genus homo has fleeting moments when a loon doctor might call him rational. Senator ALEXANDER WILEY, of Wisconsin, illustrates what this creature, who is considerably lower than the angels, can do when his mind clears for a spell. Mr. WILEY proposes that the Senate create a committee to actively promote constitutional Americanism among school children and grown-ups alike.

The House of Representatives has a committee to investigate and expose un-American activities, a needed job certainly. But the Senator thinks we need to foster affirmative American activities. The two committees would complement each other, not overlap.

When I read Senator WILEY'S resolution, my opinion of this bedlam world, inhabited by conceited "foolosophers," went up a couple of degrees. If the Senate, in a lucid interval, adopts his resolution, it will go up many more. I am certain that the First Congress, which met in 1789, and contained many of the patriots who founded this Republic, would pass it unanimously if they knew how Old World concepts of government were undermining the principles of freedom for which they left on the white snows of Valley Forge the red badge of courage.

Many splendid groups in our schools, patriotic societies, and veterans' organizations have for years been fostering love of country and pride in its institutions. But cunning influences have largely counteracted their work. What an encouragement it would be to every pro-American if his efforts were given public recognition and support by a permanent Senate committee to promote American activities.

As the Senator says, the Communists have resumed their black missionary zeal as a political party which has openly proclaimed "its deep hatred against all parliaments," that is, against republican forms of government. Congressman D'ALESANDRO, of Maryland, shows how Communists have been trying to proselyte men in our armed forces. They are everywhere. They color our news; intone their un-American hates over the radio; stir up strikes to make the American system look sour; engender race and religious prejudice to break our unity; and smear all who oppose them as Fascists.

But more dangerous, perhaps, than the gnawing of these rats is the complacency and

unawareness of millions of otherwise patriotic Americans who have been slyly taught by these very Communists to brand as red baiters or witch hunters those whose loyalty to the Constitution and the flag prompts them to expose the menace from within, which Abraham Lincoln once described. Lincoln was a contemporary of Karl Marx.

Senator WHEY, Godspeed to you and those of your colleagues who are on the alert. What a country this would be if we spent the tiniest fraction of what goes into war and death in giving every American West Point awareness of the free principles that made men great.

SAMUEL B. PETTENGILL.

## Control of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram sent by Mr. Ulric Bell, executive vice president, Americans United for World Organization, to the Honorable Harry S. Truman, President of the United States:

The May bill for the Control of atomic energy contains provisions that are extremely dangerous to our democratic form of government. The restraints on the activities and personal freedom of scientists constitute a perilous step in the direction of totalitarianism. The restrictions are so sweeping that many scientists will be forced to give up their researches. The proposed legislation is sure to stimulate an atomic-armament race. In our opinion the May bill as it now stands is as pernicious as the worst of the decrees of the totalitarian states. We feel that you must speak out in favor of full and open hearings. Therefore we ask that you urge that the hearings be reopened and that the many scientists who have been directly and indirectly involved in atomic-energy researches be given an opportunity to testify.

AMERICANS UNITED FOR WORLD ORGANIZATION.
AMERICAN VETERANS' COMMITTEE.
FRIENDS OF DEMOCRACY.
INDEPENDENT CITIZENS COMMITTEE OF THE ARTS AND SCIENCES.
NATIONAL CITIZENS POLITICAL ACTION COMMMITTEE.
SOUTHERN CONFERENCE OF HUMAN WELFARE.

## Wanted: A Pennsylvania Leo

EXTENSION OF REMARKS
OF
### HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able editorial entitled "Wanted: A Pennsylvania Leo," from the Philadelphia Record. The writer of this editorial calls attention to the fact that a retail dealer in South Dakota went into court challenging the constitutionality of a law imposing a special tax on margarine, and that the court held the margarine tax unconstitutional.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WANTED: A PENNSYLVANIA LEO

Somebody in Pennsylvania ought to emulate Leo Schmitt.

Leo was a retail dealer in a South Dakota town. He wanted to sell margarine.

But the legislature in his State, like the legislature in Pennsylvania, had passed a law imposing a special tax on margarine. The tax was so high that Leo couldn't afford to pay it. So he didn't sell margarine.

Leo wanted to sell this product, and his customers wanted to buy it.

So Leo went to court.

Judge R. C. Eakewell has just handed down a decision in which he holds that the South Dakota margarine tax is unconstitutional.

He said the tax was "an arbitrary and unauthorized legislative meddling with a natural and inherent personal privilege of the people."

And it certainly is.

The license fees imposed on the sale of margarine in Pennsylvania are not license fees at all. They are not designed to raise revenue or to pay for policing the purity of a product.

They were pressured through the legislature by the butter lobby and all efforts to repeal or reduce them have been scuttled by the butter lobby.

Even during the war, when butter was so scarce that many, many people couldn't buy it, the butter bloc, which swung its weight around in Harrisburg, managed to keep margarine from thousands of retail outlets.

The license fees imposed by Pennsylvania, as in South Dakota, are punitive taxes, designed to help one product to the detriment of another.

They have no place on the statute books. It is not the duty of the legislature to starve out one industry so another may profit by it.

But that is what the Pennsylvania Legislature did more than 40 years ago. And every legislature since has condoned that "arbitrary and unauthorized meddling."

## Freedom of Discussion

EXTENSION OF REMARKS
OF
### HON. WAYNE L. MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a broadcast by Mr. Johannes Steel, dealing with the allegations, set forth in the broadcast, concerning direct and indirect censorship of radio commentators in America. I simply wish to say that I think it is particularly important that in these times of unrest and crisis we should not overlook the fact that if we are to preserve our freedoms in America, we must see to it that the channels of information are at all times free.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, despite the fact that military operations have ceased on all world fronts, and despite the fact that the Office of Censorship has been abolished, and despite the fact that there is supposed to be a general relaxation of all censorship rules, freedom of discussion on the air and in the press is threatened more today than it ever was at any period during the war.

Pressures are making themselevs felt which are designed to eliminate liberal commentators from the air completely and to limit those commentators who remain on the air to the discussion of what is known as noncontroversial subjects.

These pressures, of course, are political. They emanate in every instance from reactionary politicians and the military. They are thoroughly undemocratic and entirely subversive of the fundamental principles embodied in the Bill of Rights.

This situation is more serious than has been generally realized. Here are some of the facts.

The so-called House Committee on Un-American Activities is preparing a drive to get all liberal opinion and independent thought eliminated from the air. A pressure campaign is being organized by that committee. The technique is the usual slander and smear technique of that committee, which begins by way of subpenaing the scripts of the broadcasts of the commentators and later the commentators themselves.

When they appear in Washington, they will be subjected to the usual star-chamber tactics. The opinions and the charges of the committee members will be widely quoted, while the people in the witness chair will have very little opportunity to bring their views before the public.

There will probably be private sessions from which the public is excluded, after which the committee may issue statements to the press, and if the usual practice of what was formerly known as the Dies committee is followed, then we may expect, of course, complete misquotations and falsifications of the record of the proceedings of these private sessions.

Among the commentators who are listed as the prospective victims of the committee in Washington and whose scripts are being looked at by the mental giants who make up the membership of the committee, of which Congressman RANKIN, of Mississippi, is the shining light, is also this broadcaster.

It can be stated authoritatively that the mere mention of the fact that this committee proposed to call one commentator on a small local station, not WHN, has already caused this man to be fired. The radio station immediately yielded to the pressure.

Obviously, the committee knows very well that such an investigation will be entirely fruitless, but it evidently feels that the mere fact of such an investigation might serve in the way of intimidation.

There is no reason why you, the public, should not let the members of the committee know what you think of their antics.

The drive of the House Committee on Un-American Activities is directly linked to a drive which is now being prepared by the National Association of Manufacturers.

The NAM has been quitely investigating—that's what they call it—the backgrounds, financial standing, biographies, sponsors, past and present, and the size of the audience of every independent and liberal commentator on the air.

The idea is said to be a plan designed to eliminate all liberal commentators from the air and to supplant them with men who

express views which are acceptable to the members of the National Association of Manufacturers.

There is reason to believe that this drive will tie in directly with the drive of the House Committee on Un-American Activities.

Here is a situation which needs a thorough public airing.

Not directly linked to this activity, but certainly of the same tendency is the resentment in certain Army circles against all comment on the social and political consequences of the release of atomic energy.

Today, the Secretary of Commerce, Mr. Henry Wallace, the man who convinced President Roosevelt to go ahead with the experiments leading to the release of atomic energy, stated publicly that while the United States might stock up many more atomic bombs than other nations, we still would be the most vulnerable nation of all.

We have in these broadcasts based our views on the subject of the future of atomic energy in a peaceful world largely upon the publicly stated views of Secretary Wallace and former Secretary Stimson, as well as a number of leading scientists with whom we have talked on that subject.

We believe that the political and social views of Mr. Wallace are the only ones which are relevant.

We also believe that it is intolerable in a democracy that there should be any restrictions placed upon the dissemination of the views of Messrs. Wallace, Stimson, Compton, Langmuir, Shapley, and others by way of gumshoe intelligence intimidation.

This is particularly so since, by the wildest stretch of the imagination, there is no military secret involved here.

This commentator is forwarding a copy of this broadcast to all competent Senate and House committees for their consideration.

We are certain that the public and our listeners want the freedom of the air preserved and we know we can count on their support.

## Problems of Quicksilver Producers

EXTENSION OF REMARKS

OF

### HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the San Francisco Examiner of September 15, 1945, relative to the problems faced by the quicksilver industry because of importations from Spain.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MINERS FLAY "SQUEEZE PLAY"—SPAIN FLOODING QUICKSILVER MARKET, UNITED STATES INTERESTS SAY

Spanish politics and Yankee dollars are combining relentlessly to throttle an entire American industry and unless remedial action comes fast, California's quicksilver mines, producing 70 percent of the Nation's output will close tight by January 1.

The ancient and government-owned mines of old Spain, worked at wages which are equal to less than one-tenth those prevailing in California, are pouring their metallic product into the United States in volumes which cause local quicksilver men to shake their heads and mutter "dumping."

SUPPLY ON HAND

They point out, for instance, that in one month—July—imports of Spanish quicksilver totaled 19,000 flasks, and that the entire Nation used no more than 24,000 flasks in an entire year before wartime requirements sent consumption rocketing.

The July imports plus some 17,000 flasks already above ground, add up to 18 months' prewar needs and to the obvious closing down of the Nation's quicksilver mines—unless somebody does something.

PLEA SLATED

In hopes of doing that needed something, a group of producers of California, Nevada, and Oregon, representing some 60 percent of the entire production, have sent Sam Williston, president of the Oregon Mining Association, to Washington to try to save the industry.

He will attempt to remove the present glut by having the Government take the 36,000 flask surplus off the market and place it in a military stock pile—the need for which was gaudily demonstrated as America entered the war needing quicksilver so urgently that it gladly paid Spain the obviously hold-up price of $280 a flask.

MYSTERY ANGLE

Just why Spain began pouring mercury into America in 19,000-flask lots—or why America continues to export it in such lots at prices more than double the prewar price—are mysteries which the quicksilver miners of California do not profess to know.

But they are doing some shrewd guessing. One school holds that it is entirely a matter of Yankee dollars. They point out that in prewar days the Almaden mines and the Italian mines (knocked out by the war) combined in a cartel which operated on this principle: Depress the price until American mines can't operate at a profit and have to shut down; then raise the price until the desperate howls of American consumers cause American mines to reopen; then depress the prices again and repeat.

SQUEEZE PLAY

The July shipments, in the face of a surplus already on hand, may represent an attempt by the Spanish Government, now playing a lone hand, to resume the prewar squeeze, according to this school of thought.

Another school holds that it's all politics—Spanish politics. This faction points out that shipments of quicksilver furnish Spanish politicos with ready and lush dollar exchange.

HOPES DROWNING

Whatever the motives, the results are certain, according to worried operators of quicksilver mines. With the quicksilver market promising to expand manyfold as war-developed uses of the versatile metal are adapted to peacetime wants, the industry in California had hopes of many years of prosperity. Present conditions change this, however.

## POW and Points

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks I include the following letter written by Mrs. Esther Markus, Chicago, Ill.:

CHICAGO, ILL., *October 12, 1945*

Dear Mr. ROWAN: The record of your endeavors in Chicago on behalf of people's rights has long been history, and now as the wife of a former prisoner of war in Germany, I am appealing to you. Perhaps you will recognize the validity of my appeal—

I understand that several weeks ago, a proposal was made in Congress for the discharge of former prisoners of war, but this proposal has not been furthered. In my opinion, I believe this decision should most definitely be passed by Congress.

My appeal to you is not wholly subjective. Since the Army granted my husband his 60-day furlough (which was extended by a stay in Gardiner Hospital), and his consequent 8-day stay in Florida for processing and reassignment, I have met many former prisoners of war, and I feel that somebody should speak up for this apparent "Lost Legion" of men, who because of their internment in horrible prison camps, have not been able to secure high scores entitling them to discharge, although rear echelon groups, who have never seen combat, or been anywhere near the zone of combat, are daily being given points for the activities of their advance units who have seen action.

The war is over, and we are eternally grateful for that—but for these prisoners of war it will be a mighty long time before the terrors of their brutal experiences will be forgotten. Every day spent in the Army now is but a needless reminder of a life that emotionally and psychologically links their thoughts with the miserable past. It will be a good long time before these boys will come back to their normal selves, and the only solution for them is to get back to a normal life, where they will not constantly be reminded of the war. Instead, they are being sent all over the country to camps, where they are ill-fit and ill-adjusted to meet their daily tasks, such as they are.

Former prisoners of war cannot and must not be placed in the same category as our other returned soldiers. Although they may not show apparent outward injuries, their injury is to the heart, soul, and mind. They just must be discharged immediately, so that they may adjust themselves to normal living, and in normal surroundings. Remember also that the period of adjustment of a former PW may by far exceed that of the usual returned soldier.

May I not have your help? Believe me, not only will I personally be grateful, but you will have the gratitude of countless thousands of other former prisoners of war and their families and next of kin.

I know I can count upon you, and shall be watching the CONGRESSIONAL RECORD for results.

Thanking you, I am,

Most sincerely,

MRS. ESTHER MARKUS.

## Atomic Energy in Congress

EXTENSION OF REMARKS

OF

### HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, under leave given me to extend my remarks, I wish to insert in the RECORD an editorial which appeared in

the New York Post on October 16, 1945, entitled "Atomic Energy in Congress":

ATOMIC ENERGY IN CONGRESS

It is possible that in about 2 years, other industrialized nations may develop atomic bombs a thousand times more potent than the one which vaporized Hiroshima.

Yet the politically slanted pretense of secrecy is being used to withhold the facts about the significance of atomic energy from the American people.

Hundreds of atomic scientists have repeatedly had their mouths shut by the threat of prosecution and jail. Under cover of this gag, there is a drive to railroad through Congress a bill which would govern the future of American industry and American science as both move forward to harness the atom.

The Johnson-May bill on atomic energy was given one single day of hearings by the House Military Affairs Committee. Only four witnesses were heard.

Yet the Johnson-May bill is so sweeping that it would in effect give us two Presidents instead of one; the first elected, and the second appointed and possessed of dictatorial powers practically unchecked by Congress, the Administration, or the people.

For as the bill was drawn, the Administrator of Atomic Energy would not be elected, would not be appointed by the President, would not be confirmed by the Senate.

WHAT'S IN THE BILL?

The Administrator would be appointed by a Commission on Atomic Energy. The Commission would be appointed by the President with the consent of the Senate. It would consist of nine members serving for 9 years, their terms staggered so that three members would be appointed every 3 years.

The members of the Commission could not be removed by the President except for particular cause. Unlike the heads of Government Departments, they would not change with an incoming administration, they would not reflect the popular mood as expressed in the choice of a new President. It would be a rare combination when a President could in a single term appoint a majority to the Commission, and thus control or remove the Administrator.

The Administrator, who as the bill was drawn, would likely be an Army or Navy big shot, could take over a plant as big as Willow Run without even letting Congress in on the secret. He could order the dismissal of employees of any Government agency for talking out of turn.

He could grant or refuse atomic licenses at his whim. There would be no appeal, and the absence of adequate safeguards could open the way to dangerous monopolies.

Nationalization should guarantee free and equal access to the productive, nonmilitary aspects of atomic energy, safeguarded by wide-open publicity and democratic control.

On the contrary, the Johnson-May bill would take control of atomic energy away from the people, load it with secrecy, and vest it in an unrepresentative and irresponsible official.

IT WON'T CONTROL THE BOMB

It would saddle us with a permanent peacetime censorship and end our scientific freedom. Scientists could get 30 years in jail or a fine of $300,000 for discussing everyday physics with each other.

They could not exchange information with their international colleagues—yet without contributions from Stockholm, Copenhagen, Birmingham, we could not have developed the atomic bomb. This attempt to lock up scientific knowledge would mean that America would rapidly fall behind other nations in research.

But fettering American science would not deter researchers abroad from the inevitable independent development of the atomic bomb. When that happens the Johnson-May bill, which demands such fatal sacrifices of our freedom, offers us no security.

The gagged scientists have tried repeatedly to warn us that there is no visible defense against the atomic bomb, and that our only hope lies in international control.

Unlike the far saner McMahon bill in the Senate, the Johnson-May bill makes no provision whatever for setting up international machinery to prevent the use of the atomic bomb and to control atomic energy.

## The Atomic Bomb

EXTENSION OF REMARKS
OF
## HON. CHASE GOING WOODHOUSE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address which I gave over radio station WDRC, Hartford, Conn., on October 7, 1945:

The atomic bomb has brought us headlong against a choice which we must make. Do we want full employment and peace; or do we want economic instability and war? Do we want a developing civilization or do we want to destroy civilization? You say "How foolish!" Of course everyone wants peace and prosperity. True, all over the world men and women are prayerfully hoping for jobs and for peace. And yet they are confronted with two compelling fears—the fear of unemployment and the fear of war.

Both these fears must be wiped from the face of the earth. Now don't say "Impossible." It not only can be done. It must be done. Doing it turns very largely on how we use our scientific knowledge. It is the men and women in the laboratories and in the libraries who can give us jobs and give us peace if we will only provide enough of them with adequate opportunities for training and for study, with adequate facilities for research, and, most important, if we will develop a national policy as to how we will encourage scientific research and how we will use scientific findings and inventions.

The discovery and the terrifyingly effective use of the atomic bomb has resulted in an almost grim determination to achieve peace. But it is typical that we speak almost always of the atomic bomb and seldom of atomic energy. It is the weapon of destruction which has seized our imagination. But there is an equally dramatic potential for peace and better living in atomic energy sanely used and wisely directed toward social ends. The balance of power between war and peace, between human well-being and devastating world tragedy, lies in how we encourage scientific research and how we formulate and administer a national and international policy as to the use of the findings of science.

We must not think of the atomic bomb as an isolated individual scientific discovery. It is one end result, a startling, dramatic and world stirring result, but yet only one result, of the great march of modern science. Science made it possible for the Axis with limited natural resources to wage war. And science made victory possible for us. But just because we were fortunate in being the first to discover the formula of atomic energy and the technique of manufacturing the bomb it does not follow that it is our secret or that it will be anybody's secret for very long. The Germans apparently were appallingly near to the discovery. Had they been a few months sooner or we a few months later the world situation today might be very different for you and for me. Nor could we count on having found a counter defense had they made the discovery first. We did not have a defense for V-2. Our only recourse there was to blast at the launching sites.

There is no way to keep the atomic bomb secret. The impression is far too general that only the United States can produce the atomic bomb. This is a new form of isolationism. We were told that the Atlantic Ocean protected us from war. We cannot afford to listen again to the voices which tell us that no enemy can harm us.

The only way the United States, Great Britain, and Canada could keep exclusive possession of the atomic bomb process would be to destroy all vestiges of modern science and technology—to muzzle every scientist. That would be the end of modern civilization.

The scientists who worked on the various projects where the bomb was developed have discussed the subject and have released memoranda which show almost complete unanimity in their main points. This is a typical statement from this group: "There is no secret to be kept. It has been known for 40 years that this form of energy exists. The principles required for its release have been the common property of scientists throughout the world for at least 5 years. Each one of the advanced civilized nations possesses scientists capable of working out the details required for the accomplishment. Each one of the advanced civilized nations has access to some of the resources required for the production of an atomic bomb. The only remaining secrets concern technological processes which any competent group of scientists anywhere can discover within a relatively brief time. It is a matter of only a few years at the most before any great nation can be producing atomic bombs, even if we do not tell them a single fact which they do not already know."

So we can't protect ourselves by locking away the secret because it won't be a secret for very long. And there is little sense in the off-the-cuff suggestion by some persons in public life that we disperse our cities and put our important factories underground. We are men, not moles. The scientists themselves suggest that the only alternative to disaster is to create a world commission which would control the manufacture and use of the bomb.

President Truman has recommended to the Congress that it enact legislation to fix a policy with respect to our existing plant and to the control of all sources of atomic energy and of all activities connected with its development and use in the United States. The policy would be administered by an Atomic Energy Commission, with members appointed by the President with the advice and consent of the Senate.

President Truman further has stated that he will initiate conversations on international control as such action cannot be delayed until the UNO is functioning.

These are essential, immediate steps but they are not enough. We must always remember that the atomic bomb is only one outcome of scientific research. We must be prepared for future findings. We have created difficulties for ourselves because we had no policy in wartime in regard to the use of our scientific manpower especially as related to Selective Service. Now, if we are to have peace and if we are to have prosperity we must have a national policy as regards the use of all our scientific resources.

This need has been coming to the fore during recent months. Last June the House

of Representatives passed the May bill (H. R. 3449) which provided for an appropriation of $8,000,000 a year for the National Academy of Science. The academy would use this grant for contracts with educational, scientific, and industrial organizations for research of aid to national defense. This was a step in the right direction but too limited. National defense we must care for, but our real goal is full employment and peace. The Office of Scientific Research and Development now being liquidated did a magnificent war job. We must have an even better job done for peace.

The American economy has not provided stable full employment under modern conditions of high labor productivity and mass production. Even during the depression new industrial developments and an expanding labor force continued to raise the level of output needed for full employment. Thus, in 1939, although we reached the production level of 1929, there were 7,000,000 unemployed. Today we are faced with the task of creating millions of new job opportunities and of substituting a mass consumer market for the enormous war purchases of the Federal Government. We need a good 15,000,000 more jobs than we had in 1939. And science, wisely directed, can help private enterprise provide these jobs. To create new jobs we must make new, better, and less expensive products. We must have many new vigorous enterprises, and science can provide the impetus. Just remember that in 1939 millions of people were engaged in industries which did not even exist at the close of World War I—radio, air conditioning, rayon and synthetic fibers, and plastics are examples. More jobs, higher wages, shorter hours, more abundant crops, more production of manufactured goods, a higher standard of living are all possible if we will encourage scientific research and direct its results. Our success with discoveries and inventions in the war is ample proof of this statement.

The highest goal of scientific research is to improve the lot of mankind. It may well remove one great cause of war—the struggle for raw materials, for natural resources. Synthetic rubber is but one example of what I have in mind. Our children may well live to see a new definition of national wealth. It may well be that national wealth will be counted not in terms of natural resources but in terms of men and women of scientific training and in terms of laboratories. If any nation can make synthetic rubber, then what nation will exploit colonial peoples, will fight wars to gain natural rubber. Science may be our main road to peace.

The Federal Government has supported research in State institutions for 80 years under the land-grant college acts. This is not a new suggestion. But there is no agency in the Government charged with formulating or administering a national science policy. There are no standing committees of the Congress directed to this vital subject.

With our mounting demands for scientists both for teaching and for research we enter the postwar period with a serious deficit in our trained scientific personnel. During the war we have piled up a deficit of 150,000 young men and women who would have received the bachelor's degree in science and technology. By 1955 we will have accumulated a deficit of 17,000 young students who would normally have had advanced degrees in science.

The Government can increase the flow of new scientific knowledge by the support of basic scientific research and by aiding through scholarships and fellowships the development of scientific talent. It takes many years to train a scientist so the start must be made now. And ability, not the size of the family checkbook, must determine who shall receive higher education in science.

There are several bills before Congress recommending Government encouragement of science. The Kilgore bill (S. 1297) and the Magnuson bill (S. 1285) are the most important. Each would set up an independent Government agency—a National Science Foundation. It would not itself operate any laboratory or plant but through its support, private scientific, educational, and industrial organizations and governmental agencies would carry on research of benefit to national defense; to health and medicine; to conservation, development, and use of natural resources; and to small business enterprises. The Foundation would also provide scholarships and fellowships for promising young men and women. Further, it would develop a national policy for scientific research and scientific education. The original Magnuson bill would limit the foundation to work in mathematical, physical, and biological sciences. The Kilgore bill as now in committee print includes the social sciences. To my mind this is vital. I believe that even more emphasis should be placed upon encouragement of the social sciences than is done in the bill as it now stands. Peace and prosperity depend not only on our discovery and production of new products. They depend even more on how we use those products and on how we behave one toward the other in dealing with those products and inventions. While the social scientist cannot put two individuals or a community in a test tube and study their reactions under various circumstances he can do much to study and explain and learn how to direct human behavior. The development of personnel work in our war plants is definite recognition of this possibility. We can learn how to develop good reactions in a group.

For example, one of the most difficult and intangible problems before the world today is how the German and Japanese peoples may be educated to an understanding and appreciation of democratic government and peace. That is a job for the social scientist and one he could help solve if he had the proper facilities.

The Magnuson bill would have the National Science Foundation administered by a board of nine scientists appointed by the President. The Kilgore bill would have it administered by a board consisting of the Secretaries or their deputies of War, Navy, Justice, Interior, Agriculture, Commerce, Labor, and the head of the Federal Security Agency. The Kilgore suggestion is by far the better, as it puts the actual scientific work in the hands of the specialists but places final responsibility for policy as to the use of the scientific findings upon men who represent the administration elected by the people and responsible to them.

These are not dramatic bills. They will not make the headlines. But they are very important. The full-employment bill, which is so much discussed and which should be passed, and passed promptly, expresses a policy as regards jobs. But we must have scientific research if private enterprise is to provide the required number of actual jobs. A sound national policy in regard to the encouragement of scientific research and the use of its findings, both in the natural and in the social sciences, will be an important factor in making possible the fulfillment of the two great desires not only of the American people but of the democratic peoples of the world—the desire for full employment and the desire for peace. Science properly supported and directed can wipe the fear of unemployment and the fear of war off the face of the earth. What will we do to make this possible?

## Atomic Energy Is Not Too Hard To Understand—Read and See for Yourself

EXTENSION OF REMARKS

OF

### HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. McDONOUGH. Mr. Speaker, the revelation of atomic energy as an instrument of war which destroyed Hiroshima and Nagasaki in Japan has amazed and shocked the world and focused public attention on the unbelievable potentialities of atomic energy for war as well as for peaceful purposes.

To the average person without some scientific knowledge or training, atomic energy is a great mystery, beyond, understanding and something for only scientists, engineers, physicists, and mathematicians to deal with. The average person thus closes his mind and shuts himself out from any possibility of learning anything about atomic energy believing that it is something so new and terrifying, so deep and impenetrable that he thinks he could never grasp or understand what it is. Atomic energy is not new. It has always existed. All we have done is discover it. It is as old as the hills.

Can you imagine the utter amazement of the first man that discovered fire? He had less conception of what fire was or how to control it then than we have of atomic energy.

Think of the courage of Ben Franklin when he discovered electricity by flying a kite during a thunderstorm. He did not know then that he would not be electrocuted and he did not have the slightest idea that electricity would be used to light great cities, drive great power plants, heat homes, cook food and the thousands of other uses it has been put to.

We know what fire is and how to use and control it. We know how to use and control electricity but we still do not know what it is. Frankly, now should not we learn all we can about atomic energy instead of looking upon it as a monster of destruction but rather as a great gift to humanity for good, and a means to help mankind live better and happier?

I speak with some knowledge of science, having spent some years of my life before entering public service as an industrial chemist in metallurgy, manufacturing steel and aluminum, and in explosives, manufacturing nitroglycerine nitrocellulose—smokeless powder; trinitrotoluene—TNT; tetranitroanaline—TNA; and research work on nitro starch. You have to know what atoms and molecules are to do that kind of work. I am not appearing as an expert on atomic energy, but I have made up my mind I am going to add to what knowledge I have by reading all I can about it.

Let me tell you in layman's language what I know and have found out. It

may help you better understand and perhaps grasp some of the fundamentals of atomic energy.

First, atoms are very, very small, smaller than microbes. They are so small that 100,000,000 laid side by side would not measure an inch in length. Everything is made up of atoms—your clothes, food, your body, house, automobile—everything. All matter is made up of atoms—that is something to remember, because it means everything. Until very recently atoms were believed to be the smallest indivisible form of matter. That is the theory that science has believed for many years. Now we have found a way to split the atom and have discovered that the atom is composed of several particles. The two principal particles are called the nucleus or center, and carries a positive or plus charge. The nucleus in each atom is surrounded by electrons which carry a negative or minus charge, and continuously move around the nucleus like a planet moves around the sun. Now, the secret of atomic energy is to separate the nucleus from the electrons.

Let us take for example a plum. We will call the seed inside the plum the nucleus of the atom and the fruit around the seed the electrons. Now to release atomic energy, you must separate the seed from the fruit of the plum and when that is done great energy which causes tremendous heat is released. In fact, the energy is so great that it blows the nucleus out of other atoms that happen to be nearby and they in turn release great energy and heat and so on until the energy bumps up against some atoms that will not be separated or are not fissionable or radioactive or, in other words, are stable, and the energy wastes itself and the reaction stops. This is called a chain reaction. When atomic energy is released in a chain reaction in the presence of radioactive fissionable atoms without a moderator or neutralizer, you have the effect of an atomic bomb, which destroys everything in its presence with the tremendous energy and heat it releases.

Now, this is just what might have happened to the man who first discovered fire, if he had made his discovery in a great forest of heavy dry underbrush. The fire would have burned until it consumed all combustible material it came in contact with but finally it would burn itself out. Remember now that atoms are very, very small and that in, say a pound of radioactive or fissionable atom splitting material, there are billions and billions of atoms and if you can find the way to start just a few of those billions of atoms to split—just the same as lighting a match to set fire to a bunch of dry twigs—they in turn would release enough energy to split the others, thus producing tremendous heat and energy that would consume everything in the area where the reaction occurred, but if you can control and store up that heat and energy and use it when, as, and if, you needed it, just like storing electricity in a battery or steam in a boiler, you will have harnessed atomic energy and make it do whatever you want it to do.

Today we know of only a few elements that are highly radioactive and fissionable, uranium, polonium, thorium, protactinium, others may be discovered and then again we may find a way to make more common elements such as carbon, sulfur, or magnesium, radioactive and fissionable. Einstein stated the theory that matter can be converted into energy. That means all matter and is the basis upon which atomic energy has been developed. In other words, all matter can be converted into energy if you can find a way to split the atoms of all matter.

We Members of Congress should learn all we can about atomic energy and as quickly as we can. We will soon have to pass some legislation to establish the Nation's policy on how to control it. I hope what I have said will help you.

## Are We Ready To Make This Our Century?

EXTENSION OF REMARKS

OF

### HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a thoughtful and well-prepared editorial from the Buffalo Evening News of October 15, 1945. The editorial is as follows:

ARE WE READY TO COME OF AGE, TO MAKE THIS OUR CENTURY?

The United States returns from the wars the world's most powerful Nation. Faced with crisis, we found unsuspected springs of strength, and no task proved too great for the American Leviathan. The world stage is set for this to be America's century. Economically and financially, we can cope with the problems of the major creditor Nation, because we are by long odds the world's greatest manufacturer of goods and services, capital and skills. But are we emotionally adjusted to the new role? In an international sense, is America ready to come of age?

Nations, like communities, find it hard to break the cake of custom. Britain's high-tariff mercantilism, which precipitated our War of Independence, persisted after she overturned Napoleon and began her great career as factory and bank for the world. She tried to face both ways, to favor the landed gentry with a high tariff on foreign grain at the same time that she filled Lancashire's cotton mills with workers at starvation pay. Not until 1846 did Sir Robert Peel win his fight to get rid of the corn laws. Britain then assumed her responsibilities as a great creditor power, and her golden age began.

There has been an almost identical lag in America's attitude toward foreign trade. Since Jefferson's 1807 Embargo Act, we have looked with favor on the export of the fruit of our labor, but have built tariff walls against the import of goods from abroad. In 1916 the United States became a creditor country, but has been loath to act as one until the closing stages of World War II. As a creditor country, we must eschew repetition of the blunders of the lush 20's, when we pipelined goods and gold to the rest of the world but erected the Hawley-Smoot tariff wall to prevent our customers from paying their debts.

The present Congress has gone a long way to avoid the repetition of this identical mistake. The passage of the Bretton Woods monetary measures, the extension and expansion of the Trade Agreement Act, the move to repeal the Johnson Act to prevent the sale here of the securities of any country in default in World War I debts represent great forward steps.

Prof. Percy W. Bidwell, formerly of the University of Buffalo, now with the Council on Foreign Relations, points out in Foreign Affairs that in the years of transition immediately ahead, imports can make three special contributions to our national well-being; imports of minerals and other foreign raw materials can diminish the drain on our natural resources; they can be used to break up monopoly situations and thus strengthen the forces for true free enterprise; the receipt of consumers' goods from abroad can educate the tastes of our buying public, thereby stimulating our domestic producers to improve the state of the arts.

America cannot function as a great creditor country without becoming hospitable to imports in a way we have never before. Unless we greatly expand our purchases abroad, we will be unable to maintain the great increase of exports without which our goal of full employment in an economy of abundance will collapse as soon as the economy has caught up.

Economically, America has come of age. But it remains to be seen whether we are emotionally prepared to exercise our enormous power with the self-restraint that its possession demands. If we do, this is the American century. If not, there may be self-frustrations and disappointments ahead.

## Parcel Post to Italy

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. LANE. Mr. Speaker, I am writing today to Jesse M. Donaldson, First Assistant Postmaster General of the Post Office Department concerning the criticism of our Italian people here in the United States concerning parcel-post restrictions to their native land, Italy. At the present time, packages may be sent to most all foreign countries, but there are discrepancies in the number of deliveries and the amount of weight of parcel-post packages.

I am informed that parcel post may be sent to some countries twice a month, but to Italy only once a month. The weight of the packages to some countries is 11 pounds, but to Italy only 4 pounds. Americans of Italian descent feel that they are being discriminated against. They would like to be able to send the 11 pounds per month, the weight alloted to other countries instead of the mere 4 pounds per month. It is a matter of record that they are doing more, proportionately, to relieve the distress of people in the mother country than any other group. Because of inflation, it is useless to forward or send money to Italy. The

people need clothes to withstand the hardships of the approaching winter. However, present parcel-post regulations prevent Americans from sending bulky clothing, like overcoats, which are desperately needed in Italy.

People here will do much to help the impoverished over there, if parcel-post limitations are revised upward to permit larger sized, individual shipments to Italy.

## The Atomic Bomb

EXTENSION OF REMARKS
OF
**HON. WILLIAM A. ROWAN**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. ROWAN. Mr. Speaker, the atomic bomb is undoubtedly the most discussed question in the United States today, if not throughout the world. My native city of Chicago is intensely interested in this subject as evidenced by the increasing volume of mail which arrives daily on all phases of that matter. Among the most interesting communications received recently is one from Mr. Leonard I. Katzin, of 5511 South Kenwood Avenue, Chicago. Because of his very interesting comments on the atomic bomb I am including excerpts from his communication, as follows:

CHICAGO, ILL., *October 9, 1945.*

The disclosure of the atomic bomb at Hiroshima and Nagasaki brought to the attention of the world a force of a new order of magnitude, and with it an overwhelming need for a reevaluation of the relationships between the peoples of the world, as well as reconsideration of traditional domestic policies. The Congress is busy now with these important points, for which the alternative to a wise decision is national and world-wide catastrophe.

The scientists who have, with full knowledge of the implications, worked on the development of this new force, atomic power, during the years of secrecy, continually have given serious thought to the consequences of their work. They are the persons best fitted to point out the directions and potentialities of future developments and uses of this new power. These scientists, whose views I am attempting to present to you here, uniformly are dismayed by the fact that much of the action and discussion related to the matter of atomic power and the atomic bomb are based upon a misunderstanding of some fundamental facts, and thus may be translated into dangerous policies.

The first of these misunderstandings is that there exists a fundamental secret which may be kept from the rest of the world. There are two possible places where such a secret might exist—the actual construction of the bomb itself, and the manufacture of the uranium-235 or the plutonium which constitutes the explosive charge of the bomb. With regard to the first point, there are a large number of possible ways of constructing a bomb and having it function successfully. Any team of competent nuclear physicists and explosives experts can devise several forms. One simple, obvious construction is pointed out in the Smyth report (official public report on atomic energy for military purposes) itself. In short, any secret of the construction of the atomic bomb used is a completely trivial one, whose knowledge is not fundamental nor even essential. The only secret of the atomic bomb was its existence prior to its public unveiling at Hiroshima.

Is there then a fundamental secret of the manufacture of the fissile (explosive) matter itself? It has been pointed out time and again that the principles of isotope separation on which the preparation of uranium-235 is based were well known and understood before the war, and that wartime developments consisted solely of working out technological details in great haste for wartime production of the isotope. True, the usefulness of the plutonium for atomic power was not known for certain before the war, but methods for making it were even then known to the world's scientists, and it is conjectured that the Germans had actually worked on its manufacture, with the aid of Norwegian "heavy water." Plutonium's usefulness is no longer a secret, and any competent nuclear scientist can point out the obvious ways of its manufacture. The Smyth report supplies additional useful facts. The remainder consists of details that may be worked out by others in the same manner that our scientists did, and perhaps the German scientists also. We needed only half a milligram—a sixty thousandth of an ounce—to enable us to design and build huge production plants. Where then is any fundamental secret of the atomic bomb or atomic power?

There being no fundamental scientific secrets involved, it is obvious that all that stands between any determined nation possessing the raw materials (which themselves are found in many places on the earth's surface) and finished atomic bombs are technological developments, and time. Here again there are important errors of understanding. It is not essential for successful production of atomic explosive material to invest two billions of dollars, and to run the whole gamut of engineering development of which we are so proud. We made such a huge investment because we were covering all the possible angles of approach, and developed many processes to plant scale before finally abandoning them for more immediately profitable approaches. As a result, we spent many times more than would be necessary for development of a single workable procedure. The nations of the world no longer have to go through the same selective agonies we did—we have already published the nature of the most successful methods of manufacture to be used. Even the plutonium development, which was the one real flight into the completely unknown, cost only 383 millions according to official figures. It should be clear that a nation desiring to develop production of fissile material need anticipate an investment of perhaps only a tenth of our total, or about 200 millions of dollars. Many nations are able to afford this.

Such a development does not need to take a great deal of time. We spent approximately 3½ years, from the beginning of the war to the testing of the first bomb in New Mexico. Almost a year of that time (up until the demonstration of the first chain reaction in December 1942) was spent on explorations to test whether the whole idea were actually feasible. Newcomers to the atomic field need not spend that period of uncertainty; they already know not only that the project is feasible, but the best lines of attack. It is sheer conceit to claim that no other nation can develop one of our successful processes (or even a different and better one) within the period of 2½ or 3 years, in which we divided our efforts among several.

When General Groves claims that the scientists mean that it would take 5 or 10 years for another nation to duplicate only our theoretical scientific information, and that they could never duplicate the necessary industrial and technological development, he totally misrepresents the scientist's position. We say that with no further help from us, other nations can have effective atomic bombs within a period of 2 or 3 years.

I hope that I have been able to transmit to you in its proper perspective the scientist's understanding of the situation. The erroneous statements which are current concerning the questions of secrecy and time and effort needed to produce atomic missiles give a false sense of security, and a false sense of the time we have to work out a solution. We say that the country does not have time to let things work out in their own way. Within 3 years' time at least several nations of the world will have at their disposal material for atomic bombs. What can we do now to anticipate the situation, and act wisely to prevent the possible world conflagration which an international dispute may then touch off?

Most sincerely yours,

LEONARD I. KATZIN.

## Discrimination in Medical Colleges

EXTENSION OF REMARKS
OF
**HON. ROBERT F. WAGNER**
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Thursday, October 18, 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very significant article on discrimination in medical colleges, written by Frank Kingdon, which appeared in the October issue of the American Mercury.

Mr. Kingdon's article proves conclusively that the gross discrimination which now exists in our medical colleges is a serious matter which warrants the concern of the entire Nation.

I believe that this problem justifies a complete investigation by the Congress with a view to correcting this unfortunate situation.

Senate bill 1050, which the Senator from Montana [Mr. MURRAY] and I have jointly introduced, along with a companion bill introduced in the House of Representatives by the gentleman from Michigan, Representative DINGELL, provides for a comprehensive national-health program which includes grants-in-aid for medical education and research and gives preference and priority to grants-in-aid with respect to projects for servicemen. This proposed legislation would help to expand opportunities for medical education. Our bill also contains provision for health insurance which would make it possible to utilize the services of more doctors—and pay them for these services. All these measures should be adopted to bring more adequate medical care to the American people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DISCRIMINATION IN MEDICAL COLLEGES
(By Frank Kingdon)

Leo, a bright and personable American lad, dreamed of becoming a great physician. He was the kind of boy who could expect to go far in any field, and assuredly there are easier ways of achieving success than the grueling study and practice of medicine. But Leo did

not think of his ambition in economic terms. He thought of it as a life-long dedication to the vocation of human healing.

After graduating from Thomas Jefferson High School, in New York City, he took his premedical course at the University of Ohio, and made an excellent scholastic record. In college, he became a member of the student council and the debating team, and also distinguished himself as a star track man. Upon graduation, he filed his first application for admission to a medical school and, in view of his record, he was confident of being accepted.

But his application was mysteriously turned down. He filed another, and another—at 87 schools—always with the same heartbreaking result. Though the rebuffs piled up, Leo kept trying. That fall he took his master of arts degree at Yale, receiving top honors. One of the professors, impressed by his mind and personality, made a personal effort to enroll him in a medical school, but without success. Not one of the schools had the courage to inform Leo frankly that he was being excluded because he was a Jew.

Frustrated everywhere, Leo gave up his dream of becoming a doctor, and the American people in all likelihood lost the potential services of a very able one. In a scientific domain upon which depends the health of the Nation, common sense would demand that strictly scientific criteria be applied in selecting personnel. Yet in Leo's case the criteria used had nothing to do with science.

His case, brought to light by a Nation-wide survey, unfortunately is not exceptional. It is typical, to the point of being commonplace, of systematic discrimination on racial and religious grounds enforced by virtually all medical schools in our country. The principal victims happen to be Jews, but the undemocratic system also strikes at other minority groups, particularly Catholics, Italians, and Negroes.

While the science of medicine is making magnificent progress, prejudice on a voodoo-doctor level prevails in the choice of its future practitioners. The wrong-name church or ancestry too frequently cancels out scholarship, personality, and natural talents in accrediting students to schools of medicine. Moreover, to the injury of exclusion for racial reasons, the schools add the insult of hypocrisy. Privately the medical deans acknowledge that they apply a quota system designed to keep out minority-group applicants. But not one of the 78 grade A medical colleges in the United States and Canada interrogated by questionnaire would admit this in writing, except the southern schools, which declared that they exclude Negroes. Even so, no school anywhere admitted that it uses the quota device to keep out other minority-group applicants.

II

The evidence of anti-Jewish discrimination is overwhelming. Although the annual applications for entrance by Jewish Americans has not declined, the number of Jewish students in medical schools has been reduced by, roughly, 50 percent in the last 20 years. Out of a total of 6,500 enrolled annually, only between 500 and 600 are now Jews. Even that figure is likely to be cut sharply if public opinion does not intervene quickly. The significance of the low figure emerges clearly when it is considered in relation to the number of Jewish boys seeking admission.

Every year, the survey disclosed, the medical colleges receive between 35,000 and 40,000 applications from about 14,000 individual students. Medical officials estimate that from 35 to 50 percent of the applicants—that is, from 5,000 to 7,000—are Jewish. Of the non-Jewish students, some 6,000 are admitted; of the Jewish applicants, only about 500 get in. In other words, 3 out of every 4 non-Jewish students are accepted, while only 1 out of every 13 Jewish students is given the chance to enter a medical school. These ratios do not have the slightest relation to mental equipment, natural aptitudes, and other rational, scientific standards of selection. By those standards alone, the Jewish applicants could reasonably be expected to rate the same proportion of admissions as the rest of the applicants.

During the last decade the total student body in the medical colleges has remained fairly constant, between 21,000 and 22,000. The number of doctors needed in the country, and hence the size of the student body, is estimated by the Association of American Medical Colleges. But while the total number of students has remained the same, or even increased slightly, the number of Jews among them has declined rapidly—this despite an increase of Jewish applicants. Slow at first, the decline has become precipitate in recent years. The class of 1937 included 794 Jewish students, the class of 1940 only 477—a 40-percent drop in 3 years.

Scholarship, of course is not the only requirement of a competent doctor. Character, personality traits, emotional balance and integrity are vital considerations which the colleges seek to explore through oral interviews. Increasingly, however, this screening has been misused as a device for weeding out Jews, Catholics, and other undesirables, many of whom match or even surpass successful candidates for admission on the essential character standards.

To make matters worse, the war and post-war conditions have closed off access to foreign medical colleges, which in the past absorbed many of these unwanted Americans seeking to become physicians. Before the war, some 2,000 of our boys were studying in medical school in Scotland, Switzerland, France, and other countries, a big percentage of them drawn from our minority groups. In addition, many of the so-called grade B schools, to which Jewish and other victims of quota rules flocked out of necessity, have been closed down.

And while valuable human material for future medical contingents is cast aside recklessly for racial or religious reasons, alarms are being sounded in some quarters about a serious shortage of doctors in the near future. In a recent report issued jointly by the Office of Scientific Personnel and the American Council on Education, Dr. Victor Johnson, secretary of the Council on Medical Education and Hospitals, and Dr. Fred C. Japffe, secretary of the Asociation of American Medical Colleges, declared that today we have a shortage of 35,000 doctors and that we face a shortage of 19,000 doctors after demobilization.

III

The survey not only questioned the 78 accepted medical schools but examined their entrance blanks, studied confidential reports and documents, and conferred with leading physicians, medical officials, and laymen. This inquiry left no doubt that discrimination is not merely general but has been accepted and become entrenched. Educators have ceased being astonished by the practice. "I've just taken it for granted," one college professor observed, "that the Jewish students in my classes would be unable to enter a medical school. We've become hardened to this and no longer fight it."

It is even becoming difficult for boys with obvious Jewish names and addresses in centers of Jewish population, like New York City, to obtain application blanks. One Jewish student was told by the College of Physicians and Surgeons of Columbia University that it was "filled up until 1947," and is therefore "not taking any more applications." As an experiment, the boy's father asked a friend with a "good" name and "proper" address to write the same school. The answer came through quickly and said, in effect, that it was very happy to send him the application blank for admission to the medical school, and, indeed, would be pleased to consider him for the coming term.

Because the students of the College of the City of New York are preponderantly Jewish, graduates of that institution find it more and more difficult to obtain admission to medical schools. "Don't send your boy to City College if you want him to go into medicine," parents are now advised. Scholastically, the college measures up to most other such schools; only racial prejudice and planned discrimination can explain the difficulties which City College of New York men experience in seeking entrance into the medical schools of Cornell, Johns Hopkins, Dartmouth, Yale, Harvard, and other first-class colleges.

An analysis of the actual figures for graduates of City College desiring a medical career reflects the whole sordid picture. Of 190 City College graduates applying to medical schools in 1925, 58.4 percent were accepted. By 1941, the last prewar year, only 20 percent of the 115 applying were accepted. The rate of admission has gone down steadily since then. But here is the comparative table for City College of New York:

| Year | Number of applicants | Total percentage admitted |
|---|---|---|
| 1925 | 190 | 58.4 |
| 1927 | 205 | 51.0 |
| 1929 | 258 | 29.0 |
| 1932 | 279 | 24.0 |
| 1936 | 189 | 16.0 |
| 1939 | 122 | 15.0 |
| 1942 | 134 | 16.0 |
| 1943 | 139 | 15.0 |

The same general trend—an ever smaller percentage of admissions—is evident for Brooklyn College, Queens College, and other institutions that have a large percentage of Jewish, Italian, and other minority-group students.

The College of Physicians and Surgeons of Columbia University shows a typical picture of the same trend viewed from the angle of the medical school. The enrollment of Jewish students here dropped from 46.92 percent in 1920 to 6.4 percent in 1940. Here is the statistical table for the two decades at Columbia:

| Year of admission | Enrollment | Total number admitted | Total percent admitted |
|---|---|---|---|
| 1920 | 98 | 46 | 46.92 |
| 1923 | 103 | 26 | 25.22 |
| 1928 | 112 | 23 | 20.24 |
| 1934 | 91 | 13 | 14.17 |
| 1939 | 103 | 6 | 5.82 |
| 1938 | 92 | 4 | 4.39 |
| 1939 | 108 | 8 | 7.36 |
| 1940 | 121 | 8 | 6.19 |

At Long Island University,[1] the process of anti-Jewish discrimination has been somewhat slower but in the same general direction. The Jewish enrollment in its medical college, constituting 42.24 percent in 1932, declined to 26.50 percent in 1935, to 19.38 percent in 1938, to 14.14 percent in 1940. At Syracuse University the percentage of Jews in the total of new enrollments dropped from 19.44 in 1936 to 6 in 1942; though in this period the size of the freshman class increased from 41 to 50, the number of Jewish students among them decreased from 8 to 3.

At Cornell University, where 40 percent of the entering medical class a quarter of a century ago were Jewish, today only five percent

[1] Figures for Columbia, Long Island, and Cornell were obtained through private investigation. They are substantially correct although actual percentages may vary slightly from official records which are not available to the public.

of new admissions are Jewish. In 1941 Cornell enrolled only three Jewish students in a total class of 84.

New York University, indeed, is one of the few, perhaps the last, of the major medical schools, where the quota system is disregarded. From 40 to 50 percent of its medical enrollment are Jewish. But it is no secret that the university has been under pressure to conform to the prevailing pattern of discrimination.

IV

Practically every medical college, the survey showed, asks the applicant for his race or religion or both. Some of them inquire whether the student has ever changed his name. The University of Southern California, under race and descent, requires the candidate to check whether he is Anglo-Saxon, French, Germanic, Italian, Negro, Oriental, Scandinavian, Slavonic, or Spanish. The University of Virginia Medical School asks the applicant to state whether he is English, French, Hebrew, Italian, etc. Syracuse puts it this way: "In what denomination is your church preference?" The George Washington University, besides inquiring about race and religion, asks: "Have you ever registered at any school under a different name? If so, state it and name the institution."

Rejected in one place, students of the minority groups try others. Many of them spend up to $200 in application fees, which are not returned. Nearly all schools require a fee; the $5.00 charged by Johns Hopkins, Virginia, Minnesota, Georgetown, and Nebraska is the average, but fees as high as $10.00 are not unusual. In accepting and retaining fees from boys whose applications are automatically rejected on racial and religious grounds, many medical schools are in effect engaged in a profitable sideline. Boys desiring to become physicians who, in desperation, make multiple applications to 40 or 50 colleges, obviously make a large financial investment before being convinced that the wall of discrimination is too high to be vaulted.

| School | Catholics | Italians | Negroes | Jews |
|---|---|---|---|---|
| Yale University | 14 | 4 | 4 | 12 |
| Tufts College Medical School | 70 | 10 | 0 | 15 |
| University of Illinois | 20 | 5 | 1.5 | 41.80 |
| University of Rochester | 13 | 2 | .6 | 6.0 |
| Bowman Gray School of Medicine of Wake Forest College | 1.5 | 0 | 0 | 1.5 |
| The Hahnemann Medical College | 31 | 9 | 0 | 9 |
| Western Reserve University | 21 | 8 | 1 | 15.5 |
| Creighton University | 74 | 18 | 0 | 4 |
| University of Buffalo | 36.17 | 10.11 | 0 | 10.91 |
| Women's Medical College of Pennsylvania | 15 | 7 | .9 | 31.0 |
| Syracuse University College of Medicine | 17.8 | 6.5 | 0 | 12.7 |
| Queens University at Kingston | 13.67 | 2.16 | 0 | 5.4 |
| Georgetown University School of Medicine | 85 | 19 | 0 | 8 |
| Boston University | 70 | 15 | 3 | 20 |
| University of Virginia | 3 | 1 | 0 | 10 |

Sixty-five of the seventy-eight United States and Canadian medical schools listed as grade A by the American Medical Association responded to the inquiry. The first question was direct and simple: "Do you have a quota system in regard to minority groups such as—Catholics, Italian Americans, Negroes, Jews, any others?" Except in reference to Negroes, the answers were "No" without exception; 17 of the colleges, all in the South, acknowledged a quota system for Negroes.

Having denied that they enforce a quota system, the schools, of course, did not specify what their quota percentages are. On questions seeking information as to the proportion of minority-group students admitted in a normal prewar year (1940), the majority denied exact knowledge or asserted that the information was not available.

The conclusion, in the light of all the other facts, is that medical schools actually do apply a quota system but they do not care to admit it in writing.

One more-than-likely explanation for this hush-hush policy is the practical consideration that quotas, indefensible on scientific or democratic grounds, may actually run counter to constitutional guaranties nationally and to many State laws.

It should be recalled that these medical colleges are tax-exempt and in some cases supported by public funds. Whether directly helped financially from State budgets or not, the taxpayers everywhere contribute indirectly by exempting the institutions from taxes. Their obligation to treat all citizens on a basis of equality is therefore not only moral but in many instances legal. In New York, for example, section 4 of the tax law says:

"No education corporation or association that holds itself out to the public to be nonsectarian and exempt from taxation pursuant to the provisions of this section shall deny the use of its facilities to any person otherwise qualified, by reason of his race, color, or religion."

In New York, and in other States with similar provisions, the tax authorities should examine the validity of the tax exemption enjoyed by some educational institutions.

V

The excuse for imposing a quota system usually advanced is that there ought to be some correlation between the number of physicians of any racial or religious strain and the proportion of that race or religion in the general population. Since Jews constitute about 4 percent of the American population, their share of places in the medical schools, it is argued, should conform to that percentage. Thus Dean Willard C. Rappleye, head of the College of Physicians and Surgeons of Columbia University, and an influential leader in medical education, has declared:

"There is a general belief that the representation of the various social, religious, and racial groups in medicine ought to be kept fairly parallel with the population make-up."

The same viewpoint is expressed, at least by implication, by Dr. Morris Fishbein, editor of the Journal of the American Medical Association. On October 7, 1939, he wrote in a letter:

"The case of the Jewish boys in medicine is particularly serious because they have overwhelmed the schools, and many schools turned them down simply because they are Jewish. There is no way to prove this, but it is obvious. At the same time, I wish to point out that somewhere between 15 and 20 percent of the doctors in this country in the practice of medicine are Jewish, and there is about 3.5 percent of the population in the same category."

The surface logic of this arithmetic collapses as soon as one subjects it to democratic or sheerly human, let alone scientific, tests. It assumes, to begin with, that our population consists not of Americans but of a vast number of racial and religious segments, each entitled to legal and human rights only in direct proportion to its size. It assumes absurdly, moreover, that Italian doctors should cure only Italians, Jewish doctors should cure only Jews; that the contribution of every social or racial element in the population to the progress of medical science should be limited through a racist bookkeeping.

The appropriate comment on this spurious and un-American arithmetic should be made by some Christian whose life has been saved by a Jewish doctor or vice versa; it should be made by non-Jews who have benefited from the discoveries of Paul Ehrlich, August von Wassermann, Otto Warburg, Waldemar Haffkine, Reuben L. Kahn, Abraham J. Rongy and other giants of modern medicine who happen to be Jews. We need only apply the same fantastic arithmetic to any department of American life to realize how ludicrous, antidemocratic and wasteful it would be; how it might drain every department of those very people most eager and most able to make the greatest contribution.

A list of some of the medical schools which have a rigid quota system, denied in words but applied in fact, would include the following:

Yale University School of Medicine.
Johns Hopkins University School of Medicine.
Harvard University Medical School.
Dartmouth College Medical School.
Columbia University College of Physicians and Surgeons.
Cornell University Medical College.
University of Rochester School of Medicine and Dentistry.
Duke University School of Medicine.
Bowman Gray School of Medicine of Wake Forest College, N. C.
University of Virginia Department of Medicine.
Northwestern University School of Medicine.
Syracuse University College of Medicine.
Baylor University College of Medicine.

Some of the schools that have a policy of discrimination but are less rigid in its application include:

University of Chicago Medical School.
University of Maryland School of Medicine.
Boston University School of Medicine.
Wayne University College of Medicine.
Washington University School of Medicine, St. Louis, Mo.
University of Cincinnati College of Medicine.
University of California School of Medicine.
Jefferson Medical College of Philadelphia.
Temple University School of Medicine.
University of Pennsylvania School of Medicine.

Major medical colleges that come closest to a nonquota policy are unhappily few. The Medical School of New York University and the University of Illinois School of Medicine are the most important examples. Those not included in any of the above lists are mostly State universities or sectional colleges in the South or Midwest. They operate, in effect, on a strict quota system, but theoretically it is based on geographic distribution rather than on race or religion.

The result is about the same: There are, for example, few if any Americans of Jewish or Italian origin in the Kansas University medical school, the medical schools of North or South Carolina, Utah, or Texas.

Though some medical colleges may deny the facts revealed by this study, no one close to the picture of medical education in the United States can or will deny its basic truth. Few self-respecting educators are so deficient in the faculty of simple logic as to deny that the situation is a startling and dangerous violation of the theory and practice of democracy. In sorting out Americans on the basis of race and creed, the quota system is openly divisive instead of unifying; it accepts racism at the very moment when Americans of every race, creed, and color are fighting together to safeguard our democratic way of life.

There is no other reasonable, democratic answer to the questions posed by discrimination in medical education except to abolish it.

## Fundamental Principles of Economic Law

EXTENSION OF REMARKS
OF
**HON. COMPTON I. WHITE**
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 16, 1945*

Mr. WHITE. Mr. Speaker, in reply to one of the many letters received in response to the publication of my article on money entitled "The Trouble With Silver," I have undertaken to further explain some of the facts concerning money. This letter from a gentleman in New York and my reply is inserted herewith:

Hon. COMPTON I. WHITE,
*Washington, D. C.*

DEAR SIR: I have just read your article, The Trouble With Silver, in the August 1, 1945, CONGRESSIONAL RECORD. I always read your remarks with deep interest.

It seems to me that the average person in this country has gotten smarter, or just more informed, since the days (81 years) of bimetallism. True, during the clear days bimetallism works all right—but when storm clouds begin to gather, wouldn't the smart, informed people be quick to convert their $1,000 of silver coin into gold coin? In other words, wouldn't Gresham's law still operate or attempt to operate? That law grew out of human nature, not economics, and human nature changes very slowly.

Sincerely,

EDWARD M. CAMPBELL.

Mr. EDWARD M. CAMPBELL,
*The Union League Club,*
*New York, N. Y.*

DEAR MR. CAMPBELL: Thanks for your recent letter. In preparing and publishing the article on money entitled "The Trouble With Silver", an attempt was made to touch upon some of the important changes in the monetary system of this country and the effect of these changes on our national economy.

I am sure you will agree that money and finance are subject to the control of the principles of economic law and that the use of credit and money are interchangeable and in many cases closely intermingled—a fact that has the effect of confusing the issue. To reach any definite conclusion concerning the function of money, we must first determine the basic principles on which any monetary system is established. It may be that you will agree that the most important factor is the monetary unit of stable value with constant purchasing power. Any country to obtain such a stable monetary system must provide a currency that increases in volume evenly with the growth of population and commerce.

I quote from an old article taken from the New York Times under a Paris date line:

"Former Finance Minister Joseph Caillaux stated that for the sake of our producers and manufacturers, we sincerely hope the pound will soon be back on a gold basis. Of the world depression, he diagnosed the causes as, first, partitioning of nations by tariff walls and, second, the penury of monetary metals, and further stated there is only one remedy. It is not that there should be any redistribution of gold, as is being childishly suggested. Gold has its own law which it obeys. What must be done is that another monetary metal should be joined to it. Platinum has been suggested. I would prefer that silver, which was stupidly demonetized, should be rehabilitated."

In making response to your observation "the average person in this country has gotten smarter or just more informed," on the contrary, in considering the fundamental principles of economic law and the ultimate effect of the application of these principles on the several world monetary systems, it appears that the average person is less informed on the basic principles of money and has succumbed to the false propaganda. With regard to the operations of Greshams law. There is an old axiom embodying a fundamental principle—"Use creates demand and demand creates value." If the profit and financial control motif was removed as an influence in managing the national currency system so that our currency system could be established upon a plan that would conform to the principles of economic law, silver would be remonetized and would be "as good as gold" in supplying the money function—yea better—circulating in the channels of trade and business.

Don't forget that every foot of territory obtained by our Government in the continental United States—Louisiana, Florida, Texas, California, Northwest Territory, and Alaska—was acquired when silver was money and the United States was on a bimetallic basis.

Judging by the record and our national experience, we know that our national currency system failed disastrously "when storm clouds began to gather." The only thing left to the country in the way of finance was the collective credit of the American people and the taxing power of the Congress, which the Government was forced to draw upon to supply credit to fulfill the money functions by the establishment of the Reconstruction Finance Corporation to make private loans financed by the sale of United States bonds, a plan that put the Government in business in a big way. This program, coupled with the relief appropriation, left our country burdened with a $63,000,000,000 public debt before the war emergency which forced the Nation to undertake the financing of a world-wide war. The financial developments of recent years both in this country and abroad have demonstrated to my entire satisfaction the inadequacy of the single gold standard and the failure of any managed currency system to meet financial emergencies.

I reaffirm the statement made in my article on silver—that the only way the governments of the world will ever obtain a stable, adequate, workable money system is by the use of gold and silver under a bimetallic system—money standardized as to purity and weight.

Thanking you for the opportunity to explain my views on the vital issue of money, I am,

Sincerely yours,

COMPTON I. WHITE,
*Member of Congress.*

## A Splendid Troublemaker

EXTENSION OF REMARKS
OF
**HON. JOHN B. SULLIVAN**
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include herein an editorial from the St. Louis Star-Times of September 28, 1945:

A SPLENDID TROUBLEMAKER

Causing trouble for the government to which one is assigned is not usually regarded as the badge of high diplomacy, but as Ambassador Spruille Braden comes home from Argentina to assume an Assistant Secretaryship of State, it is to his everlasting glory that he has made things as hot as possible for the military dictators at Buenos Aires.

From first to last, Braden kept clearly in mind the ideal concept of his proper role as Ambassador. That role was to represent with all possible vigor the policies and ideals of his own Nation. He was a plumed knight of democracy in a land where officially democracy was anathema. Unlike many in our State Department, he did not deem it his function to make himself pleasing to the official hierarchy to which he was assigned. He was no gardenia diplomat to be taken into camp by the social lobbies. He did not become a bridge between dictatorial Argentina and democratic America. To his credit he did everything he could to knock the plank out of the bridge and to widen the abyss between the military usurpers and our Government in Washington. And this was all to the good. Our diplomats should be fearless, courageous, vociferous exporters of the American ideal of free government. Spruille Braden should become a pattern.

As we learn that Argentina has deemed it necessary to imprison 2 foreign ministers and 72 other prominent persons in Buenos Aires and to reestablish the state of siege which was lifted last August 17, we applaud Braden the more. He must have given aid and comfort to the popular forces of revolt. He was a splendid troublemaker for a government that has hampered and retarded the aspirations of free people throughout South America. Well done, Mr. Braden.

## Plain Tax Talk

EXTENSION OF REMARKS
OF
**HON. RAYMOND S. SPRINGER**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 17, 1945*

Mr. SPRINGER. Mr. Speaker, the tax bill, recently passed by the House of Representatives has produced many and different opinions respecting its provisions. An editorial appeared in the Washington Evening Star on October 17, upon this very question. This editorial is worthy of careful consideration upon this highly important subject, and I am submitting it herewith as a part of my remarks, and it is as follows:

Secretary Vinson does not pretend to be a student of semantics, but he gave an excellent lecture in that field when he appeared before the Senate Finance Committee the other day and showed how in the realm of taxation, as in domestic and international politics, words do not always mean what they seem to mean.

Speaking specifically of the "excess" profits tax and the "normal" individual income tax, Mr. Vinson made clear that both have been very misleadingly named, and he argued most persuasively for repealing them outright—and at once—because they were enacted originally only as wartime measures and can no longer be justified, now that peace is here.

Mr. Vinson's points on the "excess" profits tax may be summarized as follows: (1) To begin with, calling profits "excessive" does not actually make them "excessive"; (2) this levy was adopted primarily to keep war profiteering to a minimum; (3) it has no place in our peacetime economy; (4) it is "erratic and in many ways inequitable," giving to corporations with high prewar earnings or inflated capital structures a competitive advantage over new or expanding businesses not similarly situated as far as

taxing goes, and (5) since it inhibits planning and expansion, its repeal will stimulate production, create jobs, and thus benefit everybody.

As for the so-called normal tax, Mr. Vinson argues: (1) Far from being "normal," it is purely a war levy; (2) it has no peacetime justification because it is objectionable in that it violates the principle of adjusting taxation to differences in family status and according to ability to pay; (3) it is not a proper instrument for broadening the tax base, and in any event, even without it, there will be well over 30,000,000 taxpayers in 1946; (4) it is relatively nonproductive, creating complications for wage earners, employers, and the Government alike; and (5) its repeal will help reconversion by cushioning the transitional fall of purchasing power among low-income groups.

Secretary Vinson's views on a limited tax reduction of $5,000,000,000 for the calendar year 1946 cover more ground than this. But his advocacy of immediate repeal of the excess-profits tax and the normal individual tax constitutes his most important recommendation for promoting a "vital, invigorated peacetime economy" offering full employment and maximum production.

The House has already passed a bill which, in effect, eliminates the normal levy but which goes only 60 percent of the way on the excess-profits tax. Mr. Vinson's over-all argument seems so sound, however, that we must hope that the bill, when finally enacted, will follow his main suggestions.

## Pooling Scientific Resources and Brains Is Bound To Win Against Most Dreaded Diseases

EXTENSION OF REMARKS
OF
### HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. STEVENSON. Mr. Speaker, after reading the following letter received from Mr. J. E. Bucheimer, of Baltimore, Md., every Member of Congress should be in sympathy with the purpose of H. R. 3939, which seeks to eradicate the scourge of cancer and infantile paralysis.

The purpose of my bill is to make possible the construction of many more research laboratories and institutes throughout this country, equipped with the most modern scientific machinery and apparatus, where the keenest brains of the world may carry on independent research activity with the one purpose and determination in mind—the establishment of the causation and the cure of cancer and infantile paralysis.

If by the construction of laboratories and plants throughout the Nation, equipped with the most modern machinery, our scientists were enabled to discover how to harness atomic energy, surely with the aid of many more modern research laboratories and with the concentrated attention of the best scientific brains in the world, the scourge of dreaded diseases likewise should be conquered.

In the face of these scourges, mankind feels utterly helpless today. Is it not worth the effort and the expenditure of a mere fraction of the cost of the atomic bomb to make much greater the possibility of discovering the cure for cancer and polio?

Mr. Bucheimer's letter follows:

OCTOBER 13, 1945.

Hon. WILLIAM H. STEVENSON,
*Washington, D. C.*

DEAR CONGRESSMAN STEVENSON: In reading the CONGRESSIONAL RECORD each day, I have noticed your outstanding endeavors to have your bill, H. R. 3939, passed, in an effort to stamp out cancer and infantile paralysis.

I especially consider this one of the greatest bills ever put before Congress. Just a year ago I lost my daughter Jeannette, age 17, from the effects of a sarcoma. After the test operation, advised by a number of doctors, her leg was amputated above the knee in an effort to save her life, but this action failed to save her. The doctors claim they do not know the cause of it and, therefore, have no cure, and that no one has ever lived when they are affected by it. Further, it seems that in almost every case this particular condition shows up in young people. She had every treatment known to medical science, and still she lost.

It is for this reason that I hope and pray that the men of our lawmaking body will rally around you in an effort to save and build up the bodies of our future Nation and, if God willing, stamp out the conditions entirely.

With best wishes for your success, I am
Very truly yours,
J. E. BUCHEIMER,
BALTIMORE, MD.

## Strikes

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, unless this administration takes firm action concerning strikes, we may well find more and more people out of work because power-hungry labor racketeers have it in their power to deny the honest laboring man the right to work. There is no greater right than the right to work. It means the right to live and eat and have a home. Labor leaders are denying this right to countless numbers of our people today. Labor leaders have seized unusual powers. This power makes the individual member of a union a slave. He may be well paid but he cannot work, only when he is told to work. He is idle when he is told to be idle. He pays what he is told to pay. In other words, he is a slave to a few leaders who hold in the hollow of their hands the right of an individual to work and earn a living. Many of these honest laboring men have no voice in the running of these labor unions.

The present strikes and the attitude of the labor leaders are far removed from what we know as democracy. These labor leaders have a lust for power and money which far outweighs their interest in the welfare of their members. Union leaders can call strikes, make threats, levy assessments and dues without even trying to learn the will of the majority of the union members. There are workingmen, thousands of them, who pay their dues to their unions, far more each year than many of the country's better clubs dare ask of their own members.

Mr. Speaker, it is time for this Congress, if the administration will not do it, to enact legislation which will give the honest man the right to work. We must oppose those leaders of labor who in a large part are self-appointed and who work for their own selfish means. Organized labor has become of age. They should be accountable to industry and to people for their acts. They should respect contracts between their members and industry. When industry and labor lock horns and the wheels of machinery fail to move, then the public is the one that suffers. There are thousands of items which a hungry public needs but they cannot be produced when either labor or industry calls a strike.

I believe, Mr. Speaker, that this administration has it within its power to stop these strikes.

The people of America must work together or they can get no place in this reconversion period. It is time for action.

## Statehood for Palestine

EXTENSION OF REMARKS
OF
### HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. LYNCH. Mr. Speaker, under the unanimous consent granted me to extend my remarks in the RECORD, I desire to include an address made by me to a gathering of approximately 1,000 members and friends of the Bronx council of the American Jewish Congress at the Waldorf-Astoria, New York City, on October 14 last, which follows:

Mr. Chairman, distinguished guests, members of the Bronx division of the American Jewish Congress, ladies, and gentlemen, it would be most unusual for one with sentimental Irish blood in his veins not to be impressed by this demonstration of his fellow citizens of the Jewish faith. I feel deeply honored as the recipient of the Good Citizen Award made by the Bronx division of the American Jewish Congress. I trust that I not only have proved myself worthy, but I entertain the great hope that at no future time will the American Jewish Congress have reason to regret the award that has been given me here tonight.

Born and bred in New York and educated in the Catholic school system of the great Archdiocese of New York, from grammar school through university, it would indeed be strange if I did not believe in that great American principle—freedom of religion. I am not alone in that feeling. I have an abiding faith in the patriotism and Americanism of the people of this great city, and I am convinced that the feeling of prejudice and bigotry is confined to only a very minute percentage of our population. New York is great and big and gererous; its people are open-hearted, friendly, and kind and for the most part care not what their neighbors' religious beliefs might be. However, there are always some who, for mercenary reasons, strive to fan into flame the sparks of bigotry and prejudice that may here and there be found, and as an aid to their scheme they utilize the facilities of the United States

mails. It was with the idea of reducing to a minimum the dissemination through the mails of scurrilous and libelous literature, designating persons by race or religion, that I introduced H. R. 2328. The bill has had an unusually stormy time and has met with rather severe opposition. After extensive public hearings by a subcommittee, I was successful in having the bill reported favorably to the full committee, but there an unusual hazard was encountered. The chairman of the full committee reopened the hearings and after taking additional testimony had the bill referred back to the original subcommittee that had unanimously reported it out. The bill died in committee upon the adjournment of the Seventy-eighth Congress. In the present Congress, I again introduced the bill and I can assure you that we will either get action by the committee or seek to discharge the commite from further consideration of the bill by a petition to bring the bill to the floor of the House.

Important as this bill may be to minorities in the United States, there is a still more important issue that confronts the Jewish people. It has to do with the status of Palestine. To my mind it is a sad commentary on the efforts to secure international peace and amity to have one of the four great nations of the world break its pledged word. When the new Labor Government in Great Britain assumed office, Americans believed its preelection pledges with respect to Palestine would be kept. It is with regret that Americans have learned that the British Labor Government is not in disagreement with the policy of the white paper. The repudiation by the British Labor Party, when it came into power, of its preelection promise of a solution of the Palestine problem, while regrettable, is not, in the light of other circumstances, altogether surprising. The gratuitous insult by Harold Laski, one of the prominent leaders of the British Labor Party, to the religion of 30,000,000 American Catholics, indicates his attitude toward all religions and it is likely that as a policy maker of the dominant political party in Great Britain, his influence has been and will be felt—not on the side of justice and peace, but, rather, of hate and discord—the basic principles upon which British imperialism rests.

Americans must now realize that whether the British Government be Liberal, Conservative, or Labor, British imperialism still survives.

We Americans have little use for double talk—the language of international diplomacy. When the Sixty-seventh Congress of the United States on June 30, 1922, passed the resolution later signed by President Harding, "that the United States of America favors the establishment in Palestine of a national home for the Jewish people," there was no equivocation. The ruthless persecution of the Jews in Europe had aroused the sympathies of the American people, and our Congress, by its resolution, sought to give expression to the deep-seated conviction of the people of the United States that all men are created equal and that freedom of religion is the inalienable right of every individual. The centuries have seen the tortuous trek of the Jews through the countries of the world, and have witnessed the persecutions that have relentlessly pursued them. Through the years and despite the persecutions the Jewish heart clung with deep-seated affection to Palestine—the home of Jewry and the birthplace of Christendom.

The world has too long denied the Jews their Palestine. It is time their right to their homeland be recognized. The hour has come when justice be done, when appeasement cease, and the doors of Palestine be opened as a haven to the millions of homeless Jews who are the victims of persecution.

Neither in the resolution of the Sixty-seventh Congress nor in the Balfour Declaration is there any intimation that there was to be a limitation of the number of Jews for whom Palestine might be a haven. Indeed, under article 6 of the convention between the United States and Great Britain, as proclaimed by President Calvin Coolidge on December 15, 1925, it specifically provides that the administration of Palestine "shall facilitate Jewish immigration under suitable conditions and shall encourage, in cooperation with the Jewish agency referred to in article 4, close settlement of the Jews on the land, including State lands and waste lands not required for public purposes.

The only restriction that was placed on immigration prior to the British white paper—and the only one that could possibly have ever been intended—was that the volume of immigration should not be so great as to exceed the economic capacity of the country to absorb such immigration. The reason for this was to prevent the immigrants from becoming a burden upon the community. This was sound policy.

To my mind, restriction of immigration, based on political considerations, as outlined in the British white paper, defeats the very purpose of the Balfour Declaration and the resolution of the Sixty-seventh Congress. While calling Palestine a haven for homeless Jews, it shuts the doors of that home against all but a minimum of Jewish refugees. Instead of becoming a center in which the Jewish people may take an interest and pride, on grounds of religion and race, Palestine, under the British white paper, becomes a community surrounded by a wall of politics, which bars the helpless and unfortunate Jewish refugees who, in their desperate need, seek succor amongst their coreligionists—and in vain.

It is most important for the peace of the world that we bring the great weight of our influence to induce Great Britain to fulfill the Balfour Declaration and to keep its solemn pledge to the United States and to the League of Nations when it assumed the obligations and responsibilities of the mandate over Palestine. We cannot look with confidence to future pacts and treaties if obligations incurred in the past are ruthlessly broken. The failure of the British Government to faithfully discharge its trust under the terms of the Palestinian mandate, which ratified the Balfour Declaration, augurs ill for the faithfulness and integrity of Great Britain at the peace table in the present world crisis.

Today as a nation that shed its blood and gave its riches that the world may live in peace, the United States has it within its power to insist that the British Palestinian policy as set forth in the white paper of 1939 be repudiated and that the doors of Palestine be opened to those Jews whose great and unconquerable desire has been to live in peace in their historic homeland. How long shall the United States exchange notes upon this question? How long shall the American Government and the American people be indifferent to the sufferings of the persecuted Jews of Europe?

President Truman, to alleviate at least in part the indescribable sufferings of Jews in the Axis and former Axis-occupied countries, has recommended to the British Government the immediate admission of 100,000 Jews into Palestine. I appreciate the efforts of our President, but we must face the stubborn fact that there can be no appeasement of British imperialism. Whether the new British Government will accept the recommendation of President Truman seems doubtful, but whether it does or not, the real question as to whether the doors of Palestine shall be closed to the Jews by the British until the Arabs give their consent that they be opened, remains unsolved. It would not long remain unsolved if the United States, giving expression of its displeasure with a nation that repudiates its pledges, refused economic assistance to Great Britain, and to that end I pledge you my best efforts.

## Wincenty Rzymowski

EXTENSION OF REMARKS

OF

## HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. O'KONSKI. Mr. Speaker, American diplomats and the Washington social-climbers set have reached a new low in their activities. Tuesday evening, from 5 to 7 p. m., the Washington so-called social set and some leaders in Government circles paid tribute and honor to a quisling. The entire so-called Polish Embassy, which consists of two quislings by the names of Wincenty Rzymowski and Janusz Zoltowski received yesterday what they considered to be the cream of the crop of American diplomats, foreign diplomats, and social climbers.

Conspicuously, no true American of Polish descent was either invited or present. This is a true indication of the attitude of all honest Poles throughout the world concerning the two quislings mentioned above. I am amazed that the American diplomats who were present, and the foreign diplomats who were present, as well as the American social climbers who were present, did not make an honest check of the so-called Polish Foreign Minister's record before they attended this social affair.

I am amazed that those social climbers who were present did not realize that in attending this function they were paying honor not only to a quisling and a Laval but they were paying honor to a man who is a literary outcast throughout the entire world.

This man, Wincenty Rzymowski, who poses as the Polish Foreign Minister, is known throughout the world not only as a quisling but as a literary outcast. In 1934 he was elected a member of the Polish Academy of Letters. In 1936 he was dismissed from membership because he had written a book one-third of which was stolen from the work of Bertrand Russell. As a plagiarist Wincenty Rzymowski ranks among the first order.

When the real Polish Government was in existence Wincenty Rzymowski was in favor of that government. When the Stalin puppet government was set up in Poland recently Wincenty Rzymowski was then a supporter of that government. He has no such thing as loyalty and patriotism in his heart and he will go down in Poland's history as among the quislings of the first order.

The social climbers who attended this affair should also have realized that Wincenty Rzymowski does not represent the 7,000,000 Poles who gave their lives for freedom in this war. He does not represent the 300,000 Polish troops all over the world who have no home to go to. These boys fought Hitler longer than any army or nation in the world. Wincenty Rzymowski does not represent a single one of them. Nor does Wincenty Rzymowski represent any of the remaining 20,000,000 freedom-loving people in Poland. Wincenty Rzymowski represents

only Molotov and Stalin and no other people. He is Molotov's and Stalin's mouthpiece disgracefully parading under the flag of Poland. He represents no one other than the plagiarists and the fakers and the quislings of Europe.

For a long time I have noted that Washington is filled with social climbers seeking nothing other than social prestige, but I never realized that the Washington social and diplomatic set would seek to gain such prestige by honoring a quisling and a plagiarist and the puppet of the two men who would like to destroy Poland completely.

So that the people of America may know what our social set and the diplomats of our country and the diplomats of other countries are doing, I wish to include in these remarks a newspaper article taken from the Times-Herald of October 17, 1945. I think the people of America should know what is going on, because this is the first step of the march of quislings to America posing as representatives of their own countries that they have stabbed in the back. It will not be long until another quisling who out-quislings Quisling will arrive in Washington. His name is Oscar Lange, and I will have more to say about him at a later date.

This Polish quisling, Wincenty Rzymowski, who stabbed Poland in the back and is parading under the flag of Poland, represents nobody but Stalin and came here to sign the United Nations organization. It is an insult to the brave and gallant nations who signed this organization to have a name like Wincenty Rzymowski on it. He does not represent Poland; he does not represent the Polish people. He represents nobody but himself. I consider it an insult to this noble world organization to have a man like that sign for any nation, let alone for a brave and gallant nation that lost 7,000,000 lives in this war fighting for our freedom and theirs.

No true Pole and no true American considered his acts as official and I am amazed that our State Department and some of our social set in Washington accept him as an official.

POLISH LEADER IS HONORED AT RECEPTION

(By Elizabeth Ford)

The entire Polish Embassy staff received yesterday with the Polish Foreign Minister, Wincenty Rzymowski, at the reception in his honor from 5 to 7. The entire Polish Embassy staff at the moment adds up to one man—the Chargé d'Affaires, Janusz Zoltowski.

Also included in the receiving line, however, were Mme. Rzymowski and Alexander Mierzejewski, secretary-interpreter to the chief of his country's foreign office, right on hand to welcome non-Polish speaking guests with an impeccable Oxford accent acquired at Cambridge.

LANGUAGES VARIED

Henri Bonnet, the French Ambassador, however, found his native language an international means of communication with Mr. Rzymowski; the British Ambassador and Countess Halifax stuck to English.

Arriving early at the first fete at the Polish Embassy in many months were Mrs. James F. Byrnes, who was accompanied by Mrs. Tom Connally; Miss Vera Bloom, the Surgeon General, and Mrs. Norman Kirk, the Marine Commandant, and Mrs. Vandegrift, and the Chinese Ambassador and Mme Wei.

Still others present were the Czechoslovakian envoy and Mme. Hurban, Mme. Hugues LeGallais, wife of the Luxemburg Minister; the Italian Ambassador, Alberto Tarchiani; the Portuguese envoy and Mme. de Bianchi; the Secretary of Commerce, Henry A. Wallace; Mrs. Robert Patterson, wife of the Secretary of War, and her son, Captain Patterson; Miss Pauletta Guffey, the Irish Minister, and Mrs. Robert Brennan, Mr. and Mrs. Edgar Morris, the Czechoslovakian Minister and Mme. Cervenka and many, many more.

ABLAZE WITH RIBBONS

Ablaze with campaign ribbons was Lt. Gen. Leonid Rudenko of the Soviet Army, who fought at Stalingrad; and with him was Maj. Gen. Alexei Chizhoe.

Earlier in the day, Secretary of State Byrnes had feated Mr. Rzymowski at luncheon at Blair House. Others present at this event were Minister Josef Olszewski, director of the political department of the Polish Foreign Office; Wladyslaw Nizinski, assistant chief of the Anglo-American section of the Polish Foreign Office; and Mr. Mierzejewski.

Still others were Senator TOM CONNALLY, Representative SOL BLOOM, Charge Zoltowski, Ben Cohen, Dr. Ludwig Reichman, Polish delegate to UNRRA; M. S. Szymczak, H. Freeman Matthews, Alger Hiss, Elbridge Durbrow, Francis B. Stevens, and R. D. Muir.

## National Federation of Telephone Workers Protest NLRB Ruling

EXTENSION OF REMARKS

OF

### HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, the following letter was signed by 35 members of the National Federation of Telephone Workers of Sidney, Nebr., and represents the views of a large majority of the employees of the telephone company at that place. I have no doubt it represents the views of a large majority of the telephone workers in Nebraska. It shows what a grave mistake was made when the National Labor Relations Board recommended the dissolution of this union in favor af a union affiliated with a national organization. If some governmental agency is to have the authority to order the employees of an industry to belong to a union favored by that agency, labor will never be able to bargain through representatives of its own choice. It will be under the autocratic domination of Government-favored labor bosses. This is a long way from American ideals. It goes far beyond the intent of Congress in setting up the National Labor Relations Board. The letter follows:

SIDNEY, NEBR., *October 6, 1945.*

A. L. MILLER,
*Member of Congress,*
*House of Representatives,*
*Washington, D. C.*

DEAR MR. MILLER: We, the undersigned, as members of the National Federation of Telephone Workers, having met in session this 5th day of October 1945, the aforesaid meeting being held as part of a national plan to protest the National Labor Relations Board's recent ruling ordering the dissolution of the Western Electric Employees Association of Kearney area, do hereby beseech and beg you to do all in your power to induce the NLRB to reverse the aforesaid ruling.

As you know the NFTW is an organization of several hundred thousand members and we believe is fully capable as a collective bargaining agency to properly represent its members.

We wish, at this time, to call your attention to the fact that all during the war no serious labor trouble between the members of the NFTW and management of the Bell Telephone operating companies occurred, nor during the entire existence of the NFTW.

This, we believe, is definite proof that the NFTW is capable as a bargaining agency and is instrumental in promoting harmony in the ranks of labor and management in the communications field.

## Federal Aid Airport Act

EXTENSION OF REMARKS

OF

### HON. EDWARD A. KELLY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. KELLY of Illinois. Mr. Speaker, I did not intend to say anything about the pending legislation before the House today. However, this is an important bill.

It recognizes that civil aviation has become of national importance.

It represents the first step in the past decade of aviation history toward the establishment of a long-range Federal-aid program for the construction of airports, and, as the Secretary of Commerce expressed himself before the committee, its importance cannot be overemphasized, for it will govern the development of the American airport system for many years to come.

There is no question in all our minds that the rapid expansion of civil aviation is particularly vital to our national well-being now and in the future. We need this legislation to strengthen our post-war economy, which will be greatly aided by new industries with important possibilities for growth. We need it if we are to utilize the great aviation resources—both human and technical—created by the war.

We know the great program and vast expense we endured to build a great air force during the war, whereas, the huge aircraft manufacturing industry produced aircraft products worth $19,000,000,000 in 1944. We have trained millions of workers in aviation skills.

Since the ending of the war, a sharp deflation of the aircraft industry has already begun, with the reduction of military demand following the end of war. Therefore, we must act promptly to foster the growth of civil aviation if we are to preserve as much as possible of this great store of technical ability from dissipation.

Aviation is a very important part of our defense. The cities of this Nation are very much concerned and interested in aviation—commercial aviation and aviation in general.

Therefore, it is only natural, in building airports, for an airplane has no value

if it does not have a place from which to take off and a place to land.

If it were not for the keen interest displayed by the large cities in aircraft expansion before the war, the Army and Navy would have been in a bad way and their program might have been held back a few years if they did not have the facilities accorded them by municipal airports.

## Some Developments of Interest to Veterans

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. PITTENGER. Mr. Speaker, among the many legislative problems which claim the attention of a Member of Congress are those that have particular interest to World War veterans.

VETERANS' HOSPITAL FOR NORTHERN MINNESOTA

Announcement was made today by Gen. Omar Bradley that a new veterans' hospital will be located in northern Minnesota and that this location has the approval of President Harry S. Truman. My office has cooperated with civic and other agencies in northern Minnesota and Duluth in calling to the attention of Veterans' Administration officials the need for a veterans' hospital in this section of the State. We have had a great many difficulties to overcome but the people in our section may be very proud of the success that has crowned their efforts. There has never been any question about the need for a new veterans' hospital in our section of the State.

Its location at Duluth, Minn., will make it possible for veterans from a large area to be hospitalized near home, so that friends and relatives may visit them without a lot of expense and time which has been necessarily incurred in the past.

TAX RELIEF FOR VETERANS

Prompt action should be taken by Congress to cancel taxes of veterans who have been in the service of their country for the past 2 or 3 years. Under present tax laws, tax payment has been deferred until 6 months after discharge. From time to time I get letters discussing this tax problem where either the veteran or his wife points out the hardship involved in making payment of taxes during the time that the man has been in service. I feel that all taxes on military incomes during the period of the war should be canceled. This would give relief in a vast number of cases. I know that various experts are studying the question and that congressional committees have discussed the problem. However, I do not think the matter is as difficult as some of them seem to claim. If we are agreed on the proposition of canceling these taxes, legislation to bring that about should be worked out without any trouble or delay. It ought to be done now. I shall support the proper kind of a bill giving veterans this relief.

EDUCATIONAL PROBLEMS OF RETURNED VETERANS

I have just received a placard issued by the college from which I graduated in the year 1909. This is a small Midwestern college, Wabash College, located at Crawfordsville, Ind. The placard is headed, "Veterans! Are You Missing an Education?" It then proceeds to discuss a college preparatory course of 8 weeks which is intended to be of help to veterans who have been in the Army 3 or 4 years and who feel the need of getting reacquainted with the problem of again taking up school and college work. This prospectus shows that the tuition and the board and room for this course of study are paid for under legislation enacted by Congress for the benefit of World War veterans who make proper application and whose applications are accepted. As I understand it, these same opportunities are being offered in other colleges and I would urge veterans to investigate the situation at once and take advantage of these opportunities.

In this connection my attention has been called to one section of the law which limits educational benefits to men who were over 25 years of age at the time they entered service. I think that part of the law ought to be amended so that men, regardless of age, who have had technical training in the Army, may further their education along those lines regardless of age. I shall support such an amendment.

In conclusion we have in northern Minnesota a number of veterans' service officers and the different veterans' posts are always glad to discuss matters with returning veterans. In connection with the many matters in which veterans are interested they can get information from these different officials and different veterans' organizations. I urge you to consult them and if there is any information that I get or help that I can give from my Washington office, I shall be glad to have you call on me.

Regulations and conditions change from time to time and at the present moment, it will be interesting to veterans of World War II that surplus commodities so far as veterans are concerned are being handled through the Office of the Smaller War Plants Corporation. A branch office is located in the Christie Building at Duluth, Minn., and application for surplus war materials should be made there.

## Can the Story of the St. Lawrence Waterway Be as President Truman Sees It?

EXTENSION OF REMARKS
OF
### HON. HARRY L. TOWE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. TOWE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter sent me by Mr. John Kortes, of the Brotherhood of Locomotive Firemen and Enginemen, New Jersey State Legislative Board:

OCTOBER 5, 1945.

Hon. HARRY L. TOWE,
*Member of Congress from New Jersey, House Office Building, Washington, D. C.*

DEAR HARRY: Can the story of the St. Lawrence waterway be as President Truman sees it?

In urging for this proposed legislation, the President points out the hydroelectric-power facilities of the proposed St. Lawrence waterway and power project. This writer has personally no objection to offer on that assumption, but to offer facts which will rebut to some extent the theory on power. "The maximum demand for electrical power in New York State on December 14, 1943, between 5 and 6 o'clock in the evening was 4,198,600 kilowatts, and there is an installed capacity in the State of 5,346,200 kilowatts, which left an additional excess capacity of 1,157,500 kilowatts, proving that there is no need for additional power." So says the Buffalo Chamber of Commerce in April 1944 in opposition to the proposed St. Lawrence project.

The President speaks about the number of jobs it would produce. First of all, how many jobs would the construction of the waterway create for Americans since nine-tenths of the project lies within the territory of the Dominion of Canada?

It robs Peter of more than enough to pay Paul! The disorganization of existing commerce and transportation will put more men out of work than the waterway will encourage or can possibly absorb. The reduced present transportation facilities will not benefit any consumer in the eastern seaboard.

Water-borne transportation via the St. Lawrence waterway would cost more than existing rates, due to the distance required to travel to and from the points involved from which it is claimed that consumer benefits would ensue. For example, the distance from Duluth to New York via St. Lawrence is 3,017 miles, via Lake and New York State Barge Canal (now used) is 1,397 miles; Buffalo to New York via St. Lawrence is 2,070 miles, via New York State Barge Canal is 504 miles; Chicago to New York via St. Lawrence is 2,924 miles, while via Lake and New York State Barge Canal is only 1,397 miles.

The President says "It will furnish lucrative employment to many thousands of our people." I ask that this statement be justified to corroborate with the reduction of transportation personnel now employed in existing facilities. If the losses are only equal to the amount of import, export, and coastwise shipping which is handled at the eastern seaboard now, that number represents 25 percent of those now employed on the present facilities, thereby involving untold thousands of unemployed that the seaway could hardly absorb in all its widespread and so-called enlarging world commerce, as the President pointed out.

The new bill does more than tear down bit by bit the concepts of the Constitution which now require a seaway and power project of this magnitude and international geographic location to be ratified by treaty between Canada and the United States. A two-thirds vote by the Senate is also required. The new bill, as drawn, takes but a mere majority of the Congress and thereby defeats the Constitution itself.

The President says further, "It will mean more jobs, more income, and a higher standard of living." How can such be the truth? Can the writer as a locomotive fireman and engineman with 20 years' service seek the wages of the above services upon the established lines and facilities of transportation, get the same consideration to start now in plying the ships using the seaway? Can our seamen under the La Follette bill, providing

that our merchant marine must pay our seamen wages which the bill outlines as a reasonable wage, expect to compete with the merchant marine of the British who employ upon their vessels coolie, Javanese, and West Indies labor, all of whom are paid but fractions of mere pittances compared to what our seamen earn? Please excuse the above sentence since I do not wish it understood that I approve the wages paid our seamen. I still believe they earn too little for the services they render. Such being the facts from that quarter, can the seaway improve the situation as it stands today? Will our seamen under the above circumstances get the opportunity to compete with our competitors and earn the so-called "higher standard of living"? And will they have more or less employment? Can we successfully compete with Russia on the sea? These major with several other minor foreign merchant marine factors, such as Norway, Denmark, Holland, Sweden, Germany, and Greece are a grave hindrance to our foreign economic competition.

It seems to me that if the waterway is opened, and I hope it never is, we would find our flag waving on the distant shores of the seaway to the south, and not upon the masts of the ships that will carry the commerce and trade in and out of the seaway—the seaway that we paid to build out of American tax dollars for the benefit of Canadian labor and that the foreign vessels of the world will take advantage of in trading with us. We, because of our higher standard of living, cannot hope to compete with nor gain anything from such a waterway.

In the President's message to Congress, he points out that the power facilities of the waterway would produce an added 2,200,000 hydro horsepower. This added to our present excess of 1,157,000 kilowatts would equal 3,357,600 kilowatt excess, or twice the amount required during the peak wartime production period of December 14, 1943.

Have we come to the stage of abolishing little by little our Constitution by legislative enactment, which requires but a majority vote on the one hand, while ratification of treaties between nations requires a two-thirds vote of the Senate? If such abolition is desired, let it be submitted to the States for ratification. The St. Lawrence seaway and power-project agreement as proposed to Congress does abolish that section of the Constitution that requires the two-thirds vote of the Senate for ratification.

Are we playing Santa Claus to the rest of the world while we think of retaining our present merchant-marine status to provide its portion of the really needed 60,000,000 jobs? We certainly are headed for chaos if our policy is establishing jobs and then enact legislation that will produce the opposite result.

Many of us have read the statistics about the amazing output of our industry and its labor to win this last global war. We know the value and need of the existing railroad facilities throughout the Nation, particularly in the eastern and western seaboards. From that production record, one can see the job the rails and rail labor did in delivering the goods. Therefore, to establish a new part-time facility to take the place of adequate present facilities is an economically unsound use of public money.

Another point of discussion has been raised and deserves your careful scrutiny, i. e., the problem of certain fixed costs to the existing transportation organizations. Can these groups maintain present facilities of full service in the face of the losses they would suffer during the interim between the opening of the seaway and its closing 5 months later? Such additional part-time facilities are asked to be financed by tax dollars of the American people. In view of the job done by railroads and railroad labor during the war, then an indispensable system, it is unfair that they should face the possible competition that the seaway would produce, not to our own seamen but the seamen of our competitors. The seaway would require the absolute curtailment of such facilities to reduce the fixed costs which would result in the reduction of jobs. Being a railroad man in the capacity described and seeing the effect directly, it shows that we are robbing Peter of an approximate 160,000 men to pay Paul 30,000 men, or a balance of produced unemployment in the eastern seaboard States of 130,000 men, at a time when we hope to make an attempt at a 60,000,000-job goal. Can the President of the United States believe he is seeing the problem eye to eye in the way of jobs? The Congress must say "No" to the proposed St. Lawrence waterway and power project as an economic fallacy.

Sincerely yours,

JOHN KORTES.

## Demobilization of the Armed Forces

EXTENSION OF REMARKS

OF

### HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Pacific edition of the Stars and Stripes, dated October 6, 1945, giving the views of some of the men in the Pacific on the question of demobilization.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Sgt. Buck Buchwach)

A wave of indignation among Pacific GI's greeted Saturday's announcement that the Army would release surplus enlisted men in the States.

They condemned a policy which, as Corp. Elmer Heaseley put it, "will give first opportunity at postwar jobs to noncombat, stateside men."

Corporal Heaseley pointed out that "a man who has been stationed in San Francisco, with his wife right there, for 2 years, is now eligible for discharge and first crack at available jobs.

"Combat men and overseas vets who have 2 and 3 years of service and gone through hell must stay in uniform * * * taking the vocational crumbs when they finally return," he said.

BEAR OUT MARSHALL

A 91-mile tour of nine Army air, ground, and service force installations on Oahu disclosed that General Marshall's earlier prediction that "there would be a fury of protest overseas" was being fulfilled.

Not one EM of the one-hundred-odd interviewed failed to view with varying degrees of disfavor the release of men in the States—but not overseas—with 2 years service, for whom the War Department cannot find useful service.

Mildest opinion was that of Staff Sgt. Anthony Vento: "It doesn't seem like equal treatment as far as the overseas men are concerned, but it's nice to know someone is getting out."

Technical Sgt. Andrew Jensen, who has served overseas 32 of his 38 Army months, insisted "We certainly don't think stateside commandos with 2 years' service and maybe 36 points should get out before men with 50 to 60 points, 2 to 4 years of service, combat experience, and overseas time."

SCOFF AT PROVISION

Some scoffed at the provision of the order which stipulated "the system must not interfere with discharge of high-point men."

"Separation centers already jammed in the States will now be cluttered up beyond capacity with 2-year stateside sufferers, while me and my buddies languish overseas * * * waiting," retorted Sgt. Robert Grube, who has 30 months overseas, 40 months' service, and 70 points.

The GI's couldn't understand the "surplus categories and the provision that stateside dischargees must be not 'economically retrainable to perform useful service.'"

"What kind of a racket is that?" inquired T3 Jake Fink of POA's joint intelligence center, a 3-year vet 23 months overseas. "Every man can be trained * * * uneconomical hell * * * who worried about the cost before?"

PREMIUM ON FOUL-UPS

As for the "surplus" label, Pfc Joseph Antoine charged that "it puts a premium on foul-ups, trouble-makers, and guys who contributed the least. If a CO in the States has a lazy, worthless, trouble-maker in his outfit, he can now declare him surplus and get rid of him. The efficient, hard-working, sincere soldier in the States is, of course, essential, and not the least bit surplus. It's backwards."

"Every man now in uniform in the States is physically and mentally qualified for overseas duty," said Master Sgt. Frank A. Cerruti, who has 85 points, 43 months' service, 30 months overseas, and Seventh Division combat experience. "There are no bullets to face—now."

Wacs also harpooned that system, which provides that surplus stateside Wacs with 1 year of service may be released.

OVERSEAS PENALTY

"Why should Wac's be penalized for being overseas?" asked puzzled Corp. Frances Bowman, who has been in Oahu 13 of her 17 months in service.

Pfc. Gloria MacDonald declared, "Wacs overseas with 1 year of service should be entitled to go home and have babies on an equal basis with stateside Wacs."

At the Thirteenth Replacement Depot:

T3 Arnold Carlson: "Duty must have been mighty tough in the States to let them out before us."

Two rookies, six-point Pvt. Elroy Kankel and Pvt. Robert Lansford, who arrived Saturday, insisted that "the boys in the States had lots of advantages * * * overseas men with 2 years' service should have first call."

CAN SEE FAMILY

Pvt. Clarence England: "At least in the States a guy can see his family occasionally." England has four children.

Tech. Sgt. Robert B. Dunkle, 36 months of overseas service: "Absolutely no reason for preferential treatment of men in States."

Pfc Harry Kinzey: "He's had furloughs, passes, family visits, recreation * * * the overseas man has had hell."

Corp. Elmer Heasley: "It's chickenfeathers." (He didn't say feathers).

Wheeler Field's Corp. Harry L. Folmer: "They've pulled a lot of rotten deals * * * this is the climax."

At Scofield, a veteran of long service in the States who arrived only recently was infuriated. T3 L. A. Hagerman, who has 42 months service and 43 points, scowled: "It's a ——— ——— dirty deal * * * why should the fact I just came over prevent me from getting a discharge, when I enlisted 42 months ago and some other guy in the States gets out when he was drafted 24 months ago?"

JUST ANOTHER DELAY

Sgt. Hilbert Gramza: "* * * means just another delay to overseas and combat vets * * * sure lets a guy down."

T5 Simon Agron: "A lot of overseas vets gladly will change jobs with stateside 2-year men and promise to stay in to help discharge hig'-pointers."

Fort Shafter's T5 C. W. Simpson: "At least stateside GI's found enjoyment • • • they had civilization and white women."

Hickam Field Wacs:

Sgt. Dorothy Souder: "Send the gals with only 1 year of service to replace us • • • let us go home to get our homes ready for our husbands." Her husband is a GI in Germany.

Sgt. Beatrice Baird: "Why are Wacs more surplus in the States than they are here?"

---

(By Technical Sgt. Dick Koster)

TOKYO.—GI's stuck with the job of occupying Japan met the announcement of discharge for 2-year State-side men not qualified for overseas duty with the statement that "that's not helping us a damn bit."

Men here generally took a reasonable attitude that men of no use to the Army should be released, but countered with the argument that it will hamper discharge of high-point men.

NO LIMITED SERVICE

A field artillery veteran of New Britain and Luzon, T5 Harry R. Sanborn, Los Angeles, with 30 months' service and 61 points, added: "How can anybody be disqualified for overseas or any duty now? There's no limited service anywhere now. Out here, so many guys have sweated out so much and now seem to be forgotten. Combat men get the crap even after the war's over."

Most GI's here are more interested in what is ahead for them. All 2-year men not eligible for point discharge now ask, "After 60 points what?"

"When will they give us something tangible to count on?" asked Pfc J. William Jennings, Leominster, Mass., with 24 months' service and 52 points, many earned in the Philippines.

NOT IRRITATED

Sixty-four pointer Pfc Joe Crowninshield, with 30 months' service, was not irritated. "As long as they keep high-point men moving, I don't care," he said. "If they can't find anything for others to do, they might just as well get rid of them."

T4 Al Gerber, Philadelphia, a veteran of 34 months' service, who now has 50 points, also wants to know what will happen after the 60-pointers are released. "It's silly for those guys to be sitting around as surplus," he said, "just because we can't get home; but I ask you, When are they going to do something about us?"

---

## National Scientific Research Foundation

EXTENSION OF REMARKS
OF

### HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. GOSSETT. Mr. Speaker, we must immediately set up in this country a National Scientific Research Foundation. Enlightened self-interest dictates such a course. Such a recommendation was made by the Director of War Mobilization and Reconversion on October 1. It was suggested that such a Federal agency should have the following functions:

First. To promote and support fundamental research and development projects in all matters pertaining to the defense and security of the Nation.

Second. To promote and support research in the basic sciences and in the social sciences.

Third. To promote and support research in medicine, public health, and allied fields.

Fourth. To provide financial assistance in the form of scholarships and grants for young men and women of proved scientific ability.

Fifth. To coordinate and control diverse scientific activities now conducted by the several departments and agencies of the Federal Government.

Sixth. To make fully, freely, and publicly available to commerce, industry, agriculture, and academic institutions the fruits of research financed by Federal funds.

Several committees of Congress have made similar proposals. Numerous bills, including one by me, have been introduced to create such an agency. The stimulus and impetus back of these bills and proposals comes largely from the remarkable record made by American scientists during the war.

A casual survey of what has been done is convincing proof of what can be done in the field of science and technology. Shortly after Hitler invaded Poland there was created in this country a National Defense Research Committee. In June 1941, through Executive order, there was established an Office of Scientific Research and Development. As an adjunct to this organization there was also established a Committee on Medical Research. In due course outstanding scientists from American universities and from American industries came at the beck and call of their Government and pooled their collective brains unselfishly in the service of their country. At one time 4 percent of all Americans with doctor's degrees in science were working in these laboratories of war. Most of them left comfortable homes and pleasant surroundings to work long hours in seclusion and secrecy. They have now gone back to their classrooms and workshops. The question arises, Shall we continue to rely simply upon philanthropic, industrial, and educational institutions to supply the inventions and discoveries so vital to the common good? Here is a field long neglected by Government. Here is a field in which Government can be of vital service.

Mr. Speaker, a brief résumé of some of the more important accomplishments of the Office of Scientific Research and Development in the course of the war is appropriate. At the height of its activity this group of civilian scientists and technologists had entered into more than 2,000 contracts with 441 institutions, employing thousands of people. They delved into all fields of physics, chemistry, medicine, and related sciences, spending altogether some four billion dollars. Of the hundreds of offensive and defensive weapons perfected the outstanding examples are, of course, radar, the proximity fuze, and the atomic bomb. But for these inventions those of us who now remain on this continent would no doubt be slaves of ruthless barbarians. It is generally admitted that our giving to the British our discoveries in radar in 1940, imperfect as they were at that time, enabled the British to save themselves from the all-out assault of the Luftwaffe and win the Battle of Britain. By its use the British were able to determine when German planes left the Continent, and the direction of their approach to the British Isles. We know what effective use we were to make of this weapon at a later date. We were amazed when one of our new battleships was able to fire upon and sink a half dozen Japanese ships in the dead of night many miles distant, and turn the tide of naval war in the Pacific.

Just as remarkable as radar was the later development of the proximity fuze. Only after the war did we learn of the phenomenal magic of this revolutionary device. Our scientists developed the proximity fuze in numerous types suitable to different shells and methods of attack. It is said that by the use of this fuze the British were able to shoot down 98 percent of the V-1 robot bombs before they could land on British soil. It is said the proximity fuze enabled us to win the Battle of the Bulge by wiping out masses of enemy soldiers sheltered in forests and fox holes where they would otherwise have been safe from the usual type of bombardment. It is said that the proximity fuse was largely responsible for our victories over suicide pilots in the Pacific and increased our firing accuracy by more than 400 percent.

Last and most startling of these inventions was, of course, the atomic bomb, whose deadliness is a matter of common knowledge and common dread.

Mr. Speaker, less spectacular but just as important have been our discoveries in the field of medical science. While penicillin was known as early as 1929, it was not finally developed until war created a pressing need for an agent to prevent infection. Due largely to penicillin, 97 percent of all wounded men who reached hospitals during the war survived their wounds. Meningitis, a terror of World War I, was no longer feared. Other toxoids and vaccines were developed which reduced to zero deaths in our Army from tetanus, yellow fever, and epidemic typhus. Again, through the use of DDT, we were able to conquer malaria and reduce tropical diseases.

Notwithstanding these remarkable discoveries, health statistics are still cause for great concern. Of 22,000,000 men of military age in this country, between eight and nine million are physically unfit and four and one-half million are so unfit as to be of no military value whatsoever. Of registrants for the draft, 40 percent of those 28 years of age were rejected; 50 percent of those 34 years of age were rejected; and 59 percent of those 38 years of age were rejected. In boasting of what we have accomplished we point out the increase in life expectancy. In 1890 one's life expectancy was 34 years. In 1911 one's life expectancy was 46 years. In 1942 one's life expectancy was 64 years.

Still, the other side of the ledger is exceedingly dark. In 1943 nearly a million and a half civilians died, mostly from disease about which little is known. More than 426,000 died of heart ailments,

more than 166,000 died of cancer and malignant tumors, more than 127,000 died of cerebral hemorrhage, more than 99,000 died of nephritis, and more than 90,000 died of pneumonia and influenza. Tuberculosis still took a large toll, as did diabetes. Many were stricken by the dread infantile paralysis. Then we have the less fatal but far more common diseases of hay fever and colds from which nearly every human being suffers untold discomfort, pain, and loss of earning power.

Notwithstanding remarkable progress in medical science, we still spend more than four billions annually on medical care, and we suffer a national loss in productiveness from illness of at least $10,000,000,000. Human suffering from these diseases, of course, cannot be measured in dollars and cents.

Statistics on scientific personnel are significant. During the war we stripped our schools of scientific students. It is estimated the war has created a deficit of 150,000 students who eventually would have received bachelors' degrees in sciences and technology, and a loss of 17,000 who would have received doctors' degrees in these subjects.

Mr. Speaker, war and disease may yet destroy civilization. Our fight against these terrible enemies of security and happiness should be waged as relentlessly during peace as during war. A Federal Scientific Research Foundation would utilize scientific genius which in the past we have allowed to waste in poverty and lost opportunity. In addition to Government support such an institution would doubtless receive untold millions contributed by those anxious to serve humanity through its facilities. In recent years we have spent billions on various conservation programs. Let us now invest a few millions in direct human conservation. Wisdom and prudence demand such action.

## H. R. 4422—Payment of Certain Benefits to Enlisted Personnel in Lieu of Accumulated Leave

EXTENSION OF REMARKS
OF
### HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. KUNKEL. Mr. Speaker, yesterday, Thursday, October 18, 1945, I introduced a bill, H. R. 4422, the purpose of which is to grant to enlisted personnel of the armed services certain benefits in lieu of accumulated leave. In substance, it merely gives the enlisted men the same rights and benefits which are now given to officers only. While I certainly feel that officers are entitled to payment for this accumulated leave. I can see no earthly reason why enlisted men should not be. In any army in a democracy we certainly wish to establish every form of equality which military necessity will permit. We must not allow anything that savors of a caste system or special privileges. Therefore, I hope the Military Affairs Committee will quickly report either this bill or a similar one introduced by the gentleman from Florida [Mr. ROGERS].

The bill has a retroactive clause providing that enlisted men who have been discharged before its passage should have 90 days after the enactment of this act within which to file application for payment due for accumulated leave.

The gentleman from Florida introduced a similar bill, H. R. 4051, some time ago. He has frequently called attention to the importance of this subject, and I certainly agree wholeheartedly with what he has said about this proposal.

Under leave to extend my remarks, I am including a copy of the bill and a resolution adopted by the department executive committee of the Pennsylvania Department of the American Legion, on October 6, 1945, in support of this proposal:

H. R. 4422

A bill to grant to enlisted personnel of the armed forces certain benefits in lieu of accumulated leave

*Be it enacted, etc.*, That (a) effective as of December 7 1941, each enlisted member of the armed forces of the United States shall be considered for the purposes of this act, as being entitled to leave at the rate of 2½ days for each month during the war-service period. Such leave, less the leave actually received and used prior to discharge or release from active duty in such armed forces, may be accumulated, and each individual entitled thereto under this act shall be entitled upon discharge or release from active duty to receive in a lump sum, pay and allowances covering such accumulated leave.

(b) The pay and allowances referred to in subsection (a) shall be computed at the rate of the pay and allowances which the individual was receiving immediately prior to discharge or release from active duty.

(c) In the case of enlisted personnel discharged or released from active duty prior to the date of enactment of this act such lump-sum payment shall be made only if application therefor is made within 90 days after the date of enactment of this act. In the case of an individual discharged or released from active duty in the Army such application shall be made to the Secretary of War, and in the case of an individual discharged or released from active duty in any other branch of the armed forces application shall be made to the Secretary of the Navy.

(d) For purposes of the operation of this act with respect to any particular individual the term "war-service period" means the period beginning with the date of commencement of such individual's active service in the armed forces of the United States, or December 7, 1941, whichever is later, and ending 6 months after the date of the termination of hostilities in the present war, as proclaimed by the President, or the date of such individual's discharge or release from active duty, whichever is earlier.

---

Whereas under Army regulations commissioned officers of the Army are allowed to accumulate unused leave up to 120 days; and

Whereas under Navy regulations commissioned officers of the Navy are permitted to accumulate unused leave to the extent of 90 days; and

Whereas upon such officers terminating their connection with the services and being honorably discharged therefrom, they are compensated for such accumulated leave at the prescribed rate for their grade, such compensation being given as terminal leave; and

Whereas the same benefits, limited to 90 days, are granted under civil-service regulations to all Federal civil-service employees, and upon their separation from their employment they are paid for such accumulated leave at the regular rate of pay to final separation from employment: Now, therefore, be it

*Resolved by the American Legion, Department of Pennsylvania, in regular meeting assembled in Harrisburg, Pa., on this 6th day of October 1945*, That it recommends to the National Congress that appropriate legislation be enacted to grant unto the enlisted personnel of all branches of the various services accumulated leave on the same basis as is now permitted to commissioned officers of the respective branches of the service and that upon their discharge from the armed forces that they be paid for such accumulated leave at the rate of their regular pay and allowance, and that it be retroactive to include leave accumulated after the passage of the Selective Service Act, September 16, 1940; and be it further

*Resolved*, That this resolution be forwarded to the members of the Pennsylvania congressional delegation with the request that their best efforts be employed to enact such legislation as will put into effect the purport of this resolution.

## A New Kind of Strike

REMARKS
OF
### HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. MICHENER. Mr. Speaker, time was when a strike indicated some dispute between the employer and the employee concerning wages or working conditions. Today that is not the case in many instances. I rise to call the attention of the House to a new type of strike; that is, so far as I have heard.

These are the circumstances as I understand them: Ryerson & Haynes operate a manufacturing plant in Jackson, Mich. Local No. 625, UAW-CIO, is the plant union unit enjoying the collective bargaining privilege. Some of the members of the local union employed in the plant are veterans of World War No. 1.

During the period of reconversion, a number of the employees have been laid off but are being gradually returned to their jobs.

During World War II, an employee of the factory was inducted into the military service, has now been discharged, returned home, and reinstated in his old job in accordance with the law. There is much controversy, especially in union circles, over the question of seniority, and this World War II veteran was given what is designated as superseniority under the Hershey ruling. This ruling was not made by the employer. The employer, as I understand, is following directions only. I repeat that there is no dispute between the bargaining unit and the employer.

Nevertheless, veterans of World War I are picketing the factory, the principal cause of the picket line being a protest against the order made by General Hershey as administrator of the selective-service law.

Now, the local CIO union refuses to go through the veterans' picket line; therefore, the factory cannot operate. Just another case of where a factory is down and persons are out of jobs because, perchance, a so-called unauthorized picket line is operating. It may be that World War I veterans in the picket line are employees in the factory and are members of the local CIO union. Nevertheless technically it is claimed that this is not a regular UAW-CIO strike.

It does not make much difference to the people who want to work, and the employer who wants to turn out products, about technicalities. A strike is just as effective whether authorized or unauthorized. The fact is that this picket line is preventing the operation of the factory.

Mr. Speaker, I have today called this matter to the attention of the Director of Selective Service and find that the decision as to the correctness of the "superseniority" regulation lies with the courts and that some cases are now pending in the courts. Court procedure is slow at best and if this type of strike is to be a pattern for other strikes to follow then strike conditions will progressively get worse as demobilization of the armed forces proceeds. I am urging that something, if possible, be done by the Director of Selective Service to meet this situation at the moment. I am not criticizing, because I do not know. I am imploring, because I do know what the result is and what the result will be if this type of strike becomes general throughout the land. These returning veterans should have everything the Congress intended they should have and these matters should be worked out in a cooperative and a judicial way. If additional legislation is necessary then let's have it. Everybody is interested in jobs, reconversion, and the interest of the veterans in particular.

I do not imagine that strikes of this type, where the employer through no fault of his own is caught in the squeeze, are common to many industries or communities. Therefore, Mr. Speaker, an ounce of prevention at this early stage of the disease will be worth a pound of cure months from now.

Pursuant to the privilege granted me, I am enclosing herewith exerpts from a front-page story of the Jackson (Mich.) Citizen-Patriot telling about this new veterans' picket line. It is as follows:

WAR I VETS WANT JOBS; PICKET PLANT

Veterans of World War I picketed the Ryerson & Haynes plant on East Ganson Street Tuesday in Jackson's first open labor flare-up arising out of industry's compliance with reemployment provisions of the Selective Service Act and Maj. Gen. Lewis B. Hershey's demand for superseniority for veterans of World War II.

Displaying placards asserting "We Want Work—Not General Hershey's Opinion," Ryerson & Haynes employees, who served in the Army and Navy during World War I, demanded that the company adhere to seniority provisions of their union contract.

Operation of the factory, now reconverting from war-matériel production to the manufacture of automotive parts, was suspended Monday when members of Local 665, UAW-CIO, the plant union unit, declined to pass through the picket line. Most of the factory personnel had been laid off for the changeover to civilian production before the dispute arose.

RETURNED VET HIRED

Included in the currently employed group is a returned soldier who under superseniority outranks many of the men with longer terms of service for the company who have not yet been recalled to work, says Lawrence Puffer, chairman of the plant veterans' committee. Puffer said this veteran stood two hundred and eleventh on the seniority list at the time of his induction into service.

"The union," Puffer said, "recognizes for seniority all time spent by members in the armed services, but insists that superseniority, which gives returning veterans preference over all nonveteran employees for a period of 1 year from the date of their return from service, breaks down the whole seniority system."

Union leaders of Ryerson & Haynes are alined with World War I veterans in opposing superseniority, and Beck Underwood, head of the local, Tuesday branded the plan as impractical. It breeds dissension among groups within the factory, he declared, and pits veteran against both veteran and nonveteran in a manner which his organization considers unfair and discriminatory.

CONCILIATORS CALLED IN

The dispute concerning the status of the veteran in question at the plant here arose shortly after his return from the Army a week or more ago, and Federal conciliators had met with the company and union officials last week.

While no statement was yet forthcoming from the management, a company spokesman indicated that picketing by the veterans, resulting in the shut-down, came as a surprise.

Underwood asserted the suspension is not due to union action against the firm. He reiterated, however, the union's sympathy with the World War I veterans and its opposition to veteran reemployment as interpreted by the Selective Service chief.

Lined up with the protesting veterans is a Ryerson & Haynes employee, former head of the Jackson County CIO council and discharged from the Navy, which he joined voluntarily in September 1942.

CASES NOW IN COURT

The Ryerson & Haynes case localizes opposition which has broken out at numerous points over the country against selective-service reemployment provisions. * * *

Two prepared statements were submitted Tuesday in the Ryerson & Haynes case, one from Puffer, representing the veterans, and another from Underwood, on behalf of local 665.

PITS VETS AGAINST VETS

Puffer's statement says:

"We, the veterans of Ryerson & Haynes, Inc., object to superseniority, and in no way do we want to be used as tools of management to break up contractual relations between company and the union. We only want the rights that are justly ours without usurping the rights of others, thereby causing misunderstandings between the veterans and our fellow workers.

"Hershey's opinion relative to superseniority is strictly labor baiting and not helpful to the veteran. In fact it places him in the position whereby the civilian population would resent such privileges. This opinion, if carried out, would pit veterans of World War I against World War II veterans, also against other workers.

"To summarize the whole issue, if Hershey's policy is applied, the debt that this country owes the veteran would be paid at the expense of the displaced worker and not by the Nation as a whole.

"The policy of this company has been to grant superseniority which the veterans of Ryerson & Haynes, Inc., object to strenuously."

CALLS MEETING

Underwood's statement reads:

"As president of this local I can only express the opinion of my constituents, which is in full agreement with the veterans' feelings. We of the UAW-CIO have foreseen that conditions would arise if Hershey's opinion was carried out whereby the veteran would be used by the manufacturers to promote dissension among the ranks of union members.

"It seems rather odd to me that in this particular plant of Ryerson & Haynes, Inc., that they wish to go along with superseniority, but refuse to go along with the Selective Service Act when it concerns wages, because they refuse to give a veteran a like position he held prior to V-J day and put him in a lower paying classification. This definitely proves the insincerity of their attitude toward the veteran, and we are backing the veteran up with all resources at our command. The Ryerson & Haynes union members of Local 665, UAW-CIO, are requested to attend a special union meeting at the CIO hall, Wednesday, October 17, at 2 p. m."

## The Voice of the Servicemen

EXTENSION OF REMARKS

OF

## HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. SCHWABE of Oklahoma. Mr. Speaker, while our boys in uniform were in foreign lands and while the fighting was in progress, the boys did not complain much. They did their job nobly. But after hostilities ceased they wanted to come home, as they were entitled to do. They were instructed, as many of them have written me, not to communicate with their Representatives or Senators in Congress. They say these orders were issued by their commanding officers. However, several of them wrote their Congressmen and sent the letters back to the States by boys who were coming home on furloughs or as war casualties, and they were mailed from points in this country to their representatives in Washington. I received several of these myself.

Now that the fighting is over and many of these intelligent and alert young men have been returned to the United States, they are unhesitatingly writing their Congressmen and calling upon their representatives in Congress and narrating the almost unbelievable situations, which they say prevail in our military system. They seem to feel that they are now back home where freedom of speech is a guaranteed right to every citizen, and they are speaking their pieces. Those that have taken off the uniforms are absolutely unafraid to tell their stories, and many who are still in uniforms in this country and attempting to be discharged are expressing their

displeasure and resentment of the conduct and orders of those who head our military organizations.

Mr. Speaker, this indicates to me very clearly that we have just begun to hear from these, our future citizens. I believe they are determined that their sons shall not be subjected to the cunning, deceptive, and arbitrary regulations which these boys have tolerated and endured during their military service.

I want to illustrate the thinking of some of the clear-minded fellows who have been in the service, a few of whom have been discharged.

The following is a letter which I have just received from a boy who is serving in the Asiatic theater of operations:

It should be self-evident by this time that the Army intends to reduce its size as slowly as possible. This has been evident since VE-day, but is much more apparent now. As long as the War Department is permitted to handle the demobilization program unmolested we can be sure it will take many months more than necessary to reduce the Army to a practical size and attempts will, of course, be made to have it appear necessary ultimately to maintain a much larger force than is actually needed. All this is, of course, due to the fact that high-officer positions bear a direct relationship to the size of the Army and the men who now have much better positions than ever before are reluctant to give them up.

Congress should act to force the War Department to hasten demobilization through the release of all men not needed for actual occupation duties by specifying that all men with a predetermined period of service in the Army, men with overseas service, married men, men over a specified age, and/or other groups be discharged at once. The Army should be reduced to a size commensurate with actual requirements, and not a padded estimate devised for the purpose of justifying a maximum number of high grades.

The men who have given their time to the Army should not be forced against their will to continue. The draft should be continued with a definite period of service stipulated until such time as volunteers can be procured in sufficient numbers to take care of the necessary requirements. Inducements should be ample in order to attract a sufficient number of volunteers, although the biggest inducement in this respect would be a basic change in the Army caste system.

Even though Army spokesmen allege that the big bottleneck in rapid demobilization is transportation, this statement is directly contradicted by the fact that plans are being made to allow men who do not have sufficient points for discharge but who have had an extended period of overseas service to return to the States for a brief period and then return overseas.

The real bottleneck in demobilization is the evident intention of maintaining the Army in strength and the point system has proved to be a convenient device for this purpose. The point system was satisfactory for the purpose originally intended, namely, the release of some combat veterans after the defeat of Germany, but its application as a method of determining eligibility for discharge under present conditions is a farce and should be terminated. It is being used as a means for retaining men in the armed forces rather than securing their release and is a grossly unfair system.

Instead of accepting all statements made by the Army at their face value, investigations should be made into situations warranting such action. However, such investigations should be comprehensive and not merely confined to conferences with high-ranking officers, as was the case during a recent visit of several Government representatives at this headquarters, since the ideas imparted from such a source would in all likelihood not be those of the vast majority of the men concerned.

Demobilization is as much an emergency as mobilization was and should be handled as such. Instead of working backward as is the present policy, i. e., determining how many men can be let out at a time, it should be determined how many men will be required and all others released. The process of discharge from the Army is merely a clerical function and could be tremendously expedited through the utilization of more separation centers and more civilian clerical help in the processing for discharge.

It is obvious that the feeling of the men in uniform is such that any man who at this time has the fortitude to stand up for them in Government circles and fight for their rights will have their lasting gratitude and support in the coming years.

Here is a letter which was written September 17, 1945, by a boy in service in Europe. He addressed this letter to me, enclosed it in a letter to his mother, and she forwarded it to me. Think of how our boys have to get their messages to the representatives of the people in Congress, the subterfuge they have to follow to get beyond the lines of arbitrary military rules, un-American regimentation.

At present the critical score is 80 points or more. This does not include the recount up to and including VJ-day. It includes those points accumulated up to VE-day. Recent directives state that men with a score lower than 35 points will be included in the army of occupation. They also state that men with points between 35 and 72 will be sent to an assembly area command. Men having over 72 points will be transferred to States bound units. These figures are effective only to May 12. A more recent directive states that the points will be recomputed to include September 2 and that they will be effective on the 20th of this month. According to this, I will have a score of 76 points. In the meantime, my unit is to leave for the assembly area point on the 21st.

Does it make sense to ship men over 500 miles inland ———, with points enough to allow them to be shipped from this present area, ———? Every man with whom I have had contact, contends that something smells. Units have been known to have boarded their ship for the States, only to be removed a few moments later. I have given you the facts as I know them, and trust that you will make a logical deduction from them.

I have been overseas 21 months, participated in the Normandy invasion, been in four major battles, have been awarded four battle stars—Bronze Arrowhead, Presidential Citation Badge, Seahorse Patch for Amphibious Operations; the latter three awards are of no point value. We were never told why. It does seem that any award by the War Department should be of value in points for discharge.

I was in the Army from 1936 to 1939 and am not allowed to count this service to my credit for points. Why? My service was honorable. Furthermore, I volunteered for duty in this war in 1942, while at time, prior to my reenlistment, I was earning close to $400 per month.

Please understand that I am asking no favors, but I do feel that you may arrive at better deductions if you know the facts. Nor do I blame anyone for the faults that are known. I am merely seeking justice for several hundred thousands of men who are known as GI Joes.

Some time ago I received a letter from a boy in service in the Southwest Pacific who said:

They have put the needle to us again. Contrary to our belief that VE-day would give us relief it is the opposite.

In the first place they withheld two authorized campaign stars until after we signed our service rating cards which reduced our points by 10.

* * * * *

The POA has now put a clause in the furlough plan whereby all men with 80 points or over have to sign a waiver of all discharge rights before they receive their furlough. They are also to be furloughed with no possibility of reassignment which means that we will have to return to the Pacific for undoubtedly the duration of the war.

* * * * *

My main bone of contention is that the POA has exceeded its authority in forcing men to sign discharge waivers before they can get the furlough that they deserve.

Dad, I have heretofore accepted the high-handed Army methods in a more or less passive manner but this is the rawest deal that I have seen. I believe it would do some good if the actual facts were brought to the attention of someone who could exert some pressure on the War Department.

This communication was referred to the President and by him re-referred to the Secretary of War, who failed to give a satisfactory explanation of the situation.

Another boy in the service wrote his father and mother describing in detail the fact that they were held in the service without any idea as to when they will be discharged and without having to do anything that will help them in any way in their future lives, unless they expect to make the Army their career. He says:

The courses are so short and so dry that those that would like to remain cannot even hold their attention to it. The instructors themselves realize the worthlessness of the whole thing and are becoming bored with teaching it.

Our flying is a farce! We fly 10 to 13 hours a month and what good we get out of it is our flying pay, and that could be done in 4 hours.

These are the words of a boy in Europe, written August 7:

I'm really not doing a hell of a lot that I feel is constructive, but, frankly, no one else over here is either, right now. I'm coordinating truck transportation out of the port here at ———. Again, sort of liaison between the port and the hauling agencies. Any buck private could do the job, but that's just the way everything is here right now. I've traveled all around this continent, and for the last 60 days I can't find anybody doing any work to speak of.

To show the disapproval by the parents of the manner in which the demobilization program is being handled, I quote the following from a father of a serviceman:

I also note that the War Department is, in effect, threatening men who try to get some justice through their Congressmen. Will Congress sit by and let the brass hats get away with this? It is quite likely that because of my letters to you that both of my sons have or will have "P. I." (political influence) on their service records, which, if done, will put them in a position to be singled out in some slick fashion for retaliation. This is one of the old Army games.

For the present I can't do much about that, but Congress can take care of the situation if it so desires.

A leading Democratic politician of my State sent each Member of our delegation from Oklahoma a copy of an open letter appearing recently in the Stars and Stripes, so he stated, and sent to this gentleman by a man overseas, concluding as follows:

If the people back home are determined to create the angriest group in our Nation's history, they can succeed by informing the men overseas the occupation job is theirs until it's finished.

In effect, they'll be telling them they're a lost generation, that they're trapped, and there's nothing they can do about it.

A man who served in the Naval Reserves in early July, in the Southwest Pacific, 36 years old, wrote me a letter which one of his buddies brought to the States and mailed while he was on furlough. He states:

I dislike having to go underground in order to write you; it would make me feel more like a free American to send this to you openly, but our commanding officer has issued an order that no member of this command is to be allowed to write to a Congressman or Senator. Such tactics may seem a bit high-handed to you, but I can assure you they are quite prevalent in this battalion. We can readily understand the fears of our commander, and most other officers of this battalion, that word of their incompetency, placed in the proper hands, might arouse sufficient action as to make their positions untenable. I have a friend leaving within a few days who has promised to see that this is mailed to you.

* * * * *

The Army and Navy Departments may succeed in convincing a majority of the people back home that it is necessary to send an increasing number of men to the Pacific, but until they shall utilize fully the thousands already out here, they will never make us believe any of their stories. We have been around too long and in too many places to accept any of their statements without reservations. The needless waste both of manpower and matériel we have witnessed in the course of our service and travels is something we shall never be able to forget.

A mother has written me, under date of October 15, and sent me a newspaper clipping of where her son was supposed to have arrived here from England, October 4. She states:

He was sent to London ahead of his division, the Ninety-ninth, and they evidently got their orders to leave soon after, as the division is home, but this boy is still awaiting transportation home. He said that his medical doctor told him that his leg would stay swollen for the next 5 or 10 years. I'm sure that he would be granted a discharge here in the United States.

Shouldn't casualties have priority over high-point men?

An anxious father called me by long-distance telephone last Saturday and told me that his son, who served in one of our armies in the European theater for the past year and a half or 2 years, was sent to England August 5. There were about 200 boys in the group there who have been sitting anxiously awaiting an opportunity to come home since August 13. They have not received any mail since they have been in England, and this father told me that 85 letters addressed to his boy had been returned to his home at Tulsa.

These boys say they have not been paid anything since they have been in England. They say they have been alerted four different times and were pulled off the ships each time. They were pulled off the *Aquitania* when this ship sailed for the States with 300 vacant berths. The morale of the boys is unspeakably low and the parents are irate, to say the least. This situation, as well as all of the others above narrated, have been reported directly to the military authorities here, and little or no results have been accomplished.

Many other equally glaring and almost unbelievable circumstances and reports from our servicemen could be furnished if time and space would permit. It is evident that something is wrong. The servicemen know that something is wrong. Their parents and their wives know that something is wrong. They will not hesitate to tell their story as soon as they are free from reprisals and repercussions that might militate unfavorably against them. The people expect the President and Congress to afford the proper relief against these abuses. The majority party in control has the responsibility and should assume it forthwith. If they do not, the public is sure to express their displeasure at their first opportunity.

## Cooperatives as a Bond Between the Americas

EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. VOORHIS of California. Mr. Speaker, during the early part of this year three representatives of the Bolivarian Cooperative Union, which has its headquarters in Colombia, South America, as guests of the Cooperative League of the United States of America came to this country to tell of the very rapid development of cooperative organizations in South America and of the desire to further the organization of an Inter-American Cooperative Conference which will be organized very shortly. The president of the union, Mr. Francisco Luis Jimenez, wrote the cooperative league to express his thanks to the league and also to make a plea for greater interest in the support for the development of cooperatives. He emphasizes that cooperative organizations in those countries allied can do more for the development of understanding and peaceful relations between the countries than can any other organization.

Under unanimous consent, I include with my remarks the letter addressed to the Cooperative League of the United States by Mr. Francisco Luis Jimenez, president of the Bolivarian Cooperative Union:

BOLIVARIAN COOPERATIVE UNION,
MEDELLIN, COLOMBIA, SOUTH AMERICA,
*March 12, 1945.*

*To the Cooperative League, to the Cooperatives and the Cooperators of the United States of America.*

MY DEAR FRIENDS: In postwar days, the cooperative movement will have a great task to perform and a delicate responsibility before history and humanity. The war came about because of the selfishness of men and nations which did not wish to sacrifice their desire of lucre. If we want peace to be durable and men to live in perfect concord, it will be necessary for society to stay on bases of fraternity and mutual help.

A new order will be necessary. The world must not be what it was in 1939. The forces of evil that then unloosed the conflict that today shakes humanity to its very depths ought to be chained forever, and it will be possible to do this if we resort to human concord through the necessary elements that will end forever the feeling of need and longings in the hearts of men.

For all this, cooperation is the remedy. There is no other system that can replace it. It is the only doctrine that is able to secure peace and keep the spirit of solidarity among people. Only cooperation has the necessary means to guarantee the policy of a new concept of society and of mutual relations among men.

American solidarity—according to the opinion of statesmen—is founded upon cooperation. Apparently cooperation seems to be more international than national at present. The nations of this continent march together and promise to do this until the end. They try to destroy the totalitarian forces and save democratic principles, which they wish to see more widely accepted and more firmly protected in their respective countries.

But is there any proof that the stability of these aims will be secure? Will they not be only a consequence of the need to protect themselves against the common enemy? Are we sure that when the war is ended and the danger has passed, that the feelings of solidarity will still subsist? Is it not possible that we may see the community of the American nations affected in what should be their complete unity?

A deep study of the reality of things brings us to the conviction that American cordiality depends on agreements among the States, in promises by their governments. But when these fall, are modified, or come to an end, people must wait again to see what will occur. Often we hear that it will be necessary to wait until the new men of the new government get their bearings. Why this doubt and vacillation filled with anguish? Will it not be, perhaps, that the existent bonds are not as yet deeply entrenched in the nations, in the human masses, but in definite advantages, in already known aspirations, in a word, in gain?

A careful examination of what the Latin-American people think or know about the United States of America and wish from her causes us to arrive at the following conclusions:

1. The great majority of the Latin-American people do not know, even superficially, the history, geography, customs, and the strong work being done by that great country of the North. And the same may be said of the United States of America in her relations to the Latin-American Nations.

2. The relations among the different governments are officers, based on mutual interests of trade, industry, and common defense.

3. The trade and industry of the United States of America, and the trade and industry of Latin America are connected with utilitarian conveniences, inspired by monetary gain, which is to say that the traders and industrialists of both parties only seek advantages, and for that reason when greater advantages are to be found in other parts of the world, both of them will leave their companions and their customers in order to better themselves in other situations which have been made.

4. A cautious but constant propaganda is becoming each day greater. It is asserted that the United States of America is an imperialistic country, and that the Latin-Americans are Yankee protectorates; that we must prepare ourselves to trade preferably with other peoples, and that by all means we should cast off North America's boot which tramples on us. As anyone can see, at the bottom of all this there is a desire for gain. The phenomenon is not analyzed through a sense of culture, of faith in the destiny of both peoples, and of mutual and disinterested help toward each other, but all from the point of view of trade and commercial interchange.

As I had the opportunity of saying several times in my recent visit to the United States of America, the cordial and constructive friendship between Latin America and the United States of America, in order to endure, should be a work of the people, of the human masses, and not an exclusive job of the governments. The day when the peoples of the North and of the South know and understand each other, they will love each other and work together to create the most amazing culture that history will record.

According to my idea the only force that is able to effect this union is that of cooperation. No other force could accomplish this with success. It is for this reason that I have insisted so much on the convenience of cementing the bonds of friendship and mutual help between the cooperative movement of the United States of America and that of Latin America. But you already have a strong movement, well tried out, and a great work has been done. We, on the contrary are only beginning.

The cooperative movement will construct and preserve the union of the American Continent. For that reason we who preach and praise the excellence of the system have a very great responsibility. Because of that, the Bolivarian Cooperative Union have just convened an inter-American cooperative conference that will be held in Lima on December 2 to 9 of the present year. There we shall study all of these ideas and transform them into practical conclusions for the good of all.

But it will be absolutely necessary to carry forward an intense work of publicity, diffusion, and understanding for some months before the meeting. Only in this way shall we be able to obtain the attendance of all the countries, the success of the different kinds of work, and the excellence of the conclusions to be reached. Otherwise we might fail, which would mean a great detriment for the cooperative movement and for us.

I should like to invite very cordially my cooperative friends of the United States of America, and especially of the Cooperative League, to collaborate with the Bolivarian Cooperative Union in the efficient preparation and celebration of the Lima conference.

Due to your great experience and indisputable capacity of acting in a most intense way, I think that the greater part of the work should be under the care of the organizations of the United States of America, preferably of the Cooperative League. But I should like to suggest that this be only the execution of the work, because—for obvious reasons—the direction should remain under the exclusive care of the Bolivarian Cooperative Union.

So, while inviting you very cordially to attend the next Bolivarian conference that will be held in Lima and to take a very prominent part in it, I want to make the following suggestions:

(a) That the Cooperative League of the United States of America form as soon as possible the committee that the Centennial Congress of Chicago recommended it to do, with the commission to establish relations—preferably educational—with the cooperative movement of Latin-America.

(b) That the committee, already constituted, within the plan that it might adopt, would furnish the Bolivarian Cooperative Union with means to begin a series of publications, radio speeches, and goodwill trips, to prepare, in this way, the Latin-American cooperative movement, so that it might cooperate in a proper manner with the one in the United States of America.

(c) That, as soon as it be possible, efforts to establish the International Cooperative Business Association be initiated, beginning with the American Continent's cooperatives, according to the bases set forth by Mr. Cowden in the Washington Conference and in the Centennial Congress of Chicago.

(d) That the cooperatives and the cooperators of the United States of America kindly suggest and propose the methods that they believe would be most advisable in order to accomplish without delay the aims of this message.

While making this call to you, a fervent wish to contribute to the union of the American cooperative movement inspires me. This union will enable it to have a potent influence on America's future and on the well-being of the world in general. For this reason, I am sure, my words will merit a cordial reception on the part of the cooperators of the United States of America.

I wish to make use of this occasion to send to the Cooperative League and to the cooperators of the United States of America my fervent thanks for the noble, but unmerited kindness, that they showed me during my recent visit to that great country. I shall always remember it with the deepest emotion and it will always be a reason for deep gratefulness on my part.

With highest respect and personal best wishes to my friends cooperators of the United States of America, I am,

Cordially yours,

FRANCISCO LUIS JIMÉNEZ,
*President of the Bolivarian Cooperative Union.*

---

## Americans Must Cooperate To Survive

EXTENSION OF REMARKS
OF
## HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, in the United States we are now face to face with a new world situation which demands that if we are to survive as a free country—or if we are to survive at all—citizens of every class and section from ditch digger to millionaire, and without regard to race, must cooperate. We have been told within the last few days by the outstanding experts of our national defense that the fate of the world hangs in the balance. We have been bluntly told that unless all men, women, and children in the United States of America do cooperate, the next war may easily result in America's being struck with such a force of atom bombs as would in a matter of minutes completely paralyze our ability to defend ourselves.

It appears to be futile for us to hope that the United States, Great Britain, and Canada can keep the atom bomb secret. In fact there is a very grave question as to whether or not it is now a secret known only to the United States, Britain, and Canada. A report in the Washington Times-Herald of Monday, October 15, indicates that Russian scientists already have the secret. I have in my files the summary of an article appearing in the Scientific Monthly of August 1945, which contains an article translated and condensed by the American-Russian Institute from Izvestia, the Russian newspaper, on November 25, 1944. This gives the names of two Russian scientists who then were far along in their investigations.

We also know that the leading German scientists who have been working on the release of atomic energy were taken into Russia after the German surrender and have not been heard of since. They presumably are working under Russian direction.

With conditions as they are it becomes a matter of life or death for every man, woman, and child in this Nation that we cooperate together to set up a new and hitherto unconceived defense.

We have all too many in this country who would like to see us enslaved to communism. Such slavery would be worse than the instantaneous disintegration that would be caused by the atomic bomb.

It seems as though the most gigantic force for all evil ever dreamed of by man has been loosed on the world. The question now is survival. Not only survival of civilization, but the survival of the human race. Death would descend from 100 miles up in the stratosphere within 3 or 4 hours after it had been launched from some distant point in the world. We are not now dealing with labor unrest and labor politics. We are dealing with life, or death, or survival of the men, women, and children of the United States. It is that awful impelling reason which urges us to get together and cooperate for our common defense and our common existence.

The Nation-wide total of people out of work because of strikes in American industries was 418,000 on October 10, 1945. This represents a somewhat reduced figure from that of the previous day because some 42,000 textile print and dye workers had returned to their jobs. If this same total were maintained for a single week, it would mean that 3,244,000 work-hours would be lost in a single day and 16,220,000 work-hours would be lost in a 5-day workweek.

It is a corollary of American production that no industry lives to itself alone. No automobiles or refrigerators can be built in large numbers while the steel industry is not producing at full blast. The steel industry cannot produce for the automobile or the refrigerator industry

unless the coal mines are functioning at top speed. We have had a recent demonstration of this. What applies to the automobile, refrigerator, steel industry, coal chain applies with equal vigor to all industrial chains existing within this country.

Nor is the effect of domestic strikes entirely confined to this country. The more than 369 vessels tied up in New York Harbor because of the longshoremen's strike just closed imperiled thousands of tons of goods piled up on the docks for foreign export. One hundred and ten thousand tons of this amount was earmarked for relief or for our boys overseas. Part of it consisted of 8,000 tons of perishable meat. If your boy in the occupation forces in Germany or Japan goes hungry, it could well be the direct result of this particular strike.

And if your boy returns from abroad and finds no job awaiting him it may also be the result of this strike. Why? The ships that left New York during the strike had to leave without cargo. We cannot take our exports to Europe at a time when it is most critical for all industries and businesses dependent upon the export trade. If our strikes continue, cheap Soviet labor plus German slave-labor under the Soviet system will glut the European market with Soviet products before the American export product will have a chance to get a fair trial by the European consumer. Even at this stage of reconversion we need all we can get of American goods carried in American ships to Europe so that we can participate in the beginning of postwar economic competition.

How can the people of the United States create badly needed jobs, relying on sales to consumers either at home or abroad, if union leaders are going to persist in the self-destructive practice of keeping wage earners out on strike?

The situation is all the more tragic when one considers that many of these strikes do not even have any relationship whatsoever to working conditions or wages. In this class falls the so-called disciplinary strike in which an important contributing company, the Kelsey Wheel Co., was forced to abandon production because thousands of men were called out in a dispute over whether or not a foreman should be allowed in a particular part of the factory.

Who is punished by a disciplinary strike? The employer? Yes. He is punished. He is under contract to the larger company which buys his product. He must sell at the ceiling or contract price. He has no opportunity to recoup his losses. The purchaser of the finished product is punished. He has been waiting all through the war to buy his new refrigerator or his new car. It is a poor reward for a faithful worker, a careful saver, to make him wait longer to replace his worn-out mechanical needs. The striking employee loses, too. He, too, is punished. It will take a long time to replace the two or three war bonds a week which he must cash in in order to support himself and his family. In addition he loses his weekly wage.

Only the union leader remains unpunished. He draws his wages while his men are striking. He always wins, whether the strike is won or lost. He risks nothing.

The same people lose and the same people win in so-called sympathy strikes, when unions which have no grievance of any kind against their employer simply walk out because another union has quit work because of a real or spurious cause. The same people lose and the same people win in so-called power strikes brought about when there is a question of which union shall control the lives of the workers.

Management is a definite and distinct business. Selling is a definite and distinct business. Labor, itself, is a definite and distinct business. Yet, none of them can survive alone. They must sink or swim together. All must be joined in order to produce. In other words, the balance, the synchronization, between all production factors must be maintained if our economic machine functions.

If any business is making beyond a reasonable profit, it should support wage increases. But it is unreasonable for labor to expect management to forego all profits and merely conduct a business to provide jobs. It is no more to the advantage of mangement to start an inflationary cycle than it is to the advantage of labor to start one. If an industry cannot safely raise prices—and at the same time is forced to raise wages—it begins to lose money and has no logical incentive for continuing in operation, throwing good money after bad. Even if the industry were allowed to raise prices—and, under such conditions, other industries would rightfully demand like concessions—pulling up wages for the worker would not ease the worker's lot. He would have to pay higher prices for his purchases; thus, losing his wage gains. A continuing price rise would make the worker try to leave the industry in which he was employed and hunt for a better job, if he could find one. Those are conditions of which crashes and panics are made.

When union leaders, with no pretense at any knowledge of an industry's financial situation, ask that industry to keep its hands up while the union leaders go through its pockets for added wages, they are asking something which is sure to fail. Management should be disposed to meet with labor on a common ground so that their differences might be ironed out if labor leaders showed a disposition to understand the problems of management.

The management-labor problem will never approach final settlement so long as labor leaders regard business as an activity from which to take as much as possible in wages while giving as little service as possible in work. Neither will management-labor relations ever come near to solution if any considerable segment of management regards labor as people to be paid as little as possible for as much work as can be squeezed from them.

Management and labor in the war performed a miracle. The Japanese war lords had prepared for war for 40 years. Mussolini had been driving the Italian people for 20 years, preparing for war. For 20 years Stalin prepared for the war he knew would come. For 12 years Hitler drove an enslaved Germany to war efforts. Yet, in 3 years, free American labor and free American management overtook the enemy in production. A year later we had surpassed the enemy and the war was won.

It will take considerably less than 3 years to reconvert our industry to a peacetime economy. In peace, the greatest market ever created for American goods awaits us. That market means prosperity for labor, for management, and for agriculture alike, as well as a chance for our returned soldiers, sailors, and marines to go back to productive careers. We cannot retreat from this prospect. It is here. We must meet it, use it, and profit by it—or we must recognize the hard truth that we are unfitted for building up our domestic economy and foreign trade. Either we are going to solve this labor-management problem or we at home are going to lose the peace after our American boys have won the war.

## Back on God's Time

EXTENSION OF REMARKS

OF

### HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. SCHWABE of Oklahoma. Mr. Speaker, everybody is thankful that we are back on God's time. The wartime requirement that everybody move his clock up an hour was perhaps one of the most nonsensical of all the emergency measures enacted by Congress. It is sometimes called daylight saving; but that is an erroneous designation, for it saved neither time nor daylight. On the contrary, it caused confusion and inconvenience, disrupted business, and necessitated the expenditure of more money for light, power, and fuel, and the people could not see that there was any saving at all. Farmers, merchants, school teachers and patrons, factory workers, professional men, and citizens of nearly every walk of life, were unhappy, displeased, and disgusted with it.

Since the present Congress convened on January 3, 1945, 30 Members of the House of Representatives introduced legislation seeking the repeal of the so-called daylight-saving law in response to the overwhelming demand of their constituents that we revert to standard time, sun time, or what many have been pleased to call God's time.

I introduced two measures to repeal the daylight-saving-time bill. The thirtieth bill introduced—next to the last one—was introduced by a Democratic Congressman from Oklahoma, a member of the majority party, and that bill was passed and became a law and put us back on standard time, although the bill which was passed was introduced after I introduced my bill. But its author is a Democrat, and I a Republican. The bills were identical in language. His was adopted. I am happy that it was an Oklahoman who introduced the bill

which became a law repealing the New Deal time program.

This repeal measure should have served as an example for the New Dealers to follow in repealing a lot of other laws that are at this time of no value to the people and, in fact, are encumbering, delaying, and preventing progress and reconversion. The trouble is that the New Deal Party in power here has not seen fit to repeal a lot of other laws that the people want repealed. The public should demand the abolition of most of our wartime bureaus which have served their purpose and are now no longer needed, and that we be freed from the regulation and regimentation which was forced upon us by the New Deal administration.

The President can do away with a lot of these bureaus by a mere stroke of the pen, if he sincerely wishes to do so. They were created by Executive order of the President and he can abolish them by Executive order. Those that were created by Congress should be abolished by Congress. I refer to such un-American bureaus as the OPA, the ODT, and the almost unlimited list of alphabetical bureaus which the New Deal administration brought into being and has kept alive at the expense of the taxpayers and to the almost intolerable annoyance of our citizens.

## Resolution Adopted by the Council of Polish Societies and Clubs in the State of Delaware

EXTENSION OF REMARKS
OF
### HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at the commemoration of the one hundred and sixty-sixth anniversary of the death of Brig. Gen. Casimir Pulaski, who was mortally wounded in the siege of Savannah, sponsored by the Council of the Polish Societies and Clubs in the State of Delaware, member of the Polish-American Congress, held on Sunday afternoon, October 14, 1945, at the Pulaski Place, Wilmington, Del.:

We Americans of Polish descent, assembled at the Pulaski Place in Wilmington, Del., on Sunday afternoon, October 14, 1945, to commemorate the one-hundred-and-sixty-sixth anniversary of the death of Brig. Gen. Casimir Pulaski, who rendered his valor, courage, and his life to the American cause for liberty and independence, who came to America from Poland to lend his aid in winning the Revolutionary War. He was a man to whom the principle of liberty was uncompromisable with any enemy of such; and later these principles were created and kept wholly up to the time of the Teheran Conference.

Further, we as Americans of Polish descent are upholding the American principles for which General Pulaski gave his life, having over 1,300 of our sons and brothers all over the world who shed their blood, of whom 26 have made the supreme sacrifice, for the principles stipulated in the Atlantic Charter and the "four freedoms." At home we have made sacrifices in money and work, and have given our Government full support against all intentions and aims of enemies to freedom, liberty, and independence.

Whereas we stress the grave concern by the trend of world events in the wake of the current revival of secret diplomacy in which our statesmen have participated with unhappy results in the past. We submit these blunders and sins committed by secret diplomacy in respect to Poland and elsewhere under the pressure of wartime expediencies must be rectified at the peace conference so as not to make the Government of the United States coresponsible for the crimes perpetrated by Soviet Russia in Poland as well as in the rest of eastern Europe.

Whereas we are pointing out the necessity of having alien influences removed from Poland, calling for the admission to Poland of the American Red Cross, the International Red Cross, and Polish-American relief agencies.

Whereas the United States cannot remain indifferent to the fate of Allied Poland, one-half of whose ancient lands was ruthlessly seized by the Soviets and the sovereignty of the other half taken away by the imposition of a puppet government. Much more is involved than merely the fate of Poland, the interest of America is at stake and the American way of life menaced.

Whereas we demand further that the United States Congress should commence an investigation of the deplorable treatment of the displaced persons of Polish nationality in the American occupational zone who are being coerced into returning, against their will, to Soviet occupied Poland. Until the conclusion of such an investigation all forced repatriation of Polish citizens into the Soviet zone of occupation should be postponed.

Whereas we express our opinion that the secret of the atomic bomb must not be shared with Soviet Russia and no financial aid should be granted to Soviet Russia until it fulfills the pledges of the Atlantic Charter of which it was a signatory.

Therefore, we here assembled, protest against any attempt to deprive Poland of her full freedom, independence, and integrity. In defending Poland we defend truth and equity, right and justice. We defend collective security of the world and the individual security of our country, the United States of America.

Furthermore, we here assembled, declare that the United States should not succumb to the psychosis of moral and spiritual demoralization spreading in alarming proportions over the country. The American people must be vigilant. They must be alert. Just as the appeasement of Germany brought on World War II, so the appeasement of Russia will lead inevitably to another war in defense of our liberty.

VINCENT J. KOWALEWSKI,
*Chairman.*
MRS. JANINA JASINSKI,
*Secretary.*

## Full Employment Act

EXTENSION OF REMARKS
OF
### HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. MASON. Mr. Speaker, S. 380, the Full Employment Act of 1945, is a bill that engenders both hope on the part of many and fear on the part of others. It is therefore desirable that we who must vote for or against the measure should have access to the different viewpoints expressed upon the bill. For that reason I propose to give one interpretation of what full employment means, and also to point out the many difficulties and handicaps that would occur if the bill becomes a law.

FULL EMPLOYMENT MEANS WHAT?

Mr. Speaker, full employment does not mean that every citizen of the United States is going to be guaranteed employment in the job he wants to do, at the factory he wants to work, in the city or village where he prefers to live. To insure full employment our workers must be willing to work at jobs where and when they become available. The author of the full-employment plan, Sir William Beveridge, in his book Full Employment in a Free Society, places special emphasis upon the need for labor mobility, the need to shift workers from one place to another when and where needed. Therefore, any full-employment plan would bog down if workers staged a sit-down strike and insisted upon the right to work at their own job, in their own plant in their own community.

Mr. Speaker, in pointing out the difficulties and handicaps that would be encountered in administering the provisions of the bill, I can think of no better way to accomplish the task than by including as a part of my remarks an editorial carried in the Chicago Tribune of Wednesday, October 17, 1945. The editorial was entitled "Some Bad Guesses," and is as follows:

SOME BAD GUESSES

The so-called full-employment bill would require the President each year to submit a "job budget." In this he would state how many jobs there were going to be in private industry, and how many jobs the Government would have to create to provide for the unemployed.

How is the President going to find out how many jobs there are going to be a year in advance? Who will his experts be? Is he going to rely on the trade-union executives like Sidney Hillman and William Green?

They are certainly men of wide experience in the ups and downs of industry. They both have excellent sources of information. However, in August, right after Japan surrendered, Hillman declared that within 6 to 8 weeks, 10,000,000 people would be unemployed. Eight weeks have passed, and the number out of work is about an eighth of the number forecast by the CIO Political Action Committee chairman. William Green, president of the American Federation of Labor, about the same time said unemployment was going to be serious but wouldn't give any figures.

More likely the President, in making his annual determination of how many jobs there were going to be, would rely upon an official staff. No agency in the future is going to be better prepared to estimate unemployment in the next few years than was the War Manpower Commission 2 months ago. It had immediate contacts with every employer during the war. No one could go to work without its approval. It could require reports and conduct investigations without limit. It had expert analysts, economists, and statisticians. If any outfit was ever set up to get the low-down on employment, it was the WMC.

Early last month WMC prepared a report which was used by the Government to show that 4,000,000 were going to be out of work by early spring. It now has changed its mind and says that the crest in the lay-offs has passed. If policies of expanding expenditures had been followed, based upon its 4,000,000 figure, the result would have been disastrous. The Government, with its synthetic jobs, would have been competing with industry struggling to find manpower sufficient for reconversion.

Of all the Government agencies, WMC has come closest to the mark in its guesses. Going to the other extreme, there were the statements of Chester Bowles, who placed the amount of unemployment that was going to develop at between ten and twenty million. Although unemployment never came close to the ten or twenty million mark he set for the reconversion period, he did what he could to make his estimate come true by keeping one industry after another in the dark about the prices they could charge for their products.

Government officials and trade union officials have shown that they couldn't accurately forecast the volume of unemployment 6 or 8 weeks in advance. What reason is there to think that the President, who would have to rely upon the same sources for guidance, could determine the out-of-work status 12 or 18 months in advance?

Public officials on their showing ought to be extremely humble about predetermining the course of economic forces which they have shown they do not understand. The desirability of filling in the valleys and leveling off the peaks in business has been often stated, but the instruments haven't been perfected for accomplishing this or those at the controls do not know how to use the gadgets.

## Address Before Polish-American Congress

EXTENSION OF REMARKS

OF

### HON. THOMAS S. GORDON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address I made before the Polish-American Congress, assembled to observe and commemorate the death of Brig. Gen. Casimir Pulaski, on October 11, 1945, in the Masonic Temple at Detroit, Mich.:

Mr. Chairman, honored guests, ladies and gentlemen, it is a great privilege to address such a distinguished gathering and it is a special privilege to be in Detroit, the city which earned the glorious name of the "arsenal of democracies," and which so magnificently contributed to our victory. I am particularly proud that my fellow countrymen, Americans of Polish descent, are so numerous among the workers of this city and whose sweat was shed in this hard work which permitted the arming of our boys on the fighting fronts so as to assure the triumph of American weapons forged by strong American hands.

We must see now that this victory, achieved through the effort of the entire American Nation, on the battlefields, in the factories, and on the farms, shall not be wasted. Let us all together watch that the peace which shall follow our victory be worthy of our sacrifices. I am sure that as we fought and worked for victory under the enlightened leadership of our late President, Franklin D. Roosevelt, we shall achieve a real victory of democracy and equal rights for big and small under the statesmanlike guidance of our President, Harry S. Truman.

It is particularly fitting to remind you of the necessity of our common continued effort to secure a peace worthy of American democratic ideals, a peace for freedom, and a peace for the common man, on a day when we are celebrating the memory of our valiant American and Polish fighter for freedom, Casimir Pulaski, who, like many American and Polish boys in this war, gave his life for these ideals.

I want you all to rise and in a minute's silence pay tribute to his memory and to the memory of the fighters for freedom fallen in this war for ideals which always were and shall be forever the common ideals of the American and of the Polish people.

You want to hear my report on what I saw in Poland. Let me tell you right at the beginning that as much as I would like to report to you on the day on which we celebrate the memory of Casimir Pulaski, that I saw Poland free, independent and happy, I cannot submit to you such a report. My observations point to the fact that despite indescribable losses suffered by Poland in this war and despite the untold sacrifices the entire Polish Nation has made for the common cause, Poland was unable and still is unable to celebrate with us the day of victory as its day of liberation.

I do not want to comment upon what we saw in Poland. I will take the liberty of submitting to you cold facts and facts alone. Let them speak for themselves, and indeed, they speak eloquently.

Authorized by a resolution of the House of Representatives of July 17, 1945, to go to several countries in Europe in order to "conduct thorough studies and investigations of all matters coming within the jurisdiction of the Committee on Foreign Affairs," a committee of four, comprising Representative FRANCES P. BOLTON, of Ohio; Representative KARL MUNDT, of South Dakota; Representative JOSEPH P. RYLEY, of Connecticut; and myself, left the United States on August 12, 1945. We visited France, Germany, Austria, Czechoslovakia, Poland, and Soviet Russia.

At this time I will concentrate on observations we made in Poland only, as I know that this is of greatest interest to you.

We started out, and our destination was Warsaw.

Arriving from Berlin at the only airport that was approachable, called Okecie, on the outskirts of Warsaw, we were met by members of the American Embassy, and also by two officers, one a Russian and the other in a Polish uniform, who, as we soon found out, spoke Russian far better than Polish. They failed to show any signs of courtesy; in fact, they were definitely rude to us. Fortunately, we were in the company of our own people—Americans.

We landed safely, although at our own risk, as we were advised that this airport was not completely cleaned out of the mines and unexploded bombs. Our pilot had difficulty in making a landing, as he had to circle a few times and make observations for same. It is located 10 miles distant from Warsaw, and en route we saw the wrecked homes, which was a forerunner of what we were to see of the city itself. Arriving there, a most ghastly scene hit our eyes: There was no more Warsaw.

Every building was deliberately demolished, not so much by aerial bombing but by systematically applied demolition bombs, wrecking everything that once was a beautiful Polish city. The only building that stood out in fairly good condition was the Polonia Hotel, where we made our quarters, on Aleja Jerozolimska. This building was saved, as it was used as the Gestapo headquarters, and where the Nazis did their planning for the total destruction of Warsaw. Across the street from this hotel was once the Central Warsaw Railroad Station, and what stands there today are naked ruins and sky-piercing iron girders.

By automobile we rode through the devastated streets of Warsaw. Ruins and rubble all along. It is more than difficult; it is simply impossible to describe to what degree Warsaw is devastated. There is nothing left of the beautiful historical landmarks, as there is nothing left of the old and the modern houses in Poland's capital. The rubble has been simply shoved aside and among those ruins in cellars and in shacks crudely constructed out of lumber the people of Warsaw find shelter. People of Warsaw—you should see them as I saw them—most of them in rags, many barefooted, destitute, many of them looking starved, desperate, some looking stern, some dejected, but most of them with a very strong determined light in their eyes.

Their faces would light up whenever they saw the American flag on our car and saw us getting out of it. You would say that they expected something to happen—that some immediate action would take place now the Americans were there.

Our numerous walks through Warsaw soon convinced us that we will be unable to describe to our countrymen the destruction of this formerly beautiful city. No picture can convey this story. You simply cannot believe your own eyes. Churches, cathedrals, the old city, monuments—all are gone—and in every spot on the squares cleared of rubble and in the humble backyards you can see wooden crosses. Underneath a hero of Warsaw lies buried. Around the crosses you see fresh flowers. They are changed constantly by remembering hands. There are thousands of such crosses all over Warsaw.

It is estimated there remain in the ruins of the city about 50,000 bodies that cannot be reached for recovery as there is no machinery to excavate the ruins to get at them, and to one passing near the smell of decaying human flesh is most nauseating.

The absence of children was very noticeable, and we were informed that these youngsters were in the same category of being victimized as the older ones.

In a conversation with the President, Boleslaw Bierut, he related that "everything is being done to the best of our ability to aid the stricken people and to reconstruct Warsaw as soon as possible, and in the near future, a free and unfettered election will be held. This awaits the return of many displaced Poles and soldiers, which contribute to the actual date when the election can be held." About the same view was given to us by Edward Osobka-Morawski, the president of the council of ministers. I was left with the impression, however, that all this depends upon some outside influence.

Some of the following prices have been noted on the black market: A 2-lb. loaf of bread costs $6; steak, 120 zlotys or $20; a cup of coffee, 25 zlotys or $5; for common ordinary working shoes the price is $70. Men's suits run around $200 and women's dresses from $150 to $250 and other prices are in proportion.

The Russian occupation army is behaving very badly. We saw their arrogance and unfairness in taking advantage of the poor people of that city. We saw the nearby highways jammed with hundreds of head of cattle, horses, and farming implements, being taken out of Poland and going further east, by the Russians. Pillaging of the shops on the streets was going on most freely, and the snatching of purses from Polish women is a daily occurrence. There also exists a wholesale raping of the Polish women. When resistance would be given, the Russian soldier would use his weapons of war and kill.

There is no freedom of press in Poland, but it was said that arrangements are being made now by the Ambassador to Poland, for the establishment of quarters for the United Press, the Associated Press, and the

International News Service, and it is hoped that the freedom of press shall tell the world what actually is going on in this ghost city, before very long. The few publications there now are strictly under Russian censorship.

Radios can be used, but a heavy tax is imposed. It was said that most severe punishments are meted out to anyone possessing one without a license or permit. The government has established loud speakers on the main street, where they broadcast Russian music; restricted news of the world and Polish and Russian announcements were heard while we were there.

Traffic is controlled by uniformed Russian girls. Here and there you can see a Polish uniform, but when you ask a Pole whether those are soldiers of the Polish Army, the answer is: "Oh, no, sir—the Polish Army is still in Italy and in England—they have not come home yet." The uniformed soldiers roam the streets with tommy guns on their backs and pistols in their holsters. The officers in the army commanded by Marshal Rola-Zymierski are mostly Russian, but the worst factor in the situation seems to be the fact that numerous elements of the Soviet Russian Army are being demobilized in Poland and the individuals are automatically made Polish citizens. Large numbers of them enter Rola-Zymierski's army or the local police force. Thus a large cadre of pro-Soviet adherents is being created. There is a curfew at 9 p. m. People apprehended on the streets after this hour have been shot and you can hear shooting on the streets of Warsaw all night through. Russian soldiers are complete masters in Poland.

Order is maintained by several kinds of citizens' militia, police, and gendarmes, but the Russian secret police—the dreaded NKVD—is responsible for all the mysterious disappearances of individuals. Failure to show an identity card results in immediate arrest by the NKVD.

And so the Poles are continually under the pressure of two main worries—fear of arrest and procurement of food. How ironical must seem to them the two freedoms announced as our war aims—freedom from fear and freedom from want.

Food—I regret to state that the UNRRA failed to alleviate the terrible sufferings of the Polish Nation. The man in charge of all the UNRRA activities in Poland is a Soviet citizen, acting as one of the deputy directors of Mr. Herbert H. Lehman. The supplies UNRRA sends to Poland for the most part are stolen and find their way to the black market where they are sold at prices absolutely inaccessible to the population. A small part of UNRRA supplies is being distributed to the population but this distribution is used very obviously by Soviet Russia for political purposes to spread the Communist doctrine across Poland and the rest of Eastern Europe. American representatives have little or nothing to say about what goes on and the Russians take all the credit, although nearly all of UNRRA's funds, 72 percent of it, have been contributed by the United States. We were told of instances where American labels disappeared from cans containing condensed or evaporated milk and Russian labels appeared instead. The most important fact remains, however, that UNRRA's activities in Poland became a political weapon and that the population is not being helped by this international organization.

The production of food in Poland suffers greatly because of two factors: One, the requisition of 80 percent of the crop by the Government, which is compelled to feed the Russian army of occupation, and, two, because of the mass removals of livestock from Poland into Russia.

We have seen on the roads and even on the streets of Warsaw long herds of cows, horses, pigs, etc., driven eastward by Russian soldiers. We were told by these soldiers that this is German cattle being taken into Russia, but Polish peasants with whom we talked know differently. These peasants, who were given small land holdings, have to till their soil with bare hands. The cattle and horses and every implement of agriculture was taken from them. In a locality near Warsaw where a 120-acre estate was divided among 16 families, we were told that these 16 families own "collectively" just one pig and they have to hide that pig under straw whenever Russians are in the vicinity. The 20 percent of the crop left to the peasant after the removal of his livestock and agricultural implements and after 80 percent of his crop has been taken from him barely leaves enough food for his own family.

Incidentally, the removals do not stop on the farm. Over 85 percent of all the industrial equipment and even more in the western territories now allocated to Poland are being taken away by the Russian armies. This mainly is the reason for which Poles would not regard the newly allocated territories as compensation which was promised to them for the loss of the eastern Polish territories. They are by no means reconciled with the terrific loss. The taking away of Wilno, Lwow, and the oil fields left a deep wound in every Polish heart, and the fact that they are getting territories stripped of every modern implement makes the reconciliation still more difficult. How can they get the mineral riches which were promised to them in Silesia? How can they use the Baltic ports? Every piece of machinery has been removed and, cynically enough, the Russians tell them that they shall get these territories in the state of industrial development as they were in the eleventh century. Thus, abuse is added to injury.

The scarcity of food and clothing in Poland is accompanied by the scarcity of fuel due mostly to the break-down of all communications. Railroad cars have been destroyed or taken from the country, trucks and bridges are not reconstructed. There is only one railroad line running in Poland and this is the railway from Warsaw to Moscow. There is a deep meaning in this fact, and this leads me to tell you a few things about the political situation in Poland.

As much as every Pole wants food, fuel, and clothing, he wants freedom more. The spirit of the Polish people is not broken. The man in the street is not afraid to die. He prefers death to life under the present political set-up. If an impartial, free, and unfettered election could be held in Poland without tickets being prepared in advance, without arrests and deportations, the Polish people would wipe out the Government of Bierut and Osobka-Morawski. However, should the present situation persist, Poland will quickly be turned into a Soviet province ruled by Soviet police, despite the fact that Russia will fail to communize the Christian Polish people and to imbue the God-fearing Poles with the Soviet totalitarian doctrine. The Polish people need some rallying point around which they can build their hopes. This is why Mr. Stanislaw Mikolajczyk was everywhere received with open arms. He was to them the man coming from London, the man who had the backing of the western Allies. The reception given to Mr. Mikolajczyk was an indication of the feelings against Bierut and his Government that is completely dominated by Communists and Soviet Russia.

The hopes which the people of Poland focused on Mr. Mikolajczyk are now rapidly fading away. As much as we wanted we were not able to see him. We were told that he was absent from Warsaw. We could not see Prof. Stanislaw Grabski either, and as far as Mr. Mikolajczyk's personal position is concerned, I can tell you that his own appointed Vice Minister of Agriculture was arrested by the NKVD and no intervention on the part of Mr. Mikolajczyk could get him released. The Polish people see that Mr. Mikolajczyk is more and more helpless and that he was put aside by the present rulers of Poland. In consequence, they reason that the United States and Great Britain either cannot or do not want to help the Poles regain their freedom and independence and I regret to state that gradually Polish public opinion, shrewdly maneuvered by the Soviet-controlled press, is turning against us. As I told you, more than food they want freedom. They want us to help them to resist, and finally to release the awful Soviet grip in which they find themselves now.

The Poles do not speak openly about their worries and about their fate. They whisper in one another's ear and they do not discuss publicly their issues. Public meetings are run and controlled by the Communists and there is no free discussion in the press, despite the fact that newspapers are numerous. There is a very strict censorship and the Ministry of Information hands down communiqués and issues instructions on what may be printed. I also regret to state that instructions were issued to leave out of print all pro-English and pro-American news.

The present Polish Government is trying every means to attract men and women to work in the clearing up of the debris of that devastated city, and for it they would supplement their monthly wage with the Russian card system, good for additional food and living quarters. But it seems they do not find much response to their plans. Rebuilding of private buildings is practically at a standstill because, first, the Government may take possession of a new place that has been made livable, and simply pay the owner rent at 1939 prices, or, second, the Government may requisition the place outright. The result is that the owners resent such propositions and are slow to make any headway as to repair, since the best way to retain the ownership is to decline to make the place attractive to live in, to those in control of the Government.

There is the same kind of totalitarian grip over education in Poland. Primary schools, high schools, and universities are being reopened, apparently free in action, but the government of Bierut and Osobka-Morawski controls the organization of learning and membership of all academic societies.

There is no self-rule anywhere—even in villages and small towns. All officials are appointed by the Government and all of them must take the oath of loyalty to the Government and to Soviet Russia. Any reported anti-Soviet talk subjects one to immediate arrest and a word uttered against Stalin—is fatal.

Despite the infiltration of Communists into Polish political life and despite the fact that Soviet stooges are constantly calling political conventions of all the four Communist-infiltrated parties, there is the general belief that 90 percent of the population is against the present Government.

All the Poles want is to have the present state of things changed as quickly as possible. They want to get rid of the rapacious Soviet Army. They want to get rid of the NKVD. They want to get rid of the Government which assumed power backed by Soviet bayonets, and they want help to regain their freedom and independence—they want America and the whole world to redeem the pledges which were given to them, they want the obligations of the world toward Poland to be fulfilled, they want all of us to help them again become a free, democratic, and independent nation.

When the Polish people feel that the Soviet secret police is not around, they sing—Jeszcze Polska Nie Zginela—Poland is not yet lost!

## War-Built Aluminum Plants

EXTENSION OF REMARKS
OF
**HON. W. F. NORRELL**
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

TRUMAN WOULD KEEP WAR-BUILT ALUMINUM PLANTS IN PRODUCTION

President Truman disclosed today he wants to keep as many as possible of the war-built aluminum plants in production.

He told a news conference that administration policy with reference to their operation has not been established, but that private enterprise should do the job.

He said, in response to another question that he thought Government subsidies would not be necessary.

Members of the Senate Military Affairs, Small Business and Postwar Planning Committees have been hearing testimony this week on plans to dispose of the Government-owned plants. They cost approximately $700,000,000.

The Aluminum Co. of America yesterday offered to lease and operate the key unit of the Government's properties and sell alumina to any other operators the Government approves. The company offered to lease the Hurrican Creek (Ark.) plant and make the product available to small plants at a reduced price.

The lease would guarantee the Government a minimum rental of $1,000,000 a year.

Meanwhile, Congress was asked to extend for 90 days the time in which action may be taken on a plan for disposing of the Government's aluminum plants. The plan will become effective Sunday unless Congress rejects it or extends the time for considering it.

## Dr. Szilard and the Atomic Bomb

EXTENSION OF REMARKS
OF
**HON. WILLIAM A. ROWAN**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Post of October 19, 1945:

MAY-JOHNSON BILL

The folly of trying to legislate in the dark has probably never been more pointedly illustrated than it was yesterday at the hearings before the House Military Affairs Committee on the May-Johnson bill. Witnesses made it unmistakably plain that hasty enactment of that measure might have the effect of crippling instead of fostering future development of atomic power. The striking objections which these scientists piled up against the bill leave no doubt that it will have to be discarded for a fresh start.

Complaint No. 1 by the scientists is that the May-Johnson bill, enacted into law, would drive many of the ablest experts and technicians out of the atomic-energy project. The reason for this leaps to the eye of even casual laymen reading the bill. It would give the proposed Atomic Energy Commission plenary power to set up rules on the handling and transmission of data and equipment connected with research in the atomic field. Persons violating those rules could be fined up to $100,000 and imprisoned for up to 10 years. They could be dismissed from any agency of the Government with no recourse. An innocent mistake violating the Commission's security rules could be punished, "regardless of intent," by fines and imprisonment.

Astronomers seeking out the mystery of the stars and medical experimenters searching for new remedies for the benefit of mankind could be sent to prison under the sweeping terms of the bill, according to Dr. H. L. Anderson, of the Los Alamos Laboratories, New Mexico. Scientists cannot be expected to work under such conditions. A measure so gravely detrimental to their welfare might have been aptly called a bill to drive the ablest experts out of atomic research. The tyrannical powers of the proposed commission could also be used to muzzle criticism of its work and thus to stifle advancement of the most important discovery of our age.

Dr. Leo Szilard, physicist of the University of Chicago, demonstrated in detail the administrative weakness of the bill. The very large measure of independence that would be given to the Atomic Energy Commission, he said, might dangerously hamper our foreign relations. The State Department could expect repeated embarrassment from the fact that control over the most powerful of all weapons would be in the hands of a separate commission which could even thumb its nose at the President. Whatever the nature or power of the proposed commission, we think it is imperative to tie it in closely with existing agencies of Government, particularly those which are directing our foreign policy.

Dr. Szilard suggested three operating agencies to deal with different aspects of the atomic-control problem. One would operate the existing $2,000,000,000 plants; another would direct research and development looking toward industrial use of atomic energy; a third would provide machinery for further work on the atomic bomb. Each of these agencies and key Cabinet members would be represented on a board for formulation of over-all policies on atomic power. This is an interesting suggestion, but we think that Congress ought to explore the issue much more thoroughly before attempting to decide what sort of mechanism is needed. Incidentally, this witness, in reply to a question from the committee, voiced enthusiastic support for our suggestion of a quickie law to meet immediate needs while permanent legislation is being worked out.

The fatal weakness of the May-Johnson bill is that it attempts to create specific machinery before a national policy has been worked out It is not much more than an abdication of congressional power into the hands of a commission. We think it is about time for Dr. J. B. Conant and others who are said to have had a hand in drafting this clumsy and dangerous measure to recall it and then help Congress to get off to a better start.

## There Are Victories for Statesmen To Win

EXTENSION OF REMARKS
OF
**HON. LOUIS C. RABAUT**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, it is with great pleasure that I exercise this privilege and place in the CONGRESSIONAL RECORD the address of his Holiness, Pope Pius XII, to us on the occasion of the visit of our committee to the Vatican on August 27:

Even here in our retired study we are visually reminded that the clash of battle has faded away and the softer notes of peace begin to fill the air; the army, we see, is giving place to officers of state. Not that the cooperation of both was not necessary for the prosecution of the war, as a similar collaboration may well be necessary, for a time at least, to make sure that the terrible specter has been really laid. But when cessation of hostilities has been declared, the army's appointed task has been accomplished; now statesmanship must play the chief role; because there are victories yet to be won before the world can feel secure in the possession of peace.

There is the victory to be won over hatred that springs up so easily and increases so fast between nations pitted against each other in bloody conflict. Are we right in feeling that this poisonous growth has been held in check, is mostly dying out? There is naturally so much affection and generous charity in the human heart.

Then there is the victory over distrust and that pernicious principle, sure to lead to distrust, that might makes right; which in effect means that weaker nations have only such rights as their powerful neighbor wishes to concede to them.

An obstacle to concord between peoples would be an excessively unequal opportunity enjoyed by some of access to the world's riches given by God for all; that must be overcome.

And most essential of all there is the victory over a self-sufficient materialistic philosophy, which would usher God out of His world and thus leave man without any basis on which to build an order of justice, that will be something more than a hollow sham supported by mere force, at the moment overpowering.

These are some of the victories to be won by statesmen and by the people whom they represent. In extending our cordial greetings and welcome to you, honorable Members of Congress, we want to assure you that our daily prayer accompanies you and all other civil leaders, whose responsibility is so grave at this moment. We beg that God's blessing may enable you to carry your difficult task through to success for the lasting and best interests of all men, who are so dear to our paternal heart. May this divine blessing be extended also to your loved ones at home.

## Editorial Reaction

EXTENSION OF REMARKS
OF
**HON. WILLIAM M. COLMER**
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith three editorials, giving some of the press reaction to the statement made by the Special House Committee on Postwar Economic Policy and Planning on its return from a European investigating trip. The committee expects to make its formal report on this subject—its eighth—to the Congress and the country within a few days.

I should like to add that the reaction to the press release has been almost

unanimously favorable to the position taken by the committee. These are but a few of the favorable comments which have been made in the public press of the country:

[From the Chicago Daily Tribune of October 12, 1945]

CONGRESS GETS ANOTHER REPORT ON EUROPE

Once again a congressional committee has returned from Europe talking patrotic good sense. This time the message comes from seven members of the Postwar Economic Policy Committee of the House. The committee visited every important country from England to Persia, including Russia, where the members were allowed to confer with Marshal Stalin.

The formal report will be forthcoming in a week or so. Meanwhile, a preliminary report has been issued in which the members ask the common-sense question: What are England, Russia, and the other countries going to give us in exchange for the loans they are demanding?

How much of the money that Russia desires to borrow is to be used for armament with which to oppress her neighbors? How does Russia intend to repay the loan, if it is made? Evidently the members were impressed, as they had every reason to be, with the brutal military machine with which the Russians are seeking to dominate Europe.

What trade barriers, harmful to us, does the British Empire mean to remove if we assist British reconstruction with credits? (Apparently the committee in asking this question was unaware of the recent insistence of the British on a multibillion dollar gift rather than a loan.)

What advantage can America obtain from a policy toward Germany which goes far beyond disarmament and contemplates the permanent impoverishment of a nation that has been one of our best customers?

These are all highly pertinent questions which every patriotic American will wish to have answered. We hope the Congressmen succeed in blasting the truth out of the State Department. The committee went on to question Russia's good faith in promising to get out of the occupied countries and to suggest that Russia should be pressed to admit foreign publications and their reporters to blacked-out eastern Europe. Most significant was the recommendation that the State Department negotiate for "at least partial payment" of lend-lease in the form of aviation rights, bases, raw materials, sites for embassies, etc.

The Congressmen returned from their travels filled with zeal to serve America and overwhelmed with evidence of the betrayal of American interests by our agents in foreign affairs. We hope this mood survives in the Washington climate.

Experience shows that nearly every congressional committee that has gone abroad has returned in a state of mingled alarm and indignation over what the members saw. Something happens to these men and women in Washington, however. After a few weeks they are found voting as they are told to vote, in plain disregard of their own convictions and the convictions of their constituents. The explanation lies in the importance of social life in Washington and the social dominance there of the foreign embassies. They call the tune. American officialdom dances to it.

---

[From the New Orleans Item of October 15, 1945]

A NOTE OF REALISM

Some plain and sensible talk on our European relations was heard the other day from a House committee on economic policy. It has just finished a 2-month tour of Europe under the chairmanship of Mississippi's Mr. COLMER.

It is recommending, among other things, that the United States withhold further loans from Russia and Britain until the two change some of their ways which the committee finds objectionable. Here are several of their urgent proposals:

That Russia adopt an "open-door" attitude with respect to American observers, technicians, and journalists.

That Britain remove trade barriers "inimical" to American interests.

That Germany be reconstructed, without armaments, of course, so that it can feed itself and become a factor in American trade.

That the United States expand its field forces handling the disposal of billions of dollars' worth of surplus property overseas.

Chairman COLMER says the committee visited Marshal Stalin, "frankly talked business with him, and asked how he proposed to repay the $6,000,000,000 loan that Russia is asking." Also, that they asked Premier Attlee and other English leaders what concessions they are willing to make in order to ease trade barriers. He reports that the committee got no "enthusiastic" response to either inquiry.

Recommendations and inquiries like those are eminently sound, and should be pressed. The considerations advanced by this committee on its own observations have been raised by other observers and students of affairs. It is exceedingly unfortunate that more frequent reference to them has not been heard in official quarters. For they concern most vitally the future costs that this country will be forced to assume, fairly or unfairly, in the protection of its own interests in the improvement of world conditions.

Among other sharp criticism of Russia, for instance, the committee declares that the Soviets are "moving German industry, lock, stock, and barrel," whether it is war or nonwar industry. This, it says, threatens to impose a great burden of relief for Germany on the United States and the United Nations relief agency. That it can scarcely fail to do this is obvious, if the facts are as stated.

The State Department is also urged to negotiate for at least partial payment of lend-lease advances in the form of tangible assets. Among these it suggests aviation rights, bases, raw materials, business building, and sites for embassies. The propriety of this can't be gainsaid, even though the State Department may prefer to seek triumphs of doubtful diplomacy by the easier but unbusinesslike way of sacrificing enormous material interests of the American people by less practical policies.

The committee also poses a number of searching yet very pertinent questions with respect to what is going on inside Russia in matters about which this country has every right to be informed. It says it intends to seek an audience with President Truman, and give him some helpful information along these lines. From the little we have heard of that nature in high official circles, this may be of service to the President. Yet it is possible that he has information of that character on which he has not seen fit to act, or even to talk.

It is encouraging in any case that one congressional committee is talking and acting in terms that plain citizens can understand. For this we commend the committee. It is also our belief that millions of Americans will feel the same way.

---

[From the New York Journal-American of October 16, 1945]

THE POLITICAL PARADE

(By George Rothwell Brown)

WASHINGTON, October 16.—The so-called "congressional junkets" to foreign parts that have followed in the wake of the war have come in for a lot of undeserved criticism, chiefly of the pink, or left-wing, variety.

The truth about them is, as this writer sees it, that never before have so many of our lawmakers received so much valuable information in so short a period of time and at so little public expense.

The visit to Russia of a subcommittee of the House Special Committee on Postwar Economic Policy of which Representative WILLIAM M. COLMER, of Mississippi, is chairman, may save this country hundreds of millions of dollars.

The committee has returned feeling very cold to the proposition of lending $6,000,000,000 to Stalin's Communist state.

Eight of the members of the full committee spent 8 weeks in Europe, sizing up a number of important situations at first hand. The committee, by the way, was made up of a cross-section of the strongest committees in the House, top Republicans in each instance representing that party. Chairman COLMER is himself a member of the powerful Rules Committee.

The eight subcommittee members are writing a lengthy report on what they observed and learned, to be submitted to the House. There is some fear that the remaining 11 members of the full committee, who did not go on the trip, may try to soften the report. Their views, it is feared, may be influenced by State Department policy.

In that event some members of the subcommittee want to go ahead, write an unvarnished tale of just what is going on in Europe, and especially in Russia and her puppet states, and let the rest of the committee make a minority report if they desire to do so.

That is what should be done. The report of this subcommittee should be a document in which no punches are pulled.

The subcommittee appears to be of one mind on many controversial questions, particularly the Russian situation. They reached a unanimity of mind by daily consultations as they went along from country to country. They checked and rechecked their information and their impressions.

Finally on shipboard, coming home, they sat down and drafted a preliminary report to which all heartily agreed.

Since their return the members of this subcommittee of congressional globe trotters—they traveled about 10,000 miles—have been in constant demand.

Their colleagues in the House have interrogated them closely, evidence of the increasing interest in Congress in some of the more formidable economic problems which Europe is posing, especially Great Britain and Russia.

The subcommittee members are thus exerting a tremendous influence in the House, the results of which are certain to become apparent when the question of the proposed advance of $6,000,000,000 to the Soviets and the question of the British loan come before the appropriating and legislative committees.

## Our Country's Defenders Entitled to More Consideration and Earlier Discharge Than Conscientious Objectors

EXTENSION OF REMARKS

OF

### HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. JOHNSON of Oklahoma. Mr. Speaker, every American, I am sure, at home or abroad, in the armed services or in civilian life has had cause to be proud of the record made by our armed

forces during the recent war. Whether it be in the air, with the ground forces, or on the sea, our gallant men in uniform have given an excellent account of themselves. The determination to win the war at the earliest possible date and to get back home to their loved ones was uppermost in the minds of our fighting men everywhere.

On the floor of this House, over the radio, on the street corners, and in sewing circles, American men and women have taken just pride in the accomplishments of our soldiers, sailors, and marines who defeated the enemy much quicker than the most optimistic had dreamed it could be done.

But, Mr. Speaker, the time has come when words of praise of our gallant men for valor and courage for military and naval achievements have become to them mere empty gestures. Now that the war is over, these men, with the exception of professional soldiers and those who want to become professional soldiers, desire above everything else to get home to their loved ones. These men do not understand why they are being held when in the vast majority of the cases they are doing practically nothing.

Three splendid young soldiers called on me in my office this morning. All three are privates, all are married with dependents, and all had more than 18 months of honorable service. Previous to the war, two of the soldiers held responsible positions as teachers. Despite the serious shortage of teachers, their application for discharges were turned down because they are lacking a few points. The other had several years' experience in an administrative capacity in one of the leading business firms of Oklahoma. They freely admit that they are loafing at a nearby Army camp and have been marking time for several weeks merely because they do not have enough points for the coveted discharges. "Of course, if we were football players or even prize fighters, we would have been out long ago," one of them said.

High-ranking officials of the War Department tell us that the men themselves established this so-called point system which the Army is supposed to follow, but has not always done so. Neither of the three soldiers that called upon me today or the thousands of others who have either called or written me ever heard of the proposal until the Army's point system was suddenly announced by the War Department. So, is it any wonder that they will tell you flatly that point system is cockeyed and is actually the brain child of the brass hats at the Pentagon Building?

But, Mr. Speaker, these are not the only complaints. It has not helped the morale of our men and women in uniform to read in Washington newspapers this week that all the conscientious objectors over 38 years of age are soon to be released from detention camps. We are told that several conscientious objector camps are to be liquidated within the next 60 days. I have a very definite feeling that men, including many fathers, who have seen active combat service will feel deeply disappointed and chagrined, if not outraged, when they learn that the Government they fought to defend is actually showing preference to conscientious objectors in the matter of discharges. I desire here and now to enter my protest. I do not propose to remain silent and thereby lead some to believe I have given my approval to such an inexcusable and indefensible policy.

During the war it was the order of the day on the part of those of us in and out of Congress to be constantly praising the officials of the War Department, including the arm-chair generals, for their brilliance and strategy in helping win the war. I yield to no one in my respect for General Marshall, General Eisenhower, General MacArthur, and other able and courageous generals and officers, irrespective of rank, but the truth is that what most of the generals and admirals have done would have been of no avail had it not been for the enlisted men, including the lowly buck privates. Although they have not yet received their just recognition, we all know that except for the enlisted men in all branches of the armed services, we could not have begun to win the war. I also know they are getting fed up on mere weasel words of praise and empty promises while conscientious objectors who have never missed a meal go home before men with combat records. As one father said to me today, "I would rather see my babies and hear them say 'Hello, Daddy,' than have all the praise that a general, a Senator, or anyone else might give, or have placed on my shoulders all of the stars of any general in the United States Army."

Complaints against the Army, for its slowness in discharging men applies also to the Navy, the Marine Corps, and to Wacs and Waves as well as to the men. Recently, high officials of the Navy appeared before the Appropriations Committee, at which time I had the privilege of interrogating them about their point system on discharges and immediately they began to talk about this "wonderful point system" that the Navy has worked out. I have repeatedly stated, that all things being equal, fathers should be given preference in the matter of discharges, regardless of the branch of service. Yet, under the Navy's system, a man who managed to marry about the time he entered the service and who remained safely home and who never even saw a ship is entitled to more points and, therefore, an earlier discharge than the one who entered the service at the same time and who has spent practically all of his enlistment on a battleship, a destroyer, a submarine, or other combat ship in the submarine infested Japanese waters.

During recent hearings I presented several such cases to the Secretary of the Navy, for whom I have a high regard, when he appeared before our committee, but about the only satisfaction given the committee was that the cases about which I complained represented "two conflicting points of view." One of such cases is mentioned on page 56 of the hearings on the rescission bill now under consideration by the House and quotes a letter from a fine young former college boy who had been overseas 16 months. He says:

> For my 16 months' service overseas, I am given the huge amount of four points. I have gone through tropical hurricanes and typhoons. I have had two ships shot out from under me, and for all this I get four points, but that youngster who sat at my side at the university and who married about the time I went overseas, who now has a wife and one child, and who has never gotten 100 miles from the school, gets at least 10 points against my 4 points for combat service.

To this observation the naval officer reminded me that 10 points is all the Navy gives for dependency and the record of the same hearings show that I responded:

> Well, if you want to defend such a cockeyed point system you can of course do so, but I say that by any fair and reasonable rule the man with 16 months overseas combat service should have more points and more consideration than the youngster who remained at home.

I realize full well, Mr. Speaker, that anyone who dared to offer any criticism of or suggestions to the brass hats, either in the Army or the Navy, in time of war, was frowned upon, if not ridiculed, in certain circles, but the time has come for plain speaking; when both the Army and Navy must realize that the war is over and that they must now come down to earth and understand that these fine young men and women who offered their services during the darkest days of our Nation's history are entitled to No. 1 priority. Many of these gallant men and courageous women, languishing in Army camps, on ships, and at naval bases, are desperately needed at home. To be given the "assurance" by the brass hats that these fighting men will all be demobilized by next spring or summer is mighty little comfort or consolation either to them or their anxious families. They have done a good job and it is the height of absurdity for either the Army or the Navy to insist on keeping thousands of men in idleness for such an extended period of time.

I know how these men feel. I recall that in France after the World War I armistice was signed that immediately the cry went up "Finis le guerre"—the war is over—and that is what our soldiers, sailors, and marines are saying and thinking now. The time has come, Mr. Speaker, when Congress is going to have to take the proverbial bull by the horns and do something about it—now.

---

## The Fifth Freedom—A Square Deal for the Members of Our Armed Forces

EXTENSION OF REMARKS

OF

### HON. D. EMMERT BRUMBAUGH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. BRUMBAUGH. Mr. Speaker, the end of World War II has brought as its aftermath a number of paramount issues and perplexing problems. Among the

chief questions of momentous interest to American citizens in every walk of life is the problem of remedying the defects in the program for demobilization of our armed forces.

Young men in the various branches of the military and naval service are writing to their parents, relatives, and friends and revealing conditions in their daily lives that demand immediate correction by military and naval authorities. In many instances officers in our armed forces who have been sent overseas in the closing days of the war with Japan and who have no combat experience to their credit are exercising their authority in a disgusting manner. It is related by parents of veterans with long months of combat duty that they are being required to perform unnecessary tasks by young officers with a desire to show their authority. In many cases they are required to perform the same duties several times on the theory that repetition of the task will keep their minds occupied and give them the appearance of being kept busy.

Methods of intimidation of the vilest sort are practiced the most flagrant one being the threat of court martial if an enlisted man writes to his Representative in Congress. Such degrading tactics on the part of officers in our armed forces is a stench in the nostril of liberty-loving Americans and the evil effects on servicemen's morale is tremendous. This is especially true when it is realized that the denial of liberty to our fighting forces is contrary to the frenzied attempts to emblazon the gospel of the so-called "four freedoms" on the frontiers of the world. It is a depressing thought that American youth in the uniform of their country undergoing heroic sacrifices, are forced to bow to the whims of superior officers whose utter disregard for fundamental American ideals is on a par with the hideous practices of the despised and infamous Gestapo army that will eternally be a stigma of disgrace to the German Nation.

It is beyond contradiction that discipline is necessary in military and naval life, but there is a wide difference between approved methods and the system that is being followed in some branches of our armed forces. Officers guilty of breach of conduct in the failure to be just and abide by the common rules of courtesy have no right to be placed in supervision of battle-scarred troops. Countless members from the rank and file of Army and Navy personnel have held responsible and important positions in civilian life in comparison to some of their superior officers, who for the first time in their careers have occupied a place of importance as leaders in our armed forces with its corresponding advantages of attractive salary and the best possible attention to provide them with living conditions superior to those under their command.

The attitude displayed by overbearing officers bent on showing their authority is a definite barrier to any hope that may be held for the success of volunteer recruiting programs designed to encourage and attract youthful Americans to consider a career in the component branches of military or naval service. Before we embark on a world mission to teach the lessons of democracy to the nations of the universe it may be a timely suggestion of great merit to have our military and naval leaders consider the immediate need of indoctrinating officer personnel with a deeper knowledge of human nature and the respect that is due every American youth irrespective of his station in life. Arrogance, cockiness, and the complete denial of the rights and privileges of American citizens in the uniform of their country as practiced by certain deluded officers has resulted in immeasurable criticism and should be no longer tolerated by those in authority and who have the obligation to correct such evil conditions.

The success of the volunteer recruiting programs is of great importance in the efforts of Congress to convince military and naval authorities of the insistent and fervent demands for the immediate discharge of all married men in service so that they may return to civilian life and assist in the preservation of one of our most cherished institutions—the American home. In addition, men in limited service with many months of duty but unable to amass any appreciable number of the points necessary for discharge, are being deprived of their right to resume their peacetime mode of living. Many of the men in this particular classification are married and the fathers of small children and it is cruel and inhuman to deprive their families of companionship and paternal counsel and guidance.

Volunteer recruiting has a definite effect on the continuation of the present draft system which during the stress and strain of the active period of the war resulted in the lowering of the draft age and the conscription of teen-age youths. Many you will recall were forced to interrupt their education, and now with the war terminated their hope of resuming school or entering college is certain to be defeated with the result that it is bound to prove detrimental to the future welfare of this Nation.

At this time I wish to add my voice in behalf of American prisoners of war. It is my firm opinion that any American youth who has spent months behind the barbed-wire enclosures of an enemy prison camp, or who has survived the perils of the sea in being rescued from a sinking ship, that such personnel should be discharged without requiring them to qualify under the present point system.

As a member of the United States army of occupation in Germany following the armistice, November 11, 1918, I believe I am qualified by experience to voice the sentiments of American soldiers in World War II who are anxious to be returned home yet they are being retained overseas for the purpose of policing areas in Europe and the rest of the world.

I am certain that many Members of Congress share my views that the United States should not be expected to furnish a large segment of the Army of Occupation but that other Allied Nations closer to the conquered areas should be expected to perform the bulk of the task. Since the countries are closer to the scene they can operate at less expense and at the same time arrange a system of furloughs to permit military personnel to visit their homes at frequent intervals.

The huge expense involved in retaining United States troops overseas should be fully realized by every thoughtful American. With the national debt now in excess of $260,000,000,000 we must trim our Federal expenditures and make certain that the United States Veterans' Administration receives sufficient appropriations to care for the needs of every man and woman who wore the uniform of their country. We owe an everlasting debt of gratitude to the heroes of all of this Nation's wars and in discharging our solemn obligation to the defenders of our country let us be certain that we are not guilty of the hideous practice of giving mere lip service in return for the great human sacrifices rendered by American service men and women.

Congress has approved legislation designed to stimulate volunteer recruiting and it is reported that enlistments are being accepted at the rate of 1,000 daily. Such response to the invitation to consider a career in the Army is very encouraging and if we are successful in placing a checkrein on the silly antics of some irresponsible officer personnel in trying to show their authority in an arrogant manner, there is certain to be many more thousands of volunteers who otherwise may have declined further military or naval service because of the memories of serving under some upstart in the garb of an officer who is sadly lacking in the attributes so necessary for commissioned personnel.

For the sake of emphasis I am repeating my request that military and naval authorities curb the abuses that are revealed in the following letters and that they take notice of the fact that the overwhelming majority of the American people desire the immediate discharge of all married men in uniform and that serious consideration be given to the plight of the teen-age youths and enlisted personnel in limited service, with months of service, yet unable to return to a useful place in civilian life because they are being retained by the armed forces in the performance of menial and useless tasks that have no value or any significance to the needs of our national defense.

The following excerpts from some of the hundreds of communications that I have received from servicemen and their loved ones are respectfully referred to your attention in the hope that the views of my constituents may be of value in convincing military and naval authorities of the necessity for further liberalization of the point system as modification is urgently needed to correct many glaring defects in the demobilization program. For obvious reasons the identity of the authors of these letters and excerpts is not disclosed:

CAMP ——, UNITED STATES OF AMERICA,
*September 18, 1945.*

DEAR DAD: It certainly is a crime to have all these thousands of young men just lying around doing nothing. Why doesn't Congress pass a bill ordering immediate demobilization to the point of the Army needs?

MacArthur says that he will only need 200,000 men for the entire Pacific area, and yet the high-ranking officers still hold the men in the service so they can keep their

high rank. Surely our Congressmen do not think that the fellows will ever forget that they (the Congressmen) are not doing a thing toward getting the men home.

The whole story is that they are afraid of unemployment if they let the boys out of the Army, and the higher Army officers use that argument to keep the boys in—a lot of the men who are generals now will be put back to majors when the Army is sent home and they don't intend to let that happen if they can help it.

It seems that even the parents of the boys in the service do not realize what is happening to their sons. If this goes on much longer many will return nothing but tramps. Nearly every cent a lot of them make goes for liquor and women. You would never believe the rate of venereal diseases that is sweeping the Army and a night never goes by that the MP's don't pick dozens of drunks up, in, and around town.

And you cannot exactly blame the fellows, for the officers have become so overbearing that times it is hard for anyone to control their temper. They have even started a form of basic training over again, every day we must go out for close order drill. All this foolishness, if so-called discipline, is completely, wrecking the men's common sense. It is so depressing and morale breaking that all the fellows want to do is go to town and get drunk and of course with all the taverns and streets full of loose women you can easily see what the results would be and yet no one seems to care about how soon they demobilize the Army. This separation business is definitely no good.

If only the parents of these young fellows could see what is going on (and they will know it eventually), I'm sure there would be many demands of Congressmen to demobilize at once. And another thing that is not right is sending fathers overseas. So far I have not been put on any shipping list, but a fellow who sleeps next to me has been. He has two children and is 28 years old, but because he has not 36 points or 2 years' service he must go overseas, and yet there are thousands of single boys that have nothing to tie them down and have likewise only been in the Army 4 or 5 months. Yet they are lying around doing nothing and much worse the Army is talking of discharging them and here all the fathers sit with never a word about getting home to their families.

You cannot imagine how bitter the men are about the way they are being treated. I have seen some of the most brutal fights you ever dreamed of right in the barracks, in the streets, in alleys, or anywhere strained nerves meet and explode. And when men decide to fight it out, each knowing the most deadly and brutal blows the Army could teach, well, many shall carry the scars and injuries to their graves.

We have all earned our discharges and cannot figure out why there is not some action taken to release us who are not needed in the Army, and also the battle-weary soldiers overseas immediately.

I am not writing this because I think we should not defend our country, but because I think it is a sin and a crime to have so many young men wasting the best years of their lives doing nothing.

The war is over and I can see no reason for it to take a year or two to get the men home. It requires action right away, and please tell the Congressman for me that every man in the Army is awaiting their action and reply. Hoping you give this serious consideration.

Your loving son,

JACK.

---

SEPTEMBER 30, 1945.

DEAR MR. BRUMBAUGH: Is the United States Government going to be cruel enough to send fathers overseas for 18 months? Isn't there enough single men to occupy Japan and Germany without depriving our children of fathers?

Is the Government going to pay me $1,800 when they could pay a single fellow $900? Are they trying to cut expenses? It is not fair to take the fathers away from families. The children think they don't have to listen since their daddy isn't home.

Why are they going to let us worry and eat our hearts out for the men we love? Please, sir, help us to get our men home.

Sincerely yours,

——— ———.

---

APO, SAN FRANCISCO, CALIF.,
*September 24, 1945.*

DEAR UNCLE BOB: This isn't a personal letter as much as it just a plain gripe. There's an Army regulation that prevents a member of the military forces from corresponding with a Member of Congress and in so doing criticizing any policy of the War Department or its subdivided agencies. Never in all my Army experience have I seen so much concentrated inefficiency as there is in this particular locality. In the European theater of operations such complete and inexcusable inefficiency would not be tolerated for the length of time that it takes a general officer to reduce a second lieutenant to a private which I know to have happened in the length of time necessary to remove a bar from a shoulder.

* * * * *

Another thing, the veterans of the ETO are receiving a dirty deal concerning promotions. One of the things that promoted this inefficiency is the fact that all officers in this theater were given a blanket promotion before any men from the ETO arrived. This was to prevent any of the officers from that theater receiving promotions. It also made colonels at the head of any and every concern. Ninety percent of the officers were incapable of doing the work that this promotion entailed. Therefore, the work was delegated to junior noncoms who must do the work but just don't give a d—n because the work doesn't belong to them.

* * * * *

I hope that you are able to call my letter to the proper notice. You would be doing me and the rest of the troops in this area a great service.

Sincerely,

LES.

---

———, PA., *October 16, 1945.*

DEAR SIR: My conscience prompts me to write you concerning faster demobilization of our boys in the Army which I too think has been sadly neglected for different reasons both political and personal, and which I think is a very grave mistake.

I as corresponding secretary of the ——— organization in ——— in your congressional district, have received many letters expressing bitterness and disgust with their Congressmen and Senators back home, looking to and depending on them to do their utmost to hasten demobilization so they can be back in their homes where they can support and rear their children as intended. And in many cases despite the Government allotment they are sorely needed. I can send you these letters and the names of the boys if you wish me to do so.

Now the large majority of the boys complaining are of highly intelligent and very fine principles, and have the highest respect and patriotism for their country; many have been in the Army 2 or 3 years and there are bitter complaints from both abroad and in the States.

They feel the war is over and the boys should be demobilized. The thousands are not needed, especially the fathers of several years' standing, much more rapidly than they have been so far and I personally feel they are fully justified in feeling as they do.

Now as Congressman and personal acquaintance I feel that you will consider this letter in the spirit in which it is written, and start a movement which the boys are waiting and praying for as well as their children, wives, and mothers.

Very sincerely,

Mrs. ——— ———.

---

———, PA., *October 13, 1945.*

DEAR SIR: There's one thing that I cannot understand, and that's why this little note to you. First of all, I'm wondering how you Members of Congress were able to take that sleeping tablet that General Marshall and company slipped you men right before you convened. I'm referring to that grandstand play that was pulled in regard to holding a 35–38 year old man in the Army if he does not have 2 years' service.

Eighteen months ago the draft boards quit drafting men that age—they found out it was a mistake. Now they are discharging men in that age bracket only if he has 24 months' service. That, in my opinion, and all other persons with a little common sense, is really one for the books.

* * * * *

What I would like to know is, How can a body of men like the one you are a Member of, sit and know that those military brass hats have a rope attached to old men—old in the sense of military duty? I know everything can't be done overnight, but I can't understand how Congress can accept a decision like that.

* * * * *

How do you think you would feel, Mr. Congressman, if you were just sitting in an Army camp at 36 years of age—sitting like a cow in a pasture doing nothing—and watching all other men your own age leaving?

* * * * *

When is Congress going to put the heat on those military men for pulling a grandstand play of that nature?

Very truly yours,

Mrs. ——— ———.

## Assistance for Greece

EXTENSION OF REMARKS

OF

## HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

HELLAS CHAPTER, ORDER OF AHEPA,
*Lowell, Mass., September 29, 1945.*

HON. PHILIP PHILEIN,
*House of Representatives,*
*Washington, D. C.*

DEAR REPRESENTATIVE PHILBIN: All officers and members of our chapter have unanimously voted to forward to you the enclosed copy of the cable which has been dispatched in the name of the entire Order of Ahepa to the Council of Foreign Ministers in London in behalf of Greece and of her just rights and demands.

The American people are mindful of the tremendous sacrifices so readily accepted by the Greeks for the triumph of our common cause and also of the terrible years of enemy occupation that ensued. The heroic resistance of Greece to Axis aggression, a resistance undertaken against hopeless odds, shall remain an imperishable record.

The opportunity of this, our great country, to give material and everlasting aid and assistance to little Greece is now at hand. We plead with you to use your influence and to extend your help in behalf of the cause and of the territorial and reparational rights of this valiant ally, as presented to the Council of Foreign Ministers and as enumerated in the enclosed copy of the aforesaid cable.

Thank you.

Gratefully yours,

GEORGE P. THOMPSON,
*President.*

---

Whereas the heroic people of Greece held the Nazi and Fascist hordes at bay for many months in 1940 and 1941 and, by their brilliant resistance, exploded the myth of Axis invincibility and turned the tide of battle, defeating Italy and fighting resolutely the delaying action against the Germans which aided Russia to stop the Nazis at the very gate of Moscow, gave Britain much needed time and moral aid and America the opportunity to organize her industrial might and military power; and

Whereas Greece is traditionally loyal to the Western Allies and also is associated by warm, time-honored and unbreakable ties of friendship and religion with Russia and is a coastal fortress of strategic significance and a dependable ally whose position should be strengthened; and

Whereas ethnically, ethically, and historically Eastern Thrace, Epirus, the Dodecanese and Cyprus inarguably are and have been Greek territory since the dawn of history and the Greeks have been the bulwark of democracy and western civilization fighting the battles against barbarian invaders which made eventually Europe and America possible; and

Whereas the victorious Allies under the Atlantic Charter are committed to the policies of self-determination of peoples and security of nations from aggression and, in conformity with these policies, Greece is legitimately entitled to a favorable rectification of her frontiers and particularly to the territory hereinbefore mentioned and, incidentally, the Allies are morally bound to recognize her unfailing loyalty and, as well, her timely and valuable contributions to the United Nations cause and to reward her for her sacrifices in blood and material by supporting her claims to just reparations from the Axis aggressors who plundered her country and destroyed its resources; and

Whereas the Fraternal Order of Ahepa, an American organization, having more than 400 chapters in the United States, assembled in annual convention in the city of Washington, D. C., voicing the sentiments and hopes of about a million Americans of Greek descent, all of whom have abiding faith in the sense of justice of each Minister in the Council of Foreign Ministers, gave careful consideration to the foregoing matters, and thereupon it was unanimously

*Resolved*, That the Supreme Lodge of the Order of Ahepa respectfully petition and hereby petitions Your Excellency as a member of the Council of Foreign Ministers to consider fully, in the light of the Atlantic Charter, and determine favorably the just claims of Greece—firstly, for the awarding of due reparations; secondly, for the annexation of Epirus, the Dodecanese, and Cyprus; and thirdly, the rectification of the Bulgarian boundary to a line which will provide the maximum natural defense from this predatory aggressor who attacked her neighbors thrice in three decades.

In that connection Your Excellency may bear in mind that these awards are vital to afford—

(a) Security from recurring aggressions;

(b) The maintenance of peace in the Balkans;

(c) Living space and the chance of survival for the heroic people of Greece;

(d) The opportunity to realize their ideals and develop their economic life free from fears; and

(e) To enable them to make their pacific and democratic influence strongly felt in the United Nations' policy of ensuring durable peace and continued progress in a better world.

Your Excellency, to give Greece less, and the two Axis satellites, calculating Bulgaria and cunning Albania, more, and thus to keep Greece weak and make them strong, inevitably will bring about her economic strangulation and military subjugation—a glaring injustice to a faithful and honorable ally and a glaring historical inequity that would remain indelible in the memory of friendly small nations.

Bulgaria in the past had, and Tito's Yugoslavia now has, ambitions to expand and dominate the Balkans. A resurgent Bulgaria will revive old plans. Therefore, a common frontier between Greece and Turkey is imperative. It will remove the eruptive potential of aggression. In the event that military or political neutralization of the Dardanelles and incidental modifications of status quo take place, the historically Greek Gallipoli peninsula should be allocated to Greece for the foregoing obvious, weighty, and just reasons.

Respectfully submitted.

ORDER OF AHEPA,
HARRIS J. BOORAS,
*Supreme President.*

SEPTEMBER 15, 1945.

## The Delaware River Is Not a Dead Nor Dying River

EXTENSION OF REMARKS
OF

### HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. McCONNELL. Mr. Speaker, in the October 5 issue of the CONGRESSIONAL RECORD is printed an article from the October Reader's Digest on the subject of a stream pollution control, entitled "America's Dead and Dying Rivers." This story is built around the Delaware River.

For the purpose of bringing out important facts and in the interest of fair play, I am submitting a reply by the Interstate Commission on the Delaware River Basin, an organization which has done considerable study and work in furthering improvement activities on the Delaware River:

The title "America's Dead and Dying Rivers," of an article in the current issue of Readers Digest, which points to the Delaware as a horrible example of stream pollution, is anything but accurate. It is most misleading and grossly unfair.

While the section of the Delaware bordering on Philadelphia and Camden, over which the author made his classic trip the other day and observed the some three hundred and sixty million gallons of raw sewage churning down the stream is dirty, in fact filthy, it certainly is neither dead nor dying. What Mr. Harvey failed to realize, or at least to point out, is that the Delaware has been to war. Nothing dead or dying can qualify for such service. And, as our men and women who have recently been in combat and on the production lines well know, fighting and winning wars not only involves blood, sweat, and tears—but dirt, plenty of it, as well.

The part which the port of the Delaware River, extending from Trenton, N. J., to Wilmington, Del., and including Philadelphia, Camden, and Chester, played in winning the recent wars against Germany and Japan probably never will be fully evaluated. From the time when Hitler invaded Poland in 1939 until Hirohito, in a face-saving gesture, reported to his ancient ancestors that the atomic bomb had forced Japan to surrender unconditionally, ships were speeded by day and night from the Philadelphia Navy Yard and many privately operated shipyards located along the befouled but completely alive Delaware River to speed the day of victory. Airplanes, tanks, trucks, oil, gasoline, radio and radar equipment, guns and ammunition, iron and steel, chemicals and chemical products, tools, and machinery, medicine and food, all manufactured and processed with water from the Delaware, also were shipped from this region to all theaters of war.

It can truly be said that one of Uncle Sam's most important arsenals of democracy was centered around and supported by the virile Delaware—the largest fresh-water harbor in the country.

The two and one-half million people in the Philadelphia metropolitan region who depend upon the Delaware for sustenance and a livelihood were too busy during the war to take time off to give the river the scrubbing which it so badly needed. But, they were fully aware of its plight and adopted every measure possible in the emergency to protect and conserve its waters to the fullest possible extent. The region set an example for the entire country by being the first to initiate a campaign, under the slogan, Water Wins Wars, for this purpose. The patriotic response to this program not only put an end to unnecessary quantitative wasting of water but also provided the stimulus which led to the construction, even during the war, of plants for the treatment of particularly obnoxious industrial wastes.

It is only because we had been at war both directly and actually since 1939 that the author of the fallaciously entitled article on America's dead and dying rivers had an opportunity to condemn the Delaware. For prior to its outbreak, Philadelphia was ready to embark upon the construction of a $42,000,000 sewage collection and treatment project, and the cities of Camden and Gloucester, across the river, were under orders from the New Jersey Department of Health to meet their respective responsibilities in the planned program for pollution control formulated by the interstate commission on the Delaware River Basin, and approved by the four State governments—New York, New Jersey, Pennsylvania, and Delaware—which support this agency. These programs had to be set aside for the duration because of the more urgent need for materials and manpower to fight and win the war.

But, they are now being renewed. Just as soon as materials and manpower again become generally available, Philadelphia and Camden will be competing with each other to see which can get its projects started first. With such an example, it is a certainty that the pollution problem in the Delaware River will be well in hand in the near future.

More than $100,000,000 has been earmarked for this type of work as a basin-wide postwar activity.

The Delaware is a live, virile, and powerful river. Parts of it have been overworked, are tired and dirty, it is true. But, the bath, so long forthcoming, is near at hand. When cleansed, it will be freshened and ready to serve—as it did in war—as one of the Nation's No. 1 assets in the building of a lasting peace throughout the world.

## Gratitude to The Adjutant General and His Staff for Their Services to the Loved Ones of Those Who Died for Their Country in This War

EXTENSION OF REMARKS

OF

### HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. G. A. Garstang, of Knoxville, Tenn., whose brave son-in-law, Lt. Col. Raymond Worsham, gave his life for his country in this war.

Mr. Garstang is one of our best citizens and his fine letter expresses the gratitude and appreciation felt by himself and family and that of thousands of others who are thus bereaved.

The letter follows:

HARRILL HILLS, FOUNTAIN CITY,
*Knoxville, Tenn., October 17, 1945.*

Hon. JOHN J. JENNINGS,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. JENNINGS: In these days when almost everyone has a grievance of some sort, as it were, a letter of commendation may seem somewhat singular and unusual. Nevertheless the thought comes to me that a unit of our armed forces has received little recognition for the accomplishment of an almost superhuman job, and very well done at that. I refer to the Office of the Adjutant General.

It is certainly a source of sincere gratification to us who have been bereaved by casualties to find that this department of the Army has leaned backwards to ameliorate our distress. Not only has all correspondence been answered with dispatch and efficiency, but letters have been couched in most respectful and sympathetic language, leaving no doubt that painstaking efforts have been exerted to bind up the wounds which sorrow has caused.

No doubt the personnel of this unit will, when the smoke and fire has cleared away, enjoy the happy reflection of a supreme accomplishment in the way of assistance to those of us who have suffered from the supreme sacrifice of our loved ones.

Your very truly,

G. A. GARSTANG.

## Why Continue the Draft?

EXTENSION OF REMARKS

OF

### HON. A. L. MILLER

OF NEBRACKA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, the Army is now procuring more than 1,000 men a day by voluntary methods. The Navy cut their draft call for November to 1,000 men. The Navy had 16,000 voluntary enlistments in September, and 11,800 of these were new enlistments.

In this letter to General Hershey I point out that Gen. R. W. Berry, the Deputy Personnel Chief of the Army, testified that the Army had 6,990,000 men under arms as of October 15, 1945. General Berry further stated that there were 1,985,000 men with 60 to more than 85 points still in uniform. These men are entitled to a discharge now.

Mr. Speaker, to me it is imperative that the Army send home every man in this country for whom the Army does not find useful employment. They should be at home on an indefinite furlough and not called back until they are ready to complete their physical examination and put their papers in order. It is also apparent that the draft no longer needs to be continued. The Army and the Navy are getting sufficient volunteers to meet all their demands.

The letter follows:

OCTOBER 19, 1945.

Gen. LEWIS B. HERSHEY,
*Selective Service Administration,*
*Washington, D. C.*

DEAR GENERAL HERSHEY: Gen. R. W. Berry, the Deputy Personnel Chief of the Army, testified before the Senate Military Affairs Committee yesterday that the Army had been receiving voluntary enlistments at a rate of more than 1,000 a day for the past 2 weeks. These enlistments have occurred since the Congress passed the bill to encourage voluntary enlistments in the armed forces.

The Navy announced on October 15 that they had 16,000 voluntary enlistments in September 1945 and that 11,800 of these were new voluntary enlistments. They announced that the draft call for November would be only 1,000 men.

In the light of these figures by the Army and the Navy, I am wondering why it is that your department has not announced a cut in the draft quota for November, in my humble judgment, the armed forces are getting all the men they need for replacements. General Berry, testifying on October 18, stated that the Army had 6,990,000 men in the Army. He further stated that there were 410,000 men with 85 or more points in the Army at this time.

He gave further information that on October 15 there were 1,930,000 men in the Atlantic area, 2,100,000 in all Pacific areas, and 3,590,000 in the United States. This makes a total of 6,990,000 men in the Army on October 15, 1945. Out of this large number of men, he stated there were 1,935,000 who had 60 or more points and were eligible for release. Of the 410,000 men with 85 or more points, 125,000 were in Europe and the Mediterranean area, 75,000 in the Pacific, 5,000 in the China-Burma-India area, and 200,000 in the United States.

In a careful study of the statement, one asks why is it longer necessary to continue the draft under Selective Service. It is quite evident that both the Army and the Navy are getting sufficient men to meet all their needs under the voluntary system. Is it your intention and that of the administration to continue the drafting of men under the selective-service law and keep it as an instrument to force universal compulsory military training upon the country? The selective-service law was not enacted for that purpose.

The people of my district are concerned about the continued drafting of teen-age boys who ought to be in school. The farmers and others are greatly concerned about the continued drafting and taking of experienced farm labor.

I hope your office will immediately announce a smaller quota of men for November than was issued for October. The draft should not be continued when the needed personnel can be secured by voluntary methods.

Very truly yours,

A. L. MILLER,
*Member of Congress,*
*Fourth District of Nebraska.*

## Congress Hears Atomic Facts

EXTENSION OF REMARKS

OF

### HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, the impact of atomic energy on our society will be revolutionary. This new force is destined to change the pattern of the world as radically as it has been changed by steam and electricity. That is what we mean when we say we have entered the atomic age.

The following is an article written by Marquis Childs, entitled "Congress Hears the Facts," appearing in the Washington Post under date of October 19, 1945:

CONGRESS HEARS ATOMIC FACTS

(By Marquis Childs)

The scientist is speaking. He is speaking in the calm, dispassionate voice of one who knows.

The Senator asks if the atomic bomb can be kept a secret. The scientist replies:

"The discussion about secrecy is largely an academic discussion. You cannot keep the nature of the world a secret. You cannot keep atoms secret. They exist in every country."

If anyone can speak with authority, it is Dr. J. Robert Oppenheimer, who, from the beginning of the project, has had as much to do with the making of the atomic bomb as any single individual. More than any admiral or any general, what he says has weight.

Testifying before Senator KILGORE'S subcommittee, Oppenheimer said flatly that there can never be any effective countermeasures for the kind of bombs he helped to make in the Los Alamo laboratory. There is no way to detonate them in advance except by shooting down the shell containing the explosive, and a 100-percent score is all but impossible.

He replied affirmatively when Senator FULBRIGHT asked him if it was not conceivable that 40,000,000 Americans might be killed overnight in the crowded cities of the eastern seaboard. Soon, he added, the atomic explosive shell will be adapted to weapons such as the V-2 rocket, which travels faster than sound.

There is no longer any excuse for self-deception. A man who knows has spoken.

As Oppenheimer made perfectly clear, the terrible danger is a race between the nations for more deadly atomic weapons. He pointed out that one of Britain's chief scientists said recently that if America persists in an attitude of secrecy, then the only choice for Britain is to start building an atomic bomb factory.

Perhaps that race is inevitable. Perhaps the doom of this unhappy species is sealed in any event. But defeat cannot be accepted without a struggle.

It is here that opinion seems to have gone off the track. Letters that come to me say: "You don't think that if Russia had the secret of the atomic bomb they would share it with us, do you?"

The answer may be "No." But for the moment the question is irrelevant, since we must make every effort to use our bargaining power to get cooperation from Russia. We must invite an exchange of information on atomic energy and nuclear physics, and an exchange of scientists.

It may not work. The suspicion of the Russians may be too dark; it may be impenetrable. Possibly they are already committed to an atomic race.

We will have the moral satisfaction of knowing, however, that we made the attempt. We will be able to say before the world that we did everything humanly possible to break down the barriers. If our offer is rejected, then the blame will rest elsewhere.

Our position today is intolerable. Men in high positions talk about "keeping the secret." That was the net effect of President Truman's impromptu remarks in Tennessee, although he may not have intended such a result.

This has ramifications not visible on the surface. Because they share the so-called secret with us, the British have been not a little embarrassed in their relations with the Russians. The reason is a clause in the British-Soviet treaty which says that Britain will share with her ally all military and technical information.

And, as Dr. Oppenheimer said, the time is so very short. The atomic bomb gave us "a very momentary strengthening of our military position." For the long pull, it has weakened our military position and this, as Oppenheimer explained it, is why:

We are a peace-loving people. We would not be likely to launch a secret atomic bomb attack on another nation that had shown no overt signs of making war on us. But more aggressive peoples, if the atomic contest is once finally joined, may not be so constrained.

Summing up Oppenheimer's testimony, Senator FULBRIGHT said:

"We have everything to gain, then, and nothing to lose by sharing the information we have." If we can learn that in the little time that is left, then we may still hope for a future.

## Freedom of Speech in the Army

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, there are many unsigned letters coming to Congress from members of the armed forces which indicate that our soldiers are afraid to openly express themselves upon Army rules and regulations. It has come to my attention that the Army actually posts regulations which makes it an offense subject to court martial proceedings for a soldier to enter a complaint about his care in the Army or about Army regulations.

The Army still has in effect a regulation which violates the first amendment of the Constitution. It attempts to coerce and frighten not only the members of the armed forces but retired Army officers. This regulation deprives the retired Army officers of their constitutional rights. The first amendment to the Constitution reads as follows:

Congress shall make no law respecting the establishment of religion, or of prohibiting the free exercise thereof, or abridging the freedom of speech, or of the press, or of the right of the people peacably to assemble, and to petition the Government for redress of grievances.

Now, Mr. Speaker, I quote Army Regulations AR 600–10, paragraph 4, as follows:

Political activities of military personnel. a—General. Except as authorized by the War Department, efforts by any person in the active military services of the United States or by any retired member of the Regular Army to procure or oppose in any manner influence legislation affecting the Army or to procure personal favor through legislation are forbidden. No arm, service, or bureau chief, or subordinate in the War Department, and no person in the active military service of the United States or retired member of the Regular Army will apply to Congress, committees of Congress, or to any Member of Congress for the enactment or in opposition to or for the purpose of influencing legislation of any kind (except to procure the enactment of private relief legislation) without the prior approval of the Secretary of War. Private relief legislation is legislation proposed or initiated by or on behalf of one individual for reimbursement or relief to himself alone for damage or loss of his own person or property.

Mr. Speaker, when one reads this regulation, you can come to but one conclusion and that is an effort on the part of the Army to stifle and prevent any retired Army officer from appearing before Committees in Congress or Members of Congress in criticism of the Army. Such methods, Mr. Speaker, are the same as those which Hitler adopted when the Prussian, Von Steuben, wrote the original Articles of War at Valley Forge in the winter of 1777–1778. He took his pattern from the Prussian war lords. This regulation, including a whole mess of other Army regulations, is Prussian in design and a disgrace to our republican form of government.

## Full-Employment Bill

EXTENSION OF REMARKS
OF
### HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. HOOK. Mr. Speaker, it isn't very often that I find myself in agreement with David Lawrence, but I would like to begin my comments today on the full employment bill with a quotation from an editorial by Lawrence in the current issue of his United States News. This is what he has to say:

Management has a bigger stake in full employment than any other group. For full employment could mean a consumer purchasing power that would absorb a substantial part of the capacity of our machines. It could mean that we would have a surplus to spend in foreign countries and this would tend to achieve the economic equilibrium for the world which is so much to be desired as a basis for international peace.

Full employment means not only jobs for all; it means sales for the salesmen, business for the businessman; it means, actually, prosperity for all.

The great dramatic production record of the war demonstrated the versatility and ingenuity of the American system in meeting the demands of a national crisis.

The war demonstrated that our production capacity can be expanded to meet the consumer needs of the country as a whole. During the war the products of our expanded industrial capacity were consumed in the national fight for survival against fascism. The war proved that the American economic system could provide jobs for all—could support a program of full employment—without abandonment of the fundamentals of democracy.

During the war we turned out goods and services at the rate of $200,000,000,000 a year. Our total national income stood at about $156,000,000,000 a year. For the last tax year-the tax yield alone on our national income was greater than the total income itself was for the year 1932.

Right now we are witnessing a spectacular drop in total national income due to the termination of war contracts. According to the Department of Commerce, the national income has dropped $20,000,000,000 in the second half of 1945.

I do not believe there is any need for hysteria about this drop and about the further probable drop, but we do have to be ready to combat a continuing, downward spiral of national income, of purchasing power, of employment.

We must work out a plan whereby all the segments of the American economy can have at least minimum protection against depression.

I believe such a plan exists in the full-employment bill.

The full-employment bill is not a guaranty that all workers will have jobs after the war. It is in no way an adequate postwar economic program in itself. We just cannot pass the bill and sit back and wait for the millennium to arrive. As you will see, the bill in itself recognizes that there is no one cure-all for the problems of the postwar period.

Briefly, what the bill does is this. It gives the Federal Government the responsibility of cooperating with all the parts of our economic structure with the view to achieving full employment. Where necessary it provides that Federal investment and expenditures would be used to this end where private business fails to do so.

The bill states that—

It is the policy of the United States to foster free enterprise and the investment of private capital in trade and commerce, and in the development of the natural resources of the United States.

The bill further provides—

To the extent that continuing full employment cannot otherwise be achieved, it is the further responsibility of the Federal Government to promote such volume of Federal investment and expenditure as may be needed to assure continuing full employment; and such investment and expenditure by the Federal Government shall be designed to contribute to the national wealth and well-being and to stimulate increased employment opportunities by private enterprise.

If you just substitute the words "national defense" or the "war effort" for the phrases "full employment" and "national well-being"—in this part of the full employment bill, you will have a legislative expression of just what has been going on in this country for the past 4 years—the war years. Where private business was unable to carry the burden of financing war production, the Federal Govern-

ment stepped in. Where more than financing was needed, the Army and Navy and other agencies built their own facilities and produced their own weapons.

In addition to stating the broad principle of governmental responsibility for the economic welfare of its citizens, the full employment bill calls for an annual production and employment schedule, including not only anticipation of Federal investment and expenditure, but also that of all groups in the country. This economic schedule whose purpose is to appraise the number of jobs needed to provide full employment in a given period will be presented by the President every year at the same time he presents his annual Budget message covering strictly Government expenditures. If the President, after his appraisal of the number of jobs needed, the total of expenditures required to provide those jobs, and the prospective volume of business, finds that there is unemployment or the threat of unemployment he is required, under the bill, to transmit to Congress his program for creating jobs through the stimulation of private enterprise and through necessary Government programs.

This program would be accompanied by recommendations for such legislation as is necessary to carry it out.

At this point in the legislative process under the bill, the responsibility for creating full employment falls upon the Congress. And this is one among many regards where this legislation is unprecedented. It specifically directs the Congress of the United States to make a study of the national economy and on the basis of that study to pass legislation designed to maintain a healthy national economy. Now during the past 12 years there have been proposed and passed many bills designed to promote a healthy national economy. But they have been piecemeal bills, dealing with this or that economic group—the industrial workers, the farmers, the small businessman, and so forth. And largely, they have grown out of desperate immediate need.

The difference between that kind of legislation, much of which I supported as necessary to bring the country back from the black depths of the thirties, and the full employment bill, is that it seeks to determine the need before it becomes desperate. I don't know whether the bill, in its present form, will actually serve as well as some other device might serve in anticipating our employment needs, but it certainly is a step in the direction of applying sound business practice to Government activities. No businessman who hoped to stay out of the red side of the ledger would neglect to very carefully survey the needs of his business before planning his budget. The full-employment bill proposes to apply this sound business axiom to the biggest business in the world—the business of keeping some 140,000,000 Americans well fed, well clad, and decently housed.

I am enthusiastic about the full employment bill not so much because I believe it is perfect, in fact, I expect in operation that many defects will show up, but because it is a departure from the old hit-or-miss type of expediency legislation and it does recognize the basic fact that without widespread purchasing power you cannot have a healthy economy, and that you cannot spread the purchasing power to enough consumers without jobs for those consumers.

Some of the critics of the bill charged that its enactment will be the deathblow to free enterprise in this country. I am always amused at the great industrial tycoons whose very lifeblood is monopoly when they evince such tender concerns for free enterprise.

I believe that unless we work out some such plan as that provided for in the full-employment bill, recognizing the interdependence of management, labor, and Government, then the free-enterprise system is doomed.

The most obvious symbol of our free American economic system is the small businessman. The small businessman is at once the symbol and victim of the free-enterprise system as it has worked out in the past. He is the first to lose customers when conditions begin to get bad, the first to have to economize by laying off workers, the first to go into bankruptcy.

He will be the first beneficiary of a full-production, full-employment economy. Before the war there were more than 3,000,000 businesses employing 3 workers or less in this country. Half a million of these little businesses have disappeared during the war because of wartime restrictions. I do not see how it would be possible for them to reestablish themselves without a greatly expanding consumer-purchasing power. I do not see how we are going to have that without a greatly expanded force of employed workers. It has been estimated that under normal peacetime conditions of full employment there will be opportunities for 1,000,000 such small business enterprises.

## The Free Press Amendment

EXTENSION OF REMARKS
OF
### HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

THE FREE PRESS AMENDMENT

Republican leaders of the House of Representatives have given their approval to a free press amendment which they propose to attach to the bill appropriating additional funds for UNRRA. This amendment would prohibit the use of United States funds for war relief in any country whose government infringes upon freedom of information or expression, or places any barriers—technical, political, legal, or economic—against the free exchange of information among the peoples of the world.

We welcome the interest of the House Republicans in a good cause, but believe that in several respects their present proposal is mistaken. In the first place, action to meet hunger and pestilence cannot wait; on humane grounds the relief problem is so acute, and the case for prompt and generous aid is so strong, that the Republicans have chosen a wrong spot to launch their crusade. They would be better advised to attach a "free press" amendment to legislation dealing with the subject of long-term loans for purposes of reconstruction and expansion. But even here their proposal seems to us to be too sweeping. For in its present form it would bar United States aid to governments which did either one of two things or both: (1) Denied freedom of speech to their own people within their own borders, or (2) prohibited American correspondents from having free access to news for publication in this country.

We cannot properly use our financial power to attempt to compel other countries to establish freedom of speech and press for their own people; for, highly desirable as this would be, judged by our own standards, we would be using our power here to interfere with the domestic affairs of other nations. But we can quite properly insist upon freedom of access to news for our own purposes—and we would, in fact, be well advised to do so. For if billions of dollars of American credit are to be used for reconstruction loans to other countries the American public which provides such credit is surely entitled to acquire all the information it wishes to have and needs to have about the conditions prevailing in these countries. This is, in fact, the only way in which loans of this kind can be made with real responsibility.

We suggest that the House Republicans take a second look at their amendment and consider whether there is not a better place and way to put it forward.

## Twenty-four Top Nazis Indicted for Starting War and Atrocities

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles from the Washington Post of October 19, 1945:

TWENTY-FOUR NAZIS INDICTED FOR STARTING WAR, ATROCITIES—CRIMES COMMISSION NAMES GOERING, HESS, AND ACCOMPLICES IN 25,000-WORD CHARGE

(By Dougald Werner)

BERLIN, Oct. 18.—Twenty-four ringleaders of Hitlerite Germany were formerly charged today with plotting and startling World War II and with barbarous atrocities, persecution and devastation unmatched in scope and savagery in the history of mankind.

A 25,000-word indictment which traced the course of a doomed "master race" from the infancy of nazism to utter defeat, was handed down against Hermann Goering, Rudolf Hess, Joachim von Ribbentrop and their accomplices who will go on trial for their lives before a four-power court in Nuernberg, probably next month.

The unprecedented document presented the horror-ridden history of nazism in terms of disappearance of 5,700,000 European Jews, murder of 4,000,000 persons in a single concentration camp, destruction of property and the treacherous and absolute disregard of honor among nations.

SPECIFIC CRIMES

Germany was charged with exhorting Japan to declare war against the United States, with violation of peace treaties as far back as 1899, with disregard of international agreements on the conduct of warfare, and with murder, enslavement, plunder of private

and public property, wanton destruction of cities and towns and devastation not justified by military necessity.

The 24 defendants were charged with individual responsibility for the crimes of nazism. They were listed individually, identified in the Nazi heirarchy and charged specifically with the three major counts of the indictment—"Crimes against peace, war crimes and crimes against humanity" and of a common conspiracy to commit those crimes.

BORMANN STILL SOUGHT

Not yet in Allied custody but possible alive, was Martin Bormann, successor to Hess as Hitler's deputy, who was indicted along with the others so that there will be no chance that he might escape allied justice.

The indictment was signed by Robert Jackson, Supreme Court Justice and United States prosecutor of the War Crimes Commission, and by the representatives of Britain, France, and Soviet Union. The defendants are expected to be given approximately a month to prepare their cases before they go on trial before the four-power tribunal whose American member is Francis Biddle, former Attorney General.

The coldly formal report was spotted with terms that were born of German terrorism—"fifth column," "master race," "ghetto," "total war," "concentration camp," "lebensraum," "blitzkrieg."

"The murders and ill treatment of civilian populations were carried on by * * * shooting, hanging, gassing, starvation, gross over-crowding, systematic undernutrition, systematic imposition of labor tasks beyond the strength of those ordered to carry them out, inadequate provision of surgical and medical services, kickings, beatings, brutality, and torture of all kinds, including the use of hot irons and pulling out of finger nails and experiments on living subjects," one section said.

The first three listed were Goering, Luftwaffe commander, and Ribbentrop, head of the German Foreign Office, and Hess, Hitler's deputy who made the ill-fated flight to England to seek a "phony" peace. Bormann was listed as Hess' successor.

ROSTER OF RASCALS

Also named were Ernst Kaltenbrunner, notorious Austrian terrorist; Alfred Rosenberg, Nazi editor and anti-Semite; Hans Frank, the land; Wilhelm Frick, Nazi Minister of Interior; Robert Ley, labor leader; Fritz Saukel, head of the slave labor organization; Albert Speer, head of the Todt organization; and Walter Funk, Hitler's Minister of Economics; Hjalmar Schacht, president of the Reichsbank; Franz von Papen, wily diplomat; Gustav Krupp von Bohlen und Halbach, head of the Krupp armament industries; Constantine von Neurath, "protector" for Bohemia and Moravia; and Baldur von Shirach, youth leader and gauleiter for Vienna; Arthur Seyss-Inquart, Nazi dictator of Holland; Julius Streicher, the notorious Jew baiter; Field Marshal Wilhelm Keitel, chief of the German high command; Col. Gen. Alfred Jodl, member of the German general staff; Grand Admiral Erich Raeder of the German Navy; Grand Admiral Karl Doenitz, submarine commander, who negotiated peace as successor to Hitler; and Hans Fritzsche, head of DNB news agency chief.

ABSENTEES

Conspicuously absent were Josef Goebbels and Heinrich Himmler, known to be dead, and Adolf Hitler himself, who is considered generally to be dead.

Each of the defendants was a member of the Nazi Party, the indictment said, and it was the "central core of the common plan for conspiracy" for world domination.

The ascendancy of Hitler to the head of the Nazi Party in 1921, after the unsuccessful Munich putsch, his rise to German Chancellor, the Reichstag fire, and the denial of civil liberties to the German people were outlined in the document. After that all parties but the Nazi Party were abolished, labor unions were banned, the first concentration camps were established in 1933 to stamp out opposition within Germany. The SS and Gestapo began their reign of terror.

CONCENTRATION CAMPS

The indictment told of the Nazi attempt to kill Christianity in Germany and their shaping of the education of youth.

The persecution of Jews was outlined in detail, and said that of 9,600,000 Jews in Nazi-dominated Europe some 5,700,000 disappeared.

The indictment referred to such concentration camps as Buchenwald, Belsen, Dachau, and Auchwitz, and referred to such methods as:

"Bad treatment, pseudoscientific experiments (sterilization of women at Auchwitz and at Ravensbruck, study of the evolution of cancer of the womb at Auchwitz, of typhus at Buchenwald, anatomical research at Natzweiller, heart injections at Buchenwald, bone grafting and muscular excisions at Ravensbruck, etc.), gas chambers, gas wagons, and crematory ovens."

The methods and crimes of the Nazis were held to be not only in violation of international conventions but also of internal penal laws and the "general principles of criminal law as derived from the criminal law of all civilized nations."

After Italy surrendered to the Allies, the Germans turned on their former Axis partners—murdering at least 7,500 men, women, and children during the period from March 1944 to April 1945.

In Poland the Germans used the "most refined methods of cruelty," the indictment charged, including "disemboweling and freezing of human beings in tubs of water and mass shootings to the accompaniment of the music of an orchestra."

Germany was blamed for the Katyn massacre of Polish officers in Russia and with treacherously engineering a break between the Soviet and the Polish government in exile. Germany swore that Russia had killed the officers and Poland's request for an investigation caused Russia to break relations with the exile government.

Citizens of the Soviet Union were perhaps the greatest victims of Germany savagery. More than 135,000 citizens were murdered near Smolensk; 172,000 civilians were shot and tortured in the Leningrad region; more than 50,000 were killed and tortured in the Stalingrad area.

STALINGRAD HORRORS

"After the Germans were expelled from Stalingrad, more than a thousand mutilated bodies of local inhabitants were found with marks of torture," it said. "One hundred and thirty-nine women had their arms painfully bent backward and held by wires. From some their breasts had been cut off and their ears, fingers, and toes had been amputated. The bodies bore the marks of burns. On the bodies of the men the five-pointed star was burned with an iron or cut with a knife. Some were disemboweled."

It was revealed that Hitler had sent a secret order decreeing that "the Fuehrer has decided to erase from the face of the earth St. Petersburg (Leningrad)." The order said the existence of this city will have no further interest after "Soviet Russia is destroyed."

The Germans looted and destroyed historical and artistic works throughout Europe. In Russia alone, 427 museums were destroyed. The grave of the Russian poet Pushkin was desecrated, the estate and museum of Tolstoy was destroyed, and the museum of the painter Repin was looted and devastated. Some 10,000 works of art were stolen from Estonia.

LIDICE CITED

The indictment listed similar Nazi atrocities in France, Holland, Norway, Greece, Czechoslovakia, and Belgium. It told of the utter destruction of entire towns—including the now historical village of Lidice.

It condemned the mass deportations of political and racial refugees, attesting that some 1,400,000 persons were deported from France and 4,000,000 from the Soviet Union. It spoke of the use and mistreatment of slave laborers and the killing of hostages. It quoted Streicher as saying, "The sun will not shine on earth until the last Jew is dead."

The Nazis justified their aggression and terrorism on the grounds that "persons of so-called German blood were a master race and were accordingly entitled to subjugate, dominate, or exterminate other races and peoples." Germany came to believe that "war was a noble and necessary activity of Germans," the indictment said.

GERMANY'S ROAD BACK

There was a careful retracing of the German road back to militarism. The indictment told of Germany leaving the League of Nations and the International Disarmament Conference in 1933; Goering's announcement in 1935 that Germany was building an air force and the enactment of a law for universal military service in the same year.

In 1936 Germany reoccupied and fortified the Rhineland. Then came the annexation of Austria and Czechoslovakia and the infamous appeasement pact at Munich on September 29, 1938.

The indictment told of Germany's launching of World War II with the invasion of Poland on September 1, 1939, and her subsequent invasions of Denmark, Norway, Belgium, the Netherlands, Luxemburg, Yugoslavia, and Greece.

Then came the attack on Russia after an agreement of nonaggression had been signed.

Germany previously had sought and obtained a 10-year military alliance which created the Axis of Germany, Italy, and Japan.

"The Nazi conspirators conceived that Japanese aggression could weaken and handicap those nations with whom they were at war and those with whom they contemplated war," the indictment said.

APPEALS TO JAPAN

"Accordingly, the Nazi conspirators exhorted Japan to seek a 'new order of things.' Taking advantage of wars then being waged by Nazi conspirators, Japan commenced an attack on December 7, 1941, against the United States of America, Great Britain, France, and the Netherlands."

The indictment listed the treaties and agreements which the Nazis violated in their career of aggression. They included the Hague Treaty, signed in 1899 for peaceful settlements; the Hague Convention, regarding the opening of hostilities and the methods of warfare; the Versailles Treaty; the Treaty of Locarno; the Kellogg-Briand Pact; the Munich agreement; and individual treaties and pacts with other nations.

In addition to Jackson, the indictment was signed by the three other prosecutors, Francois de Menthon, of France; Hartley Shawcross, of Great Britain; and R. A. Rudenko, of the Soviet Union.

It was drawn after mountains of evidence had been sifted and thousands of witnesses heard. The final release of the indictment was delayed for several days while it was translated from the original English version into the other languages.

---

ALLIES CHARGE NAZIS BROKE 26 TREATIES—PATH OF CONQUEST TRAIL OF VIOLATION, INDICTMENT SAYS

BERLIN, October 18.—Germany violated 26 separate international treaties, agreements, and assurances in her path of conquest from 1933 onward, the war-crimes indictment charged today.

Alleged violations date back to the 1899 Hague Peace Convention and include the

United States-German Treaty signed after World War I.

Listed as violations are:

1. Hague Treaties of July 29, 1899, for the pacific settlement of peace treaties. By attacking Yugoslavia and Greece April 6, 1941, without trying to solve any dispute peaceably.

2. Hague Convention of October 18, 1907, for pacific settlement of international disputes. By attacking Poland September 1, 1939; Norway and Denmark April 9, 1940; Luxemburg, Belgium, and Holland May 10, 1940, and Russia June 22, 1941, without trying to settle its disputes by pacific means.

WITHOUT DECLARATION OF WAR

3. Hague Convention III of October 18, 1907, relative to opening of hostilities. By attacking the countries named in (2) without a declaration of war.

4. Hague Convention V of October 18, 1907, by attacking the countries named in (2) in violation of their neutrality.

5. Versailles Treaty of June 28, 1919, by rearming, annexing Austria, Memel, Danzig, and Bohemia and Moravia in Czechoslovakia and by building up the size of the army, navy, and air force.

6. United States-Germany treaty signed at Berlin, August 25, 1921, "that Germany did, at various times in March 1935, and thereafter, repudiate various parts of part V, military, naval, and air clauses of the treaty between the United States and Germany restoring friendly relations by creating an air force, by use of compulsory military service, by increasing the size of the army beyond treaty limits, and by increasing the size of the navy beyond treaty limits." The wording of this clause is the same as that of charge 5, as the American-German treaty contained similar military clauses to those in Versailles.

LOCARNO TREATY CITED

7. Locarno treaty of mutual guaranty between Germany, Belgium, France, Great Britain, and Italy, signed October 16, 1925. By occupying the Rhineland March 7, 1936, training forces, and building up fortifications there and by invading Belgium.

8. German-Czechoslovak arbitration treaty signed at Locarno October 16, 1925. By invading Czechoslovakia March 15, 1938.

9. German-Belgian arbitration convention signed at Locarno October 16, 1925. By invading Belgium without negotiation.

10. German-Polish arbitration treaty signed at Locarno October 16, 1925. By invading Poland without negotiation.

11. German-Netherlands arbitration and conciliation convention of May 20, 1926. By invading Holland without warning.

12. German-Danish arbitration treaty of June 2, 1926. By attacking Denmark.

UNITED STATES ATTACKED DECEMBER 11, 1941

13. Kellogg-Briand renunciation of war pact signed at Paris August 27, 1928. By attacking Poland, Norway, Denmark, Belgium, Luxemburg, Netherlands, Greece, Yugoslavia, Russia, and the United States. The date for the attack on the United States was given as December 11, 1941, when Germany declared war.

14. German-Luxemburg arbitration treaty of September 11, 1928. By attacking Luxemburg.

15. German-Polish nonaggression declaration of January 26, 1934. By attacking Poland.

16. Assurance given Germany May 21, 1935, that inviolability and integrity of Austria would be recognized. By invading and annexing Austria March 12, 1938.

17. Austro-German agreement of July 11, 1936. By forcing Austria to yield its sovereignty through acts of aggression between February 12, 1938, and March 13, 1938.

18. Assurances given to Netherlands by Germany January 30, 1937, April 28, 1939, and October 6, 1939, of respect for neutrality and territorial integrity. By attacking Holland.

19. Assurances given similarly to Belgium on above dates and on October 13, 1937. By attacking Belgium.

20. Assurances given to Czechoslovakia March 11, 1938, and September 26, 1938. By making further territorial claims on Czechoslovakia after cession of Sudetenland.

CZECH TERRITORY ANNEXED

21. Munich agreement of September 29, 1938. By annexing Czech territory March 15, 1939, and failing to join in a guaranty of Czechoslovak boundaries.

22. Assurances given to Norway September 3, 1939, April 28, 1939, and October 6, 1939, of respect for independence and sovereignty. By attacking Norway.

23. Assurances given to Luxembourg April 28, 1939, and August 26, 1939, of respect for neutrality and territorial integrity. By attacking Luxembourg.

24. German-Danish nonaggression treaty of May 31, 1939. By attacking Denmark.

25. German-Russian nonaggression treaty of August 23, 1939. By attacking Russia.

26. Assurances given to Yugoslavia October 6, 1939, of respect for neutrality and territorial integrity. By attacking Yugoslavia.

---

ALLIED CHARGE NAZIS OUTDID HUN FORBEARS AS LOOTERS

As plunderers and despoilers the Nazis made their Hun forebears look like pickpockets and Halloween pranksters.

The allied war crimes indictment released yesterday indicates that on many occasions the Nazis simply demolished what they couldn't carry off. But what they carried off was plenty. For instance:

"The museums of Nantes, Nancy, old Marseilles were looted. Private collections of great value were stolen. In this way, Raphaels, Vermeers, Van Dycks, and works of Rubens, Holbein Rembrandt, Watteau, Boucher disappeared. Germany compelled France to deliver up the Mystic Lamb, by Van Eyck, which Belgium had entrusted to her."

MILLIONS OF BOOKS CARTED AWAY

From Kiev, the Germans carted away more than 4,000,000 books, magazines, and manuscripts, many of which were very valuable, and a large number of artistic productions.

Many valuable art productions, 100,000 valuable volumes, and 70 cases of periodicals and precious monographs, were stolen from Riga.

It was not only in art that the Nazis occasionally showed good taste. For example, they removed 87,000,000 bottles of champagne from France.

All told in France, German plundering from private enterprise approximated 257,020,024,000 francs, or $5,140,400,480 in United States money at the current exchange rate, and 55,000,100,000 francs, or 1,100,002,000 from the state. In addition, from June 1940, to September 1944, the French treasury was compelled to give Germany 631,866,000,000 francs, or $12,637,320,000.

The Germans also extracted millions of tons of raw materials, great quantities of industrial equipment, agricultural produce and manufactured products from France.

DWARFED BY RUSSIAN FIGURES

But the French loot figures are dwarfed by those of Russia. In state prices of 1941 the Soviet Union estimates its material loss at 679 billion rubles. At the diplomatic exchange rate that figure would be $56,560,700,000 in American cash.

In describing the looting in Estonia alone the indictment mentions the removal of 10,000 works of art, immense quantities of agricultural stock, including horses, cows, pigs, poultry, beehives, and agricultural machines of all kinds.

Much of Russia's material loss represents destruction, and the Nazis seemed to be even better at that than at plunder.

For example, they destroyed 427 Russian museums, including those of Leningrad, Smolensk, Stalingrad, Novgorod, and Poltava. They wrecked 1,670 Greek Orthodox churches, 237 Roman Catholic churches, 67 chapels, and 532 synagogues.

The Nazis seemed to take particular delight in wrecking monuments of culture, dear to the Soviet people. Thus, they destroyed the estates and desecrated the graves of the poet, Pushkin, and the writer, Tolstoy.

They wrecked the museums of Tchaikovsky, the composer, and Repin, the painter.

These acts are recorded in the indictment because they are violations of The Hague regulations of 1907, the laws and customs of war, the general principles of criminal law, and the internal penal codes of the countries where they were committed.

## The Outstanding War Record of the Eight Jansen Brothers

EXTENSION OF REMARKS
OF
## HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. REES of Kansas. Mr. Speaker, I am sure the membership of the House will be interested in the correspondence and information I am including herewith. John H. Jansen, who resides in my congressional district, in Junction City, Kans., has had eight sons in service in this war. Every one of them has an outstanding record of achievement. Two of them have recently been discharged—one on account of wound received in action, the other with 150 points to his credit. Six are still in the service.

Mr. Jansen has asked me to join with him in requesting The Adjutant General of the Army to grant furloughs for these sons, if at all possible, so the eight brothers may meet in the home of their parents in Junction City at Christmas time for a family reunion that is so well earned and to which they are entitled. I am glad to join with Mr. Jansen in this request, and trust it may be granted. Here is the correspondence, also the names and brief record of the service of these distinguished servicemen:

JUNCTION CITY, KANS., *October 12, 1945.*

Hon. EDWARD H. REES,
*House of Representatives,*
*Washington, D. C.*

Subject: Emergency furloughs and leaves.

DEAR MR. REES: I am attaching a copy of my letter to The Adjutant General, requesting that orders be issued returning my six Army sons for a Christmas celebration this year.

I know that so many parents will not have the good fortune to meet their sons this Christmas. However, I am sure you will understand the situation presented by my age, and the fact that duty may still prevent any reunion in future years.

I am sure that I can rely on your assistance in making this reunion possible.

Sincerely,

JOHN H. JANSEN.

---

JUNCTION CITY, KANS., *October 12, 1945.*

The ADJUTANT GENERAL,
*Washington, D. C.*

Subject: Emergency leaves and furloughs.

DEAR SIR: I respectfully request that your office issue instructions or orders to the commanding officers of the units of my six sons,

who are now in the United States Army, enabling them to join me in a Christmas celebration this year.

I am now approaching 70 years of age and we have had no family reunion in 15 years. During the period of war, I underwent the strain and hardship of all parents whose sons were in action. Due to my advanced years, I deeply desire to bring my family together one more time, under favorable circumstances. I feel that I have earned the right to this request by virtue of the number and services contributed by my sons.

I have had eight sons in the service during the war. One in the Navy, who has received a medical discharge due to wounds received in action; one has been discharged from the Army with 150 points. Six of my boys have seen active fighting duty; one is in training; the other is classified limited duty, and has served with distinction in his assignment in the States; three have been decorated. They are stationed in Okinawa, Japan, Europe, and the States. I know that the problem of transportation is paramount. I also know that the heart of the Army is large enough to understand my situation, and to assist me in my effort to gather my sons together in a reunion of thanksgiving for our victory and our good fortune.

Since all of my sons are members of the Regular Army, and since all intend to reenlist, it is improbable that Christmas of 1946 will prove a more favorable opportunity. Attached is a list indicating the names, serial numbers, and addresses of my six sons still in the Army. The local chapter of the VFW is assisting me in preparations for a fitting celebration.

Your promptness and your consideration of a favorable reply are deeply appreciated.

Very truly yours,

JOHN H. JANSEN.

Clarence T. Jansen, captain Field Artillery, Separation Center, Fort McPherson, Ga. Over 15 years service.

Earl F. Jansen, master mechanic first class. Medical discharge June 19, 1945. Over 9 years service.

Raymond T. Jansen, lieutenant Infantry. San Francisco, Calif. Over 10 years service.

Alfred J. Jansen, sergeant Cavalry. Discharged with more than 150 points. Over 10 years service.

Anthony H. Jansen, lieutenant Cavalry. Reconnaissance Company 634 T.D. Bn. APO 403, care of Postmaster New York. Over 6 years service.

Edward H. Jansen, captain Headquarters 315 B. W. APO No. 182, San Francisco, Calif. Over 6 years service.

John J. Jansen, sergeant 23 Photographic Reconnaisance Squadron APO No. 903, San Francisco, Calif. Over 3 years service.

Louis A. Jansen, AC P. A. A. F., Pecos, Tex. Over 2 years service.

NOTE.—Of all this service not 1 day has been lost under the 107 Article of War.

## Federal Aid to Scientific Research

EXTENSION OF REMARKS

OF

### HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. SMITH. Mr. President, at the meeting this week of the board of trustees of Princeton University, the president of the university, Harold W. Dodds, will present a report in which he discusses the implications of bills pending before Congress to implement postwar scientific research programs. This report is so timely and so relevant to the present discussion of scientific research that I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

The experience of the war has immeasurably enhanced the significance of science for both national security and human welfare. The raw truth is that America must pioneer in science more than ever before or be destroyed. On the other hand, the rapid technological advance during the war is but a quick preview of what is possible for human welfare and happiness with peace. If we do not wreck our civilization in the process we can have a world vastly better than we now enjoy.

It is important to remember that the developments of the war revealed little or no new theoretical knowledge. The atomic bomb was rather a practical application of known theory than the discovery of new basic knowledge. Scientists say that the war developments have about exhausted the existing stock pile of unapplied theoretical science. It is wise, therefore, to assume that the next war will be won through the application of abstract scientific discoveries undreamed today but packed with great practical possibilities as they unfold.

These are not fanciful assumptions. They are so real that America will ignore them at the risk of her life.

It is well known that in engineering and technology America leads the world. It is not so well known that we have not led the world in basic scientific research. It was European scientists, for the most part, who made radar and atomic bombs possible by their pioneering work in most abstract theory, which to all practical people had no contact with real life. All practical people know better. To save herself America must lead, not follow, in research in fundamental science as well as applied science. In scientific discovery she must end her servitude to other peoples. To do so she will have to match or exceed the sums spent on science and engineering (for the two must always be associated) in Russia or any other country. Other nations will pour large amounts of public funds into this work. What will America do? The answer touches some deep issues.

There are several bills before Congress to implement postwar scientific research programs. Hearings are beginning on them at this writing. President Truman has urged on Congress the creation of a single Federal research agency to support and promote research in science and social science. Some of the clearest thinking on the subject of natural science appears in the report of July 1945 of Dr. Vannevar Bush to the President of the United States. This report is a strong case for science. On the whole, and with some qualifications, its conclusions are irresistible. It calls for Government aid reaching the sum of $122,500,000 annually within 5 years. It proposes that Government subsidize the education of thousands of young scientists. It recognizes certain dangers in the policy of governmental grants which it recommends, and suggests safeguards against them. However, many who have had experience with political processes will not be able to agree that new governmental gadgets alone will be adequate safeguards against some real dangers. No mechanisms will overcome the deeply grooved channels of political habits and outlook, unless public opinion is more alert to evils and abuses than it has been in the past.

Scientists are practically unanimous that the most fertile soil for basic research is in the universities. By the force of circumstances much of the scientific research of government and industry will continue to be an immediate problem of practical need. But our greatest national shortage has not been in this sort of research. Our hope for long-term investigation of a fundamental nature, in which we have been deficient, rests with university faculties and the students they discover and develop. It is in the university, or the nonprofit research institution, that the scientist enjoys the fullest freedom of inquiry, liberty to roam at will where science calls. Government and industry, writes Dr. Bush, are "dependent upon the colleges, universities, and research institutes to expand the basic scientific frontiers and to furnish trained scientific investigators." Modern scientific developments are making it more necessary for the theorist to be in touch with the practical man, and Government and industry will contribute to our stock of theory; but the universities should remain our chief reliance. Moreover, it is worth noting that, of our universities which made the most significant contribution to science between the last two wars, the privately supported institutions, as a group, were the most outstanding.

But the costs of research in the new age of science will be tremendous, beyond what the universities have spent in the past or can hope to attract in the future from private sources exclusively. Yet, it is highly desirable that the private university continue to secure gifts and endowment for research. It will destroy the peculiar function of private universities if they cannot continue to rely heavily on private donors, who have always been more sympathetic to basic scholarship than Congress or State legislatures. Strong private universities are as essential to the progress of science in America on the one hand, as public assistance is on the other.

To meet the new costs and to keep faith with donors, the universities must give up wasteful competition and overlap of facilities and cooperate. This calls for greater interchange of faculty, for cooperative planning in laboratory construction and for common utilization of expensive undertakings, such as the now famous pile required for research in atomic fission. In addition, it is important that industry recognize that the universities must prosper if science is to prosper, and be willing to support them by gifts and access to their laboratories and facilities. Both industry and science will profit, because the old short line between pure science and applied science is dissolving into a wider twilight zone.

The cost and scope of scientific research being what it is, even to meet defense needs alone, the private institutions must be ready to receive public funds, for it is not to be expected that hereafter they will be able to find themselves the large amounts they will need from private donors. But they must remember that in accepting public funds there are attendant dangers to their freedom and function to be faced and overcome. The first is that our law makers prefer to make appropriations to useful purposes which produce immediate practical awards. To offset this preference and to maintain the prestige and life of basic science, the private institutions will require larger gifts from private sources. It is these sources which in the past have been more sympathetic to academic scholarship than Government has been, and I predict that they will continue so. After all, contributing to nonpractical research, in both science and the arts is a cultivated taste.

A second hazard in accepting public funds, a danger familiar to all who have tried to raise money for charitable or educational purposes, is the tendency of private gifts to dry up whenever Government enters the field with tax-provided contributions. This is so natural as to have almost the force of natural law, and strong efforts will be

required to overcome it. In the last analysis the best guarantee that a university can have for its own freedom will be the amount of its own money at its disposal.

A third hazard is politics and bureaucracy in the accepted American sense. Neither politics nor bureaucracy encourages the free-roaming mind. In recent years you were called a Fascist in advanced circles if you remarked that the evils of the spoils system and log-rolling for appropriations still survived in Government. But the flat truth is that they do survive, strong and hearty, although in the normal processes of Government we have been able to absorb them without ruinous results as yet. But if these blights on democracy are permitted to taint Federal appropriations for scientific research they will retard rather than advance science.

How can the traditional forces of spoils and log-rolling be beaten and turned back? The mechanism generally proposed is some form of a national research agency to receive and disburse appropriations and to buffer between politics and science. Anyone familiar with our political habits and the inward workings of American Government will realize that this is much easier said than done. The Bush report proposes a national research foundation to manage the funds. It outlines mechanistic safeguards as complete as one could devise to assure scientific freedom. But more than mechanics are required if the safeguards are to work. Fundamental changes in public tolerance of certain political habits are essential. England succeeds through her University Grants Committee in disbursing funds without political taint, but her fiscal procedure, which in turn reflects a government organization and political practices different from ours, makes this possible.

The point for the privately supported university to remember is that its freedom to apply itself to fundamental, theoretical research in an atmosphere of free inquiry that nourished pursuit for abstract truth, will not be guaranteed solely by governmental mechanisms. In the last analysis, the ultimate guaranty must be sought in an informed public opinion and in the universities' capacity to provide a substantial proportion of their resources themselves. They must be equally alert to see that contributions from industry do not divert them from their long-time programs of basic research.

Finally, of prime importance, is the question of the effect of large appropriations of tax money for science upon other fields of scholarship and education. In particular will the effect be to siphon away from the social sciences and the humanities a disproportionate share of young talent? "Science," stated the Moe committee on the discovery and development of scientific talent, "cannot live by and unto itself alone." Indeed, the development of atomic fission calls for more rather than less attention to social science and the humanities if the destructive power of the new energy is to be stopped from running amuck in the world.

The Bush report approves the program of the Moe committee for the eventual expenditure of $20,000,000 annually to discover and develop scientific talent in American youth. Both reports point out that the war has caused a large deficit in the supply of science and technology students. It proposes to rectify this by searching out young talent and enabling it to take up science as a career. Through Government scholarships it would make it economically possible for young people to promise to become scientists who otherwise could not afford the expense.

At least one prominent scientist has declared that large public grants to science will not retard the growth of arts and letters. He points out that Russia pays great attention to science, yet that country is famed for its artists and composers. But assuming that arts and letters can thrive in a totalitarian atmosphere (which is surely debatable), Russian experience proves nothing for America. Perhaps it only proves that distinguished authors and composers develop best in an aristocratic society. Old Russia produced some famous ones, and while the order of the ruling classes was upset by the Communists, modern Russia is still organized on the aristocratic principle.

It is more realistic to assume that large public subsidies to scientific research and education will, if left to themselves, increase the relative prestige of science as an attractive career and will drain off talent from other lines unless positive steps are taken to prevent this result. While Government scholarships for science will discover and train heretofore hidden talent, they will also tend to divert young brains from other subjects which need them badly. This will be bad for science as well as for civilization.

Those who believe that we must nourish with greater resources the social sciences and the arts and letters if civilization is to endure must be prepared to work and to give to make them live. President Truman has recommended Government aid for basic research in the social sciences. Others will question this easy solution. What is proper here for the physical sciences is extremely dangerous for the social sciences and humanities. The dangers of political control are multiplied manyfold. Here the calm objectivity of science is not attainable. When it comes to human values and political ideologies, the private university can brook no interference by the Government as we now operate in America, even the subtle influence of appropriations divorced from raw political pressures.

Thus, we concluded that Government must aid science, if only as a means of national self-preservation; that theoretical, basic research belongs with the universities and must not become utterly dependent on Government; that public aid for science is in danger of affecting adversely other fields of learning; that the crisis thus created cannot be met by extending governmental aid to the social sciences and arts and letters in which opinions and values form so large a part; and, finally, that the crisis can be met only by enlarging from private sources the resources of these other fields, and by substantially improving the excellent of their teaching and the sweep of their influence.

## OPA Controls Peril Yule Set Making

EXTENSION OF REMARKS

OF

## HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Thursday, October 18, 1945*

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "OPA Controls Peril Yule Set Making," by Bill Bailey, published in the October 1, 1945, issue of Broadcasting.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OPA CONTROLS PERIL YULE SET MAKING—SEARCH FOR INFORMATION IS DISCOURAGED BY AGENCY

(By Bill Bailey)

Unless the Office of Price Administration acts quickly to (1) lift controls from radio parts or (2) fix price ceilings, there'll be few radio sets on the market by Christmas, unemployment will be rampant in the manufacturing field and the public must wait until some time next year for promised receivers.

That's the consensus of opinion among manufacturers after weeks of bickering with OPA. Radio Manufacturers Association has requested action. OPA has countered with demands for cost production data. Manufacturers say they can't give such data because of the peculiarities of the radio set-making industry.

Senator HOMER E. CAPEHART, Republican of Indiana, former head of the Capehart, Indianapolis (now the Capehart division, Farnsworth Telegraph & Radio Corp.), manufacturers of combination radio-phonographs, is carrying on a one-man campaign in Congress to break down the OPA resistance to industry. Said Senator CAPEHART: "Unless the OPA does something soon, there won't be any radio set manufacturing and thousands of people will be unemployed."

Despite flat assertions of OPA officials that they'd "give no information," Broadcasting learned that the OPA through the "back door," has assured manufacturers that on October 3 price ceilings will be set on parts and receivers. Efforts to confirm that at OPA led to a merry-go-round of buck passing.

Earl Morse, head of the Parts Pricing Division of OPA who is supposed to know what's coming next, was too busy to see a representative of Broadcasting. His secretary advised the reporter to submit his problems in writing. When the reporter informed her he was seeking information, she curtly replied: "You won't get it here."

After further insistence the secretary agreed to permit James Hoyt, assistant to Mr. Morse, to talk to the reporter, but cautioned him, "Mr. Hoyt won't tell you anything." While waiting for Mr. Hoyt, the secretary wanted to know if the reporter would talk to E. O. Lang, another assistant to Mr. Morse.

"I'll talk to anybody who can give me some information and answer a couple of questions," said the reporter. "Well, Mr. Lang will see you but he won't give you any information," was the secretary's response.

Mr. Lang prefaced the interview with: "I might as well tell you I'm not going to tell you anything." Nevertheless, he was plied with these questions: "Is it true that OPA will set price ceilings on parts on October 3? Does the OPA plan to lift controls on radio sets or parts? Does OPA know that manufacturers won't turn a wheel until OPA gives them something definite?"

COULD ANSWER

"I could answer all those questions, but I'm not going to," said Mr. Lang. "Talk to Mr. Gesner in our public relations department. He'll give you all the information we want the public to have. We have orders not to talk."

So to Paul D. Gesner in public relations. Mr. Gesner explained the whole situation, said the industry parts advisory committee had asked OPA to lift controls because controls had been lifted on automobile parts. But OPA had decided otherwise.

To date only 35 manufacturers of the some 500 in the radio field had complied with OPA's request to file cost production data so no interim ceilings could be given them. None of the large manufacturers had cooperated.

To Mr. Gesner were put the same questions which Mr. Lang could answer but would not. Would Mr. Gesner confirm that on October 3 OPA would give manufacturers something definite?

That's something Mr. Gesner hadn't heard about. All the information he had was contained in three releases issued since June, the latest on September 18, advising manufacturers of all radio and radio-phonograph parts (except tubes, metal stampings, screw machine products, and cabinets) they were authorized to make delivery of original

equipment parts to set manufacturers at prices that "may be adjusted upward later when final reconversion pricing factors are determined."

He explained that no manufacturer may use adjustable pricing unless he has filed with OPA a list of the prices he actually used in March 1942, in sales of original equipment parts for radio receivers, electric phonographs, and radio-phonograph combinations. As for the questions, however, Mr. Gesner said he wished he could answer them—but the Parts Section hadn't given for publication any information other than that already released.

INTERIM FACTORS

On August 31 OPA issued a set of interim increase factors, based on meager cost production data submitted by a few manufacturers. The permanent increase factor on tubes, based on an 86-percent reply, was pegged at 10.4 percent above ceiling prices charged between October 1-15, 1941. Interim factors ranged from 5 percent for resistors and "all other radio parts, as covered by Maximum Price Regulation 136" to 11 percent for coils and transformers and chokes.

Manufacturers complained that the interim factors were too low, so OPA on September 18 issued the authorization for adjustable pricing.

Mr. Gesner suggested the writer should talk to Delmar W. Beman, the trade publication publicity man. Mr. Beman, like Mr. Gesner, was most cordial, gave all the information he had but, like his coworker, knew nothing about the October 3 date.

In a stinging speech on the Senate floor September 20, Senator CAPEHART declared that "OPA price-fixing policies are retarding reconversion and recovery. I make the prophecy," he continued, "that unless we in the Congress do something about it, not too many months from now many millions of men will be unemployed." He inserted in the CONGRESSIONAL RECORD letters from the Magnavox Co., Fort Wayne; Electric Appliances Inc., Indianapolis; General Furniture Co., Terre Haute; Edgar Morris Sales Co., Washington, and Meyers & Son Mfg. Co., Madison, Ind., complaining that the OPA is holding up reconversion because of its attitude toward industry and its price-fixing policies.

Meanwhile manufacturers have declared they will not make parts under the adjustable price regulation of September 18, contending that OPA might very well fix prices at less than cost production. Furthermore manufacturers contend they have met with the same kind of opposition Broadcasting did in attempts to gather some concrete information at OPA.

Price Administrator Chester Bowles, in a special article for retailers, said: "A flow of goods to top a growing mass market is the best answer to the threat of inflation and to the long-term prosperity of industry. Radios and big ticket appliances are extremely important among the reconversion goods coming back to the market. Speed of setting prices is important in getting radios and appliances to retail dealers."

Manufacturers agree 100 percent with Mr. Bowles, but they say his own agency apparently doesn't because "speed of setting prices" is something the Parts Section hasn't displayed.

Mr. Bowles' statement said he had compared the radio parts industry with the automotive parts industry, which has been suspended from price control as to original equipment, and "found that the reasons for such suspension do not apply to radio parts." Mr. Bowles fears the small manufacturer might be penalized by his lack of buying power if controls are lifted. On the other hand, small manufacturers argue that price fixing on radio parts certainly could work to the advantage of the large corporations and run the little manufacturers out of business.

Senator CAPEHART declared that manufacturers prospered and served the public long before OPA and he couldn't understand why they need a Government agency to run their businesses for them now.

## Republican Program for Progress

EXTENSION OF REMARKS

OF

### HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. TAFT. Mr. President, I ask that there be inserted in the Appendix of the RECORD a speech I delivered at Columbus, Ohio, October 19, 1945, on the subject, A Republican Program for Progress, at the sixth annual fall conference of the Ohio Federation of Republican Women's organizations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Republicans and my good friends, I can't say how much pleasure it gives me to come back again to a meeting of the Republican women of Ohio. It bodes well for the future of the State that so many can meet together and applaud the fundamental principles of Americanism which are represented in the Republican Party. It is a sign of peace that we are able to gather here again the great numbers from all over the State who are always brought together by one of these celebrations organized by Katharine Kennedy Brown.

1. THE ADMINISTRATION HAS NO PROGRAM AND NO PLAN

I come from the political arena in Washington to which as yet, no peace has come; and, so far as government is concerned, we have not even recognized the cessation of hostilities. We face new problems and new issues, but there is no program and no plan to meet them. Such measures as have been proposed by the administration have little to do with immediate reconversion problems. They are, for the most part, based on New Deal long-range philosophy, and even if they met the approval of Congress, which they usually do not, they would have little effect on the emergency problems of reconversion. We have joined the United Nations Organization, but apparently the current international conferees are unwilling to apply its principles to any of the problems immediately before us. We adopted Bretton Woods, but it now appears that the six billions authorized wholly failed to solve the fundamental problem of world trade involved in the situation of England and the Sterling bloc.

We are asked to provide for full employment and unemployment compensation at the same time, but it does not appear that the refusal of the House to handle these measures has in any way interfered with the reconversion process. Certainly, these bills would not have cured the strikes and voluntary unemployment which is the most serious threat to reconversion today.

We are being asked to provide for compulsory military training (without military service) before any plan has been presented for obtaining the regular Army, Navy, and Air Corps which all agree that we must have in order to make this country invulnerable to attack.

We are asked to reduce taxes and enact countless bills for expenditure without the slightest plan for a permanent postwar budget or any idea whether our expenditures will be eighteen billions or thirty.

In short we are asked to enact slogans into law and leave untouched the practical problems which face the Nation today.

2. A REPUBLICAN PLAN BASED ON LIBERTY

The Republican Party has an opportunity to take the lead in guiding the Nation into a postwar world of freedom and prosperity. It should present forcibly its philosophy and its plans. I have sometimes criticized the economic planners, but it has been a criticism of the particular plans of the New Deal brain-trusters associated with this administration, rather than of the principle of planning.

Any Republican plan ought to be based primarily on liberty, liberty of the individual, liberty of the State and local government, liberty of the people to express their views and wishes through Congress against the arbitrary orders of a Federal bureaucracy. This Government was established in 1776 to secure the blessings of liberty for our forefathers and for ourselves. We have fought two World Wars, not to dominate the world or save other peoples, but to be certain that this Nation remains free from any threat of foreign domination. That must be the key to any American foreign policy.

At home, liberty is the basis of the success which we have achieved in building up the greatest and most powerful nation in the world. We owe our present position in the world, and our standard of living to the initiative, the genius, the daring, and the diligence which can only exist in a system based on liberty. We also plan to afford security and prosperity to our people, but I am convinced that the kind of security and prosperity and standard of living Americans want can only be brought about by liberty of thought and liberty of action. Freedom of opportunity must be our goal rather than security.

We are faced today with all kinds of totalitarian ideas. We have apparently accepted many of the theories of the states which we have conquered. Our people are too much inclined to look to the government for the solution of every problem, and forget the great increase of centralized power which that policy creates. The State must manage everything, it is said, if we are to avoid depression and unemployment. It would be a tragic result if a war successful in assuring liberty from foreign domination resulted in the destruction of liberty by our own action. The thinking of the Democratic administration is dominated today by the policies and thinking of the CIO-PAC, derived directly from Marx via Moscow.

*Remove controls*

If liberty is the key to peacetime progress, it is time that we declared the end of hostilities and terminated most of the war powers. Some small part of those powers will have to be continued to meet very special emergency situations, but they should be reduced to a minimum in taxation, in price control, in selective service, in rationing, in restraints on international trade, and in a multitude of smaller controls.

*Adjust taxes*

Taxes must be adjusted to a peace basis in such a way that there may be no discouragement to the expansion of business and the establishment of new business. Only thus can full employment be achieved. The tax system must be one which does not reduce the full reward heretofore given by our system for individual initiative, ability, hard work, and willingness to risk time and money for future success. That involves the complete repeal of the so-called excess-profits tax.

*Labor policy*

A labor policy should be adopted providing for a permanent machinery for conciliation, and a board to examine the issues in labor disputes which cannot be conciliated, and

give the public an impartial decision as to the merits of the disputes. Certainly the principle of collective bargaining can only be strengthened by forbidding strikes during the life of a collective bargaining agreement, and requiring arbitration of issues which arise only on the interpretation of such agreement.

*Balance the Budget*

We must establish a sound fiscal policy, based on the principle that we will only spend Government money to the limit of that which we can raise by a sound policy of taxation, one which will not kill the very business activity to which we look for prosperity. Such a fiscal policy is essential to the confidence necessary for business expansion. The Administration is still dominated by the false philosophy that you can spend yourself into prosperity. Now they have added to it the equally false inflation philosophy that we are better off if we can increase wages, and increase profits, thereby increasing prices. Of course, the key to prosperity is the increase of production. Without that the general increase in wages will be reflected in an increase in prices, and when we finish we are just where we started. No one is better off and the white-collar class is a good deal worse off. The whole theory is just as false as any other panacea of cure by inflation.

An essential of Republican policy must be a reduction of Government expenditures and immediate reduction of all war expenditures. The reduction can be far greater than is now planned and shown in the Budget. We must determine what the absolutely essential postwar expenditures will be for interest on the public debt for the Army, for the Navy, and for the veterans, and refuse to authorize additional expenditures unless a sound tax system can be devised to pay for them. The President's message contained every proposal for expenditure suggested by any pressure group, and since then he has added additional spending projects, like the St. Lawrence waterway, and is now proposing compulsory military training which will cost more than $2,000,000,000 a year.

I believe in some expansion of a public-works program and a considerable expansion in social welfare, but the projects must be carefully selected and held within a reasonable total cost.

While public works have their place in meeting unemployment problems, it is only a minor place. The largest program of public works suggested will cost about five billion a year. That would only put two and a half million men to work. We have to put over 50,000,000 to work. A sound Government policy in the encouragement of private enterprise which makes possible an increase of 10 percent in its activity would put twice as many people to work as the biggest public-works program anyone has conceived of.

Full employment can only be achieved through private enterprise, unless we want a totalitarian state, where the government guarantees everyone a job and everyone has to work where the government tells him to work. Public works ought to be planned. They ought to be speeded up in hard times, held back in good times, but, above all, they ought to be undertaken only if they are worth the money which we are asked to spend upon them. The theory that government spending is a good thing in itself has come to dominate the thinking of many people. In the end it can be utterly destructive of both prosperity and freedom.

3. A SOCIAL WELFARE PROGRAM

*General principles*

I wish to lay special emphasis tonight on the adoption of a program for social welfare to deal particularly with those who do not obtain under our system the benefits which this country is certainly rich enough to afford. A free-enterprise system must be based on the theory that a man receives compensation in accordance with the value to others of the product of his work. That principle supplies the incentive which brings to leadership those individuals who have extraordinary ability, industry, and initiative. But it also means that, even if we achieve full employment, there may be many the value of whose work will not return to them the income necessary to provide a decent minimum standard of living. There are others handicapped so they cannot work, or can work only on a limited scale. By collective bargaining laws we can assure that men receive the value of their labor and are not subject to economic oppression. By minimum-wage laws we can raise to some extent the standard of the lowest income groups; but if we carry the minimum-wage principle too far, it will result in more unemployment and the shut-down of some types of business activity.

So we have adopted in this country as a supplement to the private enterprise system the principle that we will provide through the State, and through taxation on the more fortunate members of society, a minimum standard of subsistence, of housing, of medical care, and of education for every citizen. The expense of this system must be borne by the more fortunate four-fifths of the population who do not need it. We cannot impose so heavy a burden upon them as to discourage their initiative and activity. Nor can the minimum standards be so high as to destroy the interest of men in securing something better through their own efforts. The prosperity of the country depends upon the activity of the four-fifths. But a country as rich as the United States should not fail to provide a decent standard of living for everyone who is willing to work, or who is unable to work by reason of mental or physical handicap.

In this field of social welfare the expense is so great that State and local governments cannot successfully handle the whole problem, though it is basically a State and local responsibility. In some fields, as in education, the tax systems have been set up to provide a large revenue, and the Federal Government need only supply a small percentage of total funds expended, to be distributed for the most part in States which are so poor they cannot provide a reasonable education. On the other hand, in the field of relief and work relief, if there is any considerable unemployment, we saw in the 30's that the States and local governments were wholly unable to provide the volume of funds necessary. In housing and in health the local tax systems have been set up in such a way that it is very difficult to secure additional funds for any expansion of these activities. In these two fields the need for Federal aid is greater than in education, but not so great as in relief. Dealing with these subjects, there are certain principles to which we must adhere if we do not wish to have a concentration of power in Federal bureaus which can lead directly to a completely totalitarian state.

First. The total expense must not be unfair to the four-fifths who pay the bill.

Second. The initiative and the administration should rest upon the local and State authorities. Local self-government, I believe, is an absolute essential of real freedom. If all the powers exercised by these governments today were centered in Washington, the people would have little to say about countless matters which affect their daily lives. A Federal bureau cannot be made responsible to the people of Columbus, Ohio. People here can't get at the bureaucrats in Washington and they can't get attention when they do reach them. General policies and regulations made for the whole Nation may have little relationship to the particular needs of thousands of different kinds of communities.

It is quite true that if we only help those States and localities which assume some responsibility themselves, there may be gaps in our program. That only means that the people where those gaps exist are getting the kind of government they want and provide for themselves. But it is fair to point out that no Federal program is perfect. It may cover the whole country, but the faults that develop, its mistakes and fallacies, often the ideas of a small clique, also cover the whole country.

Third. The standards on which aid is granted should be clearly stated in the Federal statute; or if that is impossible, they should be laid down by permanent regulation. States should know the exact terms on which aid is to be granted. There should be no discretion in the Federal officer to change the rules or favor one State over another. If he has that power, he can practically dictate the administration of the State plan and the policies of local officers.

Fourth. Federal aid should be confined to the lower-income groups.

We cannot hope to eliminate some Federal interference as long as the Federal Government puts up the money. The justification of Federal action is to see that certain minimum standards are provided, and no State can expect to get Federal money without giving the Federal Government some power to require that the Federal money is faithfully applied to provide that minimum. But we can make the rules definite and only give the Federal bureau power to see that the State does comply with rules laid down by Congress or by a board of experts on principles established by Congress.

At the present time we are considering a large number of public-welfare bills. Many violate the principles I have suggested; and if they were all adopted, they would add huge sums to the Federal Budget which could not be raised by taxation. Bills for social insurance like the Murray-Wagner-Dingell bill go far beyond the providing of a minimum standard. They reach all or a large proportion of the population, most of whom are already in a satisfactory position under present conditions. The Pepper maternal and child health bill would provide Federal aid for from 40 to 50 percent of the population with few safeguards. In the health field, such action clearly implies the socialization of medicine. I believe a reasonable and progressive social-welfare plan should be based on the following:

*Health*

1. Health: We have been working on a bill to provide Federal aid in the construction of hospitals. The bill was introduced by Senator BURTON and Senator HILL and the committee has carefully rewritten it to secure many of the purposes which I have outlined. It will provide $75,000,000 a year for 5 years. The Surgeon General with the approval of a Federal advisory council of eight is authorized to make regulations fixing the necessary standards. Every State is encouraged to survey its whole hospital situation and make a comprehensive plan to fill up all gaps and provide adequate hospital service for all its people in all sections. That service may include private hospitals as well as public hospitals for we are anxious not to check or freeze at present levels development of private hospitals. All States and private applicants must match the Federal funds in different proportions according to the per capita wealth of the State. Allocations to each State are fixed for formula. The Surgeon General may not change his regulations for 2 years, and then only with the approval of the Federal Advisory Council. Federal interference with administration is forbidden,

but after 2 years States must provide their own minimum standards of hospital maintenance. If any applicant is turned down, or funds are withheld, he may appeal to the United States courts from the decision of the Surgeon General.

This method of carrying out the hospital program affords the basis for medical-care bills and other bills to extend Federal assistance in some other health fields. Assistance in the providing of medical care should be confined to the group unable to pay for doctor's services, so that there may be no socialization of medicine.

*Housing*

2. Housing: A subcommittee of which I was chairman reported last summer a comprehensive housing plan. Housing presents problems which are extremely complicated and more difficult to deal with than health or education. It has been suggested that parallel treatment would authorize the Federal Government to give assistance to the indigent poor through the distribution of rent certificates with which they could obtain such lodging as might be available. I have not felt that this meets the situation. It does not get rid of the slums or prevent the development of new slums. A very large proportion of the people, today, do not have decent housing of minimum standards, and unfortunately a discrepancy between the cost of housing and the cost of other commodities makes it difficult for two-fifths of the population to obtain decent housing. The ultimate solution of the housing problem must depend on the lowering of the cost of building homes. But new homes today cost 30 percent more than before the war. There was no manner which I could discover in which homes could be provided in any volume for persons with incomes of $1,200 or less and there are millions of such persons—except by the provision of public housing. It is true that we might adopt some plan of subsidizing private housers to give really low-rent housing, but it would be even more expensive than the present system of public-housing subsidies. Furthermore, I doubt if private housers would care to submit themselves to the continuous regulation required to see that quarters were provided at the necessary low rent.

Our committee recommended a goal of 1,250,000 housing units a year for the next 10 years, 90 percent of it to be private. The only question is whether that number of units can be sold at present prices. The demand exists. We are improving the ability of the Federal Home Loan Bank System and the FHA to provide funds at low rates for private construction. The Government is helping veterans to buy homes with special loans and there should be a huge demand.

For 4 years, we are proposing to authorize 125,000 public housing units a year, 10 percent of the total program, requiring that they be provided only on the initiative of city councils, and only for the income groups who have incomes 20 percent less than those who can afford to pay the rents charged for decent private housing in the city. In my opinion, if the cost of housing can be brought down by technological improvement, we can, in the future, reduce the amount of public housing which may be necessary, but I see no hope for that result in the next 4 years.

I believe the Republicans should support a national program which thus includes both stimulation of private building and a limited amount of public building.

*Education*

3. Education: I have had great doubt about the advisability of Federal aid to education because the State tax systems are set up to make a liberal provision for education, and it is peculiarly necessary that there be no Federal interference with the education of our children. Every community should be able to give to its children the kind of education and character training it wishes them to have. A careful study of the situation, however, shows that in a number of poorer States it is absolutely impossible for the State, even if it spends a larger proportion of its income for education than does Ohio, to give every child a basic education. This is particularly true of Negro children in the South. Our whole American system is based on equality of opportunity, and certainly we cannot attain that if we begin by failing to provide the opportunity for a basic schooling. I believe, therefore, that a system of Federal aid should be developed, designed to help those States which are making every reasonable effort, but are unable to provide a minimum standard of grade school and high school education; and thus assure such an education for every child in America.

*Relief*

4. Relief: While we hope that we may always have reasonably full employment, there should certainly be some plan prepared in advance for Federal aid which will avoid the necessity of another WPA. The Federal Government should not itself administer relief. Up to a certain percentage of unemployment, the States themselves are wholly able to provide relief, and all are doing so to indigents today. Beyond that point, the Federal Government should be prepared to step in in cases of serious depression if unemployment compensation allowances have run out and on definite conditions stated in the law.

*Cost of program*

The whole program I have suggested would not ordinarily cost more than $700,000,000 a year of Federal funds. We don't know what the Federal Budget will be, but it will probably be close to $20,000,000,000. This would not be an unreasonable addition to that Budget. I believe that a possible tax plan could be devised which will raise about twenty-one billion without a dangerous burden. The whole problem should be studied in the light of the necessary expenditures of the Federal Government and the tax assistance required to pay for them. I feel confident that under such a program, wisely administered, we can meet the requirements of the limited number of people who really need Government help, without adopting global schemes which put the Government into every home, into every profession, and into every schoolhouse.

Within sound principles of constitutional government, preserving liberty, a Republican program can stimulate employment and prosperity which will enable four-fifths of the people to assume all their own burdens and responsibilities. The other one-fifth can do the same thing to a large extent, but with varying degrees of Government aid they can reach a minimum standard of living from which they can hope to go on to a full self-sustaining basis.

The New Dealers would use these aspirations as a means of socializing the state. They would try to produce prosperity by fixing prices and wages according to the decree of statisticians and "brain trusters." They would discourage industry by eliminating its freedom. Government competition is already discouraging some industries and plans are being made to extend it into many others. Our program must be a return to freedom, a reduction of regulations, rewards for incentive and risk taking, aid on sound principles to enable the state to assist those unable to provide a decent living for themselves.

## The Cheese Industry

EXTENSION OF REMARKS
OF
## HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
*Monday, October 22, 1945*

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I recently issued in relation to the cheese situation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Today, while in the Senate restaurant, one of the restaurant officials inquired of me as to the possibility of getting some good Wisconsin cheese to satisfy the persistent demand of Members of the Senate for that vital item.

I told this individual that there would be cheese in abundance if the Government had helped the Wisconsin and other cheesemakers to get into maximum production of all types of cheese in accordance with the natural laws of supply and demand.

Instead of doing so, the Government has followed an arbitrary, unfair, and unjust policy of not only discriminating against the Wisconsin cheese industry in particular, but of striking against the entire cheese industry of the Nation. There are a number of charges which I made months ago against Government's unfair orders against cheese. Most of those charges still stand. Just what are they:

1. Wisconsin cheesemakers have been denied proper mark-up for direct sales on the service wholesaler and retail basis.

2. Because of OPA rulings, Wisconsin, which produces over 50 percent of the Nation's Cheddar, has been operating under the lowest ceiling prices on cheese in the country. This is due to the infamous Plymouth-plus formula.

3. Entire types of cheese have been priced off the market. Thus, there is no brick and Muenster available throughout the Nation. This has hit particularly the Dodge County area of my State, which for years has produced over 85 percent of the Nation's total output.

4. The Cheddar cheesemakers of Wisconsin are compelled to pay more for their milk than did the Cheddar cheese manufacturers of any other State—and still more important, as I have stated above, the manufacturers of every State received substantially more for the Cheddar cheese than did the Wisconsin manufacturers.

5. Aged and cured cheeses have been priced off the market because the Government would permit no differential in price between cheese as it came out of the factory and cheese that was aged. I think this resulted in the surplus cheese, after what the Government bought, being purchased by the processors and made into processed cheese.

6. Retail sales of Cheddar were limited to 5 pounds maximum. This prevented the sale of the customary longhorn, daisy, etc., directly to the consumer.

7. Sale on the moisture basis carried an inducement to make large-style Cheddar, but it automatically limited their sale to United States agencies or to a processor. The result is that Wisconsin production shifted from 32-percent small styles to about 6-percent small styles under this pricing system.

The justice of these and innumerable other complaints have long been admitted by OPA. Yet no corrective action has been taken. The square pegs in round holes in OPA per-

sist in doing damage to one of the most vital industries not only of my own State but of the dairy States of the Union. I, for one, am fed up with OPA's inexcusable delay in remedying this intolerable situation. We have held meetings, we have exchanged letters, we have sent petitions, all to no avail. The time now is for action, and nothing except remedial action will be accepted by us from OPA.

## War Activities of American Red Cross

EXTENSION OF REMARKS

OF

### HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I recently prepared concerning the subject of War Activities of the American Red Cross.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I wish to pay public tribute to the workers of the American Red Cross for their humanitarian efforts during the war, particularly in the handling of personal problems and messages of our armed forces personnel stationed overseas. These cases involved considerable correspondence and work on the part of Red Cross overseas personnel and of the chapters here at home. During the fiscal year ended June 30, 1945, American Red Cross chapters handled approximately 550,000 cases of various types of armed forces personnel stationed overseas. The monthly total shows a steady increase from a low of 34,056 in July 1944 to 57,047 for June 1945.

We are all familiar with the various types of cases that required this special handling, particularly the emergency type message, advising the serviceman that one of his next of kin is dying and that he is needed at home. These messages increased in volume steadily from 10,742 in July, 1944, to 14,541 in February, and 13,753 in last June. Another type of message is classified by the Red Cross as "not so urgent" involving situations where the serviceman had not heard from home for quite a while or where the folks at home have not heard from the serviceman, requiring an effort to be made to reestablish communications between the people at home and the man in the service. These have run an unsteady course and should be declining now that mail facilities are improving. They total, for example, 12,130 in June 1944; 16,207 in November; and only 10,084 in June, last. The American Red Cross and the local chapters were also of aid and comfort to men in the service in cases involving assistance in financial matters, securing medical care for close relatives, helping with orphan children or delinquents and other similar family problems. These almost doubled during the year and have increased greatly since June. In July 1944 there were only 3,492 and by June 1945 they had mounted to 6,599. In situations where the commanding officers found it necessary to determine the need for emergency furloughs and extension, valuable assistance was likewise given even though it required studying each individual case. The total in July 1944 was only 5,143 but by June of this year it had climbed steadily to 21,688.

The American Red Cross is ideally organized to handle this humanitarian work because local chapters are located in communities throughout the country. Because of the traditional solicitude and care manifested by the Red Cross workers in handling matters of this kind, the serviceman did not hesitate to place these problems in its trust. He knew that if he had a meritorious case, requiring assistance, it would be handled expeditiously and fairly. For the same reason our military and naval authorities knew that they could rely upon the findings and recommendations which were made by the local chapters in the United States after proper investigation had been made.

Subsequent to the surrender of Japan, the Red Cross announced that the overseas service of the American Red Cross will be available to the men with the armies of occupation as long as needed. As I have already stated, the Red Cross chapters recently found that there has been a sudden flood of requests for verification of the need of emergency furloughs. Each of these requires personal attention by chapter representatives, and it has been found that many are made by families under the impression that such furloughs may now be obtained, even though no real emergency exists. According to the War Department, there has been no relaxing of requirements in this respect and the request must be based on an actual emergency which can be materially alleviated by the presence of the serviceman. In some areas overseas emergency furloughs are more difficult to get than before hostilities ceased, due to transportation problems.

The release of prisoners of war and civilian internees liberated from Japanese camps, afforded another opportunity for the American Red Cross to be of assistance, particularly in the handling of messages from home, the furnishing of canteen service, food and clothing, recreational facilities, refreshments, and ministering to the needs of the sick and wounded.

American Red Cross volunteer workers have done a magnificent job throughout the war in treating all of these special problems of the men overseas. We know that they shall continue to furnish these services in the demobilization period because these same problems will continue until all of our men are returned to civilian life. We must continue to give the American Red Cross our encouragement and support.

## Criticism of Mrs. Truman by Representative Adam C. Powell

EXTENSION OF REMARKS

OF

### HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Herb Graffis appearing in a recent issue of the Chicago Times, in which Mr. Graffis states:

Those who are genuinely interested in improvement of racial relations wince at the setback given their sound efforts by the New York Negro Congressman, ADAM C. POWELL.

Then he continues, with reference to Representative POWELL's remarks, as follows:

POWELL mouthed a remark which one hopes is not typical of the judgment of intelligent Negroes when he said: "From now on Mrs. Truman is the last lady."

I wish to assert that everyone acquainted with Mrs. Truman knows that she is representative of the finest type of home-loving women and of American wives and mothers. Every person who reads it and every Member of Congress who knows her resents the statement made by Representative POWELL.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL ARBITER?

(By Herb Graffis)

Those who are genuinely interested in improvement of racial relations wince at the setback given their sound efforts by the New York Negro Congressman, ADAM C. POWELL.

POWELL mouthed a remark one hopes is not typical of the judgment of intelligent Negroes when he said: "From now on Mrs. Truman is the Last Lady."

POWELL's contribution to bettering relations between American people was made because the President's wife did not see fit to let the Congressman dictate her acceptance of social engagements. Just why Powell considers himself entitled to tell Mrs. Truman what invitations she can accept and can't accept is impossible to figure.

As an authority on ettiquette and simple social decency the record doesn't reveal POWELL to be any too hot. He pushed aside the faithful wife who sweated and denied herself many of the social benefits all women crave. She did this to enable POWELL to have enough money and enough good time to make himself a conspicuous character.

When POWELL did arrive, due in no small degree to the sacrifices his wife made, she wasn't good enough for him. He threw her away and married a talented boogie-woogie pianist to get a glamor befitting his station. Talk about discrimination; the case of the first Mrs. Powell is nothing entitling POWELL to make a loud squawk.

The DAR refused to rent its hall to Congressman POWELL's glamor wife for a boogie-woogie concert. That action certainly is not in keeping with the principles for which the American revolution was fought. The denial of the hall was general' regarded by level-headed whites as a foolish thing, but not as anything personal.

It was POWELL who introduced the personal element by insulting the wife of the President of the United States. She had seen fit to exercise her personal liberty in accepting purely social engagements. Mrs. Truman was elected to nothing. POWELL, in insulting her, shows arrogance and ignorance that has roiled racial relations.

POWELL, the Harlem social dictator who kicked out a faithful helpmate to go strutting, has not associated himself with Negro gentlemen in his gutter crack about Mrs. Truman. * * * And if he thinks he can tell the wife of any American—white or Negro—where she can go socially, he's just plain goofy.

## Homes for Returning Servicemen

EXTENSION OF REMARKS

OF

### HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD a very forceful and

sensible editorial taken from the Union City (Tenn.) Daily Messenger, a newspaper published in that splendid west Tennessee town by Mr. Ed. S. Critchlow, a very able, progressive, and forward-looking man. The title of the editorial is "Union City Can't Grow Now," and it concerns the building of homes by veterans who are daily returning from the wars. We are told that nearly one and one-half million young soldiers were married on entering the Army, and when they return all will want homes. Mr. Critchlow has put his finger on an important problem.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNION CITY CAN'T GROW NOW

Union City faces a very serious housing shortage, and because of this situation there just isn't any chance for the population inside the corporate limits to grow.

This is not a new problem for Union City as there really haven't been a sufficient number of houses and apartments here in over 5 years.

But the matter is now more critical than ever before.

Discharged servicemen—many of them—have come back to Union Ctiy, and hundreds more will be returning here during the next year or so.

Many of these men have been in the service for long periods of time, and they are ready to settle down with their families in their own homes. But they can't do it in Union City—and if they can't find homes here, you can bet that a good percentage of them will be looking elsewhere.

The case of Pfc. Robert I. Cox, 36, former Brown Shoe Co., employee, who was discharged at Maxwell Field, September 28, after 3 years in the service attached to the Medical Corps, serving the Air Forces, is typical.

"My wife, Carrie Lee, and son, Stanley, have been living in my absence with her parents, Mr. and Mrs. C. C. Haley, 304 Cheatham Street," the veteran said. "The house just isn't big enough for all of us, and of course we want our own home anyway.

"I've combed Union City from one end to the other and I haven't found a single available place. I even tried to get rooms above a downtown store, but they were already occupied.

"What are we fellows who were drafted into the service, left our families at home, and did our duty to the best of our ability going to do? We come home and can't even find a place to live. We want to stay in Union City but how can we?

"I am not criticizing anyone—all I know is that we can't live here if we can't find places to live."

An application of the Union City Housing Authority for a $400,000 allotment to build some 90 dwelling units here—about half for colored and half for white—was approved in Washington before the war and has been again approved since the end of the war.

"We will build these units, which will be for people with substandard incomes, but due to the planning and red tape which must be waded through, there is little likelihood that a start on the project can be made before a year from now," Bert C. Cox, head of the local housing authority, said today.

It is further reported that Union Citians, who might normally be interested in erecting houses for rent, are not keen about the prospect at this time, because building costs—both for material and labor—are so much higher than before the war.

## An Offer To Trade Places

EXTENSION OF REMARKS
OF
### HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. WHERRY. Mr. President, I bring to the attention of the Senate and ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Offer to Trade Places," written by Hon. Edgar Howard, a former Representative in Congress, who is now the editor of the Columbus (Nebr.) Daily Telegram.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN OFFER TO TRADE PLACES

One American boy has been in the Army for 3 years, mostly in former Japanese territory.

The other American boy lives on the Atlantic coast, and is a member of the longshoremen's union, now on strike.

The name of the first American boy is GI Joe.

The name of the other American boy is Mac.

G. I. Joe is now on a little island in the South Pacific, engaged in the fight to get back home and see his wife and little boy.

Mac is now in New York, and is a longshoreman on strike against unloading the ships which transport soldiers home from foreign fields.

G. I. Joe makes an offer to trade places with Mac, the striking longshoreman, writing to him as follows:

"DEAR MAC: You are getting to be a popular boy over here, Mac. We have only three news broadcasts a day, but you are always the No. 1 character in the news. I always listen, because I am always waiting to get some news about myself, and sure enough today you and I were in the same news story. Seems like you and your bosses are having a little argument about unloading some ships, so you quit working. That's where you fit into this particular story, Mac. It also seems that the strike is delaying some thousands of servicemen from getting home. And that's where I fit in, Mac; and seeing as we are both characters in the same story perhaps we'd better talk things over.

"I got pretty mad at first, because I'm like that. I like to crab and gripe, but I soon forget about it. By the time I got out my pen and paper to write you a letter I had started to think about your own and my own predicaments, and tried to reach a solution. The more I got to thinking about it the more I thought you should be in my shoes, and I in yours. That's it, Mac. Why can't we trade places?

"You don't want to work, while I sure would like to get back home and go to work. A trade ought to suit us both pretty well, shouldn't it? There's not much to do out here now, Mac, but I think you'd like it just swell. The Nips gave up, and now most of the occupation work is being done by the 'short-termers,' so you would have plenty of time to just sit around, and you evidently like that.

"It isn't bad out here now, Mac. All of these bases have been built up, and it's getting darned comfortable. The medical units must have killed nearly all the mosquitoes ever born, and malaria is not even common any more. The food has really improved in the last 2 years and is getting so it is downright good. Usually you get a case of beer a month and you can see a different movie nearly every night for free. So you can see it isn't very bad any more. Of course, after 2 or 3 years you start getting just a little homesick, but you probably don't believe in that anyway.

"You should not have any trouble in swinging this deal for us, Mac. All you have to do is to go on strike and you can get what you want. I know your job, too, because I've been doing it off and on for quite a spell now. Of course, we don't call ourselves longshoremen. We are just 'dock detail.' We've done a lot of that work for pay all the way up from $21 a month and up, but not very far up. You know all those ships you loaded up back there. Well, we unloaded them over here, so we have had lots of experience.

"Who am I, Mac? I am a chorus of voices—thousands of voices, Mac—thousands of voices that you might be hearing in Nebraska, New Jersey, California, Iowa, and all other States if only there was shipping enough to get us back home. But they tell us that our ship is tied up by a strike. I am the guy you call G. I. Joe for some reason or other, and you have read lots about me and the thousand-and-one reasons why I have been over here helping to fight the war. It's all over now, and I want to get home and get back to work.

"How about trading places, Mac?

"G. I. JOE."

The boy who wrote the foregoing offer to trade places with the striking Mac is a Columbus boy. He has not been able to see his wife and little boy for more than 2 years. His name is Lt. Edgar Howard Rex. God bless him, and bring him home again.

EDGAR HOWARD.

## Reconversion of Hudson Motor Car Co.

EXTENSION OF REMARKS
OF
### HON. JAMES M. MEAD
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. MEAD. Mr. President, with the eyes of our people focused on reconversion, it is refreshing to find evidence throughout the country of a wholehearted desire to speed reconversion and provide employment. Labor, industry, and Government are all vitally concerned.

A case in point is that of the Hudson Motor Car Co., one of the pioneer independent manufacturers. Its record for quick reconversion clearly refutes any contention that the industry as a whole is not ready to build automobiles.

The press has told the story of how the company planned and carried through its program for quick reconversion. Simultaneously with the end of war with Japan, Hudson entered the market for $40,000,000 worth of materials, the largest order in its 36-year history. It was a display of confidence by a pioneer in the industry.

As early as August 20, the company announced that production would be under way in 10 days. That schedule was met.

On August 30, the first 1946 Hudson rolled off the production line in the presence of Orville Wright, of Dayton, Ohio, first man to fly an airplane, and Col. H. Nelson Jackson, of Burlington, Vt., first

man to cross the country by automobile in 1903. The pioneering of these two men in 1903 had much to do with stimulating our progress in air and land transportation. The event at Hudson focused new attention on how far our country has advanced since 1903, the miracles of progress that have come about, the tremendous facilities that are ours, and the processes through which we have come to be the strongest power in the world.

Due to the significance of Hudson's early plans for production, and the confidence it should give everyone in these trying times, I ask unanimous consent to insert in the CONGRESSIONAL RECORD a statement made by A. E. Barit, president of the Hudson Motor Car Co., on the occasion of production of the first postwar Hudson, a newspaper article written by him in indicating his confidence that we can and will meet the production challenge, and also a few remarks by Richard Harfst, general manager of the Automobile Club of Michigan, affiliated with the American Automobile Association.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Mr. BARIT. This is a red letter day in the 36-year history of Hudson. For that reason, we wanted a few of our friends to observe the occasion with us. We are happy to have you here and particularly those who have traveled long distances in order that they might join with us today.

The first 1946 Hudson automobile came off the production line this morning. We look upon it as something more than a new automobile. It is a symbol of Hudson's contribution toward the accomplishment of the great task which now faces the country—the problem of getting people back to work.

My partisanship for Hudson does not blind me to the fact that this larger significance is the primary thing in the minds of all of you. Indeed otherwise I would have hesitated to ask Mr. Wright to travel from Dayton to Detroit, Colonel Jackson from Vermont to Detroit or ask Senator FERGUSON and all of you busy people to take time out from a crowded day to observe this occasion.

While our concern about the matter of unemployment at this time is dictated by a sense of humanitarianism and by the thought of the millions of returning veterans, it goes even beyond that. In view of the heavy burden of public debt and other economic and social problems facing our people and those throughout the world, uninterrupted and large volume production is imperative. Only in that way can we effect the eventual orderly discharge of the tremendous obligations facing us. This is a matter of deep concern to every man and woman in the country regardless of their calling.

I am sure that this is recognized by the responsible leaders of labor, the heads of Government who are primarily concerned with industry, as well as by industry itself and that it ranks in importance with other problems of the day. For instance, recognizing fully the importance of the anti-inflation effort, I am convinced that in the public interest it must be administered so that it will not interfere with attainment of volume production.

As we have previously announced, we have set for ourselves an ambitious task. We plan to utilize the entire productive capacity of our plants. This will eventually provide employment for approximately 20,000 people.

This morning many of you visited the end of our final production line to witness the first car rolling off. At this moment a considerable part of that line is filled with cars and bodies. You will remember that this is the famous mile-long line upon which we built airplane wings during the war. The speed that we make in accomplishing our ultimate goal depends upon the constancy of our material suppliers, who, by the way, have many problems of their own getting under way. It also depends upon the far-sightedness of labor generally and their recognition of the fact that unless we do quickly acquire momentum and maintain it, jobs may not be available when they are most needed.

We are fortunate in having with us today the pioneers in aviation and long-distance travel by automobile. They know, better than anyone else, of the production miracles that are typically American. They have seen, through the years, highways filled with automobiles and the skies filled with planes. They know the promise that lies ahead through the old-fashioned teamwork that made our country great.

---

BLUEPRINTS FOR AMERICA—UNITED STATES INDUSTRY NEEDS FULL COOPERATION

(EDITOR'S NOTE: A. E. Barit, president of Hudson Motor Car Co., today acts as guest columnist for Merryle Stanley Rukeyser, who is on vacation. Tomorrow Mr. Rukeyser will resume his regular column.)

(By A. A. Barit, president, Hudson Motor Car Co.)

Once again our country is faced with the sort of problem which our people look to industry to help solve.

Current predictions of protracted unemployment seem strangely out of keeping with the reputation for speed and efficiency established by American industry during the war. They also seem to discount equally the far-sightedness of labor and our Government's declared intention to abandon industrial controls.

When war threatened, industry was called upon to provide needed munitions and supplies more quickly and in greater volume than was ever done before. In responding, it created a record which was a never-failing source of amazement throughout the war period.

WAR EXPERIENCE WARRANTS OPTIMISTIC VIEW

Now the war has come to a sudden end and once again we hear, as we did in 1941, dire predictions of a long period of distress while industry makes ready to handle its job. But our wartime experience warrants a more optimistic view and, this is most important, a confident resolution to let industry have its head with the fullest possible cooperation of all concerned—the sort of cooperation it was given when it tackled the job of producing for war.

Given this, industry will again surprise those who discount its energy and resourcefulness.

COMPANY APPROACHES TASK WITH CONFIDENCE

Here at the Hudson Motor Car Co. we are approaching our task with confidence, as indicated by the fact that, just prior to the end of the war, we entered the market for approximately $40,000,000 worth of automobile materials—one of the largest single purchases in our history.

This same spirit of confidence at Hudson resulted in past years in a policy of reinvesting earnings in plant facilities. To this policy we owe the fact that we now have one of the best integrated plants in the industry, including a large and completely equipped body plant at a time when such plant facilities are more desirable than money in the bank.

REJECTS RETURN TO SOCIAL EXPERIMENTS

Hudson is ready for the economic march ahead. We see great opportunities and possibilities in our country's enormous productive capacity, wealth of raw materials, millions of waiting customers, and other millions of men and women who are ready to produce so they can also buy and consume.

To face our current task with anything but a confident attitude is equivalent to an invitation to those who espouse the cause of Government intervention in business to bring forward new places of Government planning and control. Certainly, we do not want to go back to the social experiments of the thirties.

Because we start the postwar era with a larger public debt than ever before in our history and face other unprecedented problems, both economic and social, it is more important than ever that we have confidence in ourselves. Yes; such self-assurance is mandatory if we are to continue our way of life, for which we have sacrificed so many lives.

---

Mr. HARFST. One of the characteristics of the automobile industry since its very beginning has been its high degree of interest in its customers.

The industry has not only consistently built better cars at lower prices, but has also furthered the movement for safer and more efficient highways and aided in the improvement of traffic conditions. In these efforts the Hudson Motor Car Co. has always been to the forefront.

Thus it is a distinct privilege to have a part in this unique event as a representative of the Nation's car owners. The American Automobile Association, founded in 1902—a year before our guests of honer pioneered in long-distance driving and flying—has been dedicated to one basic objective. It is to make ownership and operation wider and wider, more useful for business and for pleasure, more economical from the standpoint of the user, and more free from the standpoint of movement by keeping to a minimum the rules and regulations that would be imposed upon it.

In attaining this broad objective, Hudson, as a manufacturer of cars and the AAA as a service institution for owners, have always enjoyed fine relations. The oval AAA emblem and the Hudson Triangle have always been conspicuous in the progress of automobile transportation.

I was impressed recently by a statement made by A. E. Barit, who has been with Hudson since its very beginning and has carried on the high tradition he helped its founders to establish. Speaking of Hudson's future, he said—I quote:

"We are prepared for future advances in efficiency and design. This industry owes much to engineers who have dared to dream and plan for automobile efficiency, design, and styling, and ease of operation beyond the limits of known horizons. Alertness to advance has made it possible for Hudson, over a period of 36 years, to be first to introduce 80 new developments in the automobile and to hold more than 120 official AAA records for stock car performance and endurance. Incidentally, we are particularly proud of these official records because they offer substantial proof of the solid foundation upon which the Hudson name rests. We are confident that Hudson will hold a leading place among manufacturers in the competitive era that lies ahead."

Mr. Barit, in behalf of the American Automobile Association and the Automobile Club of Michigan, I want to thank you for your great appreciation of the AAA official stock-car records held by Hudson. I want to also commend the fine way in which you have paid a tribute to the engineers responsible for automotive advances. Hudson's confidence in the future has been most heartening to Detroit and a motor-minded Nation.

I am convinced that our wartime experience has strengthened the place of the automobile in our social and economic life. Prior

to the war there was perhaps too much emphasis on the pleasure side of the automobile and too little emphasis on its basic importance in our daily life. This situation has now been corrected. Reliance on vehicles that could not be replaced, the shortage of tires requiring maximum care, gasoline rationing and subsequent interruption of normal driving habits—have all focused new attention on the dominant role of the automobile on every phase of activity.

Hudson is to be congratulated on the speed with which its plant is resuming peacetime production of new cars. As new automobiles roll off the production lines, there will be an increase in the whole economic tempo of the Nation. The automobile industry can indeed be proud that it is leading the way back to normal peacetimes in the same spirit that it turned to providing the implements that achieved victory. It has every reason to be called America's first industry. It's record is one of the first on the wartime production front and first on the peacetime production front.

I am confident that we can look to a new era of automobile use in our great United States and, in turn, a new appreciation of the underlying soundness of our whole pattern of life. It is much-needed. And that fact that today we honor two pioneers is evidence that we have not forgotten the stress and strain of pioneering nor the foundation upon which we have built a structure that has stood the test of time. This occasion of looking to what we have accomplished in the past as we plan and move forward to the future reflects the spirit of Detroit and our country.

## Cleavage of the Giants

EXTENSION OF REMARKS

OF

### HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

*Monday, October 22, 1945*

Mr. RADCLIFFE. Mr. President, I ask unanimous consent for the insertion in the Appendix of the RECORD of an editorial entitled "Cleavage of the Giants," which was published in the Sun, of Baltimore, on the morning of October 21. The editorial is by John W. Owens, the well-known editor and writer, and is very timely and highly constructive.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CLEAVAGE OF THE GIANTS

(By John W. Owens)

The situation is this: The Governments of the United States and of Russia have repeatedly demonstrated their realization of the necessity of cooperation and probably a majority of thoughtful people in each of the two vast nations ardently desires cooperation, but in recent weeks the evidence has pointed to separation and deepened distrust. As affairs have lately been taking shape, the policies of each nation could be construed to be the seeking of strength at the expense of the other.

The statesmen of each nation, of course, speak of principles. Quite possibly the statesmen of each nation do strive amid all the complexities and perplexities of a disorganized world to establish principles by which to guide their diplomacy. Nevertheless, this is true: The American policy in Europe calls for broad, democratic consultation in the making of treaties with the defeated Balkan nations. This policy, if successful, would probably reduce Russia's influence on her western border. The American policy in Asia calls for our dominance in conquered Japan. Manifestly, that would restrict Russia's influence on her eastern border. The Russian policy is exactly the opposite. Russia wishes a narrowed treaty-making policy in Europe. That probably would confirm her strength on her western border. And she wishes the establishment of an Allied commission of control in Japan—in addition to Mr. Byrnes' projected advisory commission. The carrying out of her will in that respect would reduce our strength and therefore increase her relative strength on her eastern border.

The situation is made more troublesome by the fact that the United States claims, in one form or another, islands in the far Pacific as sea and air bases. Our spokesmen base their claims on security and say, with sincerity, that we intend no harm to anyone. But these bases would be within striking distance of Russia's eastern border and, therefore, Russia looks at our program through the eyes of her security, not ours. Reports now circulate that Russia desires Spitzbergen and perhaps other spots in the western seas as bases. In these days of rockets and bombs, we look at this program through the eyes of our security, not Russia's.

This is the state of affairs, despite the talk in each nation of principles. Indeed, because it is the state of affairs, reasonable people in each nation must have care in talking of principles.

For a spate of eloquence on principles—much as principles are needed—might arouse nationalistic egotisms which would blind the people of these vast nations to the self-evident fact policies of each could be construed by the other as a threat in the future. Of all the evils that could befall in international relations at this time, perhaps the worse would be impassioned dogmatism in the United States and Russia on principles when, in sober truth, the principles of each call for clarification. Moreover, in all probability, neither nation will be able to clarify its principes and apply them consistently except as means are found to decrease the threats which each can find in the policies of the other. At San Francisco, the overshadowing problem was to reconcile the search of all nations for the principle of collective security with the search of all nations for individual security. The same problem arises again and again—how to establish principles to govern nations which are sacred.

No sovereign cure for the fears is possible. Cure will be found, if it is found, in the setting of faces by statesmen and people in each nation against division between them and in the fixing of wills in each nation to bridge every chasm that appears. No statesman or citizen who values the next generation will permit himself a word of cynicism. For, by all the signs of our times, war between the United States and Russia would be a global calamity beyond endurance and permanent hostility, short of war, would distort the social and economic life of mankind.

The people of each nation must think of many things. They must think of the fact that their efforts to cooperate are hampered by differences in language, in culture, in philosophy. They must think of the fact that, this being so, any misfortune in the choice of spokesmen creates graver difficulties than usually would result. No reflection upon Mr. Byrnes and Mr. Bevin should be found in remembering that in London Mr. Molotov said the trouble was that the Council of Foreign Ministers was not meeting in Moscow and that Mr. Hull and Mr. Eden were not there.

The people of both nations must think of Russian fear that Germany will be revived under conservative American and British influence as a balance to Russia's power; and of American fear that both Europe and Asia may be the scenes of Russian expansion. They must think of Russia's fear that a Western bloc will be created; and of the West's fear that a Russian bloc will be created. They must think of the atomic bomb which we used without warning—we who stand in Japan, off Russia's shores—and of Russia's ability to match our bomb in a world in which war is without mercy for women and children.

The people of each nation must think of the fact, and never forget it, that if these fears are allowed to get out of hand, they thereby confirm themselves. They become absolute perils.

## Atomic Energy Most Important Subject Before Congress

REMARKS

OF

### HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. McDONOUGH. Mr. Speaker, atomic energy is by far the most important subject this Congress, or in fact any previous Congress, has ever had to consider. We will soon have to pass on legislation which will determine the policy this Nation will follow on the future production and use of atomic energy for both military and peacetime purposes. Our final decision will have a far-reaching effect upon the future of our domestic, commercial, and industrial development, and equally far-reaching effect on our international relations with the nations of the world. We must be sure, yes, certain beyond doubt, that what we decide upon will be right.

The future of atomic energy for commercial and industrial power production staggers the imagination. If the ultimate energy of 2.2 pounds of matter such as U–235 is released, it can produce 25,000,000,000 kilowatt-hours of electric power, which equals one-sixth of the total electric power produced in the United States in 1939. Just think what that means in revolutionizing the power industry in the Nation. This same amount of U–235 used as for military purposes in an atomic bomb, releasing its ultimate energy, could destroy New York City. Think what that means. It has been estimated that 80 percent of the ultimate energy of the atomic bomb dropped in Hiroshima was lost because of imperfections in its design, and look at the terrible destruction it wrought with only 20 percent of its strength.

The theory that matter can be converted into energy on a large scale was proved beyond doubt when we detonated the first atomic bomb. Before that it was just a laboratory experiment. Now it is a reality, and we have to deal with it. We cannot sidestep it, we cannot play politics with it, we cannot put it off. Science works faster and much more accurately than politics or Congress. Let us do a good job of this the first time. We may not have the opportunity to correct or amend our errors. It may be too late.

## Housing Inflation Is Already Here—Legislation or Immediate Administrative Action Mandatory

EXTENSION OF REMARKS
OF
**HON. WRIGHT PATMAN**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. PATMAN. Mr. Speaker, our time to prevent runaway housing prices is running out. Home prices already have jumped 50 percent in many cities. They are up 100 percent over normal value for lower-priced residences in some areas where the situation is very bad. If we are going to do anything to protect our home buyers, we are compelled to take action now. The upward spiral has already commenced and next month may be too late.

England has already moved to protect its home buyers by adopting legislation setting ceiling prices of $4,800 on new houses. I do not advocate anything quite as drastic as that, but the cold facts are that we have done nothing except remove the one control we had which would have prevented the skyrocketing of housing prices.

The Army has already brought 50 percent of United States servicemen home from overseas. Remaining veterans are scheduled for return by next February. One million five hundred thousand of them will be seeking shelter for themselves and their families.

VETERANS FED TO PROFIT-HUNGRY SPECULATORS

Veterans already are walking the streets looking for a place to stay. Some of them are throwing away wartime savings in paying exorbitant prices for second-rate shelter. That is what is happening while we sit here in Washington letting them be fed to the profit-hungry real-estate speculators. We have already waited overly long for proper action to be taken on this matter.

It is my view that legislation should be introduced to control these selling prices if administrative agencies do not take action immediately under the authority now vested in them.

This legislation or an administrative order—I care not what it is as long as it does the job—should include a provision for the pricing of new homes based on current construction costs plus a fair profit for the builder and a fair profit for the real-estate dealer.

On old houses one resale could be made during the period commencing in 1943. Second sales, however, should be set at the same level as the buyer's cost price.

I would make it worth while for both the builder and the real-estate dealer to build and sell houses. On old homes I would not put a limit of any sort on the legitimate owner's right to sell his home at any price he could get, but, if that home should be sold again in a speculative market, we should insist that its selling price should be limited to the second owner's cost price plus the cost of any additions or improvements he may have added in the meantime.

Such a provision would permit flexibility and provide for change of ownership, but it would prohibit speculators from cornering the market and selling and reselling the same house to drive the market upward.

I am firmly convinced that we must take this kind of action in order to prevent a recurrence of the boom-bust period of the 1920's.

I am inserting herewith three letters that are self-explanatory:

GOVERNMENT AND VETERANS TO LOSE

OCTOBER 17, 1945.

Mr. GUS W. THOMASSON,
*District Director,*
*Office of Price Administration,*
*Dallas, Tex.*

DEAR MR. THOMASSON: Unless effective controls are placed on the prices of real estate, including new construction, the GI bill of rights will operate as a political fraud on the returning soldier. He is permitted to borrow $2,000 with which to purchase a home for his young or new family. When he buys a home he finds that he pays $4,000 for a $2,000 home. This will finally result in the actual loss of $2,000.

It is my opinion that these controls cannot be made effective through the OPA; that the only logical way to control the price of real estate and prevent wild inflation in this important phase of activity is for Congress to levy 85 percent income tax on profits in the sale of real estate, and take by taxation all profits in new construction except an allowable 10 percent.

Yours very truly,
W. V. DUNNAM, *Chairman.*

MANY PEOPLE ALREADY VICTIMIZED

DALLAS, TEX., *October 8, 1945.*

Mr. GUS W. THOMASSON,
*Dallas, Tex.*

DEAR MR. THOMASSON: In regard to the controversy now waxing hot on the proposed ceiling prices on homes, I sincerely hope that you will use your influence in supporting this very necessary measure. The time is already later than we realize. Many helpless people in Dallas have already been victimized. It is the 1919–20 story all over again.

Just across the street from where I live, a home which cost the owner $5,900 18 years ago was sold for $8,500 and it needs a new roof badly. My neighbor of 12 years told me that he didn't have the conscience to ask more, even though the real estate salesman who made the sale insisted that he could get $8,950 just as easily as $8,500. This transaction occurred in July 1945.

I talked with a conscientious real estate man a few weeks ago and he told me that he did not have the heart to participate in a sale where he knows the buyer is getting gypped, and his parting remark was, "I want to stay in business after this thing is all over. I don't want a lot of people sore at me."

I vividly recall that in the year 1919 I built a $5,000 home in Strawn, Tex., at a cost of $10,000. I have never fully recovered from this loss which occurred in a period of my life when I was just getting started. A period in life when one's hopes are high and their judgment limited.

The boys that are coming home now will be just like I was: with a few dollars for the down payment they will want to own homes. Let's not allow their savings to be taken away from them and thereby disillusion them in their finest desire—the ownership of a home.

If there are no safeguards promulgated, everybody, in the final analysis, will lose.

With kindest regards and good wishes, I am,

Very truly yours,
D. H. MACKAY.

PROMISES ARE "SMOKE SCREENS"

DALLAS, TEX., *October 18, 1945.*

Hon. WRIGHT PATMAN,
*Member of Congress, Washington, D. C.*

DEAR SIR: I wish to commend you upon the position taken with respect to the establishment of ceiling prices on homes, as reflected in the attached clipping taken from the Daily Times Herald of Dallas, October 9, 1945.

It is my opinion that any promise made by the real-estate interests and the home builders to keep prices down is a "smoke screen" or camouflage which will be forgotten by them as soon as all threat of price control is eliminated.

Without price control literally hundreds of thousands of helpless people will become victims of these ruthless, money-mad persons intent on serving their own selfish purposes. With a condition of this kind existing how can immediate inflation be avoided?

I do not propose to indict all real-estate people but feel it is safe to say that there are enough unscrupulous ones in the business to disrupt any organized movement toward self-restraint in the matter of prices. I have only to cite the proceedings of their recent meetings to prove this point. In these there is discord and contention now.

You may be interested in two additional articles from the Dallas Morning News of October 17 which are attached hereto.

I submit that we must have price control on the rental of homes and commercial property, new homes and continued price control on all commodities now so affected for a considerable time and trust that you will take strong steps to that end.

Respectfully yours,
W. R. ATKINS.

## The Purge That Failed

EXTENSION OF REMARKS
OF
**HON. RALPH W. GWINN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. GWINN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper editorial from the Reporter Dispatch, White Plains, N. Y., which explodes the idea of vote-getting power of certain high-powered pressure groups:

THE PURGE THAT FAILED

Many may have forgotten that in December 1941, the House of Representatives passed the Smith labor bill, prohibiting strikes in certain types of industry, requiring public accounting of union funds, and providing other restrictions highly offensive to leaders of organized labor. The New Deal and the leaders of organized labor announced in advance of the vote in the House that those who voted for it were "enemies" and those who voted against were "friends." They added that an unrelenting campaign would be waged to defeat the "enemies."

The Dunn survey of Greenwich has now, in an effort to determine the accuracy or inaccuracy of claims of a large, solid labor vote, surveyed the results of the campaign against those who voted for this bill. The findings are of interest.

They show that of the 252 Congressmen at that time who became "enemies" of organized labor by voting for the Smith bill, only 17 have been defeated in the 1942 and the 1944 elections, for whatever cause. Those defeated represent less than 7 percent of the "enemies."

On the other hand, of the 136 "friends" of organized labor who voted against the bill, 41 were defeated in the 1942 and the 1944 elections. That represents more than 30 percent of the "friends."

The question naturally comes to mind: Has organized labor really the strength it claims for itself, or rather, to be more exact, have leaders of organized labor the power they claim for themselves? In this connection, the Dunn survey asks another pertinent question:

"The New Deal-labor leader combine has not attempted to further its policies by running labor candidates for Congress. Is it because they do not dare risk exposing the fact that they cannot deliver a labor vote?"

We submit these figures and queries to the attention of Members of Congress who may at present be reluctant to vote their convictions on labor legislation for fear of retaliation threatened this week by leaders of the CIO. Time may yet prove that it is not always the noisy minorities which really hold the balance of power.

## Bill To Revoke Charter of the Daughters of the American Revolution

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. CELLER. Mr. Speaker, I have on October 18, 1945, introduced a bill to revoke the charter of the Daughters of the American Revolution. This organization has by its flagrant disregard of the terms of its charter forfeited its right to continue as a group sanctioned by congressional incorporation.

The power to create is the power to destroy. The DAR exists by virtue of a congressional act of incorporation. The time has now come for Congress to act.

This organization has prospered under the benefits of the public charter. In Washington, it owns an entire city block worth several million dollars. One of these structures is the so-called Constitution Hall. It is a misnomer. It should be called "non-Constitution Hall." By refusing to permit Marion Anderson, distinguished artist, to appear on its platform, and now by refusing to permit Hazel Scott, acclaimed pianist, to appear, it has followed the Nazi ideology of Herrenvolk and Sklavenvolk.

In the Congressional Act of 1896, among the purposes for which the DAR was founded, appears the high-sounding phrase, "securing for mankind all the blessings of liberty." It should read "securing for 'white' mankind all the blessings of liberty."

The DAR has the right, for example, to deposit its collections in the Smithsonian and National Museums. It is privileged to make an annual report to the Smithsonian's secretary who sends it to Congress which has it printed by the Government Printing Office. All these endow the DAR with the character of a quasi public organization.

Beyond doubt, the DAR has some responsibility to the citizens of the United States under these circumstances, and it cannot exclude any particular race or creed from the hall it owns.

Unless Congress acts, Congress would be approving the outrageous practices of the DAR.

The DAR presumably stands for American patriotism. It rebuffs the decendants of Crispus Attucks, the first American to fall in the Boston Massacre, and Peter Salem, the Negro who was first to fire the shot that killed Major Pitcairn, the British officer who started the Revolutionary War.

The ancestors of the DAR fought under the creed of "all men are created equal." Their descendants would pervert that slogan to "Only white men are created equal."

## Capt. Hugo E. Rogers

EXTENSION OF REMARKS
OF
### HON. ANDREW L. SOMERS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. SOMERS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an article from the Young Democrat on Capt. Hugo E. Rogers, the Democratic candidate for borough president, Borough of Manhattan:

CAPT. HUGO E. ROGERS

It is with pleasure that we give our members the following biographical notes of our distinguished fellow member, Capt. Hugo E. Rogers, candidate for borough president of Manhattan on the Democratic and American Labor Party tickets in the forthcoming city elections.

As will be plain to anyone reading his qualification, the Affiliated Young Democrats have pledged their untiring efforts in the election of an outstanding administrator. Capt. Rogers was born in New York City on November 26, 1899. He attended public school No. 86, Manhattan, and No. 42, in the Bronx, and was graduated from Stuyvesant High School, New York City; from New York University School of Engineering, and from New York Law School. He holds the degrees of bachelor of science, mechanical engineer, and doctor of laws.

PERSONAL HISTORY

He was a member of George Washington Bicentennial Commission, 1932.

Mentioned in Who's Who in the Law in 1937; Biographical Encyclopedia of America, 1940.

Served in the Infantry, United States Army, during World War I, and was honorably discharged as combat sergeant.

Enlisted in the United States Army in World War II, and was commissioned a second lieutenant, November 26, 1942. Presently a captain assigned as acting industrial relations officer, New York Port of Embarkation, Brooklyn, N. Y.

ORGANIZATIONS AND SOCIETIES

*Professional*

American Bar Association (member).

Federal Bar Association of New York, New Jersey, and Connecticut (chairman of committee on coordination and social security legislation).

New York County Lawyers (member committee on State legislation).

Roger Brooke Taney National Memorial Foundation, national vice president.

Formerly a member of A. S. M. E.

Reserve Officers Association of the United States.

Army Transportation Association.

*Literary*

Academy of Political Science.

Andiron Club of New York City.

*Political*

New York County Democratic Veterans' Association (member of law committee).

New Deal Democratic Club.

Affiliated Young Democrats of New York County.

*General*

Improved Order of Red Men (past deputy grand sachem).

Indian Confederation of America (life member and counsel).

Liberty Post, No. 22, American Legion (member).

New York University Letter Club (member).

ENGINEERING EXPERIENCE

Upon graduation from engineering school, I was employed as a draftsman for underground cables and boxes. I worked on this job for a period of 3 months as a squad boss of eight men. I left this position to become a purchasing engineer where I remained employed for a period of almost 4½ years. I resigned in order to take up the practice of law.

LEGAL HISTORY

1. Admitted to practice before the bar of the State of New York, Appellate Division, first department (1926).

2. Admitted to practice in the United States District Court for the Southern District of New York.

3. Admitted to practice in the United States District Court for the Eastern District of New York.

4. Admitted to practice before the United States Treasury Department.

5. Admitted to practice before the United States Board of Tax Appeals.

6. Admitted to practice in the United States Circuit Court of Appeals for the Second Circuit.

7. Admitted to practice before the Board of Immigration Appeals and Immigration and Naturalization Service.

8. Member of National Panel of Arbitrators, American Arbitration Association.

LITERARY AND TAX EXPERIENCE

Author of the following books: Minimizing Payroll Taxes (book on Unemployment Insurance), Legal Tax Savings Methods (book on all Federal taxes, including unemployment insurance and old-age benefit), editor in chief for Whitgard Services) a service covering old-age- and unemployment-insurance taxes).

PUBLIC SERVICE IN THE LAW

1. Legal adviser to the Democratic Party in the Seventeenth Assembly District, New York County, 1929, to date of entry into the United States Army (November 26, 1942).

2. Rendering free legal services to the poor and indigent in Seventeenth Assembly District, New York County, 1927–42.

3. Member of the law committee of the Democratic Party, New York County, 1928–42.

4. Special New York State attorney general for elections, without pay, from 1932 to 1938.

5. Counsel and secretary to the majority leader of the Assembly of the State of New York, 1935–36. Entailed interpretations and opinions of all legislation introduced in the assembly during that period; also the preparation of memoranda to the governor explaining some of the legislation.

6. Acting as arbitrator in commercial and labor disputes, heard before the American

Arbitration Association, 1939–42. This was a free service. Members of the national panel became arbitrators by invitation.

7. Acting as a referee to hear and determine disputes, by appointment by the Supreme Court of the State of New York.

POLITICAL OFFICES

Secretary and counsel to majority leader of Assembly of the State of New York for session of 1935.

Special deputy assistant attorney general for elections, 6 years.

MILITARY EXPERIENCE

Stuyvesant Cadet Corps, 1915–18.

United States Army (sergeant) 7 months during World War I.

ROTC New York University (sergeant) 1919–21.

United States Army, commissioned second lieutenant, November 26, 1942; at present, captain in Transportation Corps.

## The Newest Wrinkle on Palestine

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. CELLER. Mr. Speaker, Secretary of State Byrnes' latest stand on Palestine is most disappointing. He said that before a basic decision is made, both Arabs and Jews would have to be consulted. That is what one would call pulling an "Attlee."

Assuredly, Secretary of State Byrnes must know that when the Democratic Party, which almost nominated him for Vice President, promulgated the Palestine plank of the Democratic platform providing for untrammeled Jewish immigration and for the establishment of a Jewish democratic state, the party did not consult the Arabs. And when Attlee, Bevin, and Morrison, in their platform pledges before election, said that the Arabs should get out to make way for the Jews, they did not consult the Arabs.

Consulting the Arabs at this late date is a part of the abominable policy of appeasement, the appeasement that brought us the fake "peace in our time," the Munich Pact, and the nefarious white paper which shut with a bang the doors of Palestine against the Jews.

The appeasement of the Arabs did not help. They revolted against the British in Iraq. The Grand Mufti of Jerusalem, their spiritual leader, caused the loss of thousands upon thousands of American and British lives by his espionage against the Allies. We have here in the United States 2,000 Arab prisoners of war who were part of an army assembled by the Grand Mufti.

Trying to get the consent of the Arabs is exactly what the white paper is. The white paper states that there shall be no Jewish immigration into Palestine without the consent of the Arabs. Trying to obtain the consent of the Arabs is actually dodging this issue. It is as possible as trying to balance two elephants on each ear would be.

Palestine is 10,000 square miles. The Arabian world has 2,000,000 square miles.

The artificially stimulated antagonism of the Arab against the Jew would evaporate if imperial interests would withdraw.

## Hon. James A. Farley

EXTENSION OF REMARKS
OF
### HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley, chairman of the board, the Coca-Cola Export Corp., at the banquet given by the Pan-American Society in honor of His Excellency, the President of the Republic of Chile, Señor Dr. Juan Antonio Rios, at the Waldorf Astoria Hotel, New York City, Monday evening, October 15, 1945:

It is a privilege to welcome to the United States the distinguished guest, who in his person and position symbolizes the firm, strong, functioning democracy of Chile—President Juan Antonio Rios.

It was once my pleasure to visit his great country and I came away impressed by the charm, the cordiality, and enterprise of the Chilean people and with the rare beauty of the landscape and scenery.

But most of all I was impressed by the discovery that in South America there is a nation devoted to the ideology of democracy. I found what to me, I must confess, was a really startling similarity between the institutional life of Chile and the United States. I found a country really ruled by law and not by the arbitrary power of men; with a constitution creating three coordinate divisions of government as here; and with a political liberty equal to our own.

I found a Congress with House and Senate composed of men of high intellectual caliber devoted to their country; and, what naturally interested me, I found political parties engaged as here in the give and take of political controversy.

I learned that while in political campaigns the politicians hammered each other as is the fashion with our own, the elections are legal and honest, and when the polls are closed and the result is known, the defeated accept the verdict of the people and do not sally forth with arms to launch a revolution.

I found complete liberty of the press where those highest in authority are not immune from legitimate constructive criticism; and absolute freedom of speech where men may speak openly their honest thought with no fear of a gestapo or a jail; where citizens may assemble peaceably to express their views of public affairs without interference from the police.

I found a brilliant, perfectly trained army that is thoroughly democratic with no thought of conquest and respected by the people by virtue of that fact.

I found that Chile, like ourselves, had come to the democratic solution in government.

We of this country are familiar with the magnificent contributions made by Chile in the waging of the war. All Chilean raw material useful in war was assigned to the United States alone, and the nitrate and copper mines increased production to meet the needs of the United States Army. When we needed ships to convey our troops across the sea, Chile turned over to us her merchant marine and some of those Chilean ships were sent to the bottom by German torpedoes. In all the war efforts and policies of the United Nations, Chile has stood four-square with us. She was represented with distinction in the Conference of San Francisco by a delegation headed by the brilliant statesman, Joaquin Fernandez; and it is my impression that she was the first nation in South America where the Charter of San Francisco was submitted for ratification. I was very happy to observe, President Rios, that when you were in the White House last Thursday you presented President Truman with the instrument of your nation's ratification of the United Nations Charter. We have absolute confidence in Chile, its people, its institutions and its President, who is our honored guest.

There have been times, I am afraid, when Chile and South America did not have too much confidence in us. In the days of Chile's war for independence, the swaying fortunes of its armies were watched with the most sympathetic interest by the then young republic of the United States. Jefferson hailed its war for independence as a vindication of our own. Henry Clay in Congress carried on a brilliant fight for the recognition of the South American republics. When about this time the combined reactionary autocratic forces of Europe met in Vienna to shape the world in their own image, those despotic dynasties planned to dominate South America by force of arms and to deprive it of its independence. It was Monroe, one of our great Presidents, who formulated that doctrine through which we pledged that before any despotism from overseas could intervene in the affairs of any country in the Western Hemisphere, it would have to crush the Army and Navy of the United States.

Those, Mr. President, were the days when we of the United States could take pride in our South American policy.

But in later years, when money became too dominant and greed too strong, there was a time, too long prolonged, when great monopolistic enterprises looked upon the southern continent as the happy hunting ground for dividends alone. That was the period of imperialism. And out of that came the policy of dollar diplomacy. And out of that came resentments from our southern neighbors that were as inevitable as the reactions of human nature. This is the period of which we are not proud.

And then, with higher ideals, greater vision, better statesmanship came the repudiation of the policy of dollar diplomacy and the substitution of the good-neighbor policy with which the names of Roosevelt and Hull will be associated through all the years to come.

This means the fraternity of the American nations resting on the recognition of the absolute independence and equal sovereignty of every nation of the western world; it means a program of mutual help and sympathy; it means an appreciation of the legitimate aspirations of each; and that all problems distinctly of this hemisphere shall be solved by all the American nations, acting in concert and in conference.

And so we come back to where we were in the days of the struggles for South American independence, and all the unhappy events of intervening years are blotted out in this new and better day of brotherhood with the nations of the western world. To you, Mr. President, a son of the soil and a self-made man, like most of the Presidents of the United States, we extend the warm hand of comradeship. Through the desperate years from which we have just emerged you directed your country in conformity with United Nations policy and without giving up one essential principle of

democracy. Chile emerges from the most devastating and dangerous years in history without having compromised the democracy for which we fought and stand. And when you see our monuments and shrines, our great pulsating cities, and our fertile farm lands, you will know, from contact with our people, that all this power will be used if necessary for the protection of the liberty and independence of our sister republics south of the Rio Grande.

Mr. President, we are delighted to have you in the United States, and particularly in the great city of New York, and assure you that your visit means much to the people of America and the friendship of our two nations. I want you to feel that you are indeed among friends and that you can depend upon my country and its people to continue the pleasant relations that have existed down through the years, which have meant so much to both nations.

Good luck and God bless you.

## Intracoastal Waterway of Louisiana and Texas

EXTENSION OF REMARKS

OF

### HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. MANSFIELD of Texas. Mr. Speaker, under leave to extend my remarks I include the following address on the intracoastal waterway of Louisiana and Texas delivered by Roy Miller, Corpus Christi, Tex., president of the Intracoastal Canal Association of Louisiana and Texas, at the meeting of the American merchant marine conference and the Propeller Club of the United States, at New York, October 17, 1945:

Mr. Chairman, I have accepted my assignment on this program with some hesitancy and trepidation since I observe I have been placed in the company of experts, at least from the viewpoint of experience in the operation and use of inland waterways. I take some comfort, however, from the definition of an expert, which is that he is "just an ordinary fellow a long way from home." Since my home town of Corpus Christi is only 130 miles from the Mexican border, I am a long way from home.

My activities in respect to inland waterways have been of the promotional variety. I conform pretty accurately to the description I once heard of a promoter—"a fellow who will furnish the water if you will furnish the ships." In my long-time official connection with the Intracoastal Canal Association of Louisiana and Texas, I may have contributed something toward furnishing the water in at least one of our great inland waterways.

The organization I represent, the Intracoastal Canal Association of Louisiana and Texas, is the oldest inland waterway organization in the United States. It was founded 40 years ago on the 8th of last August by a group of public-spirited and far-seeing citizens of Louisiana and Texas. The undertaking they determined to sponsor was not entirely new since the idea of an inland waterway "from the Mississippi to the Rio Grande" was first proposed in a report of the Army engineers submitted to the Congress in 1875, 70 years ago. That report recommended construction of a canal from Donaldsonville, La., to Brownsville, Tex., to be achieved by connecting up the many inland bays that indent the coasts of Louisiana and Texas. I am quite sure those adventurous souls who participated in that meeting 40 years ago had no notion whatever that the project they were suggesting would ever assume the proportions of a great national transportation facility. I have no doubt they only had in mind the construction of a local waterway, which would permit the movement of small craft engaged in fishing and local transportation along the immediate coast. However, they builded better than they knew, for, as the years passed, the project attained importance and magnitude. The initial effort resulted in the construction of a little canal with a depth of 5 feet and a bottom width of 40 feet from the Mississippi River to the Sabine River on the Texas border and a project of like dimensions from the Houston-Galveston district to Corpus Christi. This left a missing link between the Sabine district and the Houston-Galveston area and through transportation was of course impossible. It was not long until the inadequacy of this little canal was demonstrated. It served in a limited way to provide some local transportation for the communities it traversed but that was all.

Meantime, the Canal Association continued its efforts by advocating a waterway of adequate proportions which would provide through transportation from the Mississippi River to the Rio Grande. It also insisted that the project should be considered in its relationship to the Mississippi River system since an adequate through waterway would give the coastal sections of Louisiana and Texas direct connection with commercial and industrial centers of the Mississippi Valley. In order that its case to the engineers and the Congress might be fully and forcefully presented, it employed the late Gen. George W. Goethals as its consulting engineer. General Goethals prepared an exhaustive economic report which was most persuasive and potential in convincing the Army engineers and the Congress that the project was economically sound and in the public interest. Accordingly, in the River and Harbor Acts of 1925 and 1927, a canal with a depth of 9 feet and a bottom width of 100 feet from the Mississippi River at or near New Orleans, La., to Corpus Christi, Tex., at an estimated cost of $16,000,000 was authorized. After long delays, due to rights-of-way and bridge difficulties, the canal was completed and immediately began to handle substantial tonnage, much of which moved to and from the Mississippi River and its various tributaries. When the World War, now happily over, was forced upon us, with the indiscriminate and wholesale sinking of ocean ships in the Gulf as well as the Atlantic, the canal was immediately taxed to its capacity to handle an enormous commerce. In a short time, its inadequacy to care for this tremendous tonnage became apparent. The Honorable J. J. MANSFIELD, of Texas, chairman of the House Rivers and Harbors Committee, immediately introduced a bill which provided for increasing the dimensions of the canal to a depth of 12 feet and a bottom with of 125 feet and its extension from Corpus Christi to the Rio Grande Valley on the basis of the same dimensions. It also authorized the enlargement of the Intracoastal Waterway east of the Mississippi River to the west coast of Florida to similar dimensions and provided for the construction of a barge canal with a depth of 12 feet across Florida to Jacksonville where it would connect with the Atlantic Intracoastal Waterway with a depth of 12 feet, extending north to Trenton, N. J., a distance of 1,023 miles. Congress promptly passed the Mansfield bill and made available necessary funds for construction work. Within less than 2 years from the approval of the bill on July 21, 1942, the entire Gulf Intracoastal Waterway from Carrabelle, Fla., to Corpus Christi, Tex., a distance of 939 miles, was given a depth of 12 feet and a bottom width of 125 feet. Construction of the barge canal across Florida, which was authorized, was not undertaken since in the opinion of the Army engineers its completion could not be insured in time to be of service in the war effort. Now that the war is over, this missing link in a great through waterway from the far Southwest to the north Atlantic seaboard will no doubt shortly be supplied.

Because of war conditions, construction on the section of the canal from Corpus Christi to the Mexican border, authorized in the Mansfield bill, was not immediately undertaken, although Congress made an appropriation of $1,600,000 to initiate it a year ago. Bids are now being asked for and a contract will be let in the near future which will insure the completion of the canal to the Rio Grande within the next 2 or 3 years.

With the enlargement of the canal as authorized in the Mansfield bill, the already large traffic, consisting chiefly of war commodities, assumed tremendous proportions. Crude oil moved in an unbroken continuous stream to the many refineries that dot the coast, especially in the vicinity of Corpus Christi, Texas City, Galveston, Port Arthur, Beaumont, Lake Charles, and Baton Rouge. Millions of gallons of gasoline daily left the refineries by barge for consuming centers in the interior served by the Mississippi River and its tributaries and to the west coast of Florida where it moved by pipe line across the peninsula to Jacksonville. There it again sought barges for transport northward through the Atlantic Intracoastal Waterway. Other pipe lines on the Florida coast fed it into the interior of the Southeast. Sulfur, always an essential industrial commodity, produced exclusively in the coastal regions of Louisiana and Texas, also moved by barge to all points available on the Mississippi River system. Indeed, every known commodity susceptible to water transportation moved on to the waterway.

When General Goethals recommended the construction of the Intracoastal Canal more than 20 years ago, he estimated its normal potential tonnage at from 5 to 6 million tons and predicted a maximum of 10,000,000 tons if and when the Mississippi River system was completed. The latest available figures as contained in the report of the chief of engineers for 1944 show that the Gulf Intracoastal Canal handled in excess of 21,000,000 tons. In transporting this enormous commerce, 53,339 barges moved over the waterway.

Remarkable industrial development throughout the entire coastal area from the Mississippi to the Rio Grande has resulted from the construction of the canal. For instance, at the time the Goetha's report was compiled 20 years ago, the oil industry, although already an important factor in the economy of the Gulf coast region, had not assumed the tremendous proportions it has since attained nor had the great economies now realized in the transportation of petroleum and its products by water been fully demonstrated. Texas and Louisiana together now annually produce more than half of all the crude oil produced in the United States. Last year, for example, Texas produced 747,790,000 barrels, while Louisiana's production amounted to 129,556,000 barrels. The importance of the petroleum industry in the future of Texas and Louisiana is illustrated by the fact that the total known reserves in the two States amount to nearly 13,000,000,000 barrels, or practically 60 percent of the estimated proved reserves in the United States.

Immense reserves of natural gas extending in an almost unbroken arc from the Mississippi to the Rio Grande provide another keystone in the area's industrial future. In the same territory and immediately contiguous to the canal are great sulfur deposits. Texas and Louisiana together contribute practically all of the crude sulfur produced in the United States. These and

other basic raw materials are already stimulating remarkable industrial development everywhere throughout the canal territory. Great chemical plants have already been established at important places along the canal, notably at Lake Charles, Orange, Beaumont, Port Arthur, Houston, Texas City, Freeport, and Corpus Christi. This rare and ideal combination of raw materials, abundant power, and cheap water transportation create opportunities for industry unexampled anywhere in this or any other country.

These factors of growth which are only beginning to exert their inevitable influence are already at work. For instance, 40 years ago when this association was formed, the total population of the 18 Texas counties contiguous to the route of the canal from the Sabine River to the Rio Grande was approximately 250,000 according to the census of 1920. These same counties according to census estimates for 1943 have a present population of approximately 1,500,000.

I trust I have not trespassed too greatly upon your time and patience in telling you this story of the Intracoastal Canal. Its dynamic influence upon the economy of the great Southwest is just beginning to make itself felt. The war is over and already many of the great industrial plants, in the rich territory traversed by the canal, are getting into peacetime production. Some of them are expanding and enlarging their facilities. As the rivers and streams of Louisiana and Texas, which the canal bisects, are improved for transportation services, as the years go by, vast areas of the great Southwest, rich in natural resources and raw mateirals will take their place in the national industrial picture.

While our intracoastal and inland waterways have already played an important part in our Nation's economy, I have no doubt that their further expansion and development will become a major factor in our country's future growth and progress. Few realize the broad extent of our present inland waterway systems or appreciate the very large volume of commerce they are now handling. Including improved rivers and intracoastal canals, we now have in the United States 26,500 miles of navigable inland waterways. Exclusive of the intracoastal canals, we have along the Atlantic coast 5,800 miles of navigable waterways. Along the Gulf coast we have 4,100 miles; in the Mississippi Valley, comprising the Mississippi River system, 12,000 miles; along the Pacific coast, 1,400 miles, while the intracoastal waterways along the Atlantic and Gulf coasts have a total length of 3,200 miles. These rivers and intracoastal waterways in 1943 carried a total commerce of 198,071,000 tons. Of that amount approximately 30,000,000 tons were handled by the Atlantic and Gulf intracoastal canals.

As our country is the greatest, richest, and most powerful Nation on the face of the earth, so our inland rivers must be improved to the fullest extent of their possibilities and developed into the world's greatest inland waterway system. The economy of water transportation exists in the long haul and so as we add to existing projects, as we integrate and coordinate them into one great system, we add not only to their utility but we enormously increase and augment the economy of their services. The Intracoastal Canal, as important as it is to the economy of my own section, is only a link in an intracoastal waterway system which soon will reach from Maine to Mexico, a distance of nearly 3,000 miles. All that is now required is the completion of the authorized canal across Florida and the construction of the short missing link between Trenton, N. J., and the Raritan River.

South of the Rio Grande, our sister Republic of Mexico is now exploring the possibility of extending the waterway down the coast to Veracruz and probably beyond. Surveys of probable routes are now under way.

In the Mississippi Valley and as a part of its extensive river system, two important and vital projects are now receiving the consideration of the Congress and the Army engineers. Soon a report will be submitted to the Congress on the Tombigbee waterway, which, if approved and constructed, will provide another major outlet from the interior to the Gulf of Mexico at Mobile. Another which in due course is certain to become a part of our national inland waterway system is the proposed canal from Lake Erie to Ohio in the vicinity of Pittsburgh.

Thus raising the veil to the future, we may envision the opening of new and more valuable routes for the interchange of our interior commerce and for its quicker and more economical movement to the sea. Within not so many years, it will be possible for some of the enthusiastic waterway advocates present at this meeting to board a graceful yacht or comfortable houseboat and take a jaunt through a protected inland waterway down the Atlantic coast, across Florida, along the Gulf, and down into the heart of the Republic of Mexico. On the return voyage, the fortunate navigator may journey up the Mississippi, then through the Illinois waterway into the Great Lakes, thence through the New York Barge Canal and down the Hudson to home port without having risked for one moment the dangers of the open sea. On the return trip, if an alternate route should intrigue him, he will leave the Intracoastal Waterway at Mobile, traverse the Tombigbee to the Tennessee, ride that great river to the Ohio, thence through the Ohio-Erie Canal to Lake Erie and back through the barge canal and the Hudson to New York City. On that return journey through the Intracoastal Canal and the Mississippi Basin, many side trips would allure him—a visit to the twin cities of Fort Worth and Dallas at the headwaters of a navigable Trinity, the Red River to Texhoma Lake formed by its impounded waters behind the gigantic Denison Dam, up the Arkansas and the White into the entrancing Ozarks; the Missouri into the far country of the great Northwest, and almost countless other streams that pour into the Father of Waters and make it the main trunk line of a matchless system of potential transportation. These are not the vain imaginings of a visionary. They lie within the range of practical probability, if not certainty, within the foreseeable future.

In this connection, I might observe that many informed persons believe that all of our inland waterways should be standardized on the basis of a minimum depth of 12 feet. Some experienced operators have expressed the opinion that they should be given a depth of 14 feet. In any event, there appears to be sound argument for the 12-foot proposal. The Atlantic and Gulf Intracoastal Waterways now have the 12-foot depth and in the Flood Control Act approved December 22 last, a 12-foot channel for the Mississippi River from Cairo south to the Gulf was authorized. The favorable report on the Lake Erie and Ohio River Canal submitted to the Congress January 23, 1939, recommended a 12-foot depth for that project. Undoubtedly, the 12-foot depth would assure more expeditious and economical transportation than the present 9-foot depth which is standard for most of our inland canals and improved rivers. The proposal should receive the consideration of the Army engineers and the Congress as soon as may be practicable.

In this discussion, I have limited my observations on our inland waterways to the navigation phase alone. In their development for transporation, however, their manifold potential services in other respects should not be disregarded. The program of improvement should comprehend and embrace their development for all useful purposes wherever feasible and practicable. I refer, of course, to flood control, which is an essential part of any adequate navigation program, water conservation and water use for domestic, industrial, and agricultural purposes and hydroelectric power whenever and wherever it can be produced economically as a byproduct. In other words, as we improve our inland rivers for navigation, we should take advantage of every opportunity to extend and develop their utilization for all beneficial purposes. Soil protection, prevention of soil erosion, the development of recreational facilities, protection of wildlife, and many other useful services fall within the scope of the program. It should be prosecuted wherever feasible upon a basin-wide plan and this can be fully achieved through existing Federal agencies. I refer, of course, to the Army engineers, the Bureau of Reclamation of the Department of the Interior, the Soil Conservation Service of the Department of Agriculture, and the Federal Power Commission. No "superduper," extra territorial or totalitarian agencies such as so-called authorities are necessary to carry out the program. Everything needed to insure the fullest possible development of our water resources for every useful purpose can be accomplished without the surrender of our time-tested democratic processes.

The jurisdiction of the Federal Government in the improvement of our waterways is based upon and limited by the right and duty to improve them for navigation under the commerce clause of the Constitution. Other services which result from their improvement are proper matters of Federal jurisdiction only because they relate to navigation or can be accomplished in connection with and as a part of navigation improvements. For instance, I doubt seriously if the Federal Government has any right whatever to construct and operate a dam exclusively for the production of hydroelectric power. If it is built in a constitutional way, it must be constructed to create or improve navigation. This has been recognized in every authorization made by the Congress for the construction of reservoirs and dams in our rivers. Although there is no navigation at all on the Colorado River in the far Southwest, if you will read the act authorizing the Boulder Dam, you will note that it is based upon navigation and the control of floods. The same, of course, applied to the dams built on the Tennessee River and on the Columbia River of the Northwest, which are used almost exclusively for the production of power. No one can or should object to hydroelectric power development on our rivers but we should not forget that if the job is to be done legally and within the plain letter of the law, the prime purpose must always be navigation and electric power, the byproduct. If this great development program is kept within the jurisdiction of existing agencies at all times under the control of the Congress, we may be sure there can and will be no perversion of the legislative intent. I think there is sound reason to doubt that these constitutional limitations will always be observed if Congress should delegate its duty and responsibility to authorities.

I plead guilty to the charge of being an enthusiast so far as our inland waterways are concerned but submit as justification, if any be needed, the indisputable fact that in the long list of things that ought to be done to insure the future of America, there is nothing more promising or alluring than the development and utilization of our waterways for every useful purpose. Second only to the human resource, our waterways constitute our most valuable national asset.

## A Square Deal for the Retailer

EXTENSION OF REMARKS
OF
**HON. H. CARL ANDERSEN**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter written by Inez B. Madsen, of Worthington, Minn., to Chester Bowles, Administrator of OPA, pleading for a square deal for the retailers of this Nation:

OCTOBER 19, 1945.

Mr. CHESTER BOWLES,
*Administrator, OPA,*
*Washington, D. C.*

DEAR MR. BOWLES: I am writing in behalf of the Benson Furniture Co., to protest the action of the OPA in granting price increases to manufacturers, which increases will have to be absorbed by the retailer.

This action discriminates directly against one group of business—the retailer—and forces him to bear more than his share of the burden. During the emergency we retailers were forced to absorb the 3- or 4- or 5-percent OPA adjustment, without any increase in our selling price, which became in many cases a distinct burden. Now there is talk of a further OPA adjustment, with only the retailer again to bear the burden.

The war years have been difficult ones for all of us and for retailers especially. Merchandise was scarce, our selling price was frozen, the OPA adjustment charge was added on, and our employees demanded higher wages. On every hand our overhead advanced, regardless of the fact that our warehouse had nothing in it to bring onto the sales floor. Yet, in spite of this, we assumed our share of the burdens of the war, working many hours overtime, cooperating in all bond drives and other war work, a duty we were proud to assume.

Now we ask only that the retailer not be singled out and made to bear the burden of a price increase without any recourse. If the manufacturer needs a price increase, then the retailer should be allowed to increase the selling price accordingly. What is necessary for the manufacturer is equally necessary for the retailer.

Private enterprise is the backbone of America. Let us cherish it.

Yours very truly,

BENSON FURNITURE CO.,
INEZ B. MADSEN.

## Navy Discharges

EXTENSION OF REMARKS
OF
**HON. BARTEL J. JONKMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. JONKMAN. Mr. Speaker, it is gratifying that the brass hats have liberalized their policy of demobilization in both the Army and the Navy during the past few weeks. Nevertheless, it may be interesting to some of my colleagues to know how they pass the buck to Congress on their ineptitude. The following was passed on to me out of a letter written by a lieutenant, senior grade, in the Navy, with over 18 months' sea duty on a carrier in the South Pacific, serving over the period of 1943–44:

Here is one thing that should be brought to the attention of someone for it appears that the Navy is pulling a fast one in an effort to get out from under the criticism that has been rifled its way. The most recent excuse circulated for not lowering the requisite points for discharge is that the Navy cannot let any large number of personnel out until Congress determines what the size of the postwar Navy will be. In other words, the Navy is putting the blame for the snail slow demobilization on Congress. We who are in the Navy are being told, via the scuttlebutt chain, that Congress by being dilatory on this matter is holding up demobilization. I cannot believe this to be the case, but rather lay the blame directly on the Navy for from my observations the delay in demobilization is entirely due to the extreme inefficiency of the separation centers. The tales told by those who have gone through the process of being separated are something to listen to. However, if Congress is at fault then certainly that should be brought to the attention of the public. Whatever the reason for the lack of action, demobilization is really ineptly handled.

## The Rural Interest Rate Confusion

EXTENSION OF REMARKS
OF
**HON. REID F. MURRAY**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the varying interest rates in effect for agricultural loans are very confusing. I list some of these loans in the following letter to the Honorable CLIFFORD R. HOPE, one of two delegates from the House to the FAO conference at Quebec:

OCTOBER 8, 1945.

Representative CLIFFORD R. HOPE,
*New House Office Building,*
*Washington, D. C.*

DEAR CLIFF: I note in the press that Mr. Paul Appleby, Assistant Director of the Budget Bureau, is to accompany you as an advisor to the FAO conference in Quebec.

Two years ago in December Mr. Appleby called at my office and told me and a visiting constituent some of the agricultural problems of the world. During the conference the discussion entered into the field of need for a world farm credit organization. It was pointed out that in Yugoslavia and other European countries the farm interest rates were high. I remember mentioning the fact that our own agricultural set-up was most assuredly due for repairs.

If the FAO does take up the question of farm credit I wish to call your attention to the following farm credit facts in our country.

1. Farm loans based on 65 percent valuation are made at a rate of 4 percent interest.

2. Farm loans based on 75 percent valuation are provided at a rate of 4½ percent interest.

3. Loans made under the Bankhead-Jones Act for 100 percent valuation are made for 40 years at a rate of 3 percent interest. In addition an average of $300 per farm is appropriated from public funds to find a Bankhead-Jones borrower a farm and still other public funds are used to service these Bankhead-Jones loans and call on borrowers.

Some of the nonagricultural thinkers in the USDA are now talking about credit on terms of "open end note and a zero rate of interest." Just what type of loans these are to be I do not know but I presume it means nonrecourse loans made according to the opinions of some bureaucrats and not made on ability to pay and without the embarrassment of any interest rate.

It would then not be surprising to see some New Dealer introduce a bill to provide a 150 percent loan and if the borrower would promise never to pay any of it back he would be guaranteed the loan without any interest whatsoever.

From 1930 to 1940 about 100,000 foreclosures were made by the Federal land bank. The reason these borrowers could not pay the interest was, as you know, due to adverse weather conditions and to the fact that we had below-cost farm production prices. The amount of the loans was relatively small as they averaged approximately $3,000 each.

While this foreclosing was going on the New Deal was buying 30,000 farms for people who had never before owned a farm. Ten percent of them were in one State, Georgia, although the loans were supposed to be made, according to law, on the basis of farms and tenants. Nearly one-half of these loans were made in five southern States. The result is that these States have a large number of 3-percent loans and the farmers in the cut-over regions of Michigan, Minnesota, Wisconsin, and other sections have the opportunity of paying 50 percent more interest or 4½ percent even though they made a down payment of 25 percent on their farms.

4. It also should be borne in mind that $25,000,000 was appropriated by the Seventy-ninth Congress to buy farms for nonveterans at 3 percent interest while under the GI bill most farm, home, and business loans are all made at a rate of 4 percent or more interest.

5. I understand from a member of the Veterans Committee that at present it would be necessary for a veteran to pay a rate of 8 percent interest if he wishes to secure a farm, a home, or a business in Alaska, under the GI bill.

6. In 1939, after 7 years of the much heralded "more abundant life" there were more foreclosures of Federal land-bank loans in Wisconsin than ever before in the history of the Federal land bank.

So, if Mr. Appleby or any of the delegates from other countries present a world farm-credit plan of too low interest rates I hope that you will have in mind the fact that we have an obligation to correct the interest rates paid by veterans and that it would not be desirable to set up a world farm credit rate that is lower than the 4½ percent that is being extracted from the thousands of farmers in the United States who have a 25-percent equity in the farm.

Sincerely yours,

REID F. MURRAY,
*Member of Congress.*

Mr. Speaker, in addition there is a 2-percent rate for the irrigation interests and a 2-percent rate provided for REA borrowers. These varying interest rates and the whole rural loan set-up is due for a constructive legislative approach. There is also the 5 percent interest rate on rehabilitation loans in the picture as well.

## Occupation Money

EXTENSION OF REMARKS
OF
**HON. FRANK CARLSON**
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. CARLSON. Mr. Speaker, the following interesting article was written by Cliff Stratton, Washington correspondent for the Topeka Daily Capital, in his column entitled "I See That."

It seems almost unbelievable that the United States authorities would turn over to the Russians the plates from which occupation money in the form of marks was printed. You will note by the article that these marks were redeemable at the rate of 10 cents per mark. This article seems almost incredible and many would doubt its veracity were they not the words of John W. Hanes, former Under Secretary of the Treasury. The article has further verification from a correspondent of the New York Times.

The conversion of the occupation marks into United States money should be a very profitable venture for any nation.

CLIFF STRATTON'S "I SEE THAT"

Monetary Notes, by William E. Spahr, a publication from the Economic National Committee on Monetary Policy, issue of October 1, says:

"Upon his return from Europe, John W. Hanes, one-time Under Secretary of the Treasury, reported in the New York Journal-American of September 9, that the United States authorities had turned over to the Russians the plates from which occupation marks are printed, that 'the Russians are running hog-wild with the marks their presses are turning out on a mile-a-minute basis,' that these marks are not redeemable in the Russian ruble but are redeemable in the United States dollar at the rate of 10 cents per mark, and that the United States Treasury (really the United States taxpayer) is being milked rapidly and to a degree yet unknown.

"'But you can't blame the Russians,' Mr. Hanes said. 'They were smart. You can blame our own stupidity and nothing else. Who wouldn't spend someone else's money?'

"Mr. Hanes could not tell the exact circumstances under which the Russians cajoled the Americans out of the money engraving plates. But, he said, it went something like this. Once the Americans and Russians met in Berlin, the latter immediately levied a demand for the plates.

"Conference after conference was held on the subject. Each wound up with the Russians politely but firmly asking, 'But where are the plates? For a while the Americans were adamant—and then they yielded. The Russian printing presses began rolling. The spending orgy—and inflation—was on.

"'The net result was as obvious as can be,' Mr. Hanes said. 'The Tiergarten resembled nothing so much as a busy day at the Belmont betting windows. The Russians, naturally, will buy anything you have to sell for any amount. They have nothing to lose.'"

Various confirmatory and some qualified reports have been sent from Berlin following the Hanes exposé, comments Mr. Spahr, in Monetary Notes, "but nothing seems to deny the general accuracy of the situation as portrayed by Mr. Hanes."

And proceeds to quote from the New York Times of September 14:

"It is a fact that the Russians received plates for the printing of occupation marks identical in every respect with those used by the western allies, except that the Russian-produced notes bear a dash mark before the serial number. No restriction was placed on the amount of occupation currency any power could issue. * * * In the first month of Berlin occupation troops of the Second Division sent home something like $3,000,000 in excess of their pay. This represented the proceeds of the sale of watches, cigarettes, chocolate, and fountain pens to Red Army soldiers."

And in the New York Times of September 15 Raymond Daniell, in the concluding paragraph, discussing this situation said:

"So every soldier who succeeds in changing them (Russian printed marks) into dollars is conducting a one-man raid on Uncle Sam's Treasury because he is exchanging worthless paper for real American dollars."

## The Creed of a Typical American

EXTENSION OF REMARKS
OF
**HON. MELVIN PRICE**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in This Week magazine, issued as a supplement to many of the Nation's newspapers on Sunday, October 14, 1945:

"HARRY TRUMAN SAYS—"

HERE'S THE CREED OF A TYPICAL AMERICAN

President Truman, people say, is just an average American. Certainly he is no spellbinder, no fire eater. And yet because he is an average American, and talks the language and expresses the faith of the average American, you will hear more and more people saying: "Harry Truman says—" Here are some of the things he has said:

"I am confident that the average American can use his most precious heritage—common sense—in the solution of the pressing problems of the day.

"I wonder if it may not be such wholesome characters as Tom Sawyer and Huckleberry Finn who will, as symbols, show the world our undying contribution to civilization. * * * They are our people and our lives.

"I like to think of our State of Missouri as situated near the heart of America, and politically—like its physical counterpart—as leaning toward neither extreme. Bitter experience has taught Missourians that it is disastrous to permit either radicals or reactionaries to obtain control of our political affairs.

"I have little patience with those who concoct fancy and plausible schemes out of thin air, ignoring the lessons of the past.

"There is no substitute for facts. When the facts are clear and are known, unbiased men do not differ as to conclusions.

"I personally am a firm believer in individual incentive, and I believe that this country reached its present development as soon as it did largely because there was free play for individual initiative. * * * But we all know that individual initiative when unregulated is abused. That is why every civilization develops law.

"The profit motive of our economic system, I think, is superior to any other system the world has known.

"There must be, and is, ample room in this country for every citizen to have the right to achieve and progress according to his capabilities and his industry and integrity.

"I believe in the brotherhood of man; not merely the brotherhood of white men, but the brotherhood of all men before law. I believe in the Constitution and the Declaration of Independence. In giving to the Negroes the rights that are theirs, we are only acting in accord with our ideals of a true democracy.

"The future of America depends upon the character and quality of our youth. The primary problem is one of home training, general education, and character building.

"I believe in an adequate national defense program. I think that the old Puritan who prayed regularly for protection against the Indians was much safer when, at the same time, he prudently kept his powder dry.

"For every Government service rendered the bill must be met by taxation. Most people want all the benefits and service, but want them for nothing.

"Today America has become one of the most powerful forces for good on earth. We must keep it so.

"Thousands of our brave fighting men will never return. The least we can do in respect to those heroes is to make sure that no selfish group will ever again be permitted to plunge the entire world into war. America's heroic dead would not want empty honors in bronze nor statues of marble. The only monument worthy of their great sacrifice is a much better world—a world blessed with just and lasting peace.

"If any nation would keep security for itself, it must be ready and willing to share security with all. That is the price which each nation will have to pay for world peace.

"When the people of the world fully realize that the public welfare is the supreme law, we may at last have real peace on earth, and good will toward all mankind."

## Ring-Around-the-Rosy by Navy Brass on Guam Doesn't Get Us High-Pointers Home, Says Letter

EXTENSION OF REMARKS
OF
**HON. JAMES H. MORRISON**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. MORRISON. Mr. Speaker, the following letter was received from a group of naval men on Guam Island, now classified as essential. I have brought the matter of replacement to Secretary Forrestal's attention, but I also want my colleagues to have the benefit of the information given me:

JOINT COMMUNICATIONS ACTIVITIES,
NAVY NR 926, FPO,
*San Francisco, Calif., October 1, 1945.*

Hon. JAMES H. MORRISON,
*United States Congress.*

MY DEAR SIR: As of this date, no man from joint communications center on Guam has been discharged under the point system, which is a month and a half old.

About 125 men were eligible as of August 15, and with the allowance for overseas time, an additional hundred or more are now entitled to discharge.

Many of us were not trained for communications but slapped in here in a hurry to win a war, and we now learn that we have become "essential" and can't be released without qualified replacements. We were not qualified when we came here, but it didn't take us long to become essential—once the war was over.

During the past 2 weeks over 500 new men have arrived and they are billeted in improvised tents as there is no room for them in the barracks. This is putting an additional drain on the chow, which has certainly been nothing to brag about and has become even worse since Nimitz' headquarters returned to Hawaii.

We would like to know why 500 men can't replace 200 and soon learn to become "essential" as we did—and just as quick, particularly in view of the fact that the traffic has decreased over 50 percent since hostilities ceased and can more than amply be handled by the men not now eligible for discharge.

Is it essential to order officers' liquor at a higher precedence than a Red Cross message notifying someone of a death in his family? Any consideration shown by our Representatives in getting us home will be greatly appreciated.

Yours very respectfully,

## A Salute to a Soldier: Brig. Gen. John J. Kingman

EXTENSION OF REMARKS

OF

### HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. MANSFIELD of Texas. Mr. Speaker, on October 20, 1945, Brig. Gen. John Jennings Kingman retired for the second time from active service in the Corps of Engineers, United States Army, his tasks completed. Four years ago, nearing his sixtieth birthday after continuous military service of over 40 busy years, he voluntarily retired to inactive status. Up to that time his career had covered not only the peacetime execution of important public works, but outstanding service and military achievements of the highest order in the First World War and in subsequent General Staff work. In December 1941, in the emergent need for carrying out the more-than-ever vital civil functions of the War Department under the steadying hand of experienced officers, the Chief of Engineers immediately recalled him to active duty, and General Kingman, being first of all a soldier, cheerfully resumed harness and undertook the exacting tasks assigned, which he has performed throughout the war years with exceptional ability.

General Kingman, himself the son of an outstanding engineer officer, his father having been Chief of Engineers, was born in Omaha, Nebr., June 18, 1882, and was appointed to the United States Military Academy from Tennessee in June 1900. From West Point he was graduated high in his class and thus earned one of the coveted commissions as lieutenant in the Corps of Engineers before attaining his twenty-second birthday. From that time on his career has followed the active, varied and colorful pattern that has come to be identified with the experience of the typical Army Engineer. As most of us realize, a combat officer cannot always learn how to fight by fighting, but an engineer officer can and does learn how to build by building, and the solution of many a war problem has been worked out in the peacetime construction of public works. The successful engineer officer has to do not only everything any other engineer can do, but he also has to do everything any other combat officer can do. Although that covers a lot of ground, General Kingman's fine record shows the accomplishment of all these duties with distinction.

General Kingman's peacetime assignments have ranged all the way across the country and to the Philippines and European countries. But the river and harbor project in which he takes most satisfaction is, I believe, the Cape Cod Ship Canal, which materially shortens the coastwise steamer lanes between Boston, Providence, and New York. With characteristic energy and thoroughness, General Kingman took over this job, improved the design and completed the work ahead of schedule and below the estimated cost of the project.

He has always taken particular interest in projects for connecting existing waterway systems so that the public may derive maximum benefit from the transportation routes thus provided. As senior member of the Board of Engineers for Rivers and Harbors, which the Congress rightly considers its own advisory body, he has consistently kept the interested committees informed as to the technical and economic aspects of proposals for improvements for navigation, flood control, and other public uses of our water resources. As chairman of the board, in hearings held to develop local aspects of river and harbor projects, he has presided with unfailing courtesy, fairness, tact, and firmness, tempered always with a relieving sense of humor. Those who are too eager for favorable reports on questionable projects, however, have found his attitude more than a little to the firm side of center.

Although General Kingman's citations and medals attest the high regard in which his abilities are held by his superior officers, the final test of a commander is the opinion of his subordinates. In that respect the General has reason for complete satisfaction. He has always been prompt and generous in acknowledging his dependence upon the diligence and loyalty of the men under him, be they enlisted men of the engineer battalions or engineers and economists forming the civilian staffs of the boards over which he has presided. And I have ample evidence that he has earned their universal approval, respect, and affection. I can pay no higher tribute to the record of a soldier.

## The 90-Percent Parity Floor Prices in Relation to World Agricultural Prices

EXTENSION OF REMARKS

OF

### HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the 90 percent of parity floor prices to which the Congress has been committed by legislation must have consideration if these commitments are to be fulfilled. I include the following letters written to our colleague, the Honorable CLIFFORD R. HOPE, who is one of the two delegates from the House of Representatives to the F. A. O. Conference at Quebec:

OCTOBER 6, 1945.

Representative CLIFFORD R. HOPE,
*New House Office Building,*
*Washington, D. C.*

DEAR CLIFF: I note in the press that there is to be a meeting of the World Food and Agriculture Organization in Quebec, Canada on October 16, and that you have been selected to attend. I wish to congratulate you.

As one who supported your position when this legislation was before the House I feel free to write you openly as to some of the facts that should be kept in mind and brought out at this world conference.

I wish to call your attention to the promises made by the Congress to the food and fiber producers of the United States in the first Price Control Act and in subsequent legislation.

While the basic commodities, such as cotton, wheat, rice, corn, and peanuts, have basic legislation with loan provisions of 90 percent parity, with the exception of cotton which has a 92½ percent parity, we also under this legislation provide for the 90 percent parity floor for certain crops and farm products during the war and 2 years after the first January 1, following the end of the war. These crops and products include the following: American-Egyptian cotton, butterfat, chickens (except chickens under 3½ pounds and broilers), dry beans (specified classes), dry peas (specified classes), eggs, flaxseed for oil, hogs, milk, peanuts for oil, potatoes, soybeans for oil, sweetpotatoes (cured), turkeys.

In addition to the above we have the other crops and products which have a support program although they are not classified as coming under the Steagall amendment, as follows: Barley, fruits for processing (apricots, peaches, pears, prunes, raisins), grain sorghums, hay and pasture seeds (specified kinds), naval stores, rye, sugar beets, sugarcane, vegetables for canning (snap beans, sweet corn, green peas, tomatoes), winter cover-crop seeds (specified kinds), wool, oats.

It appears that it would be very fitting that the agricultural experts of other countries be advised of these commitments already made by the Congress to the food and fiber producers of our own country.

Sincerely yours,

REID F. MURRAY,
*Member of Congress.*

IS THE UNITED STATES TREASURY TO BE USED TO PUT A FLOOR PRICE OF 90 PERCENT PARITY FOR ALL THE AGRICULTURAL PRODUCTS OF THE WORLD?

OCTOBER 6, 1945.

Representative CLIFFORD R. HOPE,
*New House Office Building,*
*Washington, D. C.*

DEAR CLIFF: Supplementing my previous letter I wish to call your attention to page A2091 of the Appendix of the CONGRESSIONAL RECORD whereon you will find a table which shows the leading farm crops and the parity prices as figured by the present parity formula.

This table also shows the parity prices which would prevail if the Pace bill, which includes farm labor, should become law.

It further shows the estimated world prices of these leading agricultural products, and the present and proposed duty under the new Reciprocal Trade Treaties.

One glance at this table will show that the guaranteed 90 percent parity floor for domestically produced agricultural products, so far as the principal farm products are concerned, exceeds the world prices plus the proposed duty.

If the Pace bill, which has again passed the House committee and which previously passed the House, should become law and we have a floor price based on the Pace concept of parity, which includes giving consideration to farm labor, we will be facing a situation all the more embarrassing. In other words, we will have to support the world prices for agricultural products, which might be based on 90 percent of present parity prices or which may be based on 90 percent of the Pace parity prices.

Sincerely yours,

REID F. MURRAY,
*Member of Congress.*

---

QUOTA ON IMPORTS: SUPPLEMENT THE SMOOT-HAWLEY RATES—THE NEW DEALERS MAKE POLITICAL CAPITAL OVER THE SMOOT-HAWLEY ACT BUT THEY ERECT MORE TRADE BARRIERS THAN WERE EVEN IN EXISTENCE

OCTOBER 6, 1945.

Representative CLIFFORD R. HOPE,
*New House Office Building,*
*Washington, D. C.*

DEAR CLIFF: I am taking liberty of calling your attention to the fact that it might be well to have in mind that there has been considerable interest evidenced in the establishment of quotas on agricultural products that can be imported into the United States.

At this time it appears that only some 125,000 bales of cotton can be imported annually, which is a rather small percent of the ten to twenty million bales produced in the United States.

You are familiar with the quota on cattle, 225,000 weighing above 700 pounds and 100,000 weighing less than 200 pounds. There is no quota on the importation of dairy cows, but legislation to this effect can be expected to be introduced since there is no valid reason for differentiating between the two classes of cattle.

There is a quota on the importation of potatoes of 1,000,000 bushels a year, beginning September 1, except when the domestic production falls below 350,000,000 bushels a year, then the quota is increased.

There is a quota on the importation of whole milk which is only 3,000,000 gallons. This is a rather insignificant amount when one hundred and ten to one hundred and fifteen billion pounds are produced in the United States each year.

Legislation has already been introduced to put a quota on the importation of butter. Similar legislation has been introduced to put a quota on cheese. The other farm products which do not have quotas at the present time will have legislation introduced establishing quotas on them as well.

I realize that you are familiar with the quota on wheat imports, 800,000 bushels, which is only one-tenth of 1 percent of our annual wheat production. This import quota has been placed on wheat in addition to the 42-cent duty, as provided in the Smoot-Hawley Act. In fact, millions upon millions of bushels of wheat would have been imported during the war on which duty would have been paid if it had not been for the limitation or quota that was in effect.

What will the attitude toward quotas be at Quebec?

Sincerely yours,

REID F. MURRAY,
*Member of Congress.*

---

## Central Valley Project

EXTENSION OF REMARKS
OF
## HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. MILLER of California. Mr. Speaker, in his address to the Congress on September 6 President Truman called attention to the necessity for the further development of our great natural resources. In that connection he declared that "favorable consideration should be given by the Congress to Federal reclamation projects as outstanding opportunities for returning veterans," and declared further that—

We know that by the investment of Federal funds we can, within the limits of our own Nation, provide for our citizens new frontiers—new territories for the development of industry, agriculture, and commerce.

* * * * *

We know that we have programs, carefully considered and extensively debated, for regional development of the Columbia River in the great Northwest, the Missouri River, the Central Valley of California, and the Arkansas River.

With respect to the Central Valley project in California, I wish to call your attention to the action taken at a meeting recently held in San Francisco. In attendance at this meeting were some 300 delegates, representing about 60 organizations in the State. The delegates went on record to deplore the conflict in authority which has been established in developing the project, and endorsed the program of the Bureau of Reclamation. Under leave to extend my remarks in the RECORD, I include two newspaper articles which give an account of this meeting:

[From the Sacramento Bee of September 10, 1945]

PARLEY PREFERS CVP CONTROL BY RECLAMATION UNIT

SAN FRANCISCO, September 10.—The Central Valley Project Conference today is on record favoring the construction of the Central Valley project by the United States Bureau of Reclamation rather than the United States Army Corps of Engineers.

This stand was taken late Saturday after Col. Lester F. Rhodes, Sacramento district Army engineer, and R. S. Calland, Sacramento region director of the bureau, explained their plans for water development in the Central Valley. Both speakers agreed the CVP should be developed from a multiple purpose standpoint but offered different philosophies on how it should be undertaken.

REPRESENT 60 GROUPS

The CVPC gathering, attended by approximately 300 persons, representing more than 60 organizations, scored the "antagonism between the two agencies in their conceptions" and said in its resolution "this divergence of plans can only result in a hideous botch of the project."

In addition to advocating bureau control of the project, the conference went on record urging Congress to vote an appropriation for Shasta Dam transmission line and the stand-by plant at Antioch. The bureau considers the facilities necessary to carry out its power distribution program in the central valleys.

VOTE IS UNANIMOUS

The action of the resolutions were announced by George Sehlmeyer, of Sacramento, master of the California State Grange, who presided over the conference. He said the votes on the resolution were unanimous.

Sehlmeyer declared plans were completed for greatly expanding the organization to work to carry its program to completion.

The conference approved a report by Robert Read, conference consultant, which said the Army engineers consider each flood control and navigation project as "an isolated unit," while the bureau has an "over-all plan."

A conference statement of policy declared: "The Army engineers' report shows that they cannot develop the Central Valley of California in such a manner that all of the natural resources may be used for the benefit of the people.

"They have no coordinated plan for the interchange of water or power from one section to another.

"They do not contemplate the development of power at the higher dam sites.

"The reclamation report shows clearly that they have a coordinated plan that covers the whole Central Valley.

"Under their surveys and construction, all the water will be conserved for the use of irrigation and, inasmuch as two-thirds of the arid land is in the south end of the valley and the rest of the water is in the north end of the valley in the Sacramento Basin, it is of the utmost importance that this water and power be interchangeable.

"* * * We feel that the construction and administration must be placed under the Reclamation Bureau and that there be no dual operation of any of the individual parts of the development."

VIEWS GO TO CAPITAL

Sehlmeyer declared the organization "offered no objection" to the building of "purely flood-control" dams by the Army engineers. He said the views of the group were telegraphed to the Rivers and Harbors Board of Engineers, which was scheduled to open hearings today on the Army engineers' comprehensive plans for the Central Valley.

Sehlmeyer reported the immediate objective is to "straighten out—not confuse" CVP issues and for that reason the organization took no stand on the Grange master's proposal for a three-man authority to administer the project.

Those attending the meeting represented the American Federation of Labor, Congress of Industrial Organizations, State Grange, California Farm Bureau, Presbyterian Synod, Catholic Rural Life Council, Western Dairymen's Cooperative Union, and other organizations.

[From the San Francisco Chronicle of September 9, 1945]

FARM GROUP OPPOSES ARMY CVP CONTROL

California's 15-year plan for developing water resources in the Great Central Valley should be directed by the Bureau of Reclamation and not Army engineers, members of the Farmer-Labor-Consumer Association resolved yesterday.

The association's delegates, after hearing R. S. Calland speak for the bureau, and Col. Lester F. Rhodes for the Army, voted to urge President Truman and Congress to give the Reclamation Bureau charge of the project.

George Schlmeyer, master of the State Grange, declared that the Army's report "shows that it cannot develop the Central Valley project in such a manner that all of the natural resources may be used for the benefit of the people."

Calland told the 250 delegates attending the conference that the Reclamation Bureau's plan for development over a 15-year period would provide:

1. A million additional acres of arable land through irrigation and reclamation.

2. A million kilowatts of low-cost power for electric-power use.

Calland said that the Bureau's plan is based upon developments provided for by appropriations of $360,000,000 already made. Of this sum, $160,000,000 has already been spent. The plan also, however, contemplates an additional appropriation of $572,000,000 to complete the entire project.

## Busy Days

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 18, 1945*

Mr. HOFFMAN. Mr. Speaker, Indian summer, that delightful season of the year when, in normal times, Michigan lovers of the outdoors drive down the country roads, admiring the unexcelled beauty brought to the forests and the roadsides by nature's incomparable artist, Jack Frost; when thoughts turn to the gathering of nuts and apples to be stored to add to the enjoyment of family gatherings around the home fireplace this coming winter, or to trips to the fields with gun and dog; or listen for the thrilling calls of the Canadian geese on their southward flight. Congressmen in Washington have no room for distracting thoughts or for the planning of ways and means of recreation, which might do so much to restore our serenity and clear-thinking.

So-called full-employment legislation; unemployment compensation—$25 for 26 weeks; demands that the minimum wage be increased from 40 to 65 or 75 cents per hour be enacted; almost innumerable requests for Federal appropriations for almost every conceivable purpose; pleas from industrialists and businessmen from home, who are hindered in their efforts to bring about full reconversion by OPA regulations and strikes; wires and letters from servicemen, their relatives and dependents, give the people's Representatives no time for self-pity or frivolous, though entertaining, activities.

More than 1,000 CIO members have been in Washington asking—at times, demanding—that their Representatives vote for a flat 30-percent wage increase, which beyond question would also increase the cost of living, add to the price of everything you buy; that all employers be required to pay not less than 75 cents per hour; that we put into law their demand that all unemployed, who cannot get a job at suitable wages, hours, and working conditions, be, for 26 weeks, paid $25 a week. Labor's legislative representatives, appearing before our committee, estimated the number of unemployed would be 8,000,000. Twenty-six weeks times $25 per week times 8,000,000 unemployed equals $5,200,000,000.

Our committee heard witnesses who insisted that, unless private enterprise brought about full, regular employment at satisfactory wages, the Federal Government step in and appropriate enough money to create suitable jobs which would give all who are unemployed, useful, full-time employment at a remunerative wage, which Mr. Cowan, representing Philip Murray, of the CIO, said should be not less than $3,000 per year. He estimated the number who would be unemployed at not less than 8,000,000—$3,000 times 8,000,000 unemployed makes $24,000,000,000.

Britain is insisting upon a loan or gift of $6,000,000,000. Russia wants a like sum. UNRRA is coming along for several hundred million. The House just voted $703,000,000 to establish airports throughout the country. And none of the foregoing touches expenditures for customary, necessary Federal activities—$41,903,000,000.

Many Congressmen, like myself, have more than one committee assignment. Last week, one committee, of which I am a member, heard witnesses speaking for William Green, Phil Murray, chambers of commerce, national, industrial, and commercial organizations; while, at the same time, the Labor Committee, of which I am privileged to be a member, was hearing Henry Wallace on minimum wage legislation. The House was also considering important legislation. One day there were five roll calls, necessitating trips from committee rooms to the House Chamber. In addition, there were piling up in the office the telegrams, letters, and phone calls from those who wanted their men home from the Army and Navy.

In addition, there was a very important hearing of the Smith committee, which, among other issues, had before it the right of OPA to revoke—after the manufacturer had increased obligations to more than $200,000, employed 150 additional workers and sold more than a half million dollars' worth of his products—the written order of Chester Bowles giving a manufacturer of the District a price on his products.

Folks, these are busy days in Washington. Your Representative wonders how much money can be appropriated before disaster overtakes us; how many young Americans are to be conscripted for foreign service; how long America's sons and husbands are to remain abroad; when, if ever, other nations will cease fighting and when, if ever, we, as Americans, will decide to stay out of their battles. When will we begin to set our House in order; begin to clean out subversive elements; start restoring to our own people the "four freedoms" and return to the foundation which has made our Nation great, our people the envied of all the world?

No; I am not discouraged. I feel honored and am glad to have the opportunity to serve you in these trying days—to my mind, more pregnant with danger than were those of the war.

## Sixteen Million Five Hundred Thousand Yanks

EXTENSION OF REMARKS
OF
### HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Wilmington Morning News of October 22, 1945:

SIXTEEN MILLION FIVE HUNDRED THOUSAND YANKS

Not all the suffering in the Army is honored by the Purple Heart. To judge by a report just made public by Maj. Gen. Robert H. Mills a goodly portion of the total pain endured by our GI's was encountered in the prosaic setting of the dentist's chair. Since Pearl Harbor, the general says, Army dentists under his command have pulled the jaw-breaking total of 16,500,000 teeth and filled cavities in 71,700,000 more.

It makes our own molars and incisors twinge a little in sympathy just to read about dental excavations on this gargantuan scale. There may be, as the humorists are constantly assuring us, something funny about somebody else sitting down for a session in the dentist's chair. But to us, at least, there is something overwhelming in the thought of 16,500,000 teeth being yanked out and tens of millions others being drilled.

To be sure, there are major compensations for the soldiers as a result of this herculean dental task. The men who are coming out of the Army now are probably infinitely better off on the whole, as far as their teeth are concerned, than they were when they first went into uniform. At least 2,600,000 of them are coming back with new sets of false teeth; the teeth of millions of others are undoubtedly in better repair than ever before. The Army dentists have, without doubt, done a good and worth-while job, but we would just as soon not talk about it any more.

## Conditions in Poland

EXTENSION OF REMARKS
OF
### HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. GORDON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an appeal sent to President Truman, all members of the Government affected, and to every Member of the House and Senate, by

the Polish-American Congress, 1520 West Division Street, Chicago, Ill., dated October 20, 1945.

The Poles of America are deeply concerned over the latest flow of information received in this country through press releases emanating from Poland. They tell of the occupation of Poland, our faithful Ally, by the Russian Army and the dreaded Russian secret police, their murdering of innocent people, their raping and pillaging. It curdles one's blood to read of these atrocities that are raging in this land.

HARRY S. TRUMAN,
*President of the United States,*
*White House, Washington, D. C.*

MR. PRESIDENT: A recent Associated Press dispatch reports that Red Army units, with the sanction of the Stalin-appointed Polish government, are being sent to each of the 17 provinces of Poland. This is being done under the guise of protecting the country from an "epidemic of banditry."

Catherine the Great offered exactly the same kind of "protection" before she took over Poland.

Russian headquarters in the capital of every province with Russian generals in command of all army units everywhere in Poland!

This grim news comes out of martyred Poland at the very moment when Mr. Wincenty Rzymowski, foreign minister of the Moscow-conceived government of Poland, is conferring with our State Department, which is still upholding—in words—the traditional American policy of non-recognition of governments that do not represent the free will of free peoples.

As Poland's independence is being strangled by a Soviet military noose, there is not a single word of protest from our Government.

This silence only intensifies the heart-tearing mental, physical and spiritual anguish of the people of Poland.

America's staunch ally, Poland, is a victim of ingratitude, injustice, and deception without parallel in history.

Not only was this friendly republic deprived at Yalta of one-half of its ancient lands, where barely 1 percent of the prewar population was Russian, but the sovereignty of what remains of Poland was destroyed by the imposition of an illegal government.

But Poland was not the only country sold into Soviet slavery at the Yalta market place. There were others. Ten nations, with a total population of 120,000,000 human beings—men, women and children, with the same love of freedom Americans have—met the same tragic fate.

While we are not lacking in appreciation of your expression of friendship for Poland in your speech after the Potsdam Conference, we are keenly disappointed to learn that injustices against Poland and other Soviet-held countries were not corrected at that historic gathering. It was a sad commentary on American diplomacy to learn that even Poland's reparations were placed in the exclusive custody of the Kremlin.

Victim of German and Russian aggression during war, Poland is likewise a target for plunder, murder, hunger, disease, and poverty during peace.

A member of the UNNRA Commission in Poland, Clifford H. Nillson, reports Poland is undergoing the most terrible ordeal in its history.

Representatives GORDON, Democrat, Illinois, and RYTER, Democrat, Connecticut, members of the Foreign Affairs Committee, after a tour of Poland, formally protested to you, Mr. President, that Russia is using the United Nations Relief and Rehabilitation Administration for political purposes.

We quote briefly from Representative GORDON'S observations:

"The Russian occupation army is behaving very badly (in Poland). We saw their arrogance and unfairness in taking advantage of the poor people of the city (Warsaw). We saw the nearby highways jammed with hundreds of heads of cattle, horses, and farming implements, being taken out of Poland by the Russians and going farther east. Pillaging of the shops on the street was going on most freely and the snatching of purses from Polish women is a daily occurrence. There also exists a wholesale raping of the Polish women. When resistance would be given, the Russian soldier would use his weapons of war and kill."

To conceal his intentions, Stalin juggles words cleverly. Repeatedly, he has stated he wants a strong and independent Poland. If he really wants such a Poland, he can have it. If he wanted a strong Poland, he would not have annexed one-half of it. If he wanted an independent Poland, he would not have imposed upon it a puppet government of Moscow-trained Communists.

Can anyone explain why Germany, an enemy, is under joint Allied occupation while Poland, an ally, is under exclusive Russian control?

If Russia would only withdraw its armies and stop interfering in Poland's internal affairs, Poland's troubles would come to a swift end.

The United States could and should have avoided recognizing the Communist-dominated Polish Government, until free elections were realized and not merely promised.

The attitude of our Government toward friendly Poland is in sharp contrast to our constructive intervention in hostile Bulgaria where we flatly refused to recognize the undemocratic government, installed by Moscow.

The American Nation is not bound by the secret agreements of Teheran and Yalta, made without the knowledge or approval of the Congress or the American people.

The Constitution of the United States invests in no one, no matter how exalted his position, the authority to consent to the mutilation of free nations, to the destruction of their legal governments and to the condemnation of millions of decent and law-abiding people to the yoke of a despotic foreign power.

Our responsibility to right the wrong, caused by secret agreements, violating the laws of God and man, is inescapable.

Hitler is gone, Mussolini is gone and yet there is no freedom in Europe.

The dangers against which the Polish-American Congress, representing 6,000,000 Americans of Polish descent, has consistently warned our Government are now leading to a tragic climax.

As a result of blind appeasement, all gains made after the First World War have been wiped out. Nations freed by the First World War have all been enslaved by the Second World War. Stalin, who entered the war in 1939, not as Hitler's enemy but as his ally, is out to finish the task begun by Hitler—the domination of the world.

With efforts to bring freedom to all nations being nullified by Russia, granting credit to Russia indiscriminately would be foolhardy, especially until Russia withdraws to prewar frontiers and proves by actions it has no selfish aims of aggrandizement or desire to destroy democratic civilization.

In view of the ever-growing chain of slave nations, releasing the secret of the atomic bomb to Russia would spell the doom of America. This secret should be guarded carefully, for it is the only safeguard our country has against further Russian expansionism.

America's security and the peace of the world depend upon the correction of political blunders made during the war.

Unless there is a reversal in our foreign policy, it is folly to talk about liberty, democracy, and peace.

As the shadows of despair are deepening over the world, this is not the time for silence.

For freedom's sake, Mr. President, please urge independence for Poland and for all our allies. Do not assist in the crucifixion of the people of Europe. They want to live as we Americans do, not to suffer and die.

This war was fought to protect nations from aggression.

Precious American blood was spilled to purchase freedom and not tyranny for the world.

For the Polish-American Congress:
CHARLES ROZMAREK, *President.*
HONORATA B. WOLOWSKA, *Secretary.*
JOHN J. OLEJNICZAK, *Treasurer.*

## Congress Takes Back Funds Authorized for War Purposes

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. PITTENGER. Mr. Speaker, headlines in the newspapers for Saturday, October 20, read "House votes fifty-two billion cut in spending," and then goes on to state the House of Representatives had passed the night before a bill, H. R. 4407, to reclaim $52,000,000,000 in war spending authority. Hon. CLARENCE CANNON, chairman of the Appropriations Committee, is reported to have told Chief of Staff Gen. George C. Marshall, that while the war was going on the committee authorized all the money needed in the war effort. Now Mr. CANNON is reported to have said that the shoe is on the other foot, and the war is over. In case of doubt, the War Department would not get the appropriations.

Mr. Speaker, it is rather unusual for Congress to consider legislation, such as H. R. 4407, reducing certain appropriations and contract authorizations for the fiscal year July 1, 1945, to July 1, 1946. The action of the House last Friday, October 19, in passing this bill is a healthy sign. However, it can really be classified as a matter of bookkeeping because the money has not yet been spent, and what Congress has really done is make certain that Government agencies will not go on a spending spree and waste funds of the American taxpayer.

It is very unfortunate to have to know that the average Government bureau is supposed to ask for twice as much money as it needs, and then when it gets more than it actually needs, from Congress, the Department heads have a patriotic urge to spend needlessly—just call it waste—whatever funds they do not need. If they ever adopt the habit of turning back money into the Public Treasury, they are certainly going to shock the American people half to death.

Just to avoid misunderstanding—these remarks also apply to the War Department and to the Navy Department. Congress voted all the appropriations they requested in order to win World War II. Following victory, both the

Army and the Navy still keep men in our armed forces, some of them cripples, and none of them serve any useful or economic purpose. Apparently the high ranking Army and Navy officials, who ought to consider the American taxpayer in peacetime, just figure it is proper to overlook him. The result is going to be that when they ask the American people to support their national defense programs, even though those programs are sound and constructive, they will not get any support. Most people reason that if these folks want to waste the taxpayers' money in peacetime, they cannot be depended upon to do the right thing in connection with our national defense program. It is too bad that they do not realize this because it is my firm conviction that there will always be need for an army and a navy adequate to command the respect of other countries in this world.

In spite of a lot of wishful thinking, human nature has not changed much since VE-day or VJ-day. Teddy Roosevelt was right when he said, "Tread softly and carry a big stick."

As an illustration of how money is being wasted, the story of Sgt. Bernard B. Spindell as related in a news item in the Times-Herald for October 8, 1945, is very much in point. The situation related by him is a reflection upon the ability of those in charge of our armed forces. I do not like to tell them that but somebody must give them these unpleasant facts. This story is similar to a great many that come to us from day to day. As related in the Times-Herald, it is as follows:

RUNNING ERRANDS FOR GIRLS NOT SARGE'S IDEA OF ARMY JOB

(By Frederick C. Othman)

All afternoon Sgt. Bernard B. Spindell sat quietly while the generals told the Senate Military Affairs Committee what an elegant job they were doing in discharging soldiers from the Army.

The sun was sinking when they'd finished. The sergeant stood up on his two big brogans, pulled down his coat, and asked Senator EDWIN C. JOHNSON, of Colorado, the chairman, whether he could ask Brig. Gen. R. W. Berry a question.

"Why, certainly, son," the Senator replied.

Before we go any further into this it must be pointed out that General Berry was assistant headman in charge of discharges. The sergeant was a 26-year-old New Yorker with a small mustache, a pink face, and a desperate expression around his mouth.

NOW HE KNOWS MORE

"I would like the general to tell me," he said, "whether the Army intends to discharge me, find me some work to do, or keep me in the ranks doing absolutely nothing whatever."

The general said he needed to know more about the sergeant's case. By all means, the Senator said. So Sergeant Spindell told his story without gestures and with frequent halts while he thought of the right words. He tried to be polite about it; he didn't want to put the general on the spot; yet he had to get the facts across. Two dozen GI's sat in awe while he talked. So, too, I think, did as many brass hats at the witness tables.

Sergeant Spindell said that he enlisted in 1942 to fight the Nazis. The Army sent him to Fort Monmouth, N. J., where he soon became an expert repairman on sound equipment for Signal Corps talking movies.

"So they said I was on a critical job," the sergeant continued. "They wouldn't send me across. That was all right. I did my best."

The years rolled by while the sergeant mended loud speakers in New Jersey. One day a chunk of machinery fell on him and injured his back. He was disqualified physically for overseas service, but he still was good enough to fix the machinery.

"Then the war ended," he said. "There was no more equipment to repair. I was a surplus soldier with nothing to do and I inquired whether I could be discharged from the Army. I was told that I could not be; not until the high-point men from abroad got out."

The sergeant went back to reading detective stories, to twiddling his thumbs, to worrying about the civilian film job that awaited him, but wouldn't wait much longer.

"So on September 7," he said, "I was transferred to the base at Astoria, Long Island. There they were amazed. They had nothing for me to do; they said they could not understand why I had been sent there. I spent 35 days at Astoria."

ERRANDS FOR GIRLS

He ran errands for the civilian girls in the film laboratory and he bit his fingernails. Then he was transferred back to Fort Monmouth. He got there last Friday, obtained permission from his commander to come to Washington, and arrived by day coach.

The general fidgeted in his chair, but when the sergeant had finished I must report that he responded generously.

"We have not done the right thing in the sergeant's case," he said. "It looks as though the Army top-side needs straightening out. I will look into this."

The sergeant wiped the sweat from his brow. His mouth looked better; the desperate expression had disappeared. He said all he had to do now was get back to Fort Monmouth before his pass expired.

IS IT THE ARMY'S IDEA TO WASTE PUBLIC FUNDS?

In view of the foregoing newspaper item which clearly indicates that here is a member of the armed forces who apparently could be discharged without such remarkable procedure being dangerous to public health, safety, or otherwise, it is fair to comment on the subject that someone in the Army favors wasting public funds. I do not need to repeat what I have already said about this matter. When you multiply this case by one or two million cases, you run into a large amount of money. In my opinion, the bill reducing these appropriations is good, so far as it goes. It does not go far enough. A lot of these appropriations that were made for war purposes should be completely wiped out. This drastic procedure almost appears necessary, when we consider the fact that they are still drafting married men with two or three children, in peacetime, and then these fellows who are drafted have absolutely nothing to do. This is no way to reduce expenditures and by the same token, no way to reduce the tax burden. So, I hope the committee brings in another bill and cuts off a few more billion from funds already appropriated which are not needed in peacetime.

DWORSHAK AMENDMENT SHOULD HAVE BEEN ADOPTED

Our distinguished colleague from Idaho, MR. DWORSHAK, offered an amendment requiring that the Lend-Lease Administrator cancel some of the lend-lease contracts. His amendment should have been adopted. Lend-lease was intended only to help in winning the war. The war is over and there is no justification for another single dollar of lend-lease money going to foreign countries. I think it too bad that this amendment was defeated.

CONGRESSMAN RANKIN'S AMENDMENT TO SPEED UP DEMOBILIZATION SHOULD HAVE CARRIED

While this bill was under debate Congressman RANKIN offered an amendment which would compel the heads of the Army and the Navy to discharge men in the armed forces who are standing around in uniform doing nothing. They ought to be returned to civilian life where they can do something useful, be with their families and get ready to take jobs that are now available. They can then support their families and help rebuild this country, after the ravages which have been inflicted on it by World War II. This amendment should have been adopted.

## One Big "No" to Russia

EXTENSION OF REMARKS

OF

## HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of October 18, 1945:

ONE BIG "NO" TO RUSSIA

Russia still insists on a control council for Japan which would be superior to General MacArthur and in which Russia would have an important voice, according to Secretary of State Byrnes.

The United States is still opposed to any such move to admit Russia, Britain, France, China, or any other power to such a position but welcomes an advisory commission of interested allies, including Russia, Britain, China, France, Canada, Australia, the Netherlands, New Zealand, the Philippines, and even India, which has been suggested by England as an addition.

The first part of the blunt truth is that the subjugation of rampant Japan was achieved by the United States. The other allies could not have defeated Japan. The United States bore the overwhelming burden of the whole Pacific war, even saving New Zealand and Australia on the way, which fact is graciously and freely admitted by those two British dominions.

The second part of the blunt truth is that the attempt to cooperate, especially with Russia, in joint control of Germany and liberated Europe is so difficult that it would be ridiculous to replace the smoothly operating set-up in Japan with an international control council.

Of course, the difficulties encountered in Europe cannot all be attributed to any one power. The very fact of joint control raises difficult problems. But the reluctance of Russia to allow her allies anything like an equal voice in eastern Europe and Moscow's open suspicion of their motives is a warning against getting into a similar mess in the control of Japan.

Moscow, listening to some native fascists in this country, may fear that the United States has a dream of using Japan against Russia. Russian leaders ought to know that the American people would never back such a plan. These fascists are not America.

The sole American policy toward Japan is to destroy its war making power and to try to lay the groundwork for a new and democratic Japan which cannot, and will not wish to, embark on aggression against Russia or any other nation.

We are doing this job for all the world and we propose to continue the management of it.

## Peacetime Air Forces

EXTENSION OF REMARKS
OF
**HON. OVERTON BROOKS**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shreveport (La.) Times of October 12, 1945:

PEACETIME AIR FORCES

The Army Air Forces has outlined a tentative peacetime program for itself which is reported to call for 6,500 planes and 600,000 men as its standing strength for the immediate future in the postwar period.

This is a modest request indeed for a fighting force that was a vital factor in every campaign in World War II. It is conceded, as a result of the Second World War that no nation can win a battle, a campaign, or a war without vast superiority in the air over the enemy; without, in fact, complete mastery of the air, which is something far more than mere superiority. This applies to sea battles, where carriers are both the hub and many of the spokes of the wheel of combat, as well as to land fighting.

The Army Air Forces reached a peak of 65,000 combat planes and 2,300,000 men during World War II. The proposal for 6,500 planes and 600,000 men is presented by the Army Air Forces as an absolute minimum—a program of "interim strength," which seems to mean that the plan is to go above these minimum figures eventually.

The proposal to come down to a minimum strength in the immediate postwar years, when we have a tremendous quantity of planes and undoubtedly can keep ample trained personnel in the Air Forces, and then to increase at a later date when much of the present equipment will be obsolescent or even obsolete, is sound and logical. But if it is to be successful it must not be tampered with in the way of further reduction, by Congress or by the War Department, of the minimum now proposed by the Air Forces as to both planes and men.

The United States must not again make the mistake of neglecting air power—a mistake which was a big factor in making possible the Japanese attack on this Nation and which was the main factor in much of that terrible sweep by the Japs in the early days of the war, when they took hundreds of thousands of square miles of territory with virtually no opposition.

## Mr. Byrnes' Frank Report

EXTENSION OF REMARKS
OF
**HON. JOHN B. SULLIVAN**
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. SULLIVAN. Mr. Speaker, under the leave to extend my remarks granted to me, I am including herewith an editorial from the St. Louis Star-Times of October 6, 1945:

MR. BYRNES' FRANK REPORT

Secretary of State Byrnes' report to the Nation last night on the London Conference of Foreign Ministers was a masterpiece of candor. Contrary to diplomatic tradition, Byrnes made no effort to paint a rainbow across the London fog.

The Conference ended in deadlock; momentarily irreconcilable differences developed between America and Britain on one hand and Russia on the other. With almost unprecedented frankness, Byrnes admitted this.

Major point of separation was the Russian thesis that the Three Great Powers who were parties to the surrender should make the peace, set against the Anglo-American position that the peace should be made by all the nations that will be shouldered with the responsibility of enforcing it. Also dividing the powers was the reluctance of America and Britain to negotiate treaties with undemocratic governments in Bulgaria, Rumania, and Finland.

Most Americans will overwhelmingly agree with Byrnes as far as he went. The peace arrangement cannot be safely monopolized by the Big Three. Such monopoly would found postwar settlements upon autocratic principles of to the victors belong the spoils.

The basic cause of failure at London was that the powers were all apparently obsessed by the idea that they were hedging themselves against a Third World War by the ancient devices of unilateral agreements, by setting up power blocs friendly to themselves, and by spheres of influence. The United Nations Organization was a moral embarrassment in the background.

Had the foreign ministers consistently approached their problems from the point of view of world cooperation and liberty and justice for all peoples instead of from that of making the best possible arrangement for one's own country, the result would have been happier.

While Russia's wary, pugnacious, and imperialistic performance was a chief stumbling block, it must be realized that much in our policy seems to invite criticism for the same reasons in Moscow. The Kremlin, perhaps logically, can see little difference between Russian demands for control of Tripoli and our preemption of control of Okinawa and Iwo Jima. The proposal of our leaders that we maintain the largest military establishment in the world suggests to Russia, whatever the merits of the issue, that we are building our security on traditional unilateral lines.

It is not surprising, therefore, that the London Conference bogged down on questions of national suspicion and hostility. While the American position as expressed by Byrnes seems more respectful of the United Nations Organization than that of Russia, it seems apparent that the Conference fell far short of its mark because the participants built more along lines of security through individual national arrangement than through reliance upon collective security.

At the present moment, the Allies suffer from the malady of split personality, represented by San Francisco on one hand and London on the other. This malady will have to be cured if the peace is not to be an uneasy and insecure one.

To be sure, much was accomplished at London, primarily with respect to Italy. Moreover, there still remains an opportunity for Stalin to agree to the proper thesis that the making of the peace should be approached on the broad base of universal participation by all those powers who contributed to the victory. Perhaps the next installment of our peace efforts should be on the higher level of the heads of the states rather than that of the foreign ministers.

As we have repeatedly said, the atomic bomb has so imperiled the world and so loaded war with the powers of utter devastation that we cannot permit peace conferences to fail. In effect, we must go back and back again until understanding is achieved and until decisions are made that reflect our comprehension that war is simply too overwhelmingly dangerous ever to occur again.

## Socialized Medicine

EXTENSION OF REMARKS
OF
**HON. NOAH M. MASON**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. MASON. Mr. Speaker, the Wagner-Murray-Dingell bill, S. 1050, provides that certain doctors and dentists in each community shall be designated by the Surgeon General of the United States as the approved Federal practitioners for that area. No doctor could qualify as a specialist in a particular field save upon the designation of the Surgeon General. And no patient would be permitted to consult a specialist until the case had been approved by a medical administrative officer appointed by the Surgeon General.

Senator WAGNER claims this is neither socialized medicine nor State medicine. I believe it is socialized medicine in its most obnoxious form.

It is well known that the doctor who receives so much per head in institutional practice tends to lose interest in the individual patient, and his practice becomes automatized. Any profession that cannot adjust its own fees to the conditions of the day, but must depend upon Government statute and Government control, will fail to attract the best minds. If this happens the practice of medicine will inevitably deteriorate.

President Truman has endorsed the objectives of S. 1050, and has given it the legislative green light.

Mr. Speaker, an editorial from the De Kalb Daily Chronicle, De Kalb, Ill., Thursday, October 18, 1945, quoting Robert Quillen, expresses the implications contained in S. 1050 so clearly that I insert it as a part of my remarks:

QUILLEN TELLS ABOUT THE MEDICAL BILL

In a recently published article the famous newspaperman, Robert Quillen, tells some things about the proposed medical bill in language we all can understand. He says:

If you prefer having a fair warning before the storm hits, go first to your doctor to have your blood pressure checked and then write to one of your Senators for a copy of the Wagner-Murray Senate bill 1161. He will send you one without charge, and you will find it a remarkable document well worth reading.

The chief author of the bill is the same German-born Senator WAGNER, of New York, who gave us the law that "protects the rights of labor," but denies the boss even the right of free speech. And if all goes well, the bill will be passed by the next Congress.

Its purpose is to provide more social security, including medical care. And, as usual, it levies a tax—this time a whopper.

It will add $12,000,000,000 a year to our annual tax burden—12 times the total cost of Government when dad was a youngster.

It will take 6 percent from your pay envelope, up to $3,000, and another 6 percent from the boss. From the self-employed—the doctor, farmer, merchant—it will take 7 percent up to $3,000, or $210 a year.

Three-fourths of the money will be raised to extend the benefits of social security, but one-fourth, or $3,000,000,000, will be turned over to the Surgeon General, and he will be the absolute czar of American medicine, empowered to provide free medical and hospital care for 110,000,000 people.

He will control all hospitals and decide which ones can operate and how much they shall charge.

He will tell doctors where to practice and how many patients they may have and how much they may charge. He will also decide which ones may call themselves specialists.

(The bill generously permits each of us to choose his own doctor, but not if the one of our choice already has his allotted number of patients).

There are many other remarkable provisions in the measure, but this is enough to give you the idea.

Three billion dollars is a lot of money. It is enough to hire every doctor in America at a salary of $5,000 a year; to hire every bed in every privately operated hospital every day in the year at the rate of $5 a day; to pay $2.50 a day every day in the year for each bed in Government-owned hospitals; to spend over $250,000,000 a year for medicine and supplies, and still leave $500,000,000 for political job holders.

If your doctor seems a little absent-minded and peevish these days, he is thinking about his future when politicians control the practice of medicine.

## All GI Fathers Should Be Discharged

EXTENSION OF REMARKS
OF
### HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, in a special article entitled "Mothers Fret Over Delay in Return of GI Fathers," by Ruth Millett, attention is forcibly called to the responsibility of wives whose husbands are now in the military service. This is a plea that Congress should heed. The war is over, and all fathers who have enlisted for the duration should be discharged. Ruth Millett's timely article is submitted herewith:

MOTHERS FRET OVER DELAY IN RETURN OF GI FATHERS
(By Ruth Millett)

Mrs. G. I., who was a good sport all through the war, is about fed up.

While her husband risked his life overseas and she ran the risk of being left alone to support and educate and bring up her children, you didn't hear her complain.

TIRED OF DUAL ROLE

She went about the job of being both father and mother as cheerfully as she could, all the while striving not only to keep up her own morale but the morale of her husband overseas. Without bitterness she accepted sacrifices that only part of the population was called up to make.

But the war is over now and she wants her husband back. She knows her children have suffered emotionally from having a father taken from them. She knows it is going to take plenty of time for the children and their father to become adjusted to each other, after a long separation during which the father has had no responsibility for the children and they have learned to make a mother the whole center of their existence.

She knows that the sooner her husband gets back to civilian life, the better off the family will be financially. And a man's career is important when there are children to be educated.

So she is tired of being a good sport and putting her country ahead of her family.

PATIENCE RUNNING OUT

She wants her man back home. And it burns her up to think she knows no more about when that will be than she did when the war was going on. "They don't tell us a thing," her husband writes. And "I haven't the slightest idea when I will get home."

Mrs. G. I. is fed up with that kind of treatment. She figures that at this point nobody needs a father more than his kids. And if the Government doesn't want a new pressure group on its hands it had better consider Mrs. G. I. Joe. Her patience can't be counted on indefinitely. In fact, it has just about run out.

## Farmers, Veterans, Labor Favor Democratic Party

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. PRICE of Illinois. Mr. Speaker, on Sunday, October 7, the American Institute of Public Opinion, better known to American newspaper readers as the Gallup poll, disclosed that the great majority of the people of this country, our farmers, our factory workers, and our small-business men, believe that the Nation is most likely to solve all of its major problems under the program of the Democratic Party than under any other leadership.

In this poll the American people were asked which party they preferred to accomplish 11 specific objectives, and it is interesting to note that on all 11 points the Democratic Party was preferred.

This poll is encouraging because it is a clear indication that the American people realize the basic issues which we are facing, and the stand which each political party is fundamentally taking. It is clear to the farmers, the workers in the city and to the small-business men that on the really important problems of the day they have much more hope from Democratic leadership than they have from Republican leadership.

War veterans, according to the Gallup poll, will be taken care of far better under Democratic leadership.

There will be higher farm income under the Democrats, one poll further indicates. Farmers favored the Democratic Party by 2 to 1, many of them probably remembering how poorly they fared under the last Republican administrations and recalling how they have prospered under Democratic leadership.

But let Dr. Gallup tell of his findings in his most recent Nation-wide survey. His report follows:

DEMOCRATS WIN PUBLIC SUPPORT OVER GOP ON 11 MAJOR ISSUES
(By George Gallup)

The Republican Party faces an uphill fight if it is to regain political control of the country at next year's election.

Just how tough the battle will be is revealed in the results of a national survey of voter opinions on Government problems.

Voters were asked which party they thought would do better at handling 11 important public problems, such as taking care of veterans, seeing that taxes don't get too heavy, keeping wages high, handling organized labor, keeping farmers happy, etc.—all problems that loom important as the 1946 congressional campaign approaches.

In every case the Democratic Party won a higher vote of preference in the survey than the Republican Party. The GOP leadership has not had much recent success in selling the Republican Party to the country on issues, as apart from candidates.

The political advantage which the Democrats hold at present can be seen from the vote on the 11 specific public questions dealt with in the survey, as shown below.

Note that in each case the Democratic percentage is higher than the Republican—the ratios in some instances being more than 2 to 1 in favor of the Democrats.

Voters were queried as follows:

"It's another year until the congressional elections, but as you feel today, which political party, the Democratic or Republican, do you think can handle each of these different problems better?"

The problems and the vote on each follow:

| | Democrat | Republican | No difference | No opinion |
|---|---|---|---|---|
| | Pct. | Pct. | Pct. | Pct. |
| Encouraging new business to start up | 35 | 30 | 20 | 15 |
| Reducing strikes and labor troubles | 34 | 26 | 23 | 17 |
| Seeing that taxes don't get too heavy | 37 | 26 | 23 | 14 |
| Running Government efficiently | 41 | 23 | 23 | 13 |
| Getting business and industry back to peacetime production | 41 | 23 | 20 | 16 |
| Improving the health of the people | 36 | 15 | 32 | 17 |
| Improving the education level of the people | 36 | 15 | 33 | 16 |
| Keeping farmers' income high | 46 | 19 | 20 | 15 |
| Taking care of veterans properly | 42 | 12 | 33 | 13 |
| Working out a lasting peace with other countries | 45 | 14 | 28 | 13 |
| Keeping wages high | 49 | 15 | 23 | 13 |

One surprise in the figures is that even in the matter of administrative efficiency and of encouraging new business to start up—two major talking points of the Republicans—the Democrats come out on top in public estimation, according to the survey, though only by a narrow margin in the case of the latter.

Certain of the issues dealt with in the survey have particular appeal for some special segment of the population.

Farmers, for example, have more interest in farm income than any other group, while manual workers are especially interested in high wages.

How these groups vote on the particular issues is summarized below:

Keeping wages high: To accomplish this manual workers and white-collar workers express a 4 to 1 preference for the Democratic Party.

More farm income: By 2 to 1 the farmers say the Democratic Party would be better than the GOP at keeping farm income high.

## A Few Reasons Why Men Are Not Enlisting

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 18, 1945*

Mr. HOFFMAN. Mr. Speaker, from a Casablanca overseas man, who is being discharged, but who writes in behalf of his comrades who are remaining, comes a letter which gives us some of the reasons why men are not reenlisting. His letter is as follows:

I think you will be glad to learn that most of us will leave this base in the next few months. There will still be many men left here, too many. I am and have been particularly interested in your comments and actions regarding the draft. You tell me that Congress has passed a bill offering new inducements to volunteers. I know that both you and I want the volunteer system to be a success but as you probably know already, it won't work as it stands. It strikes me as odd that few men have put their finger on the main reason that American men will not reenlist in the Army while most Federal services are overloaded with applicants for jobs. While there are many smaller reasons I believe the reason for this failure to reenlist, particularly in the enlisted category, is that the American man is not willing to submit voluntarily to the degradation of mind and spirit which our generals deem necessary for a successful Army.

The Army magazine, Yank, had a department named Mail Call in which servicemen aired their complaints. By reading that department you will find that what the American man has found most distasteful about his army life is the caste system of gentleman and scum that he has been forced to become a part of. An intelligent or even a decent-minded man does not wish to voluntary register himself as a tramp or slave and have to bow and scrape to a group of "gentlemen." When an American becomes an enlisted man he not only labels himself as a member of a coolie group but he also puts his wife and children in that same class as you can see in life at any Army post—"Poor dear, she seemed so nice to talk to but she is an enlisted man's wife." It is a positive crime in our Army for an officer to associate with an enlisted man unless they are blood relatives. They may not eat at the same table, drink together, sleep together, or even use the same toilet facilities. An enlisted man must address an officer as sir, when to call him by his rank would be just as effective, and in most cases, a good deal more accurate. A careful study of court-martial records and precourt-martial investigations will show that there is a double standard of "justice" in the Army. I need not give you examples for I am sure you know of many strange cases of military justice.

In short the existence of an enlisted man is such a degrading thing by American standards that it is next to impossible to get the right kind of men to reenlist. We will always be able to get the hoodlums and refugees from life who made up the Regular Army in the twenties and thirties but the next war, and there will be one, will require more brains and less brawn.

We do not need a draft because the average American won't work under compulsion. Any one civilian can do the same amount of work of four soldiers. We do need an army with justice and an army without a caste system. The Army should be made attractive and not repulsive. It should not be hated by its personnel as it is now. It should become another Federal service that men would clamor to get into, not out of.

In general, pay in the Army is adequate except in the private and corporal classes and since a man enlists as a private the pay in that class should be increased. There should also be close control of the Army by Congress to make sure it does not get out of hand.

I wish you every success in your efforts to make the Army more attractive and I hope that you might possibly get some hints from this letter as to what makes it so unattractive. I would appreciate your comments if any. I hope the writing is legible. I don't have access to a typewriter just now and it has been a couple of years since I have written any letters by hand.

Sincerely yours,

JOHN J. MURPHY.

P. S.—Reference rapid redelopment of troops, what do you think of the Navy's sending swarms of its largest boats to various cities in the United States so that people can visit them on Navy Day? Whose morale are they trying to build up, or is there going to be a new Naval appropriation bill soon? All of these boats should be constantly busy moving troops and should not be tied up in some harbor for people to gape at.

This young man does not come from my district and I never met him, but his letter is a clear statement of a protest often heard.

## Price Control

EXTENSION OF REMARKS
OF
### HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, the question of price control must be continued for some length of time in this postwar period, lest we find ourselves moving into a dangerous spiral of inflation. In the control of prices it must be the duty of the Office of Price Administration to carry forth without, at the same time, producing a situation that stops production. There is ample evidence that this is occurring in many places.

The Office of Price Administration would do well to restudy their policies and remove at once all phases that have to do with lessening the production of any commodity. I have just recently returned from having spent 2 days in the city of New York, the greatest market for clothing in the United States, and I must confess that under the rules laid down by the Office of Price Administration it is more difficult today to obtain clothing for men, women, and children, now that the war is over, than it was during the period in which we were engaged in a war on two fronts.

Under unanimous consent, I include an editorial taken from the New York Times, October 15, entitled "Clothing Restrictions":

CLOTHING RESTRICTIONS

War Mobilization and Reconversion Director Snyder has decreed that the feminine silhouette for the spring season will remain frozen within the clothing limits established in May 1943. Under the wartime limitation orders, the styling of women's clothing, lingerie, and lounging wear, and the yardage used in men's clothing, are controlled. WPB Chairman Krug had recommended that these controls be abandoned, but Price Administrator Bowles insisted that their abandonment would make it more difficult to continue price control. Mr. Snyder stated specifically that they would not be lifted, since their revocation would impair the Government's price-control structure.

Here we have additional evidence that the release of Government controls in several areas is being subordinated to the insistence of OPA in retaining controls over practically all prices. Our wage policy has been bedeviled by the insistence that wage increases requiring price increases will not be permitted. Now the freedom of operation in the clothing industry is not to be restored because it may affect price control. Apparently the key question is, must we continue to control practically all prices? If the answer is yes, then there is some justification for continuing other controls to reinforce the price control. If the answer is no, however, then clearly these policies concerning related controls are not soundly conceived.

Two full months have now elapsed since Japan's surrender. The major changes in the economic situation have made it possible to eliminate most of the controls over production, to modify the manpower controls, to reduce the area of rationing, and even to consider lowering taxes. But OPA marches on undaunted with practically no liberalization in price control since VJ-day and with controls still maintained on practically all products, essential or nonessential. Instead of easing controls, OPA is tightening them in some sectors of the economy. New orders fixing prices are being issued each day when the proper policy calls for OPA to be issuing orders removing controls. In the clothing field this policy has been reflected in the virtual disappearance of low-priced items.

## The Eagles' Aerie

EXTENSION OF REMARKS
OF
### HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD I include a transcript of the proceedings on the occasion of the launching of the U. S. S. *Oriskany*.

U. S. S. "ORISKANY"

The *Oriskany*, launched at 1:57 p. m. Saturday, October 13, 1945, at the United States Navy Yard, Brooklyn, N. Y., was authorized by an act of Congress on July 9, 1942. Her keel was laid May 1, 1944. Her over-all length is 856 feet, bow to stern, but her spacious flight deck, nearly 100,000 square feet in surface area, is 870 feet long. Her complement is about 80 planes.

BATTLE OF ORISKANY

The battle for which the ship is named was fought near what is now Rome, N. Y., August 6, 1777. American forces commanded by Gen. Nicholas Herkhimer, racing to intercept the British under Lieutenant Colonel St. Ledger who was

attempting to join Burgoyne and Howe at Albany, were ambushed in a narrow defile along the Mohawk River by Tories under Col. John Butler and Indians led by Joseph Brandt. After the heaviest fighting, characterized by historians as "one of the bloodiest battles of the Revolution," the Indians fled and the Tories retreated leaving the Americans in possession of the field.

THE CEREMONIES

Rear Adm. Freeland A. Daubin, United States Navy, Commandant of the New York Navy Yard, presided.

Sponsor: Mrs. Clarence Cannon.

Maids of honor: Miss Mary Katherine Van Sant, Miss Martha DeWitt Fishback.

Matrons of honor: Mrs. Robert M. White, Mrs. E. Johnston Coil, Mrs. Paul C. Stark.

ADMIRAL DAUBIN

Admiral DAUBIN. Admiral Leary, Admiral Cochrane, Admiral Cassady, Mrs. Cannon, honored guests, shipworkers of the Navy Yard, New York, you men and women of the navy yard who so loyally served the fleet during a war unprecedented in naval history have added an additional star in your field of accomplishment.

Today we launch another mighty ship, completed from keel to launching in 76 weeks. She will take her place among the great fleet units that, in the course of the war, have been built in this yard. And like other ships built in the Navy Yard, New York, the *Oriskany* is the product of the best engineering talent and superb workmanship—and she would have been another champion in battle just as her sister ships in the Pacific have been.

Carriers are named after historic battles. Our American history tells us the story of the Colonial patriots, whom we honor today, engaging our enemies in hand-to-hand fighting at Oriskany in the summer of 1777. This battle is now famous, as it marked the turning point in the war for independence. With us today we have representatives from Oneida County, New York, where the battle of Oriskany was fought. Among these representatives are school children who, by their own intensive efforts, have raised $3,000 to present a suitable gift to the ship when she is commissioned. Such interest and loyalty to the Navy among our citizens augurs well for the future.

You guests here from the Mohawk Valley are about to witness the launching of a ship whose planes and guns will be manned by men of the same spirit that characterized the stout-hearted Colonials on the now historic battlefield of the Revolution 163 years ago. And similar to the devotion of these stout-hearted patriots who fought for independence at Oriskany, this ship represents the devotion of all the people of the United States in their determination to defeat those enemies who would destroy our freedom. And when the *Oriskany* is commissioned and sails the seven seas with the other ships of the United States Navy, she will be a solemn warning that we, as a Nation, intend to and will maintain the peace.

We are honored to have with us this afternoon, Mrs. Clarence Cannon, wife of the Honorable CLARENCE CANNON, Member of Congress from Missouri. Mrs. Cannon has been chosen to sponsor this great ship.

MRS. CANNON

Mrs. CANNON. Thank you, Admiral Daubin. It is a privilege to participate, even in a formal way, in a ceremony which adds another great ship to the United States Navy.

Admiral DAUBIN. We are also honored today to have as our speaker a naval officer who, throughout the critical days of the war, commanded one of our giant carriers—in fact, the oldest of them, the U. S. S. *Saratoga*, Rear Adm. J. H. Cassady, Assistant Deputy Chief of Naval Operations for Air.

ADMIRAL CASSADY

Admiral CASSADY. I consider it a signal honor to have the opportunity of addressing the thousands of persons who have been employed in the building of this fine ship. Your reputation, the reputation of the navy yard, New York, for the speed of production and, most important, the quality of ships built, is indeed something of which each and every one of you may well be proud.

I appreciate that some of you may feel a touch of regret that this ship of yours was not completed in time to take part in and to share our great victory over Germany and Japan. However, let me assure you that your labor has not been wasted, your labor has not been in vain. This product of yours is destined to play an equally important part in history—namely, the preservation of the peace of the world, to which your Navy dedicates itself.

I believe that most of you are familiar with the role played in this past war by sister ships of this vessel, which is about to be launched. Our seagoing Navy was organized around the aircraft carrier. Battleships, cruisers, and destroyers were deployed for the support and the protection of our carriers. Our fast carrier task forces spearheaded every major engagement in the Pacific. Because of the pulverizing air strikes made by our carriers, we were able to destroy the Japanese Navy, able to sweep Japanese shipping from the seas, able to gain command of the sea and command of the air, and thus insure the success of every one of our invasion campaigns, from Guadalcanal to the Japanese homeland itself. The work of our carriers saved thousands of American lives. The work of our carriers made possible the establishment of land bases from which land-based Army, Navy, and Marine Corps aircraft could operate against the enemy. With full consideration and recognition of the splendid job done by our battleships, our cruisers, our destroyers, our submarines, and by the many other types of vessels of the Navy, I believe that there is no one person but who will readily admit that the aircraft carrier has demonstrated itself to be our most effective naval unit.

However, it was not always smooth sailing. It was only after the great productive capacity of this country was in full swing that we were able to dish out the punishment to our enemies which brought about their complete and unconditional surrender. Credit for that complete and unconditional surrender is due to the civilian population of this country as well as to your armed services population.

I can well remember the months when the *Saratoga*, of which I was then in command, was our only big carrier in the whole Pacific Ocean, and she had been bruised up a bit by the enemy. However, fortunately, we had a large carrier construction program underway, of which this ship is a part. Each month new and improved carriers were sliding down the ways and soon thereafter were dishing it out to the Japs. Less than 2 years ago, in November of 1943, we were plenty proud of the fact that we were able to launch an air strike from our carriers consisting of 105 planes, against the Jap stronghold of Rabaul. Yet within less than a year's time we were launching 1,000-plane attacks from our carriers. And this was followed by attacks by as many as 1,500 carrier aircraft day after day. Those strikes speeded up the collapse of Jap resistance.

All of this was not accomplished without its price. Many of you have seen the carrier *Franklin* here in this navy yard, and are familiar with the heroic yet costly fight of survival she had. The *Franklin* was but one of many. Thousands of our air men and ship's companies have paid the supreme price in achieving our great victory. This ship, about to be launched, must and will contribute its share of insurance that there shall be no repetition of the above—that there shall be no future war. However, if such should be thrust upon us, then your labor, your time, and the money invested in this ship will pay dividends.

And what is the future of the aircraft carrier? Has the atomic bomb outmoded this type of ship? Will the new and awesome weapons of which we hear and which will be developed in the future render the aircraft carrier obsolete? Perhaps so, but such a possibility is a thing of years in the future. How many years, I would not, nor do I believe anyone else, would venture to predict. To me there is not an iota of doubt but that the modern carrier will for many years continue to hold top place in fighting units. If and when new weapons are developed which can defeat the carrier, then is the time to scrap the carrier, not now.

Based upon our war experience, our peacetime Navy is to be developed around the aircraft carrier. This ship of yours will be part of the backbone of our future Navy. This ship, together with sister carriers, will be equipped with the most modern aircraft the world possesses. This must be so. Our peacetime Navy must be maintained at such strength and so modernized that no nation or combination of nations would dare to attack this country. We must possess a Navy which will constitute such a threat that any warmonger would consider it suicidal to attack us. We must constantly be prepared to strike back and to strike back fast. This vessel will be a part of that fast-striking force. We must keep ahead of every nation in the world in research, and we must develop and produce new and improved weapons in greater quantity and with greater speed than can be accomplished by any other nation. Only by so doing can we assure peace. Any dereliction on the part of this country can and will produce but one result—another war. And I shudder to think what that war would be.

So I consider the future of this ship before us to be enviable. She will play a part in the preservation of the peace of the world. Each of you who has contributed to the construction of this ship can and, I hope, will have a real feeling of pride in being a part of this ship.

The Battle of Oriskany has been called the turning point in the war for American independence. Let us hope—let us pray—that this ship, named after that famous battle, may itself prove to be a contributing factor in the turning point of the world to be, a turn from a war-torn, war-hungry world to a peace-loving, peace-maintaining world.

CHAPLAIN HARBOR

After the national anthem was played, the chaplain of the navy yard, Lt. R. L. Harbor, invoked divine blessing.

"Let us pray: God of our Fathers, whose paths are in the seas, and who makest the clouds Thy chariot, we bless Thee for Thy inspiring guidance in leading us to victory. Accept our praise for all those whose valorous deeds in the sea and sky have hastened the victory. To Thee we here dedicate the U. S. S. *Oriskany*, praying that she may become a strong arm of our Navy, to be a terror to those who do evil, and a defense to those who do well. Keep this world, O Lord, in perpetual peace, where none shall wage any more war for purposes of aggression, and none shall need it as a means of defense. For Thine, O Lord, is the kingdom of this world, and we praise Thy holy name world without end. Amen."

As the *Oriskany* started to slide down the ways, Mrs. Cannon broke the bottle of champagne over the bow of the ship, saying "I christen thee *Oriskany*, in the name of the United States. May God bless this ship and all who sail in her, and the U. S. S. *Oriskany* was launched.

## A. F. of L. Wage Policy

EXTENSION OF REMARKS
OF
**HON. WILLIAM C. COLE**
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. COLE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the St. Joseph (Mo.) Union-Observer:

A. F. OF L. WAGE POLICY IS SET FORTH BY THE EXECUTIVE COUNCIL—OPPOSES ANY ATTEMPT TO REVIVE WAR LABOR BOARD—WANTS FREE COLLECTIVE BARGAINING AND NORMAL COMPETITION—PRESENT STRIFE DUE TO GOVERNMENT EFFORT TO REGULATE ECONOMIC LIFE

CINCINNATI.—The executive council of the American Federation of Labor at its meeting here adopted an opening declaration on wage policy. It follows:

"The American Federation of Labor strongly opposes any attempt to revive the National War Labor Board.

"This Board served its purpose during the war. Now that peace is here, it has outlived its usefulness. The members of the Board themselves recognized these facts and voted to dissolve the agency by December 15. That decision should be upheld.

"The executive council is convinced that continuation of the National War Labor Board will inevitably bring about in increase in strikes and particularly the threat of strikes. It will force labor and management to go to the Government for the solution of their disputes instead of finding their own solutions through the orderly and democratic processes of collective bargaining. It will prolong Government dictation of economic policies—a condition that has no place nor justification in peacetime America.

"It is extremely doubtful whether the National War Labor Board could function effectively even if it were resuscitated at this time. Its authority had been weakened almost to the vanishing point when the war ended. New legislation would be required to give its decisions force and effect now.

"Such legislation would usher in another period of government by emergency. The executive council believes the Nation has had enough of that. The time has come to move in the opposite direction. The time has come for the people of America—including labor and management—to stand on their own feet instead of depending upon the Government.

"Those who desire prolongation of the National War Labor Board have no confidence in themselves nor in the operation of the free-enterprise system. They are ready to admit that the American way of life is a failure.

"The American Federation of Labor does not share these views. We firmly believe that the way to establish and maintain industrial peace and stability is to remove Government control of wages immediately, instead of reinforcing it.

"Much of the present industrial strife has been caused by the Government's attempt to regulate the Nation's economic life as though the war emergency were to continue indefinitely. We are living in a national atmosphere of fear—fear of inflation. That fear already has resulted in deflation—sharp deflation of the income of the Nation's workers. Earnings of many workers have dropped overnight below the subsistence level. Under such conditions strikes are inevitable.

"The Government cannot enforce strict wage controls against the tide of natural economic forces. This would be vain and dangerous.

"The American Federation of Labor calls upon President Truman to adopt a new course. We urge that Government controls be dropped promptly and that the National War Labor Board be permitted to pass out of existence.

"Meanwhile wage rates should be permitted to rise to their proper level through the free exercise of collective bargaining while every encouragement should be given to business to keep prices down through the operation of normal competition."

## Letters From Soldiers Came From Far and Wide—Here Is One Letter Which Shows That Demobilization Is Bogged Down—Why Isn't There Transportation for the Army's High-Point Men?

EXTENSION OF REMARKS
OF
**HON. JAMES H. MORRISON**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. MORRISON. Mr. Speaker, here are a few facts from a high-point man waiting on Leyte Island for the Army to get him home. I think our servicemen deserve better treatment than this, and now:

LEYTE ISLAND, *September 30.*

Hon. JAMES H. MORRISON,
*Washington, D. C.*

DEAR JIMMY: I received your nice letter some time ago and didn't answer because I thought I would be home before now.

I know you fellows in Congress are doing your best to get us home. I know that the Army tells you all they will get us home soon. But here are a few facts. I have 88 points as of May 12. My orders came through on September 9 and I was flown from my base in Mindoro here to the Twenty-eighth Replacement Depot to be put on a boat for home. When I arrived here 20 days ago, there were 3,600 men ahead of me. Now there are over 11,000 here with 85 points or more as of May 12. During this time 500 have gone home.

Every day we hear on news broadcasts from State side about how many men are supposed to be coming home, the fact is that we are still here. Last week a transport came in from the States with 4,000 troops from the States. We were sure we would load on that boat, but only the big shots know where that boat went.

When we ask about when will we get transportation, they tell us just as soon as the Navy gives us boats. What we want to know is if we high-point men don't get home, who is?

Jimmy, we didn't mind it as long as we had a job to do. We did that job. All we ask is to be taken home now. I am sure that all of us here feel the same—bitter and disgusted. We are getting a run around and we don't like it.

Jimmy, you can use this letter and my name to show the "brass" what is going on here instead of what they try to make the people at home believe.

I am sorry to bother you with my trouble but knowing you like I do, I know you will raise a little hell about this mess.

Thanking you for anything for us GI's, I am,

Yours truly.

## Challenge to Congress

EXTENSION OF REMARKS
OF
**HON. LAWRENCE H. SMITH**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following poem by William Ewald, of Montclair, N. J.:

TO CONGRESS

Crooks under many names are nothing new.
Subversive movements slyly use them too.

Termites working under cover dread the light;
Throw on the switch and flood their breeding sites.

Let not "witch hunting" or "red baiting" shunt your inspection;
Locate, lay bare, make known their cancerous infection.

Expore the guile of those who, loud on civil rights do call,
Are plotting to deny these sacred rights to all.

If Quislings found in places, low or high, in family tree,
Let the traitor's name be known through wide publicity.

Make deaf your ears to clamorous objection.
There's naught of greater import now or hence than our protection.
Despots rise when free men sleep or do not see
The road to serfdom they are on unknowingly.

We want not that freemen be less free.
Your constant vigil will preserve our liberty.

Freedom, by our forebears won at bloody cost,
Must not! must not! now, by us be lost.

—*William Ewald.*

MONTCLAIR, N. J.

## CIO Leaders Visit Communists in Russia

EXTENSION OF REMARKS
OF
**HON. WILLIAM A. PITTENGER**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. PITTENGER. Mr. Speaker, in the CIO News for October 22, 1945, there is an interesting item. This paper is published by the Congress of Industrial Organizations, of which Philip Murray is President and the publication and editorial office is in Washington, D. C. It is

interesting to note that Vice President Joseph Curran, who is also president of the National Maritime Union, was with the group when they called on the boys in Moscow back in October. This news item reads as follows:

SOVIET FRIENDSHIP GROUP BACKED BY CIO LEADERS

Moscow.—Formation of an American-Soviet trade-union committee was proposed here this week by Vassili Kuznetsov, chairman of the All-Union Central Council of Trade-Unions, and accepted by CIO leaders at a mass meeting in the Hall of Columns in honor of the CIO delegation now touring the U. S. S. R. Kuznetsov proposed the committee to "facilitate establishment of close contact between American and Soviet working classes" and as a step to strengthen the "friendship between the peoples, which is so necessary to support world peace."

Endorsing the proposal, CIO Vice President Joseph Curran, who is also president of the National Maritime Union, declared: "We will ardently support the idea for establishment of an American-Soviet trade-union committee. I am told to assure you that the CIO will always work hand in hand with Soviet trade-unions." CIO Secretary-Treasurer James B. Carey, declaring that he could "hardly believe I am in Moscow," told the meeting of Soviet trade-unionists:

"When I visit your plants I feel that I am in our own American establishments. When I speak here I feel as if I am speaking in my own country. All this bespeaks the fact that we and you have one mind, the same aspirations, the same community of interests. Both of our great countries can work together. We shall exert all efforts so that in the period of the peaceful development of our countries, the friendship of the Soviet and American working class will grow stronger."

CIO Vice President Allan S. Haywood declared that "the difference between the American and Soviet Government systems cannot hamper unification of the trade-unions of both countries."

Members of the House will of course be interested in this news item because on October 12 Joseph P. Ryan, president of the American Federation of Labor International Longshoremen's Association, gave out a newspaper interview in which he stated that communistic agitation behind the strike in New York City was directed by Joseph Curran, president of the Communist dominated CIO Maritime Union. You will recall that this is the strike that prevented the loading and unloading of boats, including troop ships, and that had much to do with the delay in returning the American soldiers from Europe so they could be discharged from the Army here.

## Nation-Wide Bible Reading

EXTENSION OF REMARKS
OF
**HON. JOHN C. KUNKEL**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. KUNKEL. Mr. Speaker, on March 12, 1945, I introduced House Joint Resolution 117, designating the period from Thanksgiving Day to Christmas of each year for Nation-wide Bible reading. This resolution was referred to the Judiciary Committee, but so far no action has been taken upon it. We are now approaching the Thanksgiving season, and I am hopeful that it may be enacted into law before Thanksgiving Day arrives.

This program was started last year by the American Bible Society. It met with an astounding response requiring the printing of millions more of the lists of selected passages than was anticipated. This year the program will be more extensive and the response will undoubtedly be far greater. I believe that in these troublous times which confront us it would be a far-sighted move to give national recognition to this period. There is nothing compulsory or anything of that nature proposed. It merely designates the time for people voluntarily to seek inspiration from the Book of Books.

October 15 to 21 was National Bible Week. It was widely observed. At least 26 Governors endorsed National Bible Week, including Governor Martin, of Pennsylvania. Governor Martin said, in part:

Wars will cease, and man in all the world will live as brothers only when its sacred lessons are given universal acceptance as the basis of human conduct.

He said further:

I am pleased to give the observance my complete endorsement and to urge citizens throughout the Commonwealth of Pennsylvania to cooperate in the program of activities which will be conducted during the week by churches, Sunday Schools, service groups, fraternal societies, and other organizations.

This was a fine gesture of Governor Martin's and I feel that it would be a courageous and christian evidence of faith if our national legislature would endorse the Nation-wide Bible-reading program.

As part of my remarks, I include House Joint Resolution 117. Congressman VOORHIS of California has introduced a similar resolution—House Joint Resolution 120. Resolutions have also been introduced in the other body.

Also as part of my remarks, I include an editorial from the Washington Star of October 21, entitled "The Bible Now."

House Joint Resolution 117

Joint resolution designating period from Thanksgiving Day to Christmas of each year for Nation-wide Bible reading

Whereas fresh evidence comes daily of the strength, courage, and comfort found in the Scriptures by the men and women of our armed forces; and

Whereas reading the Bible will not only bring faith, hope, and courage to millions of people now disturbed by doubt, uncertainty, and fear, but such a widespread, thoughtful reading of the Scriptures will effectively repair the moral character and spiritual ideals which form the necessary foundation for an enduring democracy; and

Whereas it behooves us at home to keep faith with those on the fighting fronts by a steadily increasing devotion to the sacred truths and principles upon which this Nation was founded: Therefore be it

*Resolved, etc.*, That the period from Thanksgiving Day to Christmas of each year is especially designated for Nation-wide Bible reading, in order that "in God we trust" as an expression of our national life may hold new and vital meaning for all our citizens.

[From the Washington Star of October 21, 1945]

THE BIBLE NOW

One of the cultural results of the Second World War is that of an increased interest in the Bible. The explanation is obvious. Thousands of men and women in the armed services of many different countries have carried the Book of Books with them wherever they have gone in the line of their duty. During long voyages on the ocean or through the air, during tedious days and nights of watchfulness on far-flung fighting fronts and especially during weeks and months of hospital experience, the Scriptures were a source of comfort and courage to a uniformed multitude of people who perhaps otherwise might never have consulted them. Meanwhile, civilians at home likewise in the emergency turned to the traditional fountain of religious idealism.

But the American Bible Society has urged that readers should follow a systematic plan in their study of the Gospels. Mere "dipping" into the Holy Word at random may be confusing. Possibly each individual needs to build a Bible for himself. Thomas Jefferson attempted something of the sort. Other persons have compiled anthologies of quotations which appealed particularly to their own instinct of appreciation. Such a book is the volume entitled "Treasures From the Bible," recently published.

Its contents were selected by chaplains and pastors for Nation-wide perusal while the global conflict continued, but they have equal significance now that peace theoretically has been restored. The first page carries the fourteenth chapter of Saint John: "Let not your heart be troubled"—the beautiful teaching of Jesus on the evening before His crucifixion. And the last page also is from St. John—the letter beginning, "My children, these things I write unto you" and closing, "If ye know that He is righteous, ye know that every one that doeth righteousness is born of Him."

Each of the selections deserves to be called great literature. Many of them come near to being great music. Psalm 23, for example, begs to be sung. The Sermon on the Mount, from the Gospel of St. Matthew, on the other hand, almost automatically prompts an oratorical delivery. But it also is a magnificent specimen of organized and disciplined logic. The late Justice Holmes could have expounded it with a perfect distinction. So, too, any of a score of generals might pronounce with the impressiveness of their authority as commanders the Twenty-seventh Psalm: "The Lord is my light and my salvation; whom shall I fear?" Or any of as many admirals might recite with a special significance the verses of the One Hundred and Seventh Psalm, commencing unforgettably: "They that go down to the sea in ships."

However, a man or a woman need not be famous or lofty of station in order to make the Bible his or her own. It is everybody's book, and the more so now, providentially, than ever in the past.

## If I Were a Congressman

EXTENSION OF REMARKS
OF
**HON. FRANK W. BOYKIN**
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from

Hon. W. H. Holcombe, sheriff of Mobile County, Ala.:

SHERIFF'S OFFICE, MOBILE COUNTY,
*Mobile, Ala., October 10, 1945.*

Hon. FRANK W. BOYKIN,
*Old House Office Building,*
*Washington, D. C.*

DEAR FRANK: I have decided to take a little time out of the busy every days that I have lately, and while sitting on my front porch at Hall's Mill Creek, with everything here so seemingly peaceful, jot down a few thoughts that I have been indulging in lately on the subject of what I would do if I were a Congressman.

I say that everything is "seemingly peaceful." No one knows how real this peace is. We do know, however, that just a few months ago all was not so tranquil. We know that hundreds of thousands of our own Americans are at peace forever because they are dead; that thousands more are maimed for life, and that that many more have as a citation of the part they played ruined health which they will never again recover.

Even now, almost every day, the lives of some of our own Mobilians are saddened by news of the passing of one of their loved ones, the terrible news just now seeping through of deaths that occurred months ago.

My own family has been struck through the death of Leila's husband, John Boehm. J. C. Holcombe's brother-in-law died on some small island in the Pacific last September 20 with infantile paralysis, a war casualty. There are too many to enumerate.

Your sons and mine are still in the service, and even though the war is officially over, they are constantly in danger.

When one thinks it over, the inevitable, simple conclusion to be reached is that all of this is because a few evil minds in the world contrived to lead willing, misguided people into war.

We read about General Patton's removal as commander of the Third Army because he was too lenient with the Nazis.

There is dissatisfaction on the part of Russia with General MacArthur's management of his command in Japan.

Every effort is being put forth, so it is said, to so govern the defeated nations that they can "never again wage war."

"Never again" is a long time. Where and when men want to try to start wars they will do so, if their people are willing, or even easily led. Though not so willing, they can and will be regimented into war-making machines, if they are not by virtue of their character against violence and bloodshed.

It all depends on the people everywhere. The kind of government they happen to live under may or may not have a great deal to do with it. All will still be uncertain.

Much has been said recently about the juvenile crime wave that has shocked this Nation. Unless we do something constructive along this line, the shock we have received will, in some not too distant time, resemble a mild tickle from an amusement park battery set as compared to a death-dealing jolt of 5,000 volts from a rural-electrification power line.

In my humble opinion the remedy for most of the world's and our own domestic troubles lies so easily within the reach of those who are in earnest about wanting to "do something" about it that it seems silly and ignorant to overlook it.

We have but to remember the old teaching, "Teach a child the way in which he should go and when he grows older he will not forget it." Our hope for the future lies in and with the child of today, with future generations, and in the schools of the world.

Two thousand years ago there lived on this earth One who knew and taught the right way in which to live. He laid down the simple rules which we have only to follow and there will be no more wars and no more crime.

The example set and the laws laid down by the Nazarine are so easily understood, so full of common sense, so easy and pleasant to follow that all men, whether Christian or not, can subscribe to them in joining together and build a world in which it will be safe for all to live.

Some there are who will reject this thought and will say that "religion should not be taught in our schools."

We note that in Illinois recently objection has been raised to the teaching in our schools of the existence of an almighty God, and have instituted injunction proceedings in the courts to prevent children from being taught that which, if there is to be any decent foundation built for the lives of our future generation, they must believe in.

Regardless of all of this, and of course there are still others who will disagree, sound thinking and reasoning seem to order that we try to mold the hearts and minds of the future citizens of America and the world along the lines of decency. We must teach them the way in which to go. When they are taught that, I for one believe that an overwhelming majority of them will not forget it. Those who will forget and choose the wrong road will be so few in number as not to matter very much.

A world whose citizens consist for the most part of those who believe in Almighty God, who respect the rights of others and who believe in doing unto others as you would have them do unto you will be a peaceful and a good world. There can be no doubt of that.

We have gone through a terrible ordeal. All of the misery, death, and destruction of the past few years will mean nothing as a lesson to the world unless we have learned that the old ways of the past will again bring only what we have just recently experienced. There must be a change brought about in the hearts and minds of men. The future citizens of the world must be people of character.

We, the so-called victors, have a chance to serve future humanity—such a chance as no nation or groups of nations ever had before. One which we will perhaps never have again.

To make good on this opportunity we have but to teach little Americans, Englishmen, Russians, Frenchmen, the children of the victor nations, and the defeated, too, yes, little Germans, Italians, and Japanese also, the way in which to go so that when they grow older they will not forget it. If that be considered teaching religion in our schools then teach it.

They will, in truth, be against and hate war, murder, robbery, and lawlessness. They will be men and women of character.

They will all want to live in a world in which, to use your own patent and expressive slogan, "Everything is made for love." Love of our fellowmen and of peace, law, and order.

If I were a Congressman, having membership in the most powerful body in the world in international affairs, I believe I would raise my voice and insist that in remaking those countries that have been brought to the brink of destruction by false and evil leadership, a system embracing in principle which I have suggested above be adopted and carried out, and that in our own country a proper foundation for good citizenship be laid in our schools.

All here send love to you and yours.

Sincerely,

W. H. HOLCOMBE,
*Sheriff.*

## Address by Hon. W. L. Nelson

EXTENSION OF REMARKS
OF

## HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an inspiring address by our former colleague, Hon. W. L. Nelson, of Missouri, delivered before the Democratic Women's Club of the Second Congressional District of Missouri, at Columbia, October 10, 1945.

Mr. Nelson, who served successively on the Committee on Agriculture and the Committee on Rules, was a Member of this body in the Sixty-sixth, Sixty-ninth, Seventieth, Seventy-first, Seventy-second, Seventy-fourth, Seventy-fifth, Seventy-sixth, and Seventy-seventh Congresses. His address follows:

Mr. NELSON. Missouri, too long heralded as the birthplace of Frank and Jesse James, the happy habitat of the long eared hound, and peopled by skeptics who demanded to be shown, is no longer so publicized. It is now "Missouri, home of Harry S. Truman, President of the United States." Since this Missouri-born son of Missouri-born parents was elevated to the Presidency, no other State has received so much favorable mention. It matters not whether the comments come from enthusiastic citizens; from writers paid by word, paragraph, or page; or whether representing the honeyed words of aspiring politicians; there is praise.

As shines forth a newly discovered star in the sky, so—if past maligners and present boosters are to be believed—a new State has been born. The rush to tell the tale may be likened to the opening of the Cherokee Strip in Oklahoma, back in the days of free land, instead of free advice, or to the mad scramble for rare nylon hose in the rayon-weary days of 1945. So marked is the transition (if we are unquestioning believers) from the old to the new era that students in the University of Missouri, oldest in the Louisiana Purchase Territory, may find the official song, "Old Missouri," long known and sung in every State, entirely out of date.

To know the man in the White House one must know Missouri and Missourians, past and present. While changes have come, old landmarks remain and early influences continue.

Many changes noted since Mr. Truman became President have been among Missourians who have taken on an added feeling of importance and dignity. This follows after too long and too often having joined with others who, facetiously or maliciously, have poked fun at Missouri, allegedly a land of "rubes" and "robbers," "slickers" and "hayseeds." The song You Got To Quit Kicking My Dog Around, is heard less, while the Missouri Waltz is featured in the White House, now occupied by the Truman family.

The name "Missouri" no longer stands for The Mysterious Stranger, a political cartoon creation. Washington knows that there is a Missouri. So do the people of every commonwealth and every country. Japan will never be unmindful of the name. It was on the U. S. S. *Missouri*, than which there is no greater battleship, that for the first time in more than 20 centuries, Japanese signed terms of unconditional surrender.

At the Potsdam Conference, it was because of the down-to-earth common sense and

humor of a Missouri man that the philosophies of Attlee and Stalin were blended with America's philosophy, thereby promoting a better understanding, and assisting in the successful termination of the global struggle. Harry Truman's love of music, nurtured in a State famous for people's music, led him to request the concert by the talented GI musician, whose skill was so enthusiastically applauded by the others of the Big Three.

Only a resourceful Missourian would have had the temerity to suggest a little music as an ice breaker at an international bull session! Yet Missouri is modest. The modesty of President Truman is in keeping with this characteristic of most Missourians. While it is true that the Sedalia (Mo.) Bazoo, when edited by J. West Goodwin, carried at its masthead the line, "He that tooteth his own horn verily the same shall be tooted," the blowing of one's own horn or bragging about one's State has never been a shortcoming of Missourians, natural haters of blowhards.

Missouri, first of all, wants to be a good neighbor. She prefers friends to fame, just as does Harry Truman, who shortly after becoming Vice President, wrote "I never want to be President." The letter was signed "Harry" and the writer meant what he said. Fate decreed differently, but it has not changed the man.

President Truman, typical Missourian, is more popular because of his manner and demeanor. As said Vice President Marshall at the end of his term, "I shall never have to go back to the common people; I never left them," so can President Truman say at the end of his public career, long though it may be.

The President has not alienated people by attempting to oversell himself or his State. Maybe he has been too modest. There is so much that might be said of Missouri. In war, for instance, many names might be mentioned: Alexander M. Doniphan, who led his men on the then record-distance march to Mexico; Crowder and Pershing and Coontz, of World War I; and Omar N. Bradley and others of World War II.

Location counts. Missouri is, in part, what it is because of where it is. Midway between the geographical and population centers of the United States, it is at the crossroads of a continent. Here preceding the Civil War period the tides of pro-slavery and no-slavery rose and fell, and here the Missouri Compromise—not the one worked out in the 1944 Democratic National Convention—was offered as a possible temporary solution for a problem touching the later border warfare and Order No. 11. Missourians, then as now, were men of conviction and courage. As stated by Justice Douglas of the United States Supreme Court, in an address before the Missouri bar, Missouri was the only State to meet its full quota for both the Northern Armies and the Southern Armies. Near Boonville, Mo., the first land battle of the Civil War was fought, and 244 of the 2,261 Civil War battles took place on Missouri's soil. Small wonder is it then that in the conflict and in the subsequent days there should have been bitterness and lawlessness, with occasional decisions by courts from which there was no appeal.

Speaking again of location, Missouri is far enough north for hustle and far enough south for hospitality. It was here that the linchpin wagon of the pioneer stopped, and here the pony express started.

Daughter of Virginia, North Carolina, Tennessee, and Kentucky to the east, Missouri became the mother of most of the States to the south and west.

Yes; early Missourians knew what hustle, daring, and hardship, too, meant. Near Independence, where is now the Summer White House of President Truman, a lone signboard, pointing to the northwest, read: "Oregon, 1,900 miles." The Santa Fe Trail, another travel way blazed by Missourians, stretched 700 miles to the southwest.

To reset a plant in its early period of growth adds to its strength as its roots go deeper into the soil selected. Missourians have always been uprooted peoples. They have come to the State from older States, from countries across the oceans, and always they have come because there were opportunities for free enterprise and industry here. Perhaps this helps account for the clear-eyed acceptance of the challenge of these uprooted days of 1945. Led by Truman, who determinedly shuns despair, the common folk of Missouri know that the vast problems of reconversion can be solved by the same fortitude and vision that helped create their State, made it a leading State in agriculture, and increasingly so in industry—yes, and that helped to win the war. The people of Missouri are still frontiersmen, facing a new west—a mental, scientific and social one that taxes all the energies and talents that men and women, forward-looking and unafraid, can command.

Missouri has about her that indefinable "something" which distinguishes her citizens from those of most other States. Missourians are different. The difference is not wholly due to heredity or environment, or altogether to background or "bringing up." No other State matches Missouri in a combination of soil and scenery and in the ability to supply man's every need, including clothing, food and fiber. But to "point with pride" to Missouri's firsts and foremosts; to mention her ability to give employment both to cotton pickers and ice harvesters; or to say much more of the State's resources in mines, fields and factories, does not disclose why Missourians are different. The soil may have something to do with it.

Half a century ago Dr. A. W. McAlester, then dean of the school of medicine, University of Missouri, and a nationally known breeder and exhibitor of Morgan horses, held that the best horses could be produced only on limestone-underlaid land suited to the growth of bluegrass, as in Missouri. Now comes Dr. William A. Albrecht, head of the soils department of the Missouri College of Agriculture and who is temporarily directing educational work in Germany, who leaves no doubt as to the importance of the source of vitamins in feed for livestock, some feeds being especially rich in those agencies making for growth and strength in animals. The suggestion is made that like contributions may be made to the development of Missourians. As to the part played by bluegrass, best grown on limestone lands, in the development of horses such as Rex McDonald, world champion five-gaited saddle horse of his day, and Easter Parade, 1945 winner over all, there is ample proof. If with feed for horses why not with food for humans?

While in no sense hero worshipers, Missourians have not failed to honor the pathfinders and home builders who cleared the forests and plowed the prairies.

Men do not set up signboards for themselves but for others who are to follow. This truth Missourians have never failed to recognize. Such sentiments find expression in old settlers' societies and reunions such as the Lone Jack picnic, held annually only a short distance from the Truman family home, and the Randolph County Old Settlers' Association.

Speaking at the fifty-seventh annual meeting of the latter, Gov. Phil M. Donnelly, Missouri's Governor, a product of the Ozarks, in addressing the Old Settlers, called attention to some of the State's out-State industries, adding, "Let us move confidently into a new future. Glorious as the past has been, our golden age is not in bygone days, but is before us. The Governor stressed citizenship, rather than commerce, merely mentioning farming and a few out-State industries, of which Missouri has many in addition to those in the larger cities. The world's foremost nursery, reminiscent of the days of Johnny Appleseed; a fire-brick plant whose immense output, ordinarily shipped to every part of the world, was all used by the Government in ship construction during World War II, the fireboxes of the battleship *Missouri* being lined with these made-in-Missouri brick; only a few miles distant from the fire-brick city a smaller town whose model factory supplies anchors and stays and other hardware, wherever telephone or telegraph wires are strung, the Government being the exclusive purchaser during the war period; largest of alfalfa dehydrators, and cob pipe factories where millions of 'Missouri Meerschaums', such as General MacArthur smokes, are made.

If one would know the secret of the strength of President Truman's home State, he will not seek it alone in bank balances or in the products of farms and factories. He will go far back and turn to many sources, to dim documents some hidden away in old courthouses; to scrapbooks, diaries, family Bibles, ancient photograph albums, and even to tombstones yellowed with the tears of the passing years.

On my desk as I write are old account books, diaries, and other records, some of the entries made more than a century ago. Let us look first at this pocket-size and well-worn notebook carried by my grandfather.

"April 20, 1836, left Hardy County, Va. (now West Virginia) with 280 head of cattle" reads the first entry. Following on other pages, some of them dog-eared and discolored, there is recorded the slow movement of these grass-fed steers which finally, after passing through Philadelphia, were sold, on foot, in New York City. The first major river crossing was at Harper's Ferry, where rivers and States meet, and where, years later, a monument was erected to the memory of John Brown. Daily entries in the old account book show toll at ferry crossings, of which there were many; tavern charges for men, and feed and lot expense for cattle and horses are figured to the last penny in the meticulously kept diary. Saving and counting the cost was good business then as now under the leadership of President Truman.

The next entries in Thomas Tucker's book were made in Missouri, to which State he and others of his family came. A few years later, in 1839, Nathaniel Leonard, who had come to Missouri from Vermont, wrote other livestock history, as he recorded the trip down the Ohio of three pure-bred cattle, "Reds, Whites, and Roans," finally shipped by boat up the Missouri River to Cooper County. These animals were foundation stock for the present Ravenswood herd and the oldest of all known herds of shorthorn cattle under one family ownership in the world.

But there are other books and notations far more revealing as to the early and continuing strength of the State. I now read from a letter written by my paternal grandmother in 1835 to a relative remaining in Virginia:

"We have been on the road 7 weeks and all is going well with us. Near the close of each day we make camp, place the covered wagons in a circle for protection, put up our tents, and start supper. When the fires under the kettles are burning bright and there is the welcome odor of food in the air, we gather about, sing old gospel hymns, and have prayer. It all reminds me of a camp meeting, but we miss the brush arbors."

As showing the same spiritual influence, and similar deep devotion of those pioneer people, I quote the following, written in small but legible script in my grandmother's diary: "Thomas and Mary V. Tucker went to housekeeping on the 10th of February, 1848. May we both live in peace and harmony while we are traveling the path of life, and when our Maker calls us from here may we depart with joy to the place God has prepared for those who love Him."

I quote from family records, feeling that they are representative of many families which came to Missouri.

The mill-run of Missouri pioneers were a deeply religious people—good but not goody-good. They, as they made the then long and dangerous trip westward, lacking as they were in adequate transportation and communication facilities, brought with them their Bibles, axes, and rifles, all of which were used.

Coming of their own free choice from States they loved, and with faith in each other and in God, they had every confidence that together they would in "the far country beyond the Mississippi" make real homes, the abiding strength of any State.

About these makes of Missouri, whether akin to the Mayflower flock or the Jamestown group or other beginnings, perhaps followers of Duden, whose vision and vigilance caused many from Germany to locate along the rivers of eastern Missouri, they were quick to establish churches, both Protestant and Catholic.

Homes and churches were the lap-rings which joined together the chains needed to remove obstacles and to build in a new land. Along with faith grew family affection. Homes were real homes, service stations as well as filling stations. Neighborliness came naturally.

Is it then surprising to hear what the public is being told of President Truman and his family They are average Missouri folk, with background, ideas, ideals, and neighbors about like thousands of other Missourians, "fair to middlin', mostly middlin'" and not given to "meddlin'" or "muddlin'."

Independence—appropriate name for a President who has not been swayed too far to "left" or "right"—is a quiet, homey town where neighbors run in or out backdoors or cut across sideyards. This still applies to the Truman home, provided secret-service men give permission, and where the President and First Lady are still "Harry" and "Bess."

Hospitality is characteristic of Missouri homes. This was ever so. "Welcome" was the word to the man in covered wagon or on horseback. The light-and-tie greeting extended friend or stranger was never lacking in the days of the bootjack and hitchrack. The visitor entered without knocking and left the same way. Then, as always, good neighbors begat good neighbors.

The President is as hospitable to new ideas and suggestion as he is to folks. Disposing of the "chaff" and "straw" as does the cyclone stacker, invented by a Missouri farmer-mechanic, he threshes out offerings from many fields. He is hungry for whatever may prove helpful, and has no fear of foundering on facts.

Mr. Truman, once derisively dubbed "Harry the hatter" because of his hat-store venture in Kansas City, must have as his motto, Keep your head; you may need it for a hat. A talented musician, he prefers to classify folks in piano terms—square, upright, and grand—rather than violently find fault with those who do not share his views. He has shown his faith in the common man by consulting him—through his elected representatives—concerning major policies of government. His genius lies in the implicit trust in the capability of each man. This is directly traceable to his Missouri background of neighborliness, good will, and interest in the other fellow; and to the interchange of viewpoints at county fairs, church festivals, and civic clubs. Possibly President Truman might best be described as a double-barreled Democrat—big D and little d—a firm believer in the Democratic Party and in all the people.

While recognizing the importance of the national "level"—to use Washington's most overworked word—President Truman keeps constantly in mind village, city, and State levels. In fact, to him all are one. The isolated, independent community, as known to Daniel Boone and other early Missourians, has disappeared as has the prairie schooner from the grassy seas. Action taken in the Nation's Capital may affect the man on the smallest farm in Jackson County, Mo. This Harry Truman, once a farmer, knows. He knows, too, that farm prosperity is measured by the purchasing power of the product, not merely by the price, and that no producer ever got rich when he had nothing to sell.

President's Truman's first act, in assuming the high office to which he had so suddenly been called, was one of humility. He asked the American people to pray for him and in so doing revealed his inherent trust in God and his faith in his fellow men. He had not forgotten the "faith of our fathers" and of the pioneer mothers of Missouri. A Baptist, Mr. Truman is content in the thought, that all paths meet at the top of the mountain.

With the love of country and friends comes the love of one's own family. Mr. Truman's first phone call, after he had taken the Presidential oath of office, was to his 92-year-old mother, Mrs. Martha Truman, in Jackson County, Mo. "Be a good man, Harry," and, with a laugh, the plain but proud mother added, "Behave yourself."

The mother did not admonish the son to be a great President. She, with perfect understanding, put first things first.

Soon came Mother's Day, when the President, eager to have his mother with him, arranged for her to travel by plane to Washington and be his guest in the White House.

Consider well these things; keep in mind that Mrs. Martha Truman is not unlike thousands of other Missouri mothers; recall the history (far too little of it in books) of early settlements and the character of the pioneer people—and you will begin to understand what makes Missouri what she is and why Harry Truman is what he is.

## Address of Hon. James M. Mead, of New York, at Dedication of the Bowne House

EXTENSION OF REMARKS

OF

### HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Tuesday, October 23 (legislative day of Monday, October 22), 1945*

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address which I delivered on October 10, 1945, at the dedication of the Bowne House, Flushing, N. Y., as a national shrine to religious tolerance. Because of the importance of the event, I also ask to have printed in the RECORD an article entitled "Bowne House—A Shrine to Religious Freedom," together with a copy of the program which was arranged for that occasion.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

TOLERANCE AND WORLD PEACE

(Address of Hon. JAMES M. MEAD, of New York)

Mr. Chairman, distinguished guests, and friends, I am mindful of the significance of this occasion and of the honor conferred upon me by your committee. Judge Colden, the chairman, and all of his coworkers are to be congratulated upon their unselfish patriotism in giving so freely of their time and talents to insure the success of this celebration.

The dedication of the Bowne House as a national shrine to religious tolerance is of much more significance than the formal ceremony implies. Inspired by the noble sentiments which motivated this tercentenary celebration, you have caused people to gather here from all over our land. We are permitted to live again the sturdy faith which gave courage to John Bowne and his supporters in their successful resistance to intolerance. In the name of religious freedom, Bowne put his own life and liberty in jeopardy that he might secure for others the liberty of conscience pledged in the charter granted to the founders of the town of Flushing by the Dutch governor.

In paying tribute to John Bowne and his supporters for the signal victory which was theirs in establishing freedom of conscience in this province of the New World, we must not neglect to make special mention of the tolerance displayed by the representatives of the Amsterdam Chamber of the Dutch West India Co. in Holland. They resolved that the consciences of men, at least, ought to remain free and unchallenged. That brave country which has suffered so much to maintain its independence is represented here today by the Netherlands Minister. To you, Mr. Minister, we express our heartfelt thanks for this great contribution to the cause of religious freedom. We are aware of the sacrifices which your people made in the recent struggle against the forces of tyranny. The absence of intolerance in your country today and the elimination of class distinction might well be emulated by the other nations of the earth. The seed of religious freedom planted here in the town of Flushing was nurtured and cared for by the Dutch inhabitants and bore fruit in plentitude. This once peaceful community of homes with its wide, tree-lined streets, has given way to the busy life of a modern metropolis with its subways, shopping centers, large buildings of stone and steel, and its crowded streets. But through the fortitude of John Bowne and the generosity of his descendants, the Misses Bertha R. and Anna H. Parsons, who are present today, the future wayfarer may find here the peace and serenity of the town of Flushing of 300 years ago.

We in America have progressed far since the memorable victory of John Bowne. All of our early forebears were not entirely free of intolerance, an inheritance from the animosities of the Old World. Strangely enough, although these early settlers came here in the name of freedom to escape the persecutions of their homelands, too often they became intolerant of others in the New World. They established havens of safety in the New World, but the havens in some instances were safe only for those who were of the same religious belief. But divine providence ordained that this new land should infuse into men's souls the burning desire that hatred and bigotry be eradicated. They learned that love of neighbor was to be the keystone in welding peoples from many lands, of many religions, and of different color, into a strong and stable government. The name of John Bowne, one of the very earliest champions of freedom of religion, was soon followed by John Peter Zenger who fought for freedom of the press.

These pioneers in the cause of liberty were followed in quick succession by others among the colonists, who wrote constitutional guaranties into their colonial laws, culminating in the immortal document of freedom, our own Constitution of the United States, which guarantees freedom of speech and of religion and of the press.

But charters of liberty alone cannot insure the freedoms so essential to man's well-being and happiness. The written words of

charters of freedom must live in men's hearts, and there must be a militant John Bowne in each generation to be ever watchful that the written words of the charters be held sacred.

The recent revelations of the tortures in the concentration camps under the Nazi regime have horrified the world. The physical and spiritual sufferings of the victims of these persecutions have aroused the sympathies of all people. The danger is great that the disclosures of these cruelties will inflame men's passions and endanger the structure of a permanent foundation for peace.

The pattern set in this historic celebration commencing with the religious services in the churches of Flushing of all denominations, should inspire all of us in the ways of tolerance. We should benefit too by the lessons of tolerance which our men in the armed forces lived so nobly on the battle fronts of the world. The children of every race and of every religion—Protestant, Catholic, and Jew—made the supreme sacrifice that others might live in peace and unity. The examples of tolerance exemplified by the contributions of the chaplains of every denomination during the tragic war, attained greater heights than ever before in our history. We must hold these gains and spend every waking moment in promoting domestic tranquillity. We need unity and selflessness as a protection against the constant threat of intolerance which is always ready to raise its ugly head, especially as an aftermath of warfare between men and nations. We proved in this war that men of every race, creed, and color can work together, live together, and fight together for a common cause. We must now present this same united front in the cause of peace. The example of tolerance which we practice here in America will in a large measure determine the extent to which tolerance will exist among the nations of the world. In the world society we must be tolerant of the differences of others from us. In return, we shall have the right to expect and to ask, in the name of world peace, that they be tolerant of our differences from them. We must strive to establish a world order in which each nation is free to work out its own destiny, under its own form of government, and through its own processes, subject only to the condition that it be tolerant of its neighbor and mindful of the inherent rights of the individual.

Today, after 300 years, this historic house still stands. Its sturdy timbers are symbolic of the spirit which lives on—the heritage of religious freedom which has been passed down by each succeeding generation, to our day.

It is fitting that this celebration follows so closely the successful termination of the costly war waged in the name of freedom. As John Bowne's successful fight for freedom ushered in a new era for the people of America, we pray God that the recent successful fight of our American people for freedom, will usher in a new era for all the peoples of the earth.

Greed, intolerance and hatred are the mainsprings of war. Charity, tolerance, and love are the ways of peace. Unless the peoples of the world have learned these truths, all of our sacrifices shall have been in vain. If we in the United States treat the military victory in the war as the end of our obligation in the struggle for lasting peace, we shall break faith with our heroic dead who laid down their lives that we might live in freedom.

The flesh and blood of America, our wealth, our ingenuity, and love of liberty were the sinews that bound the peoples of the world in the united army that brought the enemy to his crushing defeat. These same sinews must be used to fashion the peace. We cannot shut our eyes to the fact that peace as well as war requires total mobilization.

We are now the strongest nation on earth, a reality which is apparent to our friends, as well as our enemies. We used our strength in waging war. We must now use our strength to wage war against war. As the strongest nation on earth, it should not be our aim to dominate other nations of the world but rather to furnish the leadership to establish the unity of mankind and of the family of peoples. It is only by recognizing this unity of mankind and of the family of peoples that the world can live in harmony. Down through the ages determined efforts have been made to prevent wars. These efforts were always strongest immediately after the termination of the last preceding war. All such efforts were in vain. Our leaders in this past war did not wait until the military victory before starting the pattern for peace. The late President Roosevelt and Prime Minister Churchill early enunciated our aims and the aims of our allies in the historic Atlantic Charter. Since that time the leaders of the great world powers have met frequently to discuss the everchanging world events. Economic and political international conferences of the representatives of the United Nations likewise have been called from time to time. All of these efforts were inspired by the hunger of men's souls for peace. That we have not thus far solved all of the problems should not be taken as an evidence of failure. Deep-rooted prejudices, nationalistic thinking, and the human frailties of man, the heritages of thousands of years of civilization are obstacles which must be overcome before we can establish an ideal world society. Our concern must not be over the difficulties which stand in the way, but rather must we be concerned lest we lose faith in our ability to succeed. We must have faith that our leadership in world affairs will ultimately lead us to that ideal family of sovereign nations which will be vested by the consent of all with supreme authority and with power to thwart any aggressor at the outset. If we can attain this objective of banishing war, we will have gone far in establishing a world which will enjoy the freedom that John Bowne secured for the people of the town of Flushing, nearly 300 years ago.

In dedicating this shrine to religious freedom in America, we might well adopt for the people of the world the promise contained in the charter issued October 10, 1645, by the Dutch governor, namely, "the right to have and enjoy liberty of conscience."

---

BOWNE HOUSE—A SHRINE TO RELIGIOUS FREEDOM

Few towns or colonies contributed more toward establishing religious freedom in America than did Flushing.

In the charter issued October 10, 1645, by Gov. William Kieft of the Dutch Province of New Netherland, the founders of the town of Flushing were promised "the right to have and enjoy liberty of conscience." These men, of divers views on religion, courageously resisted every attempt to infringe upon that right, and accepted in their community people of every faith.

Their attitude was eloquently expressed in the Flushing Remonstrance, which is among the truly great documents in American history. Incensed by a ban ordered by Gov. Peter Stuyvesant in 1657 on the harboring of Quakers, or the holding of religious services by this sect, newly arrived in the colony, 26 freeholders of the town of Flushing proclaimed that not only would they welcome Quakers to their town and homes, but any "sons of Adam who come in love among us" and would not "condemn, punish, banish, prosecute, or lay violent hands upon anyone, in whatever name, form, or title he might appear."

Dismissal of the town officials, fining and imprisonment of some of the signers and threats of banishment failed to suppress this remarkable spirit of tolerance, which was not a common virtue of the time. Flushing continued to be a haven for Quakers, although they were forced to hold meetings secretly in the woods to escape persecution by the New Netherland authorities.

When he built his home in 1661, John Bowne, a conservative, quiet-spoken, plain, but strong-minded man, invited the Quakers to worship there. Bowne had married Hannah Feake, daughter of Sheriff Tobias Feake, who had been suspected of being an instigator of the Remonstrance. Like many other residents of the town, Bowne and his wife had been converted to the Quaker faith.

It was not long before word reached Governor Stuyvesant of this defiance of the ban on those whom he called "an abominable sect." In August 1662 a warrant was issued for John Bowne's arrest. Taken from his home in chains, he was haled before the Governor and Council and fined 25 pounds Flanders, with a stern warning to abstain himself in the future from Quaker meetings, under penalty of double the fine and banishment.

Bowne refused to pay the fine or renounce his right to religious freedom. When solitary confinement in the dungeon at the New Amsterdam fort, on a diet of bread and water, and more gentle methods of persuasion failed, Governor Stuyvesant decided to "transport Bowne from the province, as an example to others."

Sent to Holland for disposal of his case, John Bowne made such an earnest plea for tolerance and "liberty of conscience" that he was set free. In its decision the Amsterdam Chamber of the Dutch West India Co., governing body of the New Netherland Province, declared that "the consciences of men, at least, ought to remain free and unshackled."

The trial and acquittal of John Bowne on the issue of freedom of religion unquestionably ranks equally in importance with the trial of John Peter Zenger, nearly 75 years later, on the question of freedom of the press. Both helped to bring about in this new Nation the basic concepts of freedom written into the Bill of Rights.

---

DEDICATION OF BOWNE HOUSE

The following program was arranged for the dedication of the Bowne House held on October 10, 1945:

Presiding: Hon. Charles S. Colden, president of the Bowne House Historical Society.

Advancing of the colors: Color guard of the William A. Leonard Post, No. 422, of the American Legion.

National anthem: Mr. Everett D. McCooey, accompanied by Queens College ensemble, directed by Mr. Boris Schwarz.

Invocation: Very Rev. Msgr. John D. Wynne, St. Michael's Roman Catholic Church of Flushing.

Reading from the Old Testament: Rabbi Max Meyer, Free Synagogue of Flushing.

Reading from the New Testament: Rev. Dougald Lachlan Maclean, St. George's Episcopal Church of Flushing.

Address of welcome: Hon. James A. Burke, president of the Borough of Queens.

Reading of the charter: Rev. E. Wallace Mast, First Congregational Church of Flushing.

Reading of the remonstrance: Rev. Norman A. Hall, First Methodist Church of Flushing.

Address: Hon. Fiorello H. LaGuardia, mayor of the city of New York.

Address: Dr. Albert B. Corey, State historian.

Address: Dr. Howard H. Brinton, director of the graduate school, Pendle Hill, Wallingford, Pa.

Presentation of scroll: Dr. Charles H. Campbell, Reformed Church of Flushing.

Acceptance of the scroll and address: Baron W. van Boetzelaer van Oosterhout, Envoy Extraordinary and Minister Plenipotentiary of the Netherlands.

Reading of the message from Governor Dewey: Rev. B. A. Galloway, the Macedonia Methodist Episcopal Church of Flushing.

Dedication address: Hon. JAMES M. MEAD, United States Senator.

America: Mr. Everett D. McCooey, accompanied by Queens College ensemble, directed by Mr. Boris Schwarz.

Retiring of the colors.

Benediction: Rev. Archie Buchanan, Grace Episcopal Church of Whitestone.

## Abandonment of Fort Brady

REMARKS
OF
**HON. FRED BRADLEY**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Friday, October 19, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, Fort Brady, located at Sault Ste. Marie, Mich., which has stood proudly for 125 years, was declared surplus by the Army as of October 1. Secretary Patterson, in a letter to me of September 28, gave the following explanation:

Fort Brady, like some other small Army posts built along the Canadian border many years ago, has, I believe, served its useful purpose. With the existence of our firm, friendly relations with Canada, it appears to me that it will be uneconomical from both a military and a monetary point of view to maintain all of these small isolated Army posts. Experience in both world wars has shown the need for larger and more centralized military establishments where our relatively small peacetime Army can receive the intensive combined training so necessary to men who will become the nuclei of expanded wartime units.

With respect to your comments regarding the vulnerability to air attack of one of the Nation's vital areas, establishments such as Fort Brady to provide the necessary protection are not the solution according to numerous and continuing War Department studies. The guarding of such areas against sabotage probably always will be a necessity, but this function can be rapidly undertaken by Regular Army personnel from other stations or by National Guard personnel from the area in question. The situation appears to be somewhat similar to that of a city which cannot afford to disperse its police force in the continuous guarding of important property but maintains a reserve or riot squad to answer calls of an emergency nature.

In connection with your statement regarding the use of the post for CMTC training, I feel sure you will agree that if training for Regular Army personnel can be better carried out in combination with all the arms and services at large posts, so, too, can the training of the CMTC, ROTC, and National Guard be more competent and more valuable at centralized posts with large reservations suitable for maneuver and field exercises.

Of course, it is difficult indeed to find objections to the Army's decision.

However, the way in which the equipment is being removed from the buildings at Fort Brady is a disgrace and is wasteful of the taxpayers' money in the extreme. In the first place, Mr. Speaker, let me point out that Fort Brady was renovated and completely modernized in the 5 years preceding the recent war. A large, beautiful brick, steel, and concrete barracks, equipped with the most modern sanitation and cooking facilities was constructed by the WPA. The post hospital was modernized and extended through a grant of funds from the Surgeon General. During the war a large recreational building and other buildings of permanent construction were added. Through last summer, many workmen were employed making repairs to the structures to keep them up to date. Consequently, the decision to abandon Fort Brady came as quite a shock to the citizens of the Soo.

These buildings can and should be properly maintained by, and usable to, either the State of Michigan or the city of Sault Ste. Marie, especially when it is to be pointed out that this beautiful post lies right in the heart of the city proper. As a matter of fact, a delegation from the Soo is in the city right today endeavoring to find out how the city can acquire that post in its own name.

Yet the Army engineers a week before the fort actually was declared surplus—as of October 1—moved in and started destroying the permanent installations in these buildings by ripping them out bodily from the walls, floors, and ceilings. The absurd excuse has been made that all this property belongs to the Army Quartermaster Corps and I have been informed that same is being transferred to Fort Wood, Wis., or elsewhere, for storage. It is logical to concede that removable equipment such as bunks, blankets, dishes, pots, and pans, and so forth, should properly belong to the Quartermaster Corps and should thus be removed. There is no complaint with that.

On the other hand, it is entirely illogical to claim that permanent installations, such as furnaces, plumbing, plumbing fixtures, kitchen ranges, built-in chromium kitchen sinks and drainboards, are the property of the Quartermaster Corps.

They were not installed by, and they never have belonged to, the Quartermaster Corps. Surely when one sells a house out of which he is moving he does not destroy the lavatory, nor does he remove any of the other permanently attached equipment. That properly goes with the building itself, and any removal of same, especially when it is difficult, if not impossible, to replace at this time, makes those buildings unfit for occupancy for any purpose, and the terrible destructive manner in which these permanent fixtures are being removed—tearing great holes in the walls, ceilings, and floors—to say nothing of possible damage to the equipment itself, is a disgraceful waste of the taxpayers' money.

Mr. Speaker, under date of September 29, as soon as this destructive dismantling was called to my attention, I addressed a letter to Secretary Patterson protesting against this procedure and to which letter I have yet to receive any reply or even an acknowledgment.

Today we have before us on the floor a bill to retrench our expenditures and drastically reduce allocations already made for 1946 to the extent of some $55,000,000,000. With that bill, of course, I am in wholehearted accord, but I repeat, Mr. Speaker, that there are other ways in which the taxpayer can be protected, and one of those is for the Army to use more judgment in dismantling properties such as Fort Brady, and we may assume there will be many similar disgraceful such programs in the future unless a stop is put to it right now.

The SPEAKER. The time of the gentleman from Michigan [Mr. BRADLEY] has expired.

## Presidential Order Transferring Bulk of Surplus Disposal Activities to RFC Confirms Stand Taken by House Small Business Committee 2 Years Ago—H. R. 3873 Recommended Same Program Back in 1943

EXTENSION OF REMARKS
OF
**HON. WRIGHT PATMAN**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, October 16, 1945*

Mr. PATMAN. Mr. Speaker, in the fall of 1943 I introduced H. R. 3873, a bill designed to centralize disposal of Government-owned surplus property in the hands of the Reconstruction Finance Corporation. The bill carried with it the unanimous endorsement of the entire membership of the House Small Business Committee and was the result of the findings of that committee in its hearings held on surplus disposal way back in 1943. It also carried the endorsement of the membership of approximately 20 trade associations engaged in the distribution of consumer goods.

On October 19 the President issued an Executive order transferring the disposal of surplus consumer goods to the Reconstruction Finance Corporation, thus giving to that agency the responsibility for the actual disposition of approximately 90 percent of all of our surpluses.

One of my supporters in pressing for the adoption of H. R. 3873 was Mr. Charles H. Lipsett, president of the Atlas Publishing Co., and publisher of several trade magazines and one weekly publication dealing exclusively with the subject of surplus disposal. Mr. Lipsett is considered one of the Nation's authorities on this question as a result of his studies in the field during and after World War I.

I have today received a letter from Mr. Lipsett which has provided me with considerable satisfaction. The letter reads as follows:

OCTOBER 20, 1945.

Hon. WRIGHT PATMAN
*House Office Building,*
*Washington, D. C.*

MY DEAR CONGRESSMAN PATMAN: You are undoubtedly aware of the recent order by the President, transferring the surplus disposal activity of the Commerce Department to the Reconstruction Finance Corporation. This practically makes the RFC the disposal agency for at least 90 percent of our surplus war materials. I consider this order quite a compliment to your good judgment as in your bill, H. R. 3873, which you presented to the House Committee on Banking and Currency on January 17, 1944 you made the same recommendation.

In my conference with Mr. Symington, since he was appointed Administrator, I stressed the need of a centralized disposal

agency as covered by your bill, and as also outlined in my original recommendations on the disposal of surplus war materials. It has taken the Administration close to 2 years to find out that we were right.

With best wishes, I am,

Cordially yours,

CHARLES H. LIPSETT.

## British Loan Demands on United States Arouses Anxiety in Congress

EXTENSION OF REMARKS

OF

### HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, October 11, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Arthur Sears Henning from the Washington Times-Herald:

BRITISH LOAN DEMANDS ON UNITED STATES AROUSES ANXIETY IN CONGRESS

(By Arthur Sears Henning)

Great Britain's postwar program for the United States, so far as it has been revealed, is causing increasing anxiety in Congress. How to meet the demands of the British without crippling American trade and further impoverishing the American people, already shouldering a $300,000,000,000 debt for the war, is the subject of the conference.

The principal items of the British program are:

1. A gift of $6,000,000,000 by the United States to put the British on their feet financially and restore their foreign trade potential—incidentally in competition with the United States.

SEEK LOAN OF SHIPS

2. Loan of 1,000 Liberty ships by the United States to the British to enable them to regain their ocean trade on profitable terms.

3. Repeal by the United States of the provision of American law requiring the export in American bottoms of American products purchased with the proceeds of American foreign loans.

4. Devaluation of world currencies, including the American dollar, in order to make the $6,000,000,000 gift more palatable to the American people. The six billions would be taken from the United States' $20,000,000,000 gold stock, but would be represented to the public as partly, if not wholly, offset by the United States Treasury's paper profit on devaluation of the dollar.

ADMINISTRATION FAVORS AID

The Truman administration has been won to support of financial aid for Britain in the several weeks of negotiations conducted here by Lord Keynes, who, because of his inspiration of New Deal financial policies became known as the Englishman who rules America, and by the Earl of Halifax, the British Ambassador. The only question remaining, so far as the administration is concerned, is whether the aid shall be an outright gift, an interest-free loan, or a loan at nominal interest.

In Congress, sentiment is divided, and there a battle is in prospect. Many Senators and Representatives hold with Senator TAFT, Republican, of Ohio, that it is necessary to bail out Britain to the extent of three billions or more, but insist upon gaining trade concessions in exchange. The British are relying on Lord Halifax to influence Congress, the noble lord being reputed to know more Senators and Congressmen than anyone else.

The British are satisfied on the whole with the attitude of the administration. As soon as they manifested their desire for financial aid Assistant Secretary of State Clayton was dispatched to London to learn their pleasure and inquire into their financial condition. Once the negotiations were transferred to Washington the administration was more than cooperative.

Lord Halifax, however, was firm and unyielding in his demands. He said the assistance must be an outright gift, as Britain couldn't afford to repay a loan or even to pay interest on a loan.

WANT BRITISH CONCESSIONS

The negotiations now revolve around concessions that it is conceived Britain must make if the consent of Congress to financial aid is to be obtained. Congress, administration leaders believe, while refusing an outright gift would approve a long-term $5,000,000,000 loan at nominal interest.

Britain, however, would be required to abolish or greatly scale down the imperial preference tariff system which militates against American trade, abolish the dollar pool established with the Dominions, and break up the sterling bloc of countries barred from trade with the United States.

The removal of British trade restrictions is implicit in the Bretton Woods world financial stabilization project, financed chiefly by the United States, which was engineered originally by Lord Keynes. The United States has ratified the plan but Great Britain has not.

COOPERATIVE ON SHIP DEAL

The administration has been highly cooperative also in the negotiations for the loan of 1,000 Liberty ships to Britain.

Of America's 2,500 10,000-ton Liberty ships, built at a cost of $5,000,000,000, Britain now operates 200 on extended lend-lease and wants 1,000 more for 8 or 9 years on a strictly loan basis, no cash involved.

The British plan to use these ships on the principal trade routes of the world, picking up the profitable business lost by the Germans, Italians, and Japs. American ship owners are fighting the proposal, contending that this loan would throw away America's chance to become a merchant shipping power.

BLAND BILL GAINS SUPPORT

Opponents in Congress are rallying in support of a provision in the pending Bland shipping bill prohibiting transfer of an American ship to a foreign flag until 6 months after its offer for sale to Americans.

The British won the support of the administration negotiators for their argument that much as Britain needs the money America stands in even greater need of the trade benefits that the rehabilitation of Britain commercially would assure.

## Viewpoint of an American Soldier

EXTENSION OF REMARKS

OF

### HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Tuesday, October 23 (legislative day of Monday, October 22), 1945*

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very unusual letter which I received from a soldier abroad. At his request, I ask that his name be omitted from the letter.

There being no objection, the letter, without the signature, was ordered to be printed in the RECORD, as follows:

OCTOBER 10, 1945.

Hello, SENATOR BUTLER: After nearly 3 years of censorship in the Army, both in the United States and on foreign soil, I have been privileged in reading and understanding the American soldier's viewpoint on a great many things. These things I hope to carry back with me into civilian life, and until my dying day I hope to be able to justify some of the complaints which are predominant in every Army man's heart and mind. Even back in the dark days of slavery, "there was a great many souls sold down the river," but never has such a thing been so widespread as has been the plight of the American soldier on foreign soil since the day he received his "Greetings."

The first thing that a soldier must learn is the fact that an order is an order, and that his country must come first, and that his family and his individual feelings must come second. The hour has never been too late, or the weather too bad, when a man could not be called into a duty to perform which might cost him his life. Personal feelings were never taken into consideration, and his monthly check was not changed. There is no such a thing as overtime in the Army. You belong to Uncle Sam 24 hours per day, 7 days per week, month in and month out, until such time as the emergency plus 6 months is past. You had no recourse but to do the job. If you did not do the job, you were a slacker and a traitor to the country. At all times stood such possibilities as court martial and a death sentence for your failure to perform your duty. All you need must do to check this fact is to look over any court-martial proceedings any place in the entire world where the American Army has been located and it will be verified.

Yet, while the American soldier has been away from home fighting to preserve the rights of all, others have been allowed to stay at home on fine jobs and enjoy all the freedoms which we are fighting for. Certainly to the 11,000,000 men that are returning home there is a sore spot some place in their being when they stop and realize that they fought for the same rights that the man at home enjoyed, and yet their children must look upon the children of other men that are better dressed and have more money in their pocket and ask, "Is this justice?"

Ever since that eventful day in 1942 when I was called into the services there has not been one single day that I have not been able to pick up an American newspaper and read the fact that men have been called out on strikes and lost many millions of man-hours of work that were needed in American production. Just how many lives could have been saved had they done the job as the American soldier has had to do. How many men would have worked in a mine or an automobile factory at $21 per month as a great many of us have had to do in the armed service, and yet their lives were not endangered. They were allowed to return home each day to their wives and children and enjoy them growing up, while the rest of us must have been deprived of this pleasure, and our children grew up while we were away. These precious years of their lives we lost, and we cannot be repaid dollars and cents, and yet we could not strike.

Some 60 colored men refused to do a duty here on the Island of Oahu some time back, and each one of them was court-martialed and sentenced to hard labor, and yet you allow John L. Lewis to cut the American outlay of coal production 1,000,000 tons of coal per day, while the rest of the world is looking upon us and wondering how are we going to be able to reconvert to peacetime

industry and prosperity. Certainly we cannot do it if the men whom we elect to protect our individual rights allow such a selfish group to so completely monopolize and control one-third of the men that are now out on strike. Just how many of us that are away from home would be more than happy to return and do the job that they are supposed to be doing if you would but bring us home? I ofttimes wonder how deep will be our internal strife when all of the men overseas are returned home to face the realities of a Government that cannot and will not control the unions as they have in the past. Certainly the Army was never allowed to go on uncontrolled, and I can see no justification in the allowing of any other group to be handled any other way as long as we are all to be American citizens and considered of equal rights at all times.

The boys overseas have lived on broken promises ever since they left home and now we are living on the promise of being returned home some time in the future at the conveniences of the controlling American minority. I read with some interest in the Honolulu Advertiser, Wednesday morning, October 10, 1945, the following quotation:

"Strike of longshoremen and other dock workers of New York's important harbor held up disembarkation of soldiers returning from the European conflict. Soldiers were forced to unload the giant liner, *Queen Elizabeth*, which had docked after a trans-Atlantic crossing.

"Some of the striking stevedores were working the returning troopships, but 135 dock workers refused to continue unloading the *Queen Elizabeth*, a British ship. The workers were dissatisfied with the size of the sling loads being used in getting the cargo from the ship.

"Two platoons of soldiers were ordered to take over the job, which they performed amidst boos and hisses from the stevedores lining the docks."

This is a fine way to repay the men who have fought and suffered in our European theater of operations by having them return home and do the job that others refuse to do at many times the pay the soldiers are getting. These boys know what it means to return home and are more than happy to be upon American soil and laboring for America. They are not questioning the size of the load, nor the hours that they work nor the money that they get paid. They are Americans and are more than glad to do the job so that they and others like them can be returned to the ones they love that much sooner. Yet, from the above quotation, two platoons of soldiers were ordered to take over the job and perform the task amidst boos and hisses from the stevedores lining the docks. Sometimes I just wonder if the old vigilantes parties that used to be performed in the days of the old West would not be very appropriate for the 135 dock workers, who gave these boys such a wonderful homecoming. Certainly, we should have statesmen from among our electives somewhere in Washington that will see that this practice is discontinued immediately. Personally, I would not be afraid of the votes that I lost among the 135 gripping dock workers against those I would gain among the 11,000,000 men in our armed forces that have fought and paid for the freedom of which all of us shall enjoy.

I am sure from the above letter you must feel that my stomach is filled with ice cream and dill pickles to merit my writing such a letter, but honestly, Senator BUTLER, there are times when a person's heart bleeds at the conditions which do exist at home today, and have continued to exist ever since this emergency began. I do hope that you do not take this letter personally in anything other than the friendly spirit in which I have sent it. For years to come I hope to be able to devote a part of my life to making the United States of America everything that you and I individually know and want it to be. To be able to tell others what a democracy is, we must be able to live it each day ourselves.

So with continued best wishes for everything for you and yours, I remain as always,

Yours very truly.

## The American Shipping Industry

EXTENSION OF REMARKS

OF

### HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Tuesday, October 23 (legislative day of Monday, October 22), 1945*

Mr. BALL. Mr. President, I ask unanimcus consent to have printed in the Appendix of the RECORD an address I delivered last Thursday afternoon before the Propeller Club at the Waldorf-Astoria Hotel in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Trying to figure out what I could say to you people that would be helpful, or at least stimulating, I read through many of the speeches given at your annual conference here a year ago. In so doing, I was strongly impressed by two assumptions that seemed to permeate the thinking of all the speakers.

The first assumption was that a continued substantial Federal subsidy, both for ship building and ship operation, is essential if America is to have the strong merchant marine vital to our security.

The second assumption was that private enterprise should continue to build and operate ships, presumably making a reasonable profit thereon.

I wonder if those two assumptions together are not contradictory. Certainly it is true that every time private enterprise accepts a subsidy from Government, for whatever reason, it must also accept drastic limitations on its freedom of action in the form of restrictions and regulations. Isn't that a progressive disease?

I have the feeling, perhaps due to watching the geometric growth of the various subsidies which the Federal Government has paid during the war, that any kind of subsidy blunts the keen edge of competition, tends to put enterprise and initiative to sleep, leads to stagnation and the necessity for even larger subsidies. If that is true, even assuming that subsidies are essential now, they will tend to increase steadily if continued, and eventually will reach the point where the American people and Congress will decide it doesn't pay to try to make private enterprise function in this field and Government will take over completely.

I could not help remembering, as these thoughts went through my mind, what I had read about the days of sail when American clipper ships carried the cream of the world's ocean trade. Americans then built and sailed their ships without subsidy. They competed freely for their share of the business, and they got it, usually a bit more than their share. Why has the situation changed so drastically since steam came in and the handling of ships has been increasingly mechanized? I have always believed that producing and operating complicated mechanical gadgets was our special dish. I think the war has proven that belief is well-founded. One of our generals told me that when Germany put this war on wheels and wings, she played right into our hands. Why then a sick merchant marine that needs subsidy injections to maintain a precarious existence?

I haven't had all the time in the world to explore that question, but so far I haven't heard any answer that makes sense to me. I know the stock answer: That subsidies are necessary to maintain the high wages and living standards of the American workmen, both in shipyards and on ships, in contrast to lower wages of foreign competitors. I won't buy that one because it doesn't make economic sense. Maybe high wages out of line with production are one symptom of what's wrong with the industry, but they are only a symptom and not a cause.

Our living standards are high in America because our production per worker is high, partly because we have been richly endowed with natural resources, but largely because our production tools and techniques are the best in the world. Our high-dollar wages merely reflect that increased productivity. Relatively large capital investments in plant and equipment per man employed and managerial skill in planning the work have been primarily responsible for that high productivity, and the American worker has until recently measured up to the increased opportunity for him.

Of course not all industries have increased their productivity per worker to the same extent. For instance, while Congress was considering renewal of the Reciprocal Trade Agreements Act, with a grant of authority to reduce tariffs an additional 50 percent, it was interesting to note that wages on the whole were considerably lower in the protected, or should I say, subsidized, industries, than in the nonprotected and purely domestic industries. Yet the major argument for tariff subsidies, like that for all other peacetime subsidies, is that they are necessary to protect American wage and living standards against low-wage foreign competition. To me, the low wages reflecting low productivity in protected and subsidized industries is an indictment of management in those industries. I cannot help but think that management relied too much on the tariff subsidy rather than on its own initiative and energy to meet competition abroad.

What has all this general economic argument to do with the specific problems facing the merchant marine? After all, wages in the industry are at high levels compared to foreign competitors and there isn't any chance of reducing them, as a practical proposition. What can we do about it except a subsidy if we grant that a large and healthy merchant marine is vital, as I do?

For the immediate present I would agree that a continuance of the building and operating subsidy appears the only practicable answer. But I am not willing to accept it as a final answer. It is a palliative and not a cure. Prosperity for the shipping industry—capital, management, and labor—based on a Federal subsidy, is a strictly phoney prosperity because it has not been earned by production efficiency at the American level. I just do not believe that kind of phoney prosperity can be maintained, by subsidy or any other means. The shipping industry will be healthy and really prosperous only when its production performance by owners, management, and labor measures up to American standards, and not before.

I grant you that is an unpleasant, tough solution. Maybe you can brush it off and forget it on the basis that what I don't know about the shipping industry would fill a great many books, which I freely admit. But I do know something about American industry and the economics of a capitalistic system and I know my basic reasoning is sound. And I am encouraged to stick to my guns by the fact that several ship operators have refused the operating subsidy and managed to survive, and that one hardy owner will have no part of either building or operating subsidy and still manages to get his share of the

business. If one owner can solve his problems and compete profitably then others can.

Obviously in striving to meet this challenge, and I think it is a challenge that faces all American enterprise in varying degree, success cannot be achieved by any one segment of the industry working alone—capital cannot do it alone, neither can management nor labor. Organized labor, particularly, will have to overhaul its economic thinking drastically if the challenge is to be met.

It is my understanding that anticipated operating subsidies are relatively small, not only in actual dollar totals, but also in their relationship to gross operating revenues. The problem there of increasing production per man to justify the new wage scales should be easier to solve. Even there, however, chances of a solution are not bright without a realization by organized labor that only higher production per man can in the long run justify and sustain higher wages. In other words, raising wages without increasing production merely starts an inflationary spiral that in the long run cancels out the increase insofar as purchasing power and living standards are concerned. But in the process of proving anew that economic fact by a general arbitrary increase of 30, 40, or 50 percent in wages and then prices, we would hike our production costs and prices to the point where our competition for foreign trade would be tremendously handicapped unless we devalued the dollar again, which is inflation.

Unfortunately, much of organized labor, or its leaders, seems to be proceeding on the obviously unsound economic theory that wages can be increased substantially without relation to production. In fact, there is a widespread tendency not only to level down production per man to that of the least efficient workers and hold it there by shop rules, but there is direct opposition to the introduction of new machinery or techniques that will increase production per man and thereby make increases in real wages economically sound and possible. The recent strike of longshoremen here in New York is a perfect case in point.

As long as organized labor insists on following a policy of spreading scarcity among its members instead of helping to produce and share abundance, neither the shipping nor any other industry in America stands much chance of meeting the great challenge facing the capitalistic economy today.

I am, of course, familiar with the stock argument that increased wages unrelated to production can be paid out of profits. Perhaps in one or two isolated industries there is some semblance of economic truth to that argument. But for industry as a whole, it is completely false. If all net profits of industry after taxes were diverted to wages (and don't forget that Government must get its tax revenue from some place, and if corporation income doesn't produce it, then workers' income will have to produce it) the percentage increase that could be made in wages today would be insignificant—less than 10 percent. And, of course, the capitalistic system would not survive such a distribution and our objective would be defeated.

The shipbuilding subsidy, larger in amount and also constituting a much larger percentage of the total cost of building a ship, is a much tougher proposition than the operating subsidy. I believe it can be licked by teamwork. I have inspected a number of wartime shipyards. My conclusions are that management achieved a miracle in organizing the flow of materials and speeding up production, but that the waste of manpower in shipyards during the war has been tremendous. Undoubtedly union featherbedding rules and jurisdictional rows are partly responsible for the very poor utilization of manpower in shipyards, but I cannot help but think that if management had devoted as much topnotch brains and ingenuity to labor relations and utilization as it did to laying out the work and organizing the flow of materials, a much better record could have been made.

The late Wendell Willkie had a sort of litany which he tried to impress on the American people in the 1940 campaign. "Only the strong can be free, and only the productive can be strong." I wish that every American could keep that basic truth constantly in mind in these difficult years ahead. Our chests swell a bit when we talk of our war-production record. We're pretty proud of American production and standards of living. Let's not forget what made both possible—ability and willingness to produce.

## Un-American Activities

REMARKS

OF

## HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, October 22, 1945*

Mr. RANKIN. Mr. Speaker, those of you who listened to the attack on the Committee on Un-American Activities by Walter Winchell last night, must have been reminded of what a great newspaperman said once, when a complaint against one of his exposures came from an unexpected source. He said: "A farmer stuck a pitchfork through a bin. One prong of the fork went through a rat. The rat squealed."

You have no doubt noticed that the underworld, the housebreakers, the burglars, the thieves, and the bootleggers always want to abolish the grand jury.

The Committee on Un-American Activities is the grand jury of America. It represents the patriotic, law-abiding people of this country. Its members are doing the best they can to protect our country against those subversive elements that would destroy everything for which our young men have been fighting and dying on every battle front in the world.

Our country is in graver danger from within today than it is from without. A wave of syndicalism is sweeping over the land, stirring up strife, promoting race hatred, fostering strikes, and threatening the overthrow of this Government and the destruction of our American way of life.

They are not only carrying on their subversive plots against this Government but are using the radio, the motion-picture shows, and certain elements of the press to spread their poisonous propaganda. They want to get rid of the Committee on Un-American Activities because our investigators are checking up on them and exposing their activities to the world.

They call themselves Communists now, and say they are out to destroy the capitalistic system. What they mean by a capitalist is not merely the rich, or even the well-to-do. When they speak of the capitalistic system they mean that system of free enterprise that enables a man to own his own land, his own home, his own farm, his own business establishment, or to carry on any free enterprise in the land, from a factory to a dairy farm.

The other day we had before the Committee on Un-American Activities, one William Z. Foster, now the head of the Communist Party in America. I read to him the following statement from the record of an investigation of Communist propaganda made by a House committee in 1930. The statement reads as follows:

Mr. BACHMAN. I want to ask you about a statement it is reported you made in 1923. You made an acceptance speech on May 25, 1928, when you accepted the nomination for President.

Mr. FOSTER. Yes.

Mr. BACHMAN. Let me ask you whether or not, in part, you made this statement:

"No Communist, no matter how many votes he should secure in a national election, could, even if he would, become President of the present Government. When a Communist heads a government of the United States (and that day will come just as surely as the sun rises), that government will not be a capitalistic government, but a Soviet government, and behind this government will stand the Red Army to enforce the dictatorship of the proletariat."

Mr. FOSTER. I made that; I think I made that. It sounds like what I said. I do not know that is word for word, but it is in substance what I said.

He admitted the other day before the Committee on Un-American Activities, that he had not changed his position on this matter. Remember that his position is that of every Communist and "fellow traveler" in America, from Johannes Steele up and down.

Note he says:

When a Communist heads a government of the United States (and that day will come just as surely as the sun rises), that government will not be a capitalistic government, but a Soviet government, and behind this government will stand the Red Army to enforce the dictatorship of the proletariat.

I then produced a pamphlet called Syndicalism, written by this same William Z. Foster many years ago. He admitted writing it, but said he had repudiated it. I asked him when he repudiated it. He said when he became a Communist and joined the Communist Party.

When you read the statement he made then, and examine the policies he and his party are pursuing now, you can understand that it was not much of a reformation to change from a Syndicalist to a Communist in the twinkling of an eye, merely turning a mental somersault overnight.

Now let us see what Mr. Foster said back in the days before he was converted to communism. In this pamphlet on syndicalism, which he admits he wrote, we find this statement on the subject of general strikes:

THE GENERAL STRIKE AND THE ARMED FORCES

Once the general strike is in active operation, the greatest obstacle to its success will be the armed forces of capitalism—soldiers, police, detectives, etc. This formidable force will be used energetically by the capitalists to break the general strike. The Syndicalists have given much study to the problem presented by this force and have found the solution for it. Their proposed tactics are very different from those used by rebels in former revolutions. They are not going to mass themselves and allow themselves to be slaughtered by capitalism's trained murderers in the orthodox way. Theirs is a

safer, more effective, and more modern method. They are going to defeat the armed forces by disorganizing and demoralizing them.

A fruitful source of this disorganization will be the extreme difficulty the armed forces will experience in securing supplies and transportation. Modern armies, to be effective, must have immense arsenals, powder works, and other industrial establishments behind them to furnish them their supplies of ammunition, arms, food, and clothing. They also must have the railroads constantly at their disposal for transportation. When the general strike has halted these industries the army will be striken with paralysis. Another source of disorganization will be the division of the armed forces into minute detachments to guard the many beleaguered gates of capitalism. The strikers, or revolutionists, will be everywhere, and will everywhere seize or disable whatever capitalist property they can lay their hands on. To protect this property the armed forces will have to be divided into a myriad of guards and scattered along the thousands of miles of railroads and around the many public buildings, bridges, factories, etc. The wealthy capitalists themselves will also need generous guards. The most important industries, such as transportation, mining, etc., will have to be operated in some manner. To do this will require many thousands more of soldiers and police.

The result will be that the armed forces will be minutely subdivided, and through the loss of the solidarity and discipline, from whence they derive their strength, they will cease to be a fighting organization. They will degenerate into a mass of armed individuals scattered far and wide over the country. These individuals can be easily overwhelmed and disarmed, or what is more likely, as they will be mostly workingmen and in sympathy with the general strike, induced to join the ranks of their striking fellow workers. Once the disorganization of the armed forces is complete the revolutionists will seize the unprotected industries and proceed to reorganize society.

I want you to read that statement carefully, and then compare its program with the wave of unjustifiable strikes that are sweeping over the country today, sponsored by every Communist in America, at a time when we are still at war, with millions of our young men still in the armed forces, at $50 a month.

BLOODSHED

But Mr. Foster, the head of the Communist Party in America, and the leader of their fellow travelers, has this to say on the subject of bloodshed:

But the prospect of bloodshed does not frighten the Syndicalist worker as it does the parlor Socialist.

In that connection I might say, Mr. Speaker, that the bloodshed of our servicemen on foreign battlefields has never frightened the Communists in this country who are plotting to overthrow the very Government these boys are fighting to sustain.

In order for the Syndicalist, or the IWW of that day—the Communist of today—to understand how to wreck American industries and bring about the revolution they so ardently crave, Mr. Foster gives them this discourse on sabotage:

SABOTAGE

Next to the partial strike, the most effective weapon used by Syndicalists in their daily warfare on capitalism is sabotage. Sabotage is a very general term. It is used to describe all those tactics, save the boycott and the strike proper, which are used by workers to wring concessions from their employers by inflicting losses on them through the stopping or slowing down of industry, turning out of poor product, etc. These tactics, and consequently, the forms of sabotage, are very numerous. Many of them are closely related in character. Often two or more kinds of sabotage are used simultaneously or in conjunction with the strike.

Perhaps the most widely practiced form of sabotage is the restriction by the workers of their output. Disgruntled workers all over the world instinctively and continually practice this form of sabotage, which is often referred to as soldiering. The English labor unions, by the establishment of maximum outputs for their member, are widely and successfully practicing it. It is a fruitful source of their strength.

The most widely known form of sabotage is that known as putting the machinery on strike. The Syndicalist goes on strike to tie up industry. If his striking fails to do this, if strike breakers are secured to take his place, he accomplishes his purpose by putting the machinery on strike through temporarily disabling it. If he is a railroader he cuts wires, puts cement in switches, signals, etc., runs locomotives into turntable pits, and tries in every possible way to temporarily disorganize the delicately adjusted railroad system. If he is a machinist or factory worker, and hasn't ready access to the machinery, he will hire out as a scab and surreptitiously put emery dust in the bearings of the machinery or otherwise disable it. Oftentimes he takes time by the forelock, and when going on strike puts the machinery on strike with him by hiding, stealing, or destroying some small indispensable machine part which is difficult to replace. * * *

* * * By systematically working slow and clumsy and deliberately spoiling their work and building material, they have demoralized the building industry. The building contractors are unable to cope with these insidious tactics. In 1910 they called a mass meeting of 30,000 capitalists, landlords, and architects to devise ways and means to combat them.

* * * This fear is by no means confined to France. The mere threat of the striking textile workers of Lawrence to sabote their machinery and product in case they were forced back to work was a powerful deterrent to prevent their master from breaking their strike. These scared individuals admitted that there are 1,000 ways in which rebellious workers can spoil cloth without fear of detection.

* * * Sabotage is peculiarly a weapon of the rebel minority. Its successful application, unlike the strike, does not require the cooperation of all the workers interested. A few rebels can, undetected, sabotage and demoralize an industry and force the weak or timid majority to share in its benefits. The Syndicalists are not concerned that the methods of sabotage may be underhanded or unmanly. They are very successful and that is all they ask of them. They scoff at the sentimental objection that sabotage destroys the worker's pride in his work. They prefer to be able to more successfully fight their oppressors, rather than to cater to any false sense of pride.

Read that statement and note the picket lines around places of employment where there has never been complaint of discrimination and no protest against low wages.

We are told that pickets have been ordered to surround oil refineries where the workers have never made complaint and to bludgeon those workers and prevent their going to their daily jobs. In one instance we are told that the United States Government seized and took over the plant as result of these interferences.

It reminds us of another statement in this pamphlet on syndicalism, written by this Communist, William Z. Foster, whose fellow travelers are now abusing the Committee on Un-American Activities. He goes on to say:

The Syndicalist is as "unscrupulous" in his choice of weapons to fight his everyday battles as for his final struggle with capitalism. He allows no considerations of "legality," religion, patriotism, "honor," "duty," etc., to stand in the way of his adoption of effective tactics.

Remember that the man who wrote this pamphlet on syndicalism, telling how to stir a revolution, claims to have been suddenly converted to communism, which is now plotting the overthrow of this Government, and carrying out the program of syndicalism written by its leader many years ago; not only that, but these Communists and fellow travelers are today branding as imperialists and reactionaries President Truman, Secretary Byrnes, Herbert Hoover, Foster Dulles, and every other patriotic American who does not subscribe to their destructive doctrines.

They and their fellow travelers are demanding the abolition of the Committee on Un-American Activities, whose members are laboring for the protection of this Government and for the preservation of American institutions.

## Maternal and Child Welfare

EXTENSION OF REMARKS

OF

## HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Tuesday, October 23 (legislative day of Monday, October 22), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD an editorial which appeared in Parents' Magazine endorsing Senate bill 1318, introduced by the junior Senator from Florida [Mr. PEPPER], and House bill 3922, introduced by Representative MARY NORTON.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIX WORDS AND A DATE

(By Clara Savage Littledale, editor, the Parents' Magazine)

"Do we as a Nation intend to provide every mother, regardless of where she lives or what the family income is, with an opportunity to get modern, scientific maternity care? Or shall we remain content with present conditions under which some mothers and babies get the best care available anywhere in the world while others get little or no skilled medical attention?"

It's Senator CLAUDE PEPPER speaking, as he introduces a bill in Congress—the same bill that Mrs. MARY NORTON introduced in the House. The bill has a name which is "Maternal and Child Welfare Act of 1945." Could how prosaic and even dull that collection of six words and a date sounds. Actually, back of those words lie more child-bed tragedy, more heartrending need and more regard for human life than has ever before wrapped itself up in a bill before Congress—a bill that looks as though it might pass.

And that's just the point. This bill has a chance, if you and I and our neighbors know enough about it, and care enough about it to help. And if we don't—well, put it this way:

Each year some 200,000 mothers in this country go through childbirth without the care of a physician. Think back to the hours when you were bringing a child into the world. The doctor was there, nurses were there, an anesthetist stood ready. You were suffering and in pain, perhaps in terror, but you knew everything was being done that could be done to safeguard you and your baby. Then think of the 200,000 other women who knew no such care. They struggled through without a doctor—or perhaps they died.

And again thousands of babies die at birth or soon after birth in this country. Thousands of these babies would not die if their mothers had the right care before and after childbirth. It is common knowledge that a large proportion of these baby deaths, as well as mother deaths, are preventable. Then what on earth is the matter? Why isn't something done?

That's not as simple a question as it may appear. For instance, the lives of 31,000 babies could have been saved in 1 year, if every State had given its babies as good care as did the State of Connecticut. The lives of 3,600 mothers could have been saved, that same year, if every State had given its mothers as good care as did the State of Minnesota. It sounds as though one were talking in riddles, doesn't it? Just what has geography to do with the life and death of thousands of women and babies? It has a lot to do with it. The richer States—those whose per capita wealth is relatively high—can collect ample money via taxes to provide prenatal clinics and well-baby clinics and all sorts of desirable health care. Per capita wealth also makes a State a good place for doctors and nurses to locate and assures well-equipped, well-supported hospitals. It is the poorer State and rural districts that run up our horrifying maternal- and baby-death figures.

Is there any justice or democracy in a situation that safeguards the life of a baby if he happens to be lucky enough to be born in Connecticut or some one of the other well-to-do States, but stacks the cards against him and his mother if he lives in one of the poorer States? Do we, as Americans, believe in that kind of thing?

No; we don't, and we never did. It is just that we haven't been aware, haven't seen clearly enough, what was happening, and why, and interestingly enough, what brought us to a realization of the situation was the conviction that servicemen's wives and babies should have the best possible care at a cost they could afford. Patriotism, gratitude, warm-hearted humanity resulted in wartime legislation which made this possible.

Now it's peacetime. And the question before the House and the Senate and the country is whether we care enough about babies and their mothers—all babies and all mothers, no matter where they live, no matter how much money they have, no matter what their color, race, or religion—to see that not one of them shall die needlessly. Do we care enough? If we do, we will get behind this bill now up for consideration and push with all our might. This bill means that money will be appropriated for a 10-year program of necessary infant and maternal care. The United States Children's Bureau will be the administrative agency that will work with the States to see that the best in health care is provided for mothers and babies and young children, in every State, without fear or favor or duplication.

Those leaders in this country who know how shameful are our maternal and infant death rates and who know, from wartime experience, what can and should be done about them, are behind this bill 100 percent. Where do you stand? What will you do? You can discuss this legislation, you can work for it as an individual or in your woman's club, child-study group, or your Parent-Teacher Association. You can write or telegraph the Senators from your State in favor of Senate bill 1318 and your Representatives in the House in favor of H. R. 3922. (They are the same bill.) Address Senators care of the Senate Office Building and Representatives in care of the House Office Building, Washington 25, D. C. Do something and do it now.

## Veterans Have Difficulty in Obtaining Automobiles From Surplus Disposal Agency

EXTENSION OF REMARKS

OF

### HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks and include letters and telegrams from my constituents in regard to their problems, I wish to include in these remarks an excerpt from a letter which I have received from Capt. William A. Dodd, a friend of mine in my district, in regard to the difficulties which veterans are confronted with in the purchase of surplus automobiles.

Mr. Speaker, Congress has passed legislation for the disposal of surplus war material and it was intended that veterans would have preferential consideration; however, I have had complaints from the State commander of the Louisiana Department of the American Legion, and many veterans returned from the war, who state that they are unable to purchase surplus automobiles, as well as other surplus material, and the letter from Captain Dodd is typical of many which I have received.

Mr. Speaker, I hope the department charged with the obligation to dispose of this surplus war material will make every effort to give the opportunity to our veterans to secure some of this surplus war material, for it is agreed that we are all in favor of giving to the veterans every consideration and preference to which they are entitled.

Not long ago I wrote you concerning the disposition of surplus property (Government), especially automobiles, to veterans. I've got several letters but no action out of these d—— bureaucrats. It is next to impossible for a veteran to get a car without spending more for attorney fees and travel expenses than the car is worth, not to mention the time and effort.

I understand that dealers are allowed to buy cars in lots of, say, 90, at $150 to $200 each. They then sell them at the ceiling price (or over) of $300 to $1,000. A veteran can't buy just one car, unless he is a farmer or needs it for a delivery car, and so forth, and then its double tough.

I think the whole set-up is screwy and benefits only a few dealers—not the veterans. You will doubtless be unable to change the present policy, but I wanted you to know that every veteran I've seen is 100-percent disgusted with the present method of surplus property disposal.

## Hearings on Reclamation Projects

EXTENSION OF REMARKS

OF

### HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 23, 1945*

Mr. JOHNSON of Oklahoma. Mr. Speaker, the Subcommittee on Interior Department Appropriations will begin hearings tomorrow morning on estimates totaling $93,367,000 for 28 reclamation projects. The hearings are expected to run for 2 or 3 days. I will place in the RECORD a list of these projects in order that the membership may be advised as to what projects will be up for consideration. The list of projects and amounts requested as supplemental estimates for the fiscal year 1946 as set forth in House Document No. 331, Seventy-ninth Congress, first session, are as follows:

*Bureau of Reclamation*

RECLAMATION FUND, SPECIAL FUND

| | |
|---|---|
| Salaries and expenses (other than project offices) | $1,000,000 |
| General investigations | 3,000,000 |
| Projects: | |
| Boise project, Idaho, Payette division | 2,000,000 |
| Minidoka project, Idaho | 720,000 |
| Rio Grande project, New Mexico-Texas | 750,000 |
| Deschutes project, Oregon | 1,000,000 |
| Klamath project, Oregon | 1,000,000 |
| Owyhee project, Oregon | 190,000 |
| Vale project, Oregon | 3,000 |
| Kendrick project, Wyoming | 500,000 |
| Riverton project, Wyoming | 1,000,000 |
| Shoshone project, Wyoming, Heart Mountain division | 1,000,000 |
| Power division | 1,124,000 |
| Total, from the reclamation fund | 13,287,000 |

GENERAL FUND CONSTRUCTION

| | |
|---|---|
| Gila project, Arizona | 2,000,000 |
| Davis Dam project, Arizona-Nevada | 10,000,000 |
| Central Valley project, California | 18,500,000 |
| Kings River project, California | 197,000 |
| Colorado-Big Thompson project, Colorado | 7,683,000 |
| San Luis project, Colorado | 1,000,000 |
| Boise project, Idaho, Anderson Ranch | 1,925,000 |
| Palisades project, Idaho | 1,000,000 |
| Hungry Horse project, Montana | 1,500,000 |
| Tucumcari project, New Mexico | 2,000,000 |
| Lugert-Altus project, Oklahoma | 2,020,000 |
| Provo River project, Utah | 860,000 |
| Columbia Basin project, Washington | 11,000,000 |
| Yakima project, Washington, Roza division | 1,650,000 |
| Total, general fund, construction | 61,335,000 |

COLORADO RIVER DAM FUND

Boulder Canyon project (All-American Canal), $3,827,000.

COLORADO RIVER DEVELOPMENT FUND

Colorado River Development Fund (expenditure account), $1,000,000.

FORT PECK PROJECT, MONTANA

Fort Peck project, Montana, $2,000,000.

MISSOURI RIVER BASIN

Missouri River Basin, $11,918,000.

## The President's Program for Military Training

EXTENSION OF REMARKS
OF
## HON. BURNET R. MAYBANK
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Wednesday, October 24 (legislative day of Monday, October 22), 1945*

Mr. MAYBANK. Mr. President, yesterday the President of the United States addressed the Congress on the subject of military training. I ask unanimous consent to have printed in the Appendix of the RECORD three editorials dealing with this subject; one from the New York Times entitled "The President's Program," one from the New York Tribune entitled "Can We Do Less?" and one from the Washington Post entitled "Training for All," all appearing in today's issues.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of October 24, 1945]

THE PRESIDENT'S PROGRAM

President Truman told Congress yesterday that we must face the hard fact "that peace must be built upon power, as well as upon good will and good deeds." Then he himself faced the hard choice of how we best can retain the great international power we have won. To this end he recommended to Congress the passage of a universal military training act as a cornerstone of our military establishment. His language was plain. His position is unequivocal. It is a position and a program with which this newspaper heartily agrees:

1. A comparatively small Regular Army, Navy, and Marine Corps.

2. A greatly strengtened National Guard and Organized Reserve for the Army, Navy, and Marine Corps.

3. A General Reserve composed of all the male citizens of the United States who have received training, to be built up by establishing a year of intensive military training for each young man reaching the age of 18 years or upon graduation from high school, whichever is later, or at the age of 17 years if his high-school course has been completed and he has his parents' consent.

The President recognizes and states clearly the many arguments that have been made against universal military training. To those who label it "conscription" and attempt to damn it with that word, he answers that the trainees would not be enrolled in any armed service; they could not be inducted into such services except by a further act of Congress; they would be no closer to membership in the Army, Navy, or Marines than if they had no training. The point is, if a crisis should come and we had again to conscript our manpower, these young men would be trained—not untrained, as has been the case in every crisis in our history.

To those who say that adoption of universal training would indicate a lack of faith in international organization, the President's answer is that it would show instead the sincerity of our intentions to support such an organization by maintaining the power with which to assist other peace-loving nations in enforcing its authority.

To those who have said, let's wait a while and see what our commitments are going to be and whether we will need a large military establishment, the President's answer is that no once can foresee the future, but that experience has taught us that we cannot wait until a crisis arrives to begin to prepare. If time proves the program unnecessary it can be modified. But if we scrap now the camp installations, the essential equipment and the training grounds we have, then these things cannot be improvised overnight if it should be proved later that a strong military force is needed.

To those who have argued that the development of the atomic bomb has made unnecessary a strong Army, Navy or Marine force, the President answers as does General Marshall—whom he quotes—that every technological advancement in war has made necessary a greater deployment of manpower, and that the more complex the machines of war become the more necessary it is to give men intensive training in how to handle them.

Finally, the President asks and answers the question of what alternative program has been offered by the opponents of universal training. It has been, he says truly, "nothing but pious hope and dangerous wishful thinking." Those are luxuries in which we cannot indulge ourselves in the hard-headed world of today.

It took great political courage for the President to speak as he did. He might have hedged on the subject by suggesting several alternatives, such as were put forward yesterday by some less courageous Congressmen after listening to his speech. Spread the program over 3 or 4 years. Integrate it with a school program. Build up a reserve only through a volunteer National Guard. These and other halfway measures might be worse than nothing, for the very reason that they would give us a sense of false security. The President has the better plan: a year of concentrated training in handling the weapons of war that will give us, if another emergency arises, the trained reserves we did not have in 1941, or in 1917, or in 1898, or ever before in our history, but which we had better have if another crisis comes, unless we wish to be destroyed.

"There will be better answers, we hope, in the days to come," said the President, voicing the wishes of us all. "The United States will always strive for those better answers—for the kind of tried and tested world cooperation which will make for peace and harmony among all nations. It will continue to strive to reach that period quickly. But that time has not yet arrived. * * * It is our solemn duty in this hour of victory to make sure that in the years to come no possible aggressor or group of aggressors can endanger the national security of the United States of America."

The President has stated the issue clearly. We have the choice: a sure and certain peace with honor, because we are strong; an insecure peace built on the unsure sands of pious hope and wishful thinking. We believe that the people of this country have the wisdom to see this, and the courage and strength to do what is necessary to insure peace with honor. Congress should act promptly to adopt a plan for universal military training.

[From the New York Tribune]

CAN WE DO LESS?

President Truman's message, advocating universal military training, may well stand in the future as one of the fundamental documents in American history. If the implications of this proposal were not so far-reaching there would be less opposition to it and doubt about it. Every thoughtful person is aware that to institute a system of compulsory 1-year military training and military discipline for every male citizen of the United States is to institute a radical innovation in American socio-economic life, the effects of which might go a long way in many directions which cannot well be foreseen. But the stark question is, Can we do less?

If the Nation is to survive it can only survive in strength as a nation. We cannot hire anyone else to fulfill the essential function of lending strength and defensive force to our society. A city can employ a specialized police to serve its requirements of force and order, a nation cannot do so. If it is to live as an effective factor in the world it must draw its power from the sources within itself, from the willingness of its citizens to serve in its interests and from their ability to do so in an emergency. In asking the Congress for a system of universal military training President Truman is, in effect, asking the country whether it will show that willingness and will expend the costs of acquiring that ability and whether it will agree to do so now, while the lessons of two great wars are vivid in its memory.

The plan proposed is that recommended by General of the Army Marshall. It is a plan which allows for all the unforeseeable technical developments of warfare by providing only a relatively small and flexible standing army, but which also allows for the colossal man-power demands which any future war would make, whatever its technical shape, by building up a vast pool of elementarily trained citizen soldiers who could be quickly drawn into any kind of army which might be demanded by another emergency. The trained citizenry would not, as in the case of the unwieldly European conscript armies of the early years of the century, be regimented into any military structure. They would, however, be given the essentials of military knowledge and discipline—the equivalent, in the modern age, of the expertness in woodmanship and with the squirrel rifle which every colonial farmer enjoyed and on which Washington relied in his recommendations for maintaining a citizen militia—and thus equipped to fill swiftly whatever military or military-industrial cadres might be required in the event of another war.

The technical details of the proposal are sufficiently well thought out to defy most of the easy criticisms which might be brought against it. The military technology, however, is not the most important consideration. The critical question is whether the people of the United States and their Congress are willing to face the real demands of the modern world, whether they are willing to invest their time and energies in the aims of peace and prosperity which they profess, or whether they are again (as before) so tired of the war just past that they will give nothing to the future peace, relapsing rather into all the old, easy, comfortable ways which will spell another war in another generation. That is the question which the President's message poses. And to that question there seems, in the view of this newspaper, only one answer.

[From the Washington Post]

TRAINING FOR ALL

A ring of conviction on the need for universal military training comes through the President's message to Congress. It is this conviction that has persuaded him to reject alternatives that would provide for the training of some instead of all our youth, or for partial training. Mr. Truman is all out for the military system that General Marshall has recommended: a small Regular Establishment, a greatly strengthened National Guard and Organized Reserve, and a general reserve of trainees drawn from the Nation's youth. The President couches his plea in the context of arguments which are now familiar to the country. The arguments, moreover, are kept in balance. Only the person who is afraid to meet this issue frontally asks for universal training on grounds that it would improve the Nation's physique, lower illiteracy, and improve moral and spiritual standards. These results, as the President says, are byproducts, and "the basic reason for universal training is a very simple one—to guarantee the safety and freedom of the United States against any potential aggressor."

No doubt, now that the debate has been loosed upon the country, the old misconcep-

tions will be revived. The bogy of conscription is perhaps the foremost. What the President proposes is not conscription, not by any strength of that ogrish word. As the President says, conscription is compulsory service in the Army or Navy in time of peace or war, and in conscription countries the conscript is immediately enrolled in the armed services. He is, in fact, a soldier or a sailor. The system proposed for this country is a training system, not particularly in drill, but mainly in the use of all the instruments and weapons of modern warfare. The young men would not be members of the armed forces and would not be used as such. There would be sufficient flexibility to allow the boys ample opportunity to develop their skills and to allow for self-improvement in general. The closest analogy to what the President has in mind, as we have said before, is Switzerland's system.

Equality for opportunity, which is the key phrase in the American tradition, underlies the Presidential approach to a system of national training. In the war, many men were deprived of the positions they merited because of the accident of late training. They were officered by men whose sole claim to rank was that they had had the wit to seek training before war broke or to apply for entry to officers' candidate schools in time. Thus the war establishment, though it performed brilliantly, was a hit-or-miss affair in the matter of status. All this would be ruled out by the new system. Everybody would start out from scratch, and, in the event of another call, which God forbid, the right men would be in the right place at the right time. This would be a gain for democracy no less than for organization and defense.

The objection that compulsory training would violate traditional American concepts of liberty and democracy is refuted out of our Nation's history. The need for just such a program as is now suggested was seen by George Washington. In his message to Congress of December 3, 1793, the first President pressed upon the Congress "the necessity of placing ourselves in a position of complete defense." He declared in words that ring even truer today than they did then that "There is a rank due to the United States among nations which will be withheld, if not absolutely lost, by the reputation of weakness." Washington's words went unheeded because the people were anxious for peace but were unwilling to pay the price of it.

Training is one of the prices of American peace in the age we live in. If we were bent upon conquest, and not upon self-defense, the ideal scheme would be conscription. That way would lie the militarization of our country. We want no nation of soldiers, but anything less than a trained citizenry, able to defend our country, would be a deplorable weakening of the position and influence we have gained in the world and an invitation to aggression. We hope Congress will act on the basis of the arguments that the President has offered in his strong and compelling message.

## Urges Caution on Universal Military Training—Adoption of the Martin Resolution (H. Res. 325) Can Prevent It

REMARKS
OF
**HON. GORDON L. McDONOUGH**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. McDONOUGH. Mr. Speaker, President Truman's message on universal military training was a forthright appraisal of our need for future protection. The only way we can prevent universal military training is to adopt and vigorously urge the United Nations to adopt the Martin resolution, House Resolution 325, which abolishes the necessity of universal military training as a means of self-protection in the countries associated with the United Nations. The resolution reads as follows:

Whereas the first concern of every American is the security of the Nation; and

Whereas the American people are determined that their Government shall henceforth make proper provision for the continuous maintenance of such security; and

Whereas in accordance with this firm determination it has become necessary to consider a system of compulsory military service in the United States as a permanent part of our insurance against unpreparedness in the event of sudden war; and

Whereas compulsory military service would result in greater restrictions over the lives and activities of our people, would impose heavy burdens on them, causing greater taxes and profound changes in their way of life; and

Whereas compulsory military service has long been customary in many European states and elsewhere, but has been contrary to American tradition since the founding of our Republic; and

Whereas compulsory military service has never prevented war in Europe or elsewhere but, on the contrary, causes suspicion and fears to grow between nations and inclines the rulers of men to war rather than to peace; and

Whereas 50 nations, having expressed their desire for peace, met at San Francisco and resolved to make greater efforts than ever before to abate the fear and likelihood of war in the years to come; and

Whereas the people of the United States and their leaders in all sections and parties have in good faith approved the San Francisco Charter and desire our President to take a leading part in fulfilling the great purposes for which it was formed; and

Whereas with the ultimate destruction of the military power of Germany and Japan there will never be a better time than now to secure international agreement looking to permanent peace; and

Whereas an agreement between the nations of the world to eliminate systems of compulsory military service would itself be greatly conducive to that restoration of peace which is so profoundly desired by all the plain peoples of the world, and would release their energies and resources for rebuilding their war devastated countries; and

Whereas world-wide abolition of compulsory military service in no way precludes the maintenance of national or international military forces adequate for safeguarding national or collective security: Therefore be it

*Resolved*, That before the United States adopts compulsory military service, the President of the United States, the Secretary of State, and the personal representative of the President of the United States on the United Nations Organization, Edward R. Stettinius, Jr., be, and hereby are, urged to work unceasingly for an immediate international agreement whereby compulsory military service shall be wholly eliminated from the policies and practices of all nations.

If they refuse to approve and adopt this resolution, as a future policy to keep and guarantee the peace of the world, then we must proceed with a universal military training program in the United States.

Do we want universal military training if it can be avoided? We must have it, however, if it cannot be avoided. The United Nations was organized to guarantee the peace of the world, if necessary by force. Why should we proceed on the principle that we must have force to guarantee the peace when we can by mutual agreement remove the necessity of force. The only reason for universal military training is to be prepared to defend ourselves from attack by enemy nations. What enemy nations? We do not arm one State to protect it from the attack of another State in the United States. We do not have military training in one State to prepare for attack upon another State in the United States. Why? Because it is not necessary. Because by mutual agreement we have found that we can and have for 160 years lived peacefully together. Why cannot the United Nations do likewise? The nations that refuse to approve and adopt the Martin resolution will be the ones to watch. We should use this resolution as a barometer of the future good intentions of the nations associated with us in the United Nations Council.

The adoption of the Martin resolution should be our first step to show our good intentions. In the meantime we should proceed with preparation of legislation to set up this program with the hope that we may never have to adopt it.

## Strikes

REMARKS
OF
**HON. CLARE E. HOFFMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 22, 1945*

Mr. HOFFMAN. Mr. Speaker, we are all greatly interested in the statement of the gentleman from South Dakota on the strikes and the inability to get trucks. I want to call the attention of the Republican leadership to the fact that not only did Governor Dewey in New York settle the elevator strike when it affected the public interest, but Governor Kelly, of Michigan, repudiated the policy of Mr. Frank Murphy, one-time Governor of Michigan, who now sits in the Supreme Court Building as an Associate Justice, repudiated that policy when a strike occurred in the utility field in Michigan.

Governor Kelly has always been an outspoken friend of organized labor but when, under misguided leadership, the employees of public utility companies pulled the switches in the power-generating plants of Michigan and there was a threat to deprive some 2,000,000 citizens of light, heat, and power, and when the union leaders refused to accept a compromise offer, approved by State authorities, the Governor, according to the press, just called the union representatives into his office and in substance told them no one would interfere with their right to strike or their right to picket, but that, if they did not operate the plants, he would see to it that the people of the State were protected; that the plants were operated.

That was the only attitude which the governor of a State could take and, without hesitation, Governor Kelly took it. He should be commended for his prompt action.

The SPEAKER. The time of the gentleman from Michigan has expired.

---

## The Kelsey-Hayes Controversy

REMARKS
OF

## HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. LESINSKI. Mr. Speaker, I have just returned from a trip to Detroit, where I was privileged to discuss with reputable citizens the Kelsey-Hayes labor controversy. This controversy is of the utmost importance to the residents of my congressional district, and from information I gained I am of the opinion that the root of the Kelsey-Hayes labor controversy goes much deeper than would appear on the surface or from just a cursory examination of conditions.

The Kelsey-Hayes Wheel Co. employed in their two plants just prior to the strike approximately 5,000 people. Their principal customer is the gigantic Ford Motor Co., which was forced to close down for approximately 6 weeks because their source of wheel supplies was cut off by reason of the strike. The employees of Kelsey-Hayes are back on the job—not in the numbers that were employed prior to the strike, as they are now employing approximately 3,500 persons, and I have been informed that this is a sufficient number to take care of the current orders for wheels manufactured by Kelsey-Hayes.

The angle of the Kelsey-Hayes strike that is of such great importance to the labor group in the Detroit area is that the officials of Kelsey-Hayes are apparently endeavoring to break the union in their plant and thus this controversy assumes the proportions of a test case; if they are successful, other corporations in the Detroit area will use the same tactics and will flout the provisions of the Wagner Labor Relations Act, and chaotic labor conditions will follow. Informed circles in the Detroit labor area are convinced that Kelsey-Hayes are not alone—they are being supported by powerful industrial groups, and if they are successful in breaking the union in Kelsey-Hayes and bringing about chaotic labor conditions, they will tie up the Ford Motor Co.

On the surface it seems strange indeed for some industrial groups to endeavor to stop work at the Ford Motor Co. However, when one probes beneath the surface it appears that certain large corporations in the Detroit area are not willing to go along with the wage increases asked for by the UAM, which from information contained in the press and financial publications are being supported by the Ford Motor Co. In fact, it is indicated by the press that the Ford Motor Co. will shortly increase their wages approximately 20 percent, although their wages are the highest in the automobile industry. The General Motors Corp., on the other hand, has just refused to grant increases to its employees and has so informed R. J. Thomas, president of the United Automobile Workers. The strategy on the part of certain industrial groups appears to be to bust the union at Kelsey-Hayes, which would result in labor controversies that would tie up the supply of wheels for the Ford Motor Co. I have heretofore indicated that Ford Motors is the chief customer of Kelsey-Hayes, and because of the recent strike Ford Motors was forced to close when their wheel supply was exhausted.

It is quite apparent, from conversations I had while in Detroit, that Kelsey-Hayes are using rather high-handed tactics. Under the provisions of the Wagner Labor Relations Act, union employees are permitted to select their own shop stewards. These shop stewards are in reality the representatives of the employees and receive no additional compensation for their services, either from the employees, the union, or the corporation. They are men looked up to and respected by their co-workers because of their qualities of leadership and knowledge of their respective crafts. Prior to the recent strike, Kelsey-Hayes employed approximately 70 shop stewards at the McGraw Street plant and 15 shop stewards at the Military Street plant. Upon the termination of the recent strike, each of these shop stewards was sent a letter by George W. Kennedy, president of the Kelsey-Hayes Wheel Co., informing him that Kelsey-Hayes Wheel Co. had extended him the privilege of returning to work on probation, but if he evidenced the slightest tendency to disobey the rules and regulations of the company or failed to perform the work assigned him, he would be discharged immediately.

Mr. Speaker, this is a rather high-handed method to do business in a democratic country and certainly it is holding the "big stick" over the heads of the employees, and flouts the very provisions of the Wagner Labor Relations Act.

The Kelsey-Hayes Wheel Co. even went further—they arbitrarily during the strike canceled by telegram all written and verbal agreements between Kelsey-Hayes and the UAW. After settlement of the strike, they informed the UAW that theer would have to be a reduction in the number of "stewards" in their two plants—now, mind you, these "stewards" are nothing more than representatives of the workers and receive no additional compensation—they are the men to whom their coworkers look for guidance and assistance in the adjustment of grievances. The UAW made a very careful survey of conditions in the Kelsey-Hayes plants, taking into consideration the nature of the work and the physical lay-out of the departments, and they presented to Kelsey-Hayes a plan by which there would be 29 stewards in the McGraw Street plant and 7 in the Military Street plant. The UAW showed just cause and outlined in detail their reasons for the necessity of each of these stewards. The Kelsey-Hayes Wheel Co. retaliated by notifying the UAW that they would agree to a total of 18 stewards and, when asked by the UAW how they arrived at this number, they refused to give any explanation—so far as they were concerned, it was a matter of take it or leave it—they did not feel it necessary to explain their decision even though employees are guaranteed adequate representation of their own choosing under the provisions of the Wagner Labor Relations Act.

Following the arbitrary position taken by the management in regard to representation, which resulted in a deadlock in negotiations, they have further complicated the matter by the discharge of four of the "shop stewards" who are the duly elected representatives of the employees. This, in my opinion, emphasizes the fact that when the management notified the UAW of its repudiation of all written and verbal agreements they also included in that repudiation the right of the workers to select representatives of their own choosing as provided by the Wagner Labor Relations Act. This is evidenced by the fact that Kelsey-Hayes has made it known to their employees that they desire to select the number of shop stewards for them and those shop stewards who have been chosen by ballot prior to the strike as the legitimate representatives of the employees but who are not agreeable to Kelsey-Hayes have been "fired" or working conditions are being made so intolerable that it clearly violates the spirit of the Wagner Labor Relations Act.

I have been informed that the UAW still considers that the duly elected shop stewards are the representatives of the workers in the Kelsey-Hayes plants and that regardless of the management's repudiation of agreements they will continue to function as such under the terms of the Wagner Labor Relations Act.

It is beyond coincidence that at the present time the entire country is watching with interest the political situation which is developing in the city of Detroit due to the candidacy of an outstanding labor leader in the mayoralty campaign which is now being so hotly contested. It would seem to me that certain reactionary supporters of the present Detroit city administration would find it very much to their political advantage to create a chaotic condition by work stoppages, which would very adversely affect the candidacy of this candidate at the November 6 election. It seems to me that certain important industrialists in the city of Detroit are more concerned in the dual object of destroying the UAW and defeating this candidate than they are in restoring a peacetime economy through the medium of a speedy reconversion program.

Another very important feature of this situation is the thousands of war veterans who are returning to a peacetime economy to which they have been unaccustomed for the past several years and to which they have been looking forward through years of bitter fighting and all kinds of personal hardship. They are returning only to find a chaotic condition which certainly does not give them the feeling that they have won in their own city the fundamental principles of

democracy for which they have been fighting. These veterans are well aware of the fact that the ranks of the UAW during wartime here on the home front were comprised of patriotic citizens who made the instruments of war which they so successfully used to win their victories on far-flung battlefields. The UAW, on the other hand, had thousands of men in the armed forces—perhaps hundreds before entering the service were employed in Kelsey-Hayes and are looking forward to returning to a peacetime condition in their home city and going back to their old jobs.

Because this is a key plant in a key industry which will largely determine the return of this country to peacetime economy, our entire reconversion program could be wrecked by a group of selfish industrialists willing to sacrifice the happiness of millions of Americans for the purpose of satisfying competitive and political ambitions.

## To Prevent War

EXTENSION OF REMARKS
OF
**HON. GUY CORDON**
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Wednesday, October 24 (legislative day of Monday, October 22), 1945*

Mr. CORDON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "To Prevent War" by Tom Burns, published in the Sunday Oregonian of October 14, 1945. The statement is a prescription for the prevention of war.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TO PREVENT WAR

To the EDITOR:

To halt the third world war:

1. Internationalize atomic-bomb secrets.
2. Abolish all secret treaties.
3. Execute "God-Emperor" Hirohito.
4. Let China civilize Japan.
5. Help Russia humanize Hun-land.
6. Fire State Department millionaires.
7. Retire every millionaire general.
8. Shoot all war criminals.
9. Reserve fox holes for war profiteers.
10. Chloroform every cartel cootie.
11. Muzzle race-hatred rats.
12. Combine and maintain our Air, Army, and Naval Forces in matchless condition.

TOM BURNS.

## The Atomic Bomb

EXTENSION OF REMARKS
OF
**HON. SHERIDAN DOWNEY**
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
*Wednesday, October 24 (legislative day of Monday, October 22), 1945*

Mr. DOWNEY. Mr. President, on the twenty-first of this month Tristram Coffin, a well-known commentator, broadcast over the Columbia Broadcasting System an interesting account of a meeting of the subcommittee of the Senate Committee on Commerce, which was at the time considering a question which is of current interest to the American people, namely, the control of atomic energy. I ask unanimous consent that the broadcast be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Down a long, quiet corridor of the Senate Office Building is a double door. A plain, ordinary wooden door with the brass numerals, 457, tacked on.

But inside that door last week a fantastic new world was taking shape, the world of atomic energy. The room is small and smoky. At the head of a long table covered with green cloth, like a pool table, sat Senator HARLEY KILGORE, of West Virginia. He is a bald, benign man with a large, round face; a pleasant, deep voice, and a light, sometimes cynical, smile.

Senator KILGORE was presiding at the hearings Tuesday and Wednesday that struck out into a murky future. To his left sat Senator WARREN MAGNUSON, of Washington, a handsome, blond man. On the other side was Senator WILLIAM FULBRIGHT, of Arkansas, whose tanned lean face is a background for bright, intelligent eyes.

On Tuesday, the room was dominated by admirals with that full gold stripe on their sleeves. There was a sprinkling of civilians, one of them a character with a long white beard. Over to one side sat Dr. Vannevar Bush, described as one of the keenest minds in the world. He ran our scientific research program during the war. Dr. Bush sat back quietly smoking his pipe.

Rear Adm. William R. Purnell was testifying. He was introduced as Navy's expert on atomic bombs. He is a sandy-haired man with bushy eyebrows. He puffed at his cigaret through a black holder.

Senator FULBRIGHT fished around in his pocket, brought out a clipping and drawled, "The Associated Press here says the Naval Affairs Committee knows of an effective countermeasure against atomic bombs * * * some way to detonate the bombs a distance from our shores."

The Senator paused, smiled eagerly at Admiral Purnell, and asked, "Do you feel there is a defense?"

The answer came quietly and firmly, "I do not know of any defense. The people who made the bomb have thought about any possible countermeasure and of ways to evade them. I can't believe all bombs are detonated the same way." The admiral looked thoughtful. "I doubt if more than two or three atomic bombs are even made the same way."

"Do you suppose," Senator FULBRIGHT asked, twisting around in his chair to face the admiral, "there will be any warning given of the attack starting the next war?"

"No," Admiral Purnell answered. "And we will have no time to develop countermeasures. This war might last only 30 minutes."

The low background murmur in the room had stopped. There was a hush, broken only by the reporters scribbling away on their copy paper.

Senator FULBRIGHT asked, "Is it possible we might attack first?"

The answer was, "No, that is impossible under our Constitution."

The Senator spread out his point, "Then, in event of a paralyzing attack, we are at a disadvantage. We are the most vulnerable. If we have any defense, it must be in the political field. We must have a strong world organization."

Admiral Purnell spoke softly, "That is not in my field, sir."

The Senator thought aloud. "This seems so much more powerful than ordinary weapons, our conventional ideas do not apply. We've always thought defenses could be developed for anything, so we wouldn't have to worry."

Admiral Purnell smiled dryly and said, "There must be an exception to every rule."

Could be defend ourselves by digging underground like moles, or spreading our industries. No—not even that. Atomic bombs could be made to penetrate the deepest underground shelters.

Senator FULBRIGHT asked if the bomb could be kept a secret. The admiral replied the theory was wide open. However—at this time— no other nation has the industrial resources to make atom bombs. Even Britain must modernize its industry before it can make atomic energy.

Then, Admiral Purnell suddenly opened the door to strange possibilities. He said earnestly, "There is one thing we lose sight of. We started out to develop this bomb with nothing but figures on paper. As soon as we conquered one problem, we went on to the next. We didn't stop to find out if there were a cheaper or a faster way. We do not know if the scientists left short cuts behind them, or a way of making bombs with cheaper materials. Any nation may find these short cuts."

He was asked if he felt the atomic bomb would change the role of the Navy in future wars.

The Admiral replied, "Frankly, I get lost just thinking about it. I don't think the best scientists know where we will be 15 years from now. It might wipe out the navy, or army, or air forces. An atomic bomb might be launched from submarines, or planes, or by rockets. The atomic bomb is the most powerful weapon ever found."

The air in the small room was suddenly very close. You became conscious of the haze of smoke.

All this came on Tuesday morning. There were a series of greater shocks the next morning. Wednesday was a beautiful fall day in Washington. Indian summer. The trees near the Capitol splashed with bright reds and yellows. A warm sun shone, and a smoky haze rolled across congressional hill.

Our little room—this time in the basement of the Senate Office Building—was jammed. A pretty Wave sat in the front row. A gray-haired admiral was near the back. There was an intense man in a war correspondent's uniform. Visiting scientists. A small old lady who took copious notes.

A neat, handsome man with black hair turning gray at the sides sat down next to me. I recognized him as Boris Krylov, the shy Russian news agency correspondent.

Senator KILGORE was cheerfully chewing gum and whispering with his chief investigator, Herbert Schimmel.

The crowd had come to see the principal witness, J. R. Oppenheimer. He is the research director at Los Alamos, N. Mex., where the bombs are made, and one of the world's leading authorities on atomic energy.

Dr. Oppenheimer has a fascinating aliveness about him. When he smiles, he has a merry, pixey quality. He is a slim, long-legged man with penetrating blue eyes. He has long, slender fingers that are never still; a high forehead on a long face, big ears, and close-cropped black hair.

Dr. Oppenheimer began by telling of the giant machines at Los Alamos; how they could be used for biology and medicine, as well as for death. They are the huge pyles, or chain reactors. He called them "a big sledge hammer to hit the mosquitoes of science."

These machines cannot be duplicated by private industry. They are too expensive. They belong to the people of the United

States. Congress must decide what we will do with them.

Dr. Oppenheimer spoke in a low, meticulous voice. His pronunciation was a little academic. He said, for example, "prO-ject," and "EI-ther." But there was a gathering, hypnotic quality in both his words and their sound.

The military aspects of atomic energy, the scientist said gently, are really rather terrifying.

He damned the practice of surrounding scientists and their research with secrecy. This, he said, would stifle progress and discourage scientists. Back of the atom bomb was years of free exchange of scientific knowledge.

"All we did," Dr. Oppenheimer commented, "was to take a tree ripe with fruit and shake it hard. Secrecy is not possible. The nature of the world is not secret. Only policy is secret. You cannot keep the atom secret."

Krylov, the Russian reporter, was writing furiously in his notebook.

Can we keep the techniques of atom bombs secret? Senator FULBRIGHT asked.

"That," Dr. Oppenheimer replied, "is like why don't you stop beating your wife. The immediate problem, it seems to me, is to get confidence among the nations, not force them apart by trying to build up a great secret. Other countries will say, 'Keep your secret. We'll do it another way.'"

Dr. Oppenheimer looked around the room, catching the fixed fascinated expressions. Krylov, the Russian, had his chin in his hand.

The scientist went on, "The intolerable state is very close. It is only necessary for other nations to decide to pursue an independent course in atomic research. How little it would take to close the door. If I were a Russian scientist and had this pulled on me I'd say, 'Boys, let's get to it.' I think they will."

Congresswoman HELEN GAHAGAN DOUGLAS, of California, quietly slipped into the room and took a chair in the corner.

Dr. Oppenheimer was asked, "Are there any defenses against atomic bombs?"

The answer was clear, "There are no specific countermeasures for atomic bombs. There never will be. Our bomb cannot be exploded before it hits the target." Dr. Oppenheimer looked around the room, "I will offer to wager half my savings—small as they are—to anyone who can explode a bomb made at our place before it reaches its destination. The atomic bomb is the two-billion-dollar-straw that may break the camel's back."

Senator FULBRIGHT, his tanned face concentrated in thought, asked if there were any defense.

Dr. Oppenheimer answered, "No country is ever thoroughly alerted. Atomic bombs will be a cheap way to make war. They can do so much with so little."

"I suppose," he said reflectively, "it's a natural human reaction to wish so hard for a defense against this thing, that people begin to believe there is a defense. But this comes to a world already at the breaking point, so far as weapons are concerned."

A low, shocked murmur ran through the crowded room.

Senator FULBRIGHT thought aloud. "We in Government have a real job—to make sure the people understand the importance of this new power."

Dr. Oppenheimer spoke up again. "We scientists are willing to be circus performers, to move into the glare of publicity, if we can somehow make the people understand."

The room was quiet for a moment, lost in thought. Then Senator FULBRIGHT asked, "Could our 40,000,000 people be wiped out in one attack?"

All eyes were turned on Dr. Oppenheimer. He answered soberly and quietly, "I am afraid that is true."

There was a sound of people drawing in their breaths. The gray-haired woman bit her lip. Krylov, the Russian, had forgotten to write. Like the rest of us, he sat dazed.

The scientist went on, "The atomic bomb has weakened the military power of the United States. Ten or twenty years from now atomic bombs will be very cheap."

Senator FULBRIGHT, as if in reply, said, "That is a compelling reason why we must undertake some other means of defense. I feel the only way is through Government opposition to nationalism. Governments must agree to some world system of control."

"Yes," said Dr. Oppenheimer, "there are no technical problems. Only political ones. And even in solving the political problems, the world traditions of science will help." Dr. Oppenheimer smiled. "I am not envious of the tasks of the foreign ministers."

Senator MAGNUSON commented, "You know it might help if we put the scientists in the political field."

"Perhaps," Dr. Oppenheimer replied, "that might work. Scientists have always belonged to a world fraternity. Many times on this development of the atom bomb, we thought the war might end before we had a bomb. But some of us did not stop, because we wanted the world to see the atomic bomb. It was to us the greatest argument for world peace."

Senator FULBRIGHT said slowly, "Yes, it took the shock of Hiroshima to wake us up." Then he turned to face the scientist directly and said earnestly, "Dr. Oppenheimer, if all the people could hear you, I think it would give us the motive to really build the peace."

Through the windows, we could see a tiny scene, legs briskly walking by, a patch of sunlight, one corner of the big fountain in the park. But, somehow, it did not look the same.

## The Pacific Islands

EXTENSION OF REMARKS
OF

### HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by me:

(By Hon. JOSEPH R. FARRINGTON, Delegate to Congress from Hawaii and member of the House Subcommittee on Pacific Bases)

WASHINGTON, October 3.—The Pacific war has brought under American control an area beyond Hawaii that is considerably greater than that of the mainland of the United States itself.

This can be graphically illustrated by placing on a map in a space beyond the Hawaiian islands an outline of the mainland of the United States drawn to the same scale. This will show that there is ample room for all the States in the area west of Hawaii, south of Midway, Iwo Jima, and Okinawa, east of the Philippines and north of Manus, Guadalcanal, and New Caledonia.

The enormous importance of the future control and government of this area cannot be overemphasized.

The islands located within these vast reaches of water constitute a bridge between the Western Hemisphere and the Orient. The future peace and development of the Pacific will depend on how these islands are held and developed.

This area constitutes a new frontier. Its military conquest has been achieved by the adaptation of weapons of modern warfare in the most ingenious innovations known to history.

Air transportation has brought them into close relationship and given them a value far beyond anything that was ever imagined in the past.

One of the results of the Pacific war is to give to Americans numbering several millions a knowledge of this area that is far beyond that which existed before, that is possessed by no other people in the world.

These are the men who have borne the brunt of the American offensive. They are keenly aware of the importance of these islands to our country.

The outstanding fact to the men in the Pacific is the determination the sacrifices in lives and treasure that have been made to bring these islands under American control shall not have been in vain.

Almost without exception, they believe these islands should be held by our country.

The point of view of the fighting men in the Pacific is quite different from that in Europe.

In the latter most of them felt that we should participate in the affairs of Europe only so far as it is necessary to prevent a recurrence of warfare that might involve our country.

They are not interested in either the possibilities of settling or developing of any areas in Europe.

They see in this world overpopulation and great suffering, and their primary wish is to get home.

In the Pacific their feeling is almost the reverse.

They want the American flag over the Pacific for good. There is no isolationism whatsoever so far as the Pacific is concerned.

These men see that the primary responsibility for peace in the Pacific will be borne by this country.

They believe that we should not undertake this responsibility without the means to meet it.

One of these means is well-developed island bases that will support a fleet and air force equal to the task of repelling any enemy or any combination of enemies.

The territorial formula which has proved so successful in the development of our country through more than 150 years can, I believe, be readily adapted to the government of the vast new areas of the Pacific.

For the present the Pacific needs a centralized administration that would be in a position to command the skills of every department of our Government.

The extraordinary diversity of the problem involved makes this imperative.

The responsibility for this administration should not be the part-time job of any one Cabinet officer.

It needs the fullest attention of men whose experience and wisdom would qualify them to sit in the Cabinet.

Unless this administration is set up in this way, it will never command the attention of the country and Congress to the extent necessary for its proper development.

There is much in the experience of Hawaii that will be of value in the government of these islands.

Interest in Hawaii in their development is extraordinary. Nevertheless, I believe any suggestions that the Territory of Hawaii be incorporated in the administration of the Pacific islands would be extremely unwise, both from the standpoint of the country as a whole and Hawaii.

The development of this Territory is so far beyond that of any other Pacific island area that none admit of comparison.

The Territory of Hawaii, moreover, should not be expected to carry any more of the financial burden of the Pacific island administration than do the States.

The Territory of Hawaii should prepare to assume the responsibility of Statehood.

The natural point from which the new Pacific islands should be administered is Guam.

This island, if for nothing other than for geographical reasons, is a better place for the headquarters of this new administration than is any other spot in the Pacific.

It is centrally situated and in an environment and among a people who live much more in the environment and spirit of the problems to be solved than do the people of any other part of our country.

The possibility that the little city of Agana, completely destroyed and soon to be reconstructed with Federal funds, may be the point from which this area will be governed, might well be taken into consideration.

This is, however, but a detail that only begins to suggest the general diversity of problems that face the administration of these islands.

In their diversity, their novelty, and their importance to our future they offer a challenge to the best ability of the American statesmanship and involve decisions of vital importance to all of the American people.

In the development of any program for the future of the Pacific area, the cooperation of the other powers of the world is essential.

England, Australia, New Zealand, France, and Holland have important interests in the Pacific islands. France holds some of the richest and most beautiful of these islands. The fabulous resources of the Dutch East Indies are well known to everyone.

The people of the Orient, and particularly of China and Malaya, will follow with great interest any agreements that are reached concerning the future of the Pacific islands. They should participate in reaching these agreements. Their support is important to any program that is adopted.

What was once determined by rivalry should now be determined by cooperation.

The retention by the United States of the islands of the Pacific formerly held by Japan under League of Nations mandate, or bases within them, in some form or other, is essential to the future security of our country and the peace of the Pacific.

In addition to these there are several other island groups whose occupation and development by American troops has demonstrated their importance to any thoroughgoing plan for Pacific peace.

I believe that we have established a sound basis for retaining these islands in the following:

1. The sacrifices our men in the armed forces have made in the Pacific offensive;

2. The enormous effort and funds already expended in constructing within these islands the bases necessary to carry on the Pacific offensive; and

3. The desire of Pacific peoples that we of this country undertake this task.

The fighting men of the Pacific are determined that the American flag shall continue to fly over those islands for which our men have given their lives.

While much of the work to establish bases on these islands has been of a temporary nature, there are roads, harbors, and airfields already constructed which, by their very nature, constitute permanent improvements.

The process of converting these bases from a temporary to a permanent status is a relatively simple one. The native people of the Pacific, and many of them now under the jurisdiction of our allies, are very partial to Americans. We enjoy their good will to an extraordinary degree.

The responsibility for the future administration of these islands is obviously that of our country.

I believe that we should assume this responsibility on the following basis:

1. Make the Marshall, Carolines, including the Palau and Marianas Islands, an integral part of the United States and thus move the American frontier to Guam.

2. Assume control of islands such as Iwo Jima and Okinawa under possibly a trusteeship so as to prevent their utilization in the future for offensive action against this country and its allies.

3. Acquire title to Manus in the southwest from Australia and New Caledonia in the southeast from France to protect our southern flank in the Pacific.

4. In those islands that are to be incorporated as an integral part of this country, inaugurate a program that seeks the assimilation of the native people as citizens of this country and has as its purpose not only to give them American citizenship but to qualify them for an increasing measure of local responsibility in the management of their own affairs.

5. Establish in the Federal Government a new and independent agency for the administration of those areas that is directly responsible to the President, one that takes account of not only the strictly military value of those islands, but their importance from every other standpoint, such as their development for commercial aviation and other civilian purposes.

Thus may be launched the territory of the Pacific.

---

## Origin and Purposes of the American Jewish Conference

EXTENSION OF REMARKS

OF

### HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. THOM. Under leave to extend my remarks, I am reproducing an address delivered over the Canton, Ohio, radio station by Mr. Reuben F. Jacobson, a prominent merchant of that city, revealing the interest of American Jews in having Palestine opened to increased immigration of their people, especially those still in concentration camps:

WHO REPRESENTS THE JEWISH PEOPLE

America is made up of people who came here from many lands to escape from intolerable conditions in Europe. In common with all others, Jewish people came here to escape the persecutions and the oppressions of the hatreds of Europe. They were grateful for the freedom and opportunity which America spelled out for them. They looked back upon their unhappy experience in Europe as upon a nightmare. They wanted to become thoroughly integrated into the life of America and they wanted to forget about Europe and its problems.

America accepted the Jew and made him feel at home here. Except for occasional outcroppings of prejudice and the minor irritants of social discrimination, there had been no anti-Semitism in this country of an organized character. American Jews always considered anti-Semitism a problem peculiar to Europe. That it might be transplanted to the free soil of America seemed to them well nigh incredible. Then the incredible happened.

With the rise of Hitlerism and its triumphant march across Europe, the seeds of hate spread to these shores. The outbreak of this war found 800 different organizations engaged in spreading anti-Semitism in this country in accordance with the Nazi pattern.

Even as the shock of Pearl Harbor jarred American public opinion out of the slumbers of isolationism, a profound change came over the thinking of American Jews. They discovered that, much as they would like to forget the unpleasant memories of Europe, they must take into account the fact that whatever happens to the Jews of Europe is bound to affect the fate and future of American Jewry. This is one world and we are all part of one another.

This Jewish concern over the plight of their unfortunate brethren led to the formation of the American Jewish Conference. Elections were held throughout the country in June of 1943 and 370 delegates were chosen to represent the Jewish people. In addition, every major Jewish organization sent delegates to the conference. Every shade of opinion was represented.

The conference held its first session in New York in September 1943. At this session and a subsequent one in Pittsburgh in December 1944 a comprehensive program was drawn up to protect the rights of Jewish people in Europe and to implement the rights of the Jewish people with respect to Palestine. This program called for an international bill of rights to protect all minority groups regardless of race, creed, or color. It called for the outlawing of anti-Semitism, for the restoration of Jewish rights and property in liberated Europe, for the punishment of war criminals, for Jewish representation on commissions that would be set up to deal with various aspects of the peace settlement, for the relief and rehabilitation of the surviving Jews of Europe, for the opening of the gates of Palestine to free and unrestricted Jewish immigration, and for the reconstitution of Palestine as a democratic Jewish commonwealth.

The conference was a source of pride to all lovers of democracy and to all who believed in the democratic processes of representation and discussion. Naturally, there were many differences of opinion; but all the resolutions included in this program were adopted by an overwhelming majority vote. In view of the democratic character of its composition and organization, the American Jewish Conference has become the recognized spokesman for the overwhelming majority of American Jews. The American Jewish Conference is not a superorganization. It is not its purpose to dominate the life of the American Jewish community. The conference is merely a channel through which we can discover what the Jews of America are thinking and what they want.

It is a channel through which the energies of the American Jewish community can be directed toward the task of helping their brethren in Europe and in Palestine. The special position of the American Jewish Conference was recognized by our own State Department when the conference was appointed as the Jewish consultant body for the San Francisco Conference.

Working in cooperation with Jewish representative bodies in other countries, the conference is gathering material in order to present the Jewish case at the forthcoming peace discussions. The Jewish people who were the first victims of Hitlerism, who suffered 6,000,000 casualties in this war, ask for no special privileges; but we do feel that the suffering and the sacrifices of this war will be meaningless and vain unless the peace settlement brings justice and security to all the peoples of the world.

The American Jewish Conference is especially interested in the problem of the so-called "displaced persons" who were discovered in the concentration camps of Germany. Among them are 100,000 Jews. They have stood by and waited while millions of other displaced persons have been returned to their homes; but they themselves have no homes to which they may return. They have no intention of remaining in Germany. Neither do they wish to return to the scenes of their suffering and humiliation, to walk

amid the ruins of their former homes, in the streets where their parents were murdered, their children butchered, their wives and their sisters violated. They cannot begin life again amid former neighbors who looted their possessions and betrayed them to the Germans.

Having been liberated by the American and Allied armies, these people hoped that they would be free to rebuild their lives amid more congenial surroundings. Imagine their bitterness when they were forced to remain in the same concentration camps in which they were held by the Germans, sometimes under guard and behind barbed wire.

Reports of their suffering reached President Truman. He sent Mr. Earl Harrison to make a survey of the condition of European Jewry. Mr. Harrison's report has now been published. The facts are all the more shocking and horrifying because these people were being mistreated not by Germans, not by Nazis, not by the Gestapo, but by Americans. General Eisenhower had issued excellent directives. Unfortunately not all of the people in charge of these camps have the experience or the qualifications to handle the problems of these displaced persons with understanding and humanity. President Truman was convinced, on the basis of Mr. Harrison's report, that the only future and salvation for these Jews of Europe is in Palestine. He has, therefore, sent a letter to Prime Minister Attlee of Britain asking him to open the doors of Palestine to Jewish immigration and to issue 100,000 immigration certificates immediately.

The American Jewish Conference is sending a team of six representatives into the concentration camps to help restore the morale of this broken remnant of Jewish survivors. But we feel that it is no solution of the problem to have these people remain in concentration camps, a constant source of unhappiness to themselves and irritation to others. The only realistic solution of the problem is to permit them to go to Palestine. Palestine was entrusted to Great Britain under a mandate from the League of Nations for the express purpose of helping the Jewish people to establish their national homeland there. Unfortunately the British colonial officials who were sent to administer Palestine proceeded to ignore the mandate of the League of Nations and to govern Palestine as if it were a Crown colony. Instead of helping the Jewish people to establish a national homeland, every conceivable obstacle was placed in their way and their rights constantly whittled down.

When Hitler began to drive the Jews from Europe, they naturally turned toward Palestine, only to discover that the British colonial administration had shut the gates in their faces in violation of Britain's international obligations and her pledges to the Jewish people.

The American Jewish Conference is grateful to President Truman for his deep and sympathetic understanding of the Jewish problem in Europe, a problem which can be solved only through unrestricted Jewish immigration into Palestine and the reconstitution of that country as a Jewish commonwealth. The Jewish question is only a small part of the vast complex of problems involved in the making of the peace, yet we believe that it is one of the great test cases of international morality, a test of the good faith of the great powers in their dealings with smaller peoples.

We hope that Prime Minister Attlee will respond favorably to the President's request and that these Jewish refugees may find healing and new hope in their own national homeland in Palestine.

Our hope, however, does not only come from prime ministers and statesmen. It comes from our belief in the ultimate triumph of justice on earth. The Jewish people, forming a minority all over the world, cannot solve the Jewish problem, for our problem is a world problem and it must be solved by mankind at large. We appeal to God's mercy and kindness, and we also appeal to the conscience of man, to his goodness, and to his sense of justice that a broken, homeless people may find a rightful place in the family of nations.

## Federal Aid to Education

EXTENSION OF REMARKS
OF
### HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on July 6, 1945:

Friends in the Upper Peninsula, several weeks ago I sent a letter to all the school superintendents in the Twelfth Congressional District asking for their judgment on the various legislative proposals for Federal aid to education.

In my letter to the local school officials I stated that I favored authorization of an appropriation of funds by Congress to assist the States in financing their systems of education, but asked the advice of these people, so close to the problems of local education as to the specific legislation which best met the needs of the Upper Peninsula.

The response to this inquiry of mine was extremely gratifying. I received answers from almost every one of the superintendents, and their replies showed a surprising unanimity. With very few exceptions, the local school officials in my district urged me to support the Thomas-Hill-Ramspeck legislation.

This legislation, known as H. R. 1296 in the House of Representatives where it was introduced by Representative RAMSPECK, and S. 181 in the Senate where it is sponsored by Senators ELBERT D. THOMAS and LISTER HILL, provides for the appropriation of funds to more nearly equalize educational opportunities among and within the States, and also to meet emergency situations in education in the various States.

I will go into greater detail about the specific provisions of the legislation, but first I would like to discuss the nature of the problem it seeks to meet.

One of our proud boasts as a nation has been that America is the land of opportunity for the young, that our boys and girls can rise above their background, no matter how impoverished or depressed their family circumstances might be. The premise for this boast is our national pride in the American tradition of free and equal education.

The war has done much to shake this complacency about educational opportunity for our young people. It brought to light the startling fact that more than a million young men could not pass the literacy test established by the Selective Service System for inductees. One million seven hundred and four thousand men fell short of the educational standards of a fourth-grade education set for soldiers in World War II.

These million and more young men were ineligible to take part in the defense of their country in a war emergency because their country had not given them equality of opportunity in education, had not given them the chance to exercise their citizenship rights and duties.

The time has passed when the pioneer spirit and a pickax were enough to qualify young Americans for a life of useful and productive citizenship. The horizons of opportunity today are not rimmed with unexplored forests or untapped mountains of precious minerals.

The frontiers of today where young Americans must build their futures, and the future of their country, are not the old physical frontiers of the last century. It is in the realm of technology, of business and commerce, and Government that the boys and girls of today will have to find security for themselves and their families. Their courage and enterprise must be matched with training, with education, if these new frontiers are to be conquered. Democracy will have little meaning to millions of young Americans, now boys and girls of grade-school age, unless the doors of educational opportunity are opened to them.

These children, citizens of tomorrow, are a challenge and a threat to the whole Nation. Their educational problem is not and should not be treated as a local issue.

One of the prime objectives of education in a democracy should be the furtherance of the democratic ideal. Our schools should be a major force in minimizing and eliminating undemocratic economic class distinction. The goal of education should be the molding of citizens equipped to assume the responsibilities and exercise the privileges of modern technological society.

In all too many of our States the public-school systems are totally unprepared to teach children even the minimum of what modern democratic society will demand of them. As education operates now in many States its end result is to intensify existing class distinctions, to perpetuate inequalities, to negate democracy.

The reasons for this are obvious. Those States, and sections of States, which most need improved educational facilities can least afford them. The States with the most inadequate public-school systems are now spending a larger percent of their income on education than are the States with the best school systems. The plain fact is that many States cannot afford better educational opportunities for their young people.

The wide variations in public schooling offered by the different States is directly traceable to the wide variation in State income, derived from taxes, which can be expended on education, and to the differences in the size of their school-age population. Unfortunately, small tax resources in a State are accompanied by large school-age population. A recent survey showed that Connecticut, the richest State on a per capita average, had three times as much income, with only three-fourths as many school-age children, as had Mississippi, the poorest State. Another factor which acts to perpetuate the unequal educational opportunities in poor States is the increasingly higher birth rates in these States.

I want to reiterate my very strong conviction that the problem of raising the level of education in backward States is not a State or community problem. It is a national problem that involves the welfare of all the people of the country. We cannot expect the poorer States to do more than they are now doing, in the way of State aid to education. The expense of equalizing educational opportunity must be spread over the whole population. This is done through Federal financial aid, as is contemplated in the Thomas-Hill-Ramspeck bill.

A great many statistics showing the disparity between expenditures for educational purposes between the various States have been prepared by the National Education Association, the American Association of University Women, the YWCA, various church groups, the CIO and AFL as well as many other organizations. I don't believe you are interested in just the figures involved in this question so I won't recite them to you. I know you, as mothers and fathers of children

in school, and as citizens of your community and of the Nation are very concerned with the educational facilities of your community and of the Nation.

The perpetuation of pools of near-illiteracy in our population is a threat to the well-being of the whole population. And the educational standard of the country as a whole is deteriorating, not improving under the present State-grant system. Teaching is no longer a profession which lures the best minds of the country. Since 1941 about 250,000 teachers have left the schools. Only a fourth of this exodus went into the armed services. Most of the others found greater economic opportunities in other livelihoods. The normal schools and colleges are not preparing new teachers to replace those who have left the profession. Enrollment in teaching schools and colleges has dropped more than 50 percent below what it was in 1941.

The war alone does not account for this. It has intensified a trend away from teaching that was very apparent before 1941.

It is not surprising that teaching has become an unpopular profession when you realize that in a total of more than 800,000 public-school teachers in the country, 20 in every 100 are paid less than $1,200 a year. Half of the teachers in the whole country are paid less than $1,600 a year.

This antiquated pay schedule is just one expression of the inadequate financial structure of our schools today. Of course the great majority of the underpaid teachers are in the poorer areas, the backward States, and in the rural and semi-rural districts of otherwise progressive States. Michigan is in this latter group, with children in farm and semi-farm areas receiving much poorer education than the big-city children.

One of the very strong objections to Federal aid to education has always been the fear that financial aid would be accompanied by Federal domination of educational programs, that it would mean regimentation of all the Nation's children in a federalized public-school system. I believe Federal control is undesirable in the educational field.

The Thomas-Hill-Ramspeck legislation takes cognizance of this undesirability and specifically states that the financial aid from the Federal Government does not mean interference in any way with the States' prerogative to formulate their own educational methods. It expressly forbids Federal control of the schools.

Let me outline to you just what the legislation does provide for and how it would affect the State of Michigan.

The bill provides for an appropriation of $200,000,000 each year in which Congress finds an emergency for payment of teachers' salaries, for keeping schools open not less than 160 days a year, for employment of additional teachers where needed to relieve overcrowded classes, or to raise the substandard of teachers' salaries.

It also provides for the appropriation of $100,000,000 for the purpose of more nearly equalizing educational opportunities among and within the States.

The emergency funds will be apportioned among the States on the basis of the number of pupils in average daily attendance in each State. The equalization fund will be apportioned on the basis of financial need as measured by the number of persons 5 to 17 years old and the total income payments in the various States. In this way, the poorer States would receive the larger share of the fund.

The funds will be distributed by regular State authorities to public elementary and secondary schools.

Under the terms of the legislation, Michigan would receive a total of $10,100,406 for the improvement of its educational facilities.

Very many of the letters I received from school superintendents and teachers in the Upper Peninsula stressed the need of the schools in the Peninsula for just the kind of aid provided for in the Thomas-Hill-Ramspeck legislation. They are very close to the situation, and, along with the parents of the school children, know more than any other group the educational shortcomings of our schools due to circumstances beyond the control of the local communities. I share their desire to improve and increase the opportunities for our young people, and will work toward that end here in Congress.

Thank you, and good night.

---

## Jerusalem for the Jews

EXTENSION OF REMARKS
OF
## HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Wednesday, October 24 (legislative day of Monday, October 22), 1945*

Mr. CAPPER. Mr. President, an able discussion of the current controversy respecting entrance of the homeless Jews into the Holy Land, with a note of appreciation by Dr. Stephen S. Wise, was written by Dr. Clinton N. Howard, superintendent of the International Reform Federation, and published in the November issue of Progress Magazine, of this city. I ask unanimous consent to have it printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

JERUSALEM FOR THE JEWS

The following letter has been received by the editor from Rabbi Stephen S. Wise, of the Free Synagogue of New York, president of the American Jewish Congress:

"MY DEAR MR. HOWARD: I wish you to know that I am deeply moved by what you have written. It is very fine. I am sending your article to friends in London and Jerusalem. If you could spare more copies of your advance release of the Progress magazine, I should be glad to have them.

"With deep appreciation of your very fine work.

"Faithfully yours,

"Dr. STEPHEN S. WISE."

In reply to this request we sent to Dr. Wise 500 copies of the editor's appeal in behalf of the Jews, mailed a copy to the entire membership of the English Parliament, Cabinet, and King, and the London, Liverpool, and Manchester press. We also mailed a copy to the American Jewish press, the rabbinical schools, and American rabbis, in all 3,000 copies. The article follows:

"AN ANCIENT CRY TO HEAVEN

"'And the Lord said unto Moses, I have surely seen the affliction of my people which are in Egypt, and have heard their cry, for I know their sorrows, and I am come down to deliver them, and to bring them out of that land. And thus shalt thou say unto Pharaoh, Israel is my son, even my first born: and I say unto thee, Let my son go, that he may serve me.'

"Today, God is speaking to the nations about 'My people' which are in Germany, in Poland, in the Balkans, and Russia 'by reason of their taskmasters.' To them He is saying, of the same people and of the same land, 'Let My people go.'

"For a generation the rulers of Europe have 'hardened their hearts' against God's chosen people, and worse than all the plagues of Egypt have fallen upon them. Hitler hardened his heart and sent the destroyer among them by methods of cruelty and in numbers unbelievable. Millions have been brutally treated, starved, robbed, and slain.

"THE CRIME OF THE AGES

"When God created man He gave him a home in the Garden of Eden. When He created a nation, under the guidance of Moses, He gave them a homeland in Palestine. This was in fulfillment of His covenant to Abraham, saying, 'Get thee out of thy country, and from thy kindred, and from thy father's house, unto a land that I will show thee; and I will make of thee a great nation.'

"Later when Abraham and Lot divided the land and Abraham dwelt in the land of Canaan, the Lord spake unto Abraham, saying, 'Lift up now thine eyes, and look from the place where thou art northward, and southward, and eastward and westward: for all the land which thou seest, to thee will I give it, and to thy seed forever.' * * * In the same day the Lord made a covenant with Abraham, saying 'Unto thy seed have I given this land, * * * that in blessing, I will bless thee, and in multiplying I will multiply thee * * * and in thee shall all the families of the earth be blessed.'

"This covenant was confirmed to Isaac, to Jacob, to Joseph, and to Moses, under whose hand God led Israel out of Egypt, 'with a strong hand and an outstretched arm.'

"From that point on, until the fall of Jericho under Joshua, as they entered into their inheritance, there is nothing in the history or literature of the world like the rise to power of the Hebrew nation under Samuel, David and Solomon, under whose reign 'Judah and Israel dwelt safely, every man under his vine and under his fig tree, from Dan to Beer-sheba, all the days of Solomon (1 Kings 4:25). No other civilization before or since has produced such characters as the Hebrew prophets as God raised up from the loins of Abraham, culminating in the birth of Jesus, of the seed of David, through whom all the nations in the earth have been blessed.

"A DIVINE TITLE DEED

"From the days of God's covenant with Abraham, during the time of the dispersion, the carrying away into Babylon, the return under Nehemiah and Ezra, and, under the dominion of the Roman Empire to the birth of Jesus, Palestine has been recognized as the home land of the Jews.

"When God's favor was withdrawn and they were punished because of their idolatry and sins, there was always the promise through the prophets of their restoration in the land promised to Abraham and their fathers. The Hebrew title deed to Palestine, the ancient land of Canaan, is signed by the hand of Almighty God, and their restoration is as certain as the oath of Jehovah, 'For when God made promise to Abraham,' says St. Paul, 'because he could swear by no greater, he sware by himself,' saying 'And I will establish my covenant between thee and thy seed after thee, and to thy seed after thee. And I will give unto thee, and to thy seed after thee, the land wherein thou art a stranger, all the land of Canaan, for an everlasting possession.'

"A WARRANTY DEED

"This is the title deed of the Jews of Palestine, the like of which has been given to no other people or nation, not even to the Germans, the Italians, the English or the Americans, in the history of the world. Other nations have their possessions and their home lands by discovery, by purchase, by treaty, by conquest, by the might of their arms, but Palestine belongs to the Jews by the oath of Jehovah, when He sware by Himself 'for an everlasting possession.' It was a warranty deed signed by the Almighty, which when disputed by the nations, the signer must make good.

"A PEACEFUL INVASION

"Today they are in the situation of Simon Peter when he asked Jesus, 'To whom shall we go?' There is no other place for the Jews to go. Perhaps one reason why the doors of the nations are closed against them is because of the plan and purpose of Jehovah that they shall in these last days return to the land of their possession. Be that as it may, it is a peaceable and lawful invasion. They are not marching on Jerusalem with armies and the weapons of modern civilization, by land, sea, and air, with fire, gas, and sword, assassinating the inhabitants, as Italy did in Ethiopia, Japan in China, and as Germany when it kidnaped Poland, Austria, and Czechoslovakia on pain of slaughter, but peaceably, unarmed, and financed by their prosperous brethren in other lands, to purchase from the present possessors in Palestine the land promised to them by their fathers and to themselves by Jehovah their God.

"They are as much entitled to that land as are the Arabs to Arabia, the Turks to Turkey, the Italians to Italy, the Germans to Germany, the French to France, the English to England, and the Americans to the United States, for to none of these peoples hath Jehovah spoken with an oath by Himself to give to them their lands for an everlasting possession.

"Who has robbed them of their inheritance? So that the Hebrews of today, driven from the lands of their adoption by birth, stripped of their possessions, persecuted beyond human endurance, and exiled from their homes, without any destination, can say with the Jew Jesus, despised and rejected of men, 'The foxes have holes, the birds of the air have nests, but the Son of Man hath not where to lay His head.'

"THE INHERITANCE OF THE JEW

"And this despite the fact that under the land laws of the Hebrew theocracy, as set up by Jehovah, the allotment of land remained with the family forever. There were no landless or forgotten men. Under our system the children acquire land by inheritance at the death of their father. Under the divinely arranged Hebrew system, a child inherited social security at birth. He became a landowner on the day he was born. It was an inheritance from God, who said, 'The land is Mine. The land shall not be sold forever.' The birth certificate of a Hebrew child was a title deed to his estate, which could not be sold. It was a perpetual possession.

"This was the land from which the Jews were exiled by conquest, to which they are now waiting to return by purchase under the promised protection of the English mandate, and whose right to return is being disputed by the Arabs, who have several lands of their own, many times larger and more fertile than Palestine, about the size of the State of New Jersey. Palestine is their only hope.

"THE EXODUS FROM EUROPE

"They go out under conditions more galling than was the exodus from Egypt, when they were allowed to take their flocks and herds and their family possessions with them. Today they go empty-handed, half-starved, and penniless.

"The Christian who is not moved by the story of suffering of a persecuted people, which gave to the world the Bible and to the race the Christ, according to the flesh, is afflicted with either hardening of the heart or softening of the brain, or both.

"Such a situation is no longer a Jewish problem, it is a world problem, and concerns every nation calling itself civilized or Christian. Let the guilty nations beware.

"'Shall I not visit them for these things, saith the Lord. Shall not my soul be avenged on such a nation as this?' We believe it will, not only upon such a nation, but upon those nations who, like Pilate, wash their hands and say, 'I am innocent.' Upon them all there is judgment to come. 'For the oppression of the poor, for the sighing of the needy, now will I arise, saith the Lord. * * * For in the hand of the Lord there is a cup, and the wine is red: it is full of mixture; and he poureth out of the same: but the dregs thereof, all the wicked of the earth shall wring them out and drink them.'

"Once again the Voice of Jehovah is ringing through the land: 'Let my people go that they may serve me.'"

## What Are We Doing for Jews and Displaced Persons?

EXTENSION OF REMARKS
OF
**HON. BARTEL J. JONKMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. JONKMAN. Mr. Speaker, on Monday last, on the Memo to America program over WMAL, I was asked to broadcast an answer to the following question: "Are we doing as much as possible for Jews and displaced persons at this time?" My reply, restricted by a time limit of 2 minutes, was as follows:

In my opinion, General Eisenhower and the armed forces have done a splendid job. As of September 10 last, or barely 4 months after VE-day, they had repatriated nearly five and a half million displaced persons. I call that magnificent. Harrison, in his report, calls it phenomenal. This leaves about 1,000,000, or less than 16 percent, almost wholly consisting of displaced persons, who refuse, or are afraid to return.

Even Harrison, in his report to the President, says: "It is undoubtedly true that the great majority of Jews now in Germany do not wish to return to those countries from which they came." Harrison frankly states that these displaced persons want to go to Palestine and the United States. Of course the Palestine situation cannot in the slightest degree be ascribed to us or to Eisenhower and the armed forces. For that the British, in the violation of their mandate, must accept responsibility.

The voluntary refusal of this million to be repatriated created a second problem which could be developed only as the repatriation was being accomplished. Certainly, no one will contend that the Army should first have taken a census of those who refused to go home, found villas and private homes for them, and thereafter proceeded with the main job.

Now, please remember that Harrison in his report admitted marked improvement had already taken place, although he says his report was being written only 3 months after VE-day. In my opinion, that progress in 3 months shows another splendid achievement by General Eisenhower.

I visited some of those displacement camps. The Hanau camp, for instance, consisting of old barracks, providing individual apartments and wards, just out of Frankfort. The looting of a consignment of industrial alcohol by inmates (to which Eisenhower refers in his defense) had just occurred, killing or permanently paralyzing 800 to a thousand of them. The director complained of flagrant disregard of hygienic and sanitary rules, as well as immorality, which could not be punished or disciplined. When one considers that this million is the residuum or leavings of over 6,000,000 who had lived for years under the most degrading conditions, it is not difficult to realize that operating these camps is a problem.

It is true that UNRRA, with its admitted inefficiency and handicaps, had taken over much of the camp care at that time. However, their failures cannot be blamed on us, but are the fault of the United Nations. And that's why I say we are doing as much as possible at this time.

## All Members of Congress Should Become Acquainted With Atomic Energy

EXTENSION OF REMARKS
OF
**HON. GORDON L. McDONOUGH**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. McDONOUGH. Mr. Speaker, nothing is more important to our domestic and international future than to learn all we can about atomic energy and the atomic bomb. We should know what the word "fission" means.

We should know what "neutrons" are. We should know what a "chain reaction" is. We should know why "uranium 235" was used in preference to any other element.

Here are some of the answers:

"Fission" means the property to break up into fragments, to split, in this instance into other atoms.

"Neutrons" are subatomic particles which are 10,000 times smaller than atoms and are neutral, hence their name. That is they are neither positive nor negative.

"Chain reactions" are the continuations of the reaction of releasing neutrons which in turn penetrate other fissionable atoms and release other neutrons thereby establishing a continuous reaction.

Uranium 235 was used because it was found to be the one element that was most easily fissionable by neutron bombardment.

Following is part of an article written by I. I. Rabi, professor of physics and chairman of the department of physics at Columbia University, recently published in the October issue of Atlantic Monthly. It is well worth reading:

The two-billion-dollar questions which had to be answered before the atomic bomb could be realized were: (1) Did all three uranium isotopes undergo fission, and if not, which of the three was the important one? (2) Were any neutrons released during the violent fission process, and if so, how many on the average? (3) Did the remaining nonfissionable isotopes absorb neutrons to any degree?

As was stated in the official report on the development of the atomic bomb, it was known by 1940 that only U235 (Uranium 235) was important for fission by neutrons of all speeds and that neutrons of certain speeds were captured by U238 to produce U239. It also was known by this time that the average number of neutrons emitted per fission was somewhere between one and three, and that these neutrons were mostly of high speed. These facts were very encouraging and fortunate for our side in this war, because they showed that an atomic bomb was possible and also so expensive that the enemy could not produce it. The reasoning runs like this:

If more than one neutron is released during the fission process, the fission of one uranium nucleus will produce enough neutrons to set off more than one other uranium nucleus, and the whole process will multiply

rapidly with explosive effect, producing what is called a chain reaction. The chain reaction will die out, however, like a fire in wet wood, if less than one neutron is produced per fission or if the neutrons, while passing through the uranium, are absorbed to a sufficient degree by some process which does not produce fission. It is clear that the chunk of uranium has to be large enough for the neutron to do its work by colliding with a fissionable nucleus before it can escape through the surface of the uranium. Also, another important point, the neutrons must be fast to give the chain reaction time enough to consume an appreciable portion of the uranium by disintegration before the gigantic energy release blows the entire bomb apart.

Fortunately for our side, the atomic bomb was bound to be extremely expensive to produce. U235 is not only one part in 140 of the mixture of isotopes which ordinarily is bulk uranium. U238, which is 99.3 percent of bulk uranium, absorbs neutrons and thus would stop the reaction. To make a bomb, pure U235 was needed, and relatively lots of it. The separation of U235 from U238 in bulk was never attempted before and turned out to be a peculiarly difficult and costly process. To ordinary peacetime thinking, it would have been termed impossible because of the expense. Here lay our good fortune, because, unlike any other nation, we had the manpower, the money, and the time to do the task. If the abundant U238 had been the important agent in atomic bombs, our cities would have been obliterated before we entered the war, because our enemies, although short on resources, were fully aware of all the possibilities.

Another side to the development of the atomic bomb is still more eerie. The capture of a neutron by U238, which has a property, in common with some other nuclei, of spontaneously increasing its positive charge. The increase occurs in two successive steps by a process which essentially entails the creation of electrons. The electrons are ejected from the nucleus, which becomes an entirely new element, plutonium, of mass 239 and charge 94, instead of the 92 charge of uranium. This element is found nowhere on the face of the earth and represents an entirely new creation. It was suspected and later proved that plutonium also possesses the requisite fission properties to be the new material for a bomb. Plutonium had the advantage over U235, because it was an entirely different element from U238 and consequently, once made, could be separated from U238 by cheap chemical methods.

As a nation we can congratulate ourselves on having leaders in this country who were bold enough to appropriate the vast sums necessary to make this new element, atom by atom, through the bombardment of U238 with neutrons, when no certainty existed that the process would prove successful or that plutonium would be useful in an atomic bomb. Although most people feel, now that success has been achieved, that the effort was justified, one can imagine the fury of the defenders of the Treasury if the gamble had turned out otherwise.

---

## Wagner-Murray-Dingell Bill

EXTENSION OF REMARKS

OF

### HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I wish to include a speech made by myself at a symposium on the Wagner-Murray-Dingell bill sponsored by the Jackson County (Kansas City, Mo.) Health Forum:

All of us are well aware that many people in this country do not have all the medical care they need. We were shocked to learn that 40 percent of the 22,000,000 men of military age, between eight and nine million men, were found unfit for full military duty. About 68 percent were rejected for physical defects, the other 32 percent for mental defects. Statistics show us that 600,000,000 man-days of work are lost every year through illness and accidents and that the average industrial worker loses about 12 days of work a year through these causes.

Medical facilities are far below the needs of our people. Forty percent of all our counties do not have a registered general hospital. And many existing hospitals need more space, more staff, better facilities all round. But they can't get them. They can't get them because the people who need their services most can't afford to pay for them.

America is the most advanced nation in the world in the field of medical science. Our doctors and research workers have made tremendous discoveries; our best hospitals have the most wonderful equipment. But people go on dying for lack of early and adequate medical care. Children are born in shacks without a midwife's services. Mothers die in childbirth. Babies die or incur dread diseases, curable at first but later chronic. It is estimated that at least half of the 113,000 infants and 7,000 mothers who die in childbirth every year could be saved if present knowledge were applied fully. Some 400,000 children have tuberculosis, a disease easily diagnosed and easily cured in its early stages. Half a million suffer from the dread rheumatic fever. I could go on for hours listing the health defects of our people.

While there are excellent facilities available for those who can pay well for them, many do not have access to the help they need. It is an unfortunate fact that medical need mounts in inverse ratio to ability to pay—the poorer you are the sicker you are. Likewise, the poorer you are the less medical care you get.

We might well expect that those people whose job it is to cure the sick would be the first to tackle this problem. We naturally look to the organized physicians of America for help in reorganizing our medical facilities to serve the greatest number and at the same time to insure a reasonable return to the doctor. But if we look to the American Medical Association, we look in vain.

For many years the American Medical Association and most of its constituent societies have carried on a bitter fight against attempts to bring more and better care to the American people.

Until comparatively recently, this fight took the form of a vigorous frontal attack upon anyone who dared to suggest that all was not for the best in the best of all possible medical worlds.

Let me remind you of only a few of the skirmishes in this running battle between reaction and progress:

In 1932, when the report of the conservative Committee on the Cost of Medical Care was issued, the Journal of the American Medical Association denounced it as "socialism and communism—inciting to revolution." Yet all this mild document did was advocate group practice for physicians and expansion of voluntary health-insurance plans.

As late as 1934, the American Medical Association vigorously opposed Blue Cross hospitalization insurance. The journal in that year criticized "all sorts of hospitalization insurance schemes" as "mechanization of medical practice." An attempt was made to deter the American Hospital Association from sponsoring Blue Cross plans.

The period from 1930 to 1940 saw many examples of intimidation and professional blacklisting against physicians who dared to associate themselves with voluntary group-insurance plans. I cite only a few of them: The Trinity Hospital case in Little Rock, Ark.; the expulsion of Drs. Ross and Loos from the Los Angeles County Medical Society; the persecution of the staffs of the Chicago United Medical Service, Group Health in Washington, and the Milwaukee Medical Center; the attempted throttling of Dr. Michael Shadid's cooperative hospital at Elk City, Okla.

Even the feeble stirrings within some of the State and county societies themselves were quietly but effectively suppressed. In one of its 1938 issues the Journal of the American Medical Association noted that many efforts to organize county society prepayment plans in California "have been successfully discouraged."

Such Bourbon tactics had two principal effects. First, they made the American Medical Association appear ridiculous and irresponsible in the eyes of the public, which was gradually becoming more conscious of the need for a better health program. Secondly, they threatened to precipitate a revolt in the ranks of organized medicine itself.

When the AMA was found guilty of criminal conspiracy in the case involving the Group Health Association in Washington, D. C., and when this decision was upheld by the Supreme Court of the United States, even the reactionary leadership of the AMA realized that a change in tactics was necessary.

Accordingly, they decided to abandon the frontal attack. Realizing that the ground they held was not tenable in a fair fight, they agreed upon a delaying action.

A battalion of expendable troops was left behind to fight it out as long as they could with the old weapons. This was the so-called national physicians committee for the extension of medical service. Organized with the aid and support of other reactionary elements in the country, this group continues to raise the cry of socialism and communism, and seeks to confuse the public with misleading propaganda.

The main guard then retreated to a somewhat better prepared position. Conscious of the fact that the chief criticism of the AMA was that it had no constructive program to offer, they brought forth their 14-point program.

This much-heralded program recalls the old saying, "The mountain labored and brought forth a mouse." It is a collection of pious hopes and feeble generalizations. The 14-point plan offers us a pea shooter to take the place of the atomic bomb.

It is not necessary to examine this program very closely to realize that it is part of the delaying action. Many of its provisions are merely expressions of aims that all sensible people have supported for years. It proposes nothing that would improve the organization of medical services or adapt them to present-day needs. It offers no hope of more, or better, or cheaper, medical care to any appreciable number of people.

Shorn of its noncontroversial elements, the program is nothing but a plug and a plea for voluntary health insurance. By this means the AMA hopes to delay the advent of compulsory Nation-wide health insurance.

Does this mean that the AMA is now offering us what its spokesmen once denounced as "socialism and communism, inciting to revolution"?

No; that is not the case. The AMA has had to eat a lot of its own words in recent years, but the diet, frightful as it must have been, has not changed the patient much.

You see, there are several kinds of voluntary health insurance. And the kind of health insurance that the AMA is talking about in the 14-point program is a very special, very complicated, and very limited type of plan. In discussing voluntary health insurance it is very important to distinguish

between the different types of plans, for some of them bear about as much resemblance to others as a B-29 bomber does to the Flying Jennies that were used in World War I.

I shall mention a few general types of plans and analyze them briefly.

One is the industrial group-practice plan. A good example of this is the Permanente Foundation medical service for employees of the Henry Kaiser shipyards on the west coast. In return for voluntary pay-roll deductions, the employees and their families receive comprehensive, up-to-date, scientific medical care, for all types of illness. They are entitled, without extra charge, to the services of a general practitioner in the excellent hospitals and clinics operated by the Kaiser company, as well as in their homes. They receive specialists' services and surgery when needed. The hospital bill is included in the benefits.

Perhaps most important of all, they are entitled to, and they do receive, all kinds of routine diagnostic and immunization procedures. In this way preventable illness is avoided, and incipient disease is discovered early enough so that a cure can be effected rapidly and economically.

But did the AMA approve this type of plan? No, they did not. They opposed it bitterly. They did not succeed in blocking the Kaiser plans because Mr. Kaiser was fortunately able to construct and operate his own hospitals.

But local medical politicians have succeeded in sabotaging similar projects elsewhere. An example of such sabotage took place recently in Vallejo, Calif. There, the doctors of the Stowe-Lipsett group clinic were prevented from furnishing medical services to the war workers in the Vallejo Federal housing project because the county medical society was able to exclude the Stowe-Lipsett doctors from practice in the new Vallejo community hospital.

This is a particularly flagrant and disgusting example of reactionary medical politics, because that hospital was built and is maintained by Federal funds appropriated under the Lanham Act.

Another kind of voluntary health insurance is the consumers' cooperative group practice plan, typefied by the Group Health Association of Washington, D. C. This is similar in many respects to the Kaiser plan, except that subscribers' fees are not collected through pay-roll deductions, and the consumers themselves have a vote in the management of the plan.

But does the AMA approve of such a plan? Definitely not. As I said before, the Department of Justice had to step in and save Group Health Association from the AMA's illegal conspiracy to put it out of business.

Still another type of plan is that exemplified by the Ross-Loos Clinic in Los Angeles, and by the Milwaukee Medical Center. Here, again, salaried physicians give a comprehensive type of service to the subscribers, with due emphasis on preventive medicine and early diagnosis.

The AMA will have nothing to do with that type of plan either. I do not speak of these plans from merely theoretical knowledge. I, myself, have been a member of the Milwaukee Medical Center since 1937. I have received the best medical care I ever had in my life, and have had the use of every type of medical diagnostic facility, X-ray, laboratory, eye and throat apparatus, and so on. My medical expenses have been less, yet my doctors have been better paid than the average.

The last type of plan I want to mention is the kind that the AMA 14-point program recommends, and that its constituent societies sponsor.

About 23 such plans are now in operation. In general, they provide for payment of surgical fees, and sometimes of medical fees, up to certain specified amounts, if those fees are incurred while the patient is in the hospital. This means that a person has to be very sick before he receives any benefits under the plan. In many instances, the doctor may charge a fee over and above the amount of the benefit payment. The hospital bill is not included in the benefits under any of these plans.

Usually little or no provision is made for preventive or diagnostic procedures which might save the patient from serious or prolonged illness.

Since the doctors operate as individuals rather than as a group, the quality of service cannot easily be regulated.

The many small but expensive illnesses or injuries which may confine a subscriber to bed at home are not covered. The single visits which might be required during the year by an average family are not covered. Immunization is not covered. Consultation for a complaint which proves trivial, but which might have developed into something serious, is not covered. X-ray and laboratory tests are usually not covered. Then the patient may be liable for extra fees and hospital charges. In short, an insured person may pay his fee for a year, and also pay an enormous sum for medical bills during the year for which his policy brings him absolutely no return.

Often the plans are open only to subscribers with incomes under a certain amount, and the costs are usually so high that these very people cannot afford to participate in the plan.

In short, under the medical-society plans, the subscriber simply does not get enough for his money.

Undoubtedly, the medical societies are aware of the fact that their plans offer little to attract subscribers. At any rate some of the societies are taking timid and tentative steps in the direction of broadening benefits.

A new plan has recently been widely heralded in Rockford, Ill. From the newspaper publicity on this plan you would conclude that now, at last full medical care on a prepayment basis is to be available to the people of Rockford.

If you examine this plan, however, you will find some serious hitches in it. It is true that medical care is offered in home and office as well as in the hospital. But the care is given only in disabling illness. Here, again, it is care after the illness rather than preventive medicine to keep the person from becoming really ill. Moreover, benefits begin only after the first two visits; the patient pays for those two out of his own pocket. The effect of this, of course, is to discourage early treatment. Finally, the maximum benefit paid per call or visit is $2. If the doctor's fee is more—and these days it often is—that is the patient's hard luck.

Surgery, too, is on a cash indemnity basis up to a certain specified amount only. The hospital bill is not included in the benefits.

The United Medical Service, an AMA approved plan in New York City, has also recently announced that it is going to broaden its plan to include general medical care in the home and in the doctor's office.

Under this plan the patient is to pay at the rate of $2 for an office visit and $3 for a home visit. The doctor agrees that this is all he will charge if the individual's income is $1,800 or less, or if the family income is $2,500 or less. If the income is more, the charges can be hiked.

The visits or calls are limited to one a day for 20 days in any one illness. The plan pays only 50 percent of specialist's fees, and it does not pay the hospital bill.

It is easy to understand why the limited plans approved by medical societies have not succeeded in attracting more subscribers. Although such plans have been in operation since 1933, the latest figures published by the AMA show that they cover less than 2,000,000 persons. Nearly 800,000 of these are in the State of Michigan, and about 500,000 are in the three west coast States. That leaves less than 700,000 throughout the other 44 States.

What, then, are the chances for voluntary health insurance bringing medical security to the people of the United States?

If the AMA and its constituent societies would stop persecuting doctors who affiliate themselves with bona fide voluntary group practice prepayment insurance plans which give comprehensive medical service, I believe that such plans might conceivably take care of the needs of somewhere between 30 and 50 percent of the population.

I do not believe that the plans approved by the AMA—and proposed by it in its 14-point program—will meet anybody's needs for comprehensive scientific medical care.

Those plans are nothing but patchwork medicine. They are not health insurance. They are "catastrophic illness insurance."

Even under the best of plans, voluntary health insurance cannot meet the medical needs of the people. It does give the middle-income group a chance for much better help than they ever had before and it has demonstrated the advantages of group practice, with pooling of facilities and cooperation of specialists. But it can never reach the low-income group, who would have to stint their budget for food and housing to pay for it, and who naturally choose to eat regularly and take a chance on illness.

My estimate of 30 to 50 percent of the population as the top limit that can be reached by voluntary health insurance is, I believe, a very generous one. I base my estimate on the fact that 70 percent of the families in the United States have incomes of less than $3,000 a year, and 50 percent earn less than $2,000 a year. Hardly any family with less than $2,000 a year can afford to pay the premiums charged by the voluntary plans, and many families in the $2,000 to $3,000 income group cannot do so.

Let us see what these premium rates are.

The Kaiser plans, which offer perhaps the most complete service of any, cost in the neighborhood of $120 a year for a family of four. The Group Health Association, of Washington, D. C., offers a more limited family coverage for $72 a year. The Ross-Loos Clinic in California charges the individual subscriber $30 a year, and has a reduced fee schedule for members of the individual subscriber's family.

Considering the limited benefits offered, the plans approved by the medical societies are much more expensive. The Rockford, Ill., plan which I described is going to cost subscribers $50 per year per family, if we include the extra premium for hospitalization insurance. The new United Medical Service plan in New York City offers its limited service for $72 per year per family, including the Blue Cross hospitalization charge.

Besides the high cost and the frequent limitation upon services, voluntary health insurance has other serious disadvantages.

In the first place, even those who can afford it do not necessarily join the plan. Also there is a constant turn-over of membership. The Blue Cross hospitalization plan, for example, has to sign up four members for every three that it retains.

Persons who are frequently sick, of course, tend to retain their membership in the plan if they can afford it. Those who are in good health, and who therefore have little use for the plan's services, are likely to drop out. Thus the adverse risks tend to constitute an ever-increasing proportion of the plan's membership, and this way endanger the solvency of the enterprise.

Furthermore, voluntary plans must necessarily exclude those with serious chronic illness. These are the very people who need care the most.

An added disadvantage is that a policy holder in one part of the country may not be able to obtain similar service if he moves to another place. With an increasingly

migrant and shifting population this is a serious shortcoming.

And, of course, there would be tremendous duplication and waste involved in managing hundreds or thousands of small voluntary plans. The money thus spent might better be devoted to providing medical service.

It is for these reasons that I, and many others like me, believe that legislation such as S. 1050, the Wagner-Murray-Dingell bill, which provides for a Nation-wide system of compulsory health insurance, offers the best hope of meeting the medical needs of all our people.

The medical provisions of this bill would do much more than establish a workable and economical health insurance system. They would provide a modern network of medical facilities—hospitals, health centers, and clinics—to serve every person regardless of where he lives or what his income is. Without such facilities and without such assurance that medical charges can be met we shall never succeed in getting doctors and other health workers into the rural and low-income areas where they are now so desperately needed.

To be sure, one of the AMA's 14 points advocates relocation of doctors to places where they are badly needed. But the AMA does not say how this is to be done. The Wagner-Murray-Dingell bill gives assurance that relocation of physicians would be a reality—not just a pious hope.

The bill would also provide for a considerable expansion of public health facilities and maternal and child health services.

Opponents of the bill have charged that it would set up a system of "socialized medicine." It would do nothing of the kind. It would set up a national insurance fund into which every employed person would contribute a small and reasonable share of his earnings, in return for which he would be guaranteed complete medical care, including preventive and diagnostic services. The cost to the employee for medical benefits would be 1½ percent of his income up to $3,600, and the employer would pay a like amount. In other words, a worker earning $3,600 a year or more would pay $54 annually for protection for himself and his dependents. On the other hand, a person with an income of $1,000 a year would pay only $15.

With such contributions, a fund of about $4,000,000,000 a year would be raised. This is just about the same amount as we now spend as a nation for medical care under a wasteful system in which a relatively few people get good care, the vast majority get indifferent care, and some get no care at all.

The charge that the bill would permit the Surgeon General of the United States Public Health Service to become a "medical dictator" is also false. The bill specifically provides that the Surgeon General must consult with a medical advisory council on all aspects of the health program. Moreover, the council is empowered to publish all of its decisions and thus submit to the public any disagreement it may have with the Surgeon General.

Those who oppose the bill say that it would establish a bureaucracy in Washington that would completely centralize the administration of medical services. This, too, is a misrepresentation. All the Federal Government would do is collect the money and set up minimum standards followed by the doctors. Provision is made for advisory councils at the local as well as the Federal level. Through the local advisory councils the consumers of medical care in this country would for the first time have a real voice in determining how the services should be managed. The bill provides that administration through State and local authorities shall be given preference over Federal administration whenever the State and local authorities wish to assume the responsibility.

Contrary to what enemies of the bill have said, nobody would be forced to go to a designated physician or to a public clinic. Anyone could choose his own doctor, just as he does at present. The only difference would be that everyone would be able to consult some doctor when he needed him. This is not the case at present, when the money problem often stands in the way, and when there may not be a doctor available in the community.

The doctor, too, would get a square deal under the bill. Average income for doctors would actually increase. The doctors would be paid from the general insurance fund according to a fee schedule, at a per capita rate, or on a salary basis, depending upon which method the doctors in the particular community chose. In any event they would all be paid for all of the service they rendered, which is more than can be said for the system as it operates today.

Finally, despite the assertions of critics, the quality of the medical care rendered would be higher than under the present system. For one thing, the doctor could divest himself of the business care of practice and devote himself entirely to professional activities, including advancement of his skill and knowledge. Every doctor could enjoy the benefits of a group practice and would have ready access to modern, costly equipment, specialists' and consultants' services, and laboratory tests. And every patient, regardless of his economic status, would have equal access to the best that modern medical science has to offer.

The bill would also provide cash benefits to tide the worker over periods of unemployment due to sickness or disability. It would provide Federal grants to nonprofit institutions for much needed research into the causes and treatment of disease. It would enable States to undertake medical care programs for the needy, who could not qualify for participation in the health insurance plan.

I wonder how many people who listen seriously to the specious arguments so often advanced against compulsory health insurance realize that exactly the same arguments were used 75 or 100 years ago against the public school system.

In those days many people insisted that each parent must be left to choose the kind and degree of education his children should have, as well as the particular school or teacher by whom they should be taught.

There was great indignation among conservatives against the principle of what they called taking money from one person to educate the children of another.

The public schools were denounced as socialism and communism. It was claimed that they violated the sanctity of the home and corrupted every branch of government. A book published as late as 1879 said that they were responsible for "dishonesty, frauds, perjuries, defalcations, and the most gigantic, barefaced, and hitherto unheard-of robberies, perpetrated with impunity, not only upon the public moneys, but upon the dearest rights and liberties of the people."

Newspaper editors attacked the compulsion involved and said that education must remain on a voluntary basis. One writer, in 1886, declared that "the whole business of teaching school should be thrown open to private enterprise and free competition, just like practicing law or medicine or running a shoe factory."

I am sure that when the American people really understand the true significance of the Wagner-Murray-Dingell bill, they will demand national compulsory health insurance, just as they demanded, and won, universal public education.

First, however, it will be necessary to cut through the fog of misrepresentation and invective by which the real issues have been obscured. Public discussion such as this will, I am sure, do much to clear the air and hasten a mature and reasoned judgment of the case.

## Treatment of Disabled War Veterans

EXTENSION OF REMARKS
OF
### HON. BERKELEY L. BUNKER
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. BUNKER. Mr. Speaker, under leave to extend my remarks, I wish to call attention and to place before the Members of the House of Representatives, conditions that exist in the southern part of my State in regard to the treatment of disabled war veterans. I have long contended that the veterans are not receiving a square deal. No doubt similar conditions exist over the Nation. While I have great confidence in Gen. Omar Bradley, I do feel that in fairness to him a fearless investigation should be made to erase all stigma of the Hines regime from the Veterans' Administration. I respectfully submit the following article which appeared in the Las Vegas Evening Review-Journal, October 19, 1945, as proof that veterans are not getting a square deal in my State:

RUNAROUND ON VETERANS' HOSPITALIZATION INADEQUACY REVEALED

(By Walter Taliaferro)

Concrete proof of the total inadequacy of Veterans' Administration hospital facilities for care of southern Nevada disabled war veterans and the whirligig runaround even emergency cases receive through the veterans' facility at Sawtelle, Calif., was uncovered today by the Review-Journal in an investigation of the cases of five World War II veterans seeking aid this week at the Clark County General Hospital, which has eight beds under contract to the Veterans' Administration.

Of the five cases investigated the most outstanding example was that of a United States marine master technical sergeant who had made every major landing in the South Pacific except the one made while he was in the hospital in Bougainville being treated for a tropical fungus growth on both feet.

(EDITOR'S NOTE.—The names, service serial numbers and service-connected disability claim numbers of these cases are on file in the offices of the Review-Journal and are in the hands of the newly formed Clark County veterans' service coordinating committee, but to save undue embarrassment to the men, will not be published.)

This marine, whom we shall call Joe, was discharged from a hospital in Salt Lake City and came back to his home in Las Vegas. He was granted 30 percent disability claim and receives $34.50 a month. The claim was reviewed last June and continued and a new claim for adjustment because of a steel-capped knee is now pending.

Last Saturday, Joe's left foot again became infected and started swelling up and filling with pain. Monday he went to the Veterans' Administration representative, Harry Robbins, in the USES office in Las Vegas, and when he produced his full records and disability claim, was sent at once to the county hospital, where he was promised quick aid and no red tape.

Robbins quickly and properly fulfilled his duty according to the law, sending the man to the Veterans' Administration contract hospital, where the superintendent, Dr. J. C. Cherry, is the Veterans' Administration approved physician for Las Vegas.

Joe went to the county hospital and Dr. Cherry gave him emergency treatment and sent him home, to return for further treatment on Tuesday. He again was treated and told to return Wednesday.

On Wednesday, Joe returned to the hospital and Dr. Cherry found the condition in his foot getting much worse and that it would be impossible for him to further use the foot even in a slight way.

Dr. Cherry, having just received his first written instructions from the Veterans' Administration after spending nearly 3 months trying to get them, remembered part of the instructions that read: "In case of emergency where delay in securing prior authority may not be permitted * * * treatment rendered a veteran without prior authority is rendered on your own responsibility," placed a long-distance phone call to Col. C. W. Colebaugh, chief of receiving and out-patient service at the veterans' facility in Sawtelle, his immediate superior.

Colonel Colebaugh refused to accept the charges on the long-distance call on Veterans' Administration business, Dr. Cherry declares, and after the charges were paid at this end, refused to allow Joe to be hospitalized here.

"I was told not to hospitalize this veteran, but to send him to Sawtelle on the train, and that the Veterans' Administration would pay his transportation when he got there," Dr. Cherry disclosed.

"When I informed them he was in no condition to travel other than by ambulance and that his condition was rapidly growing worse and he required immediate hospitalization, I was informed they would not send an ambulance and they could not authorize hospitalization without checking his case history (said by the man to be in Sawtelle now) first," Dr. Cherry further revealed.

Rather than let the man sit around while gangrene could set in, Dr. Cherry informed them he would take care of the man anyway rather than allow him to travel by train.

Finally, according to Dr. Cherry, Colonel Colebaugh authorized him over the telephone to give Joe seven out-patient, not hospitalized treatments.

The last time Joe was hospitalized by the Marine Corps for the same cause, he was under constant treatment in a hospital bed for 1 month to save amputation of his leg, he revealed.

Joe has definitely been awarded a service-connected disability claim, has been approved for vocational handicapped training, but under interpretation of rules and red tape procedure by Colonel Colebaugh, deciding his case behind a desk 300 miles away, Joe cannot be hospitalized in Las Vegas, nor will the Government send an ambulance to move him to Sawtelle.

Yes, Joe is one of those eight beds contracted for by the Veterans' Administration at the Clark County General Hospital, and, yes, he is being treated by the Veterans' Administration approved physician, Dr. J. C. Cherry—but it has not been approved by the Veterans' Administration and neither Clark County nor Dr. Cherry will be able to receive compensation for the hospitalization and treatments under Colonel Colebaugh's interpretations of the law. It is only because Dr. Cherry refuses to see any veteran go untreated, especially in an emergency, that Joe is being taken care of—not through the means supposedly set up by Congress to care for returning disabled veterans.

"After this case and the instructions received from Colonel Colebaugh, these eight beds for service-connected veterans which can only be used when the veteran is unable to be moved without endangering his very life, are of little or no value to veterans in Clark County," Dr. Cherry emphatically declared today.

Further details on the complicated red tape which hidebinds disabled veterans and doctors in Las Vegas will be disclosed in the Review-Journal tomorrow, along with the full instructions received here by Dr. Cherry from Colonel Colebaugh, and a copy of authorization form issued if, as, and when a case is approved in Sawtelle for treatment here.

## Japanese Surrender Documents

EXTENSION OF REMARKS

OF

## HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPPESENTATIVES

*Wednesday, October 24, 1945*

Mr. COOLEY. Mr. Speaker, on September 12, 1945, the Japanese surrender documents were placed on public display in the National Archives Building. Gen. Jonathan M. Wainwright unveiled the case containing the documents. The Speaker of the House of Representatives, Hon. SAM RAYBURN, served as master of ceremonies. The Archivist of the United States accepted the documents for public display and read a message from the President of the United States. The ceremony was broadcast by several radio stations.

Under unanimous consent, I insert in the Appendix of the RECORD the remarks made by General Wainwright, Speaker Rayburn, and Dr. Buck on that occasion:

ANNOUNCER. Ladies and gentlemen, from the exhibition hall of the National Archives in our Nation's Capital, we bring you a special ceremony during which the original Japanese surrender documents will be placed on public display.

This hall provides an impressive and appropriate setting for the display of such historic documents. Beneath a great half dome, which rises 75 feet above the floor, are murals by Barry Faulkner picturing in heroic size the signing of the Declaration of Independence and the submission of the Constitution to the President of the Continental Congress. In the cases around the hall, which is bedecked with the flags of the United Nations, are documents marking milestones on America's road from war to peace. The declaration of war against Japan, the agreement to launch the Normandy invasion, the Teheran and Yalta agreements, the German surrender documents, and copies of the United Nations Charter are among the items being shown in an exhibit on international cooperation for war and peace.

Today the Japanese surrender documents signed on the battleship *Missouri* on September 2 are to be added to this exhibit. They were flown to Washington from Tokyo soon after the signing and were presented to President Truman. They are now in the hall's center case, which is in the form of a shrine. At each side of it, a military guard of honor stands at rigid attention. Before it sit a number of honor guests—two veterans of Bataan, Pfc Felman Cappel and Corp. Russell Villiers.

The case will be unveiled by Gen. Jonathan M. Wainwright, the hero of Corregidor, and Dr. Solon J. Buck, Archivist of the United States, will accept them for public exhibition. The Speaker of the House, the Honorable SAM RAYBUAN, will serve as master of ceremonies.

High-ranking military officers of the United Nations, resplendent in gold braid and numerous decorations, and Members of Congress, the Cabinet, and the diplomatic corps have just taken their places around the center case.

And now; the next voice you will hear is that of Mr. Thad Page, Administrative Secretary of the National Archives.

Mr. PAGE. Ladies and gentlemen, it gives me great pleasure, on behalf of the Archivist of the United States and the staff of the National Archives, to welcome you to the National Archives on this important occasion. I now have the privilege and honor of introducing to you a distinguished statesman, who will act as master of ceremonies, the Speaker of the House of Representatives, the Honorable SAM RAYBUEN.

Speaker RAYBURN. Ladies and gentlemen, nearly 4 years ago, on December 7, 1941, that "day of infamy," Japan treacherously struck at Pearl Harbor. The Nation was shocked and angry, but it was not stunned. It was galvanized into action. We had not sought war, but when war came we mobilized our men, materials, and machines into the greatest fighting force and the greatest arsenal of democracy the world had ever seen.

Meanwhile, however, our gallant men on Bataan, first under Gen. Douglas MacArthur, and then under Lt. Gen. Jonathan M. Wainwright, were fighting against hopeless odds. With no aid from outside possible, the fall of Corregidor was inevitable. The courage of its defenders and the brutality of the Jap victors, however, turned it from defeat into a flaming symbol—a promise that Corregidor would be avenged.

"I shall return," MacArthur vowed. But during those grim days when democracy was on the defensive and modern civilization seemed on the verge of collapse, the fulfillment of that promise seemed a long way off. Nevertheless, it gave a ray of hope to an almost hopeless world. All of us now know, after much bitter fighting on land and sea and in the air, how gloriously and magnificently that promise was fulfilled. We are all familiar with the successful campaigns that followed the recapture of the Philippines—Biakpapan, Iwo Jima, and Okinawa—and that led to the unconditional surrender of Japan.

It is fitting that the documents that now give, and will continue to give through unborn generations, evidence of the triumph of the United Nations over the Japanese Empire should be added to the other significant documents on display in this room. These documents now take their place along with the German surrender papers, copies of the San Francisco Charter, and papers relating to the various international conferences attended by President Roosevelt and President Truman—Casablanca, Quebec, Cairo, Teheran, Yalta, and Potsdam. Altogether they reflect the story of our efforts and those of our allies to win the war and bring peace once again to the world.

It is equally fitting—peculiarly appropriate—that these Japanese surrender documents should be unveiled for public display by one of history's greatest heroes, a man who even in defeat symbolized the ideals and objectives for which this Nation mobilized all its resources, a man who contributed greatly to our ultimate victory by holding out with meagre and inadequate resources far longer than was expected, a man who, despite temporary defeat and indignities heaped upon him during many months in Japanese prison camps, never lost his spirit or his faith in America, a man who by his courage and indomitable will contributed immeasurably to ultimate victory. Ladies and gentlemen, it is my privilege to present to you the hero of Bataan and Corregidor, who will unveil the Japanese surrender documents, Gen. Jonathan M. Wainwright.

General WAINWRIGHT. Mr. Speaker, Dr. Buck, ladies, and gentlemen, the first thing I want to say to you is that being home is fine. I was deeply moved by being invited to attend the Japanese surrender ceremonies aboard the battleship *Missouri*, and I was touched when General MacArthur presented me with the first pen he used to sign the instrument of surrender. Today you bestow upon me another great honor, that of making available to the American people the documents that bear enduring evidence of the supremacy of right over might and of the return of peace to a distraught world. On this occasion, as always, I think of the brave men who served under my command. On their behalf, as well as my own, I am pleased to unveil the documents that

brought final peace to a war-torn and war-weary world. (At this point General Wainwright unveiled the case containing the Japanese surrender documents.)

Speaker RAYBURN. Thank you, General Wainwright. I know something about the hardships endured by Japanese prisoners of war, but in view of the rigid schedule that you have experienced during the last few days and the strenuous schedule facing you tomorrow in New York, I am afraid that until you are permitted some relaxation and rest, Manchuria might still look good to you. At any rate you may be assured that we are grateful to you for being here today, and I want you to know that you will live in the hearts of Americans forever.

All of us know and are immensely proud of the important part played by the Navy and the Marine Corps in bringing the war to a successful conclusion. We are privileged to have with us a distinguished naval officer, Rear Adm. H. H. Good, who is here as the representative of the Secretary of the Navy. Admiral Good, will you be kind enough to come up here on the steps so that the audience may have the opportunity of seeing you?

And now it is my pleasure to present to you the Archivist of the United States, who will accept the Japanese surrender documents for public display and read a message from the President of the United States. Ladies and gentlemen, the Archivist of the United States, Dr. Solon J. Buck.

The ARCHIVIST. Speaker RAYBURN, General Wainwright, ladies, and gentlemen, it is a pleasure and an honor to receive from you, General Wainwright, these documents that mark the end of eight long years of war for our brave and enduring ally, China, and nearly 4 years of valiant fighting for ourselves and our other allies. When plans were being made for the exhibit on international cooperation for war and peace, to which these documents are now added, Franklin D. Roosevelt, whom President Truman has called the defender of democracy and the architect of world peace and cooperation, was still alive. He took a great interest in this exhibit because he wanted the people to know the road to peace as he was traveling it. Little did we imagine that he was to be cut down with the end of that road almost in sight. Nor did we think this spring when the German surrender documents took their place in this hall that in but four short months we would see the complete capitulation of our brutal enemy Japan.

Today, as these Japanese surrender documents join the Lend-Lease Act, the declaration of war against Japan, the Yalta and other agreements, the German surrender documents, and the United Nations Charter, the story on international cooperation for war and peace that this exhibit seeks to tell is completed.

The exhibit is completed. The war has ended. An organization to preserve the peace and security of the world has been devised. But there have been other surrenders, other agreements, and other international organizations—The Archives of the United States holds many of their stories, some of them tragic. This time we must not forget that enduring peace for the world rests on more than these structures. The possibility of its achievement lies in the hearts and wills of ourselves, of our allies, and even of our enemies.

President Truman has asked me to express his regret that he could not be here today to pay his respects to General Wainwright and to all those, living and dead, whose unflinching bravery brought the Japanese to their knees. He has sent a message, however, which he has asked me to read. This is his message:

"It is with profound satisfaction that this day we are able to lay before the people of the United States and the representatives of our faithful allies these tokens of the downfall of our enemy in the Pacific—the Japanese unconditional-surrender documents. They are only sheets of paper, some of them written in a language most of us cannot read, but they are an eternal reminder of that indomitable courage of our fighting forces and of the home front that led us through the disastrous days of Pearl Harbor, Bataan, and Corregidor to final victory.

"The world is now at peace, but we would betray those who died to make peace possible—we would make these surrender documents a mockery—if we did not continue to battle against the evil ideologies of those who forced war upon the world. Those ideas must be wiped out, and the German and Japanese people must be taught, with sternness but with justice, to live in a world where there is respect for the rights of nations and of men. This we must do to protect and perpetuate that peace we have so dearly won."

Army Band: The Star-Spangled Banner.

ANNOUNCER. Ladies and gentlemen, you have just heard a ceremony from the Exhibition Hall of the National Archives Building, during which the Japanese surrender documents were placed on public display. Participating in the ceremony were Gen. Jonathan M. Wainwright; the Honorable Sam Rayburn, Speaker of the House of Representatives; Dr. Solon J. Buck, Archivist of the United States; and Mr. Thad Page, administrative secretary of the National Archives.

## Army Discharges

EXTENSION OF REMARKS
OF
### HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, I am in receipt of the following telegram which I am calling to the attention of the membership of the House. I believe that this situation should be investigated and I feel that the conditions described should be rectified at the earliest possible moment. I am also taking this matter up with the War Department and shall urge that they look into this matter immediately.

MONTGOMERY, ALA., *October 19, 1945.*
Congressman MIKE MANSFIELD,

SIR: Wish if possible to enlist your aid in abolishing discrimination being shown insofar as discharges pertain to cadets and trainees held under AAF letter 50–113, dated April 1945. Are concerned by recent Army ruling and set forth in War Department message form as TWX from headquarters AFTRC, Fort Worth, Tex., 6E–31500, dated October 11, 1945. This separates cadets into two categories. Men here are highly perturbed and angry at apparent injustice and partiality being shown between discharging of cadets who entered directly from civilian life. They are of the low point and service class while those of us who became cadets from enlisted status have over 2 years' service and comparatively higher point scores, including overseas service. We wish also to object to the apparent indiscriminate assignment of ineligibles for discharge to duties not commensurate with their military occupational special number which is also set forth in above-mentioned TWX and their sudden induction into the essential class. This is strictly a local decision and removes us from surplus category and also makes us ineligible to derive any benefits due to discharge of surplus personnel. By means either of the two above-mentioned decisions, our status is terminated and we automatically enter into essential classification; most of us are airplane specialists and are being assigned duties ranging from ward boys to truck drivers, all of which come under apparent essential classification.

A/C RUSSELL J. PORTER, 12176611,
*Representing Trainees of Maxwell and Gunter Field, Montgomery, Ala.*

## The Negro Disillusioned

EXTENSION OF REMARKS
OF
### HON. THEODORE G. BILBO
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
*Wednesday, October 24 (legislative day of Monday, October 22), 1945*

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a splendid and timely article entitled "The Negro Disillusioned," by Mr. Demps Alexander Oden, of Alabama.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEGRO DISILLUSIONED

(By Demps Alexander Oden, Childersburg, Ala.)

Purpose of this article: To open the eyes of the Negroes (and some white people) to the actual status of the Negro race in America; to acquaint them with that race's lack of intellectual background and to pour oil on the troubled water of racial discord—disturbed by claims of equality that have no factual support and exist only as the hollow mockery of politics.

Of the five races with which the earth is peopled, only one, the Negro, is ashamed of his race and tries to be something other than what God made him. Neither the red, yellow, nor brown races want to be white, as the Negro ever strives to become. Instead of having that pride of race attached to the white, red, yellow, and brown races, the black race is wholly lacking in that attribute, ashamed of his ancestry, and always trying to get as far from it as possible—deluding himself with claims of equality with the white race that are not borne out by his appearance, his present attainments, nor his background in recorded history. The Negro attempts to conceal his identity by sidestepping his racial name, Negro, and classifying himself with the colored races—red, yellow, and brown—none of whom are Negroid racially, are distinct in racial type, and bear little resemblance to one another. The Negro's claim to kinship with them lies in the absurd logic that, since they are not white and he is not white, ergo, he is the same as they.

"O wad some Power the giftie gie us
To see oursels as ithers see us!
It wad frae monie a blunder free us—"

If, as the Negro claims, his race is as good as the white race, why does he not content himself with Negro association? Does not his preference for white associates prove his own claims to be ridiculous in the eyes of the other races? If the Negro possesses all the intellectual, inventive, and administrative abilities of the white race, why not prove his contention by establishing a government of, for, and by Negroes, and demonstrate his equality with the ruling races, white and yellow? Why such scant attention to that Negro proving ground, Liberia? Would even the Negroes themselves feel secure with our coasts guarded by a fleet manned exclusively

by Negroes; by an air force staffed and operated by Negroes; by an army composed wholly of Negroes? If not, why not? Abraham Lincoln supplies the most reasonable answer to these questions. See the quote on following paragraphs:

The Negrophiles argue continually of the "wonderful progress"—(progress from what?) made by the Negro race during the past 150 years' contact with the white race (chiefly in the South); but they are silent concerning the Negro's lack of progress during the preceding 3850 years of recorded history in which he lived alongside the highest types of civilization that the world has ever known—Egyptian, Greek, etc., without "progressing" one iota beyond the savagery, the barbarism, with which the black race has ever been enshrouded. Where are the cities that the African Negro has founded; the monuments he has built; the language he has recorded; the laws he has established? Hear Abraham Lincoln's personal opinion of the Negro, as expressed in his debate with Douglas at Charleston, Ill., September 18, 1858 (Douglas had accused Lincoln of desiring to bring about social equality between the two races):

"I will say that I am not and never have been in favor of bringing about in any way the social equality of the white and black races. That I am not, nor ever have been in favor of making voters or jurors of Negroes, nor of qualifying them to hold office nor to intermarry with white people, and I will say in addition to this, that there is a physical difference[1] between the white and the black races, which I believe will forever forbid the two races living together on terms of social equality; and, inasmuch as they cannot so live, while they are together there must be the position of superior and inferior; and I, as much as any other man, am in favor of having the superior position assigned to the white race."

(Lincoln shook his finger in Douglas' face, as he made the concluding statement).

The advances into civilization made by the Negro in America are not due to his independent efforts, but to tutelage by the superior race (see Lincoln), and he reverts to savagery, even cannibalism, when the leading hand, the protecting arm of the white race is withdrawn—vide Haiti. It is the opinion of the people who know the Negro best from longest acquaintance with his inherent traits, that if the American Negro should be deprived of the association, example, and leadership of the white race, within a generation the innate urge to savagery would crack the thin veneer of civilization acquired from contact with the white race, and the spectacle of another Haiti, a rejuvenated savage Africa come into view.

The present status of the Negro as a race in America is due chiefly to the civilizing influence of the southern whites during the years when he was nominally a slave, actually a ward of the Christian element in the slave-holding States. These white people were not the slave-dealers who brought the manacled African savages to America and sold them; first in New England where climatic conditions operated against the Negro's value as a worker, and aroused the Puritanical conscience—not to free the slaves; but to sell them in the South where they could be worked to greater economic advantage. Therefore, those humane Yankee slave-holders "passed the buck" to southern whites in a climate more congenial to the Negro's accustomed life. That humane act did not extend to the ship-owners who had abandoned whaling for the more lucrative slave-hunting, and laid the foundation for many modern New England fortunes with blood-money from the sale of such of the African cargo as stood the trip in the blackhole.

Abraham Lincoln, himself, absolves the South for the institution of slavery in these words: "It is no less true for having often been said, that the people of the South are not more responsible for the introduction of slavery than are the people of the North."

With the Puritanical example of slave-holding before them, the southern whites bought the slaves brought to market by Yankee slave-dealers, and put them to work on plantations in a climate suited to their experience and at an occupation the most natural, the most congenial to mankind—agriculture. For one Simon Legree—a wholly politico-mythical character—there were a thousand kind-hearted Christian masters whose training made human beings out of the brutal savages dumped on American shores by the heartless slave-traders. Good food in abundance; clothing suited to the climate, and reasonable hours of labor was the slave's lot. The Biblical seventh day of rest was universally observed by master and slave alike throughout the South; church attendance was an accepted institution—provision by gallery or assigned space being made for the slaves in all churches. Bible teaching, corresponding to modern Sunday school, was carried on by the mistress and her adult daughters every Sunday morning. The effects of that training for the unlettered savages is seen today in the South, particularly the rural sections, where religion is still the dominant factor in Negro social life. Elsewhere, however, those modern Negrophile crusaders include in the New Deal program that disturbing, disrupting feature, social equality, that will lead—if ever applied—to intermarriage between certain whites and Negroes; pulling white civilization from its throne, and setting up in its stead a mongrelization growing out of "Eleanor Clubs."

In the late 1850's, a noted English writer toured the United States and upon returning home, published his impressions of America. He was appreciative and complimentary toward economic conditions throughout the country, but gave as his best impression the fact that the southern whites had taken the trouble to train the African slaves into the paths of Christianity. He noted, particularly, that this was the personal task of the slave-owners, and practiced universally in the slave-holding States. Verily, Booker Washington did not go back far enough to obtain the title for his book, "Up From Slavery." It should have been: "Up From Savagery; Through Slavery, to Civilization."

Save for the stubbornness of Jefferson Davis, the Hampton Roads Conference would have ended that unfortunate, needless Civil War, and Lincoln's proposition to pay—approximately—$500 apiece toward freeing the slaves through a specified period and returning them to ancestral homes as fast as liberated, would have saved the South that bitter cup, reconstruction, whose dregs the administration would now have us drain in the form of social intermixture between white and Negro races—ignoring the impossibility of peaceably enforcing that edict. The inconsistency of that "social gain" is found in the absence of Negro or Negress among the several marriages in the White House family. What explanation does Mrs. Roosevelt tender to her Negro proteges for that? If the Negro is the equal of the white man socially; the Negresses of those admirable young women, wives of the four Roosevelt boys, why that discrimination? Evidently those young Roosevelts take Abraham Lincoln seriously in his debate with Douglas; nor do they believe that a lot of mulatto grandchildren would enhance the attractiveness of the White House. That condition respecting the White House family prevails in a similar degree all through the country, as these facts prove:

The United States Senate is composed of 96 white Senators, none of whom ever contracted marriage among the Negro race.

The House of Representatives consists of 429 white males, none of whom ever contracted marriage with a Negress and 5 white women members, none of whom ever contracted marriage with a Negro. The sole Negro Representative, to his credit, married within his own race.

The nine Supreme Court Justices confined matrimonial alliances to their own white race, as did all United States judges throughout the Union. The Governors of the 48 States are white men, none of whom ever married a Negress—all practiced race discrimination in the selection of life partners, as did the head of every State university and all members of State supreme courts.

Facts are stubborn things, and all persons referred to in the above list, to which may be added the President's Cabinet, are guilty of that same race discrimination hurled by mulatto-minded editors against the southern whites (Birmingham dailies: Please copy). To say the least of it, race discrimination in the South, as regards matrimony, has precedent in the highest official circles—not excepting the White House, whose mistress does not practice in her own family that policy which she preaches so tirelessly along her social and political orbit.

The insincerity of those Negrophiles, who inspire interracial gatherings and flood the press with assertions that the Negro race is equal to the white, is proven by a simple test—one that never fails. Ask him:

"If you have a white daughter of marriageable age, would you be willing for a Negro to marry her?"

His reply, prompt, positive, and emphatic, is "No!" In that reply, the Negro race finds full evidence that claims of equality with the white race, with which white renegades delude them, are "but as sounding brass and tinkling cymbals," with no motive above politics. If the Negroes themselves will put this question to that type of whites—pointedly and publicly—the embarrassment following will perceptibly chill the enthusiasm of interracial gatherings.

A familiar illustration of the Negro's limitations is found in the practices of the three outstanding mail-order houses of America—Sears, Roebuck and Montgomery Ward, retail, and Butler Bros., wholesale—all domiciled in the North and unaffected by southern influences. These concerns each distribute millions of expensive catalogs, carrying thousands of attractive human likenesses—beautiful women and handsome men—to demonstrate the appearance of their clothing offerings as worn. Among these thousands of illustrations, not one of Negro or Negress is found. There is a reason, a God-given physical, nonpolitical reason for this "racial discrimination," and that reason is simply the Negro race, whose dark skin, dull, expressionless eyes, flat nose, and thick lips (facts) do not lend themselves to illustrations of harmony and beauty as those characteristics are regarded by the superior race. (A. Lincoln.)

With these plain, indisputable evidences of racial discordance glaring from the illustrated page and the official records in every State in the Union, the Negro should turn his thoughts inward, take his gaze from the mirage of racial oneness, and cease pursuing that will-o'-the-wisp, social equality, and realize that, after almost a century of freedom everywhere and of political coddling in the North, he is no nearer that goal for which

[1] Evidently referring to the body odor of Negroes, irrespective of physical cleanliness, that is repugnant to the 100-percent white; but is tolerated by those whose blood is tainted with Negro strain. To guard against mixed breeds, the Creator attached to the lower grade of those types possible to intermix, an odor that is offensive to the higher type—notably the horse and the camel. The odor of the Negro is sickening to full-blooded white people; but is less offensive to those alleged whites whose blood is tainted, even in a faint degree, with Negro blood. (This may account for the enthusiasm with which some white (?) people promote the "interracial" gatherings.)

nature did not design him nor civilization equip him, than in Lincoln's day. If he will devote his energies to becoming a better, more useful Negro, rather than the dupe of designing, selfish Northern white politicians, who subtly practice "race discrimination" against him both in matrimony and catalog in this course he will reap the rewards of industry, instead of the disappointments of ambition unattainable, and he will find sympathy, protection, and prosperity among his real friends—the Southern white people. These Southern whites, occupying that superior position assigned to them by the Creator, and recognized by Abraham Lincoln, are justifiably hostile to any race that attempts to drag them down to its own level; therefore, the Negro will be wise in leaving the ballot in the hands of a dominant sympathetic race; since he is far better off as a political eunuch in the house of his friends than a voter rampant in the halls of his enemies.

That policy of the southern whites to refuse racial intermixture with the lower races is due to pride in the superiority of their own race (see Abraham Lincoln), and not to hatred toward the inferior race. The claim that color is due to climate instead of race, becomes ridiculous in the absence of a belt of black people around the earth in the Torrid Zone. The highest attainments of any race were reached in those periods when that race was free from contamination by inferior blood (again, see Lincoln). Conversely, the downfall of every ancient civilization is traceable to racial contamination that weakens intellectual, moral, and, eventually, physical power.

Universal hatred of the Negro race by southern whites has no foundation outside the envenomed minds of envious Negroes and the depraved members of the white race whose claim to be 100-percent white is open to grave suspicion (A. Lincoln). The place to determine normal racial relation in the South is in rural regions where the Negro has never been contaminated by would-be missionaries bent upon "saving" the Negro from imminent destruction at the hands of the "brutal" whites. Here the Negro is closer to year-round happiness than elsewhere in all these United States. Improvident, somewhat inclined to idleness, carefree, confident that "my white folks" (employer or landlord) stand between him and want or serious trouble, be it the law or crop-allocation documents prepared by college-bred brain trusters. Among these idyllic surroundings exists race pride in a pronounced, desirable from, with rigid lines drawn against racial intermixture, both races frowning upon violation.

Our critics recognize no neutral ground between love and hatred—the races must be either at daggers' points or in physical embrace—pity their feigned ignorance! They forget that a man may love his dog and provide him with food and shelter, without desiring the animal as a bedfellow; or like treatment for his horse, without stabling it in his parlor; yet resent with fury any mistreatment of either animal.

When the Negrophiles cease their "race hatred" toward the Negro's best friend (when his material welfare is considered) the Southern whites and open their eyes to facts regarding the Negro race from the dawn of civilization to the present day, the race problem will adjust itself in conformity with facts instead of venom, and the Negro will devote his energies to self-improvement, rather than continue to build on a foundation of sand—assuming an intellectual quality with the white race that does not exist; did not exist in Lincoln's day, nor has ever existed anywhere upon the face of the Earth. God made the Negro black; the Southern whites did not do it, and all the race-hatred spewed at them will not change His mark.

How thin is the veneer of civilization on the modern Negro, even the best-educated among them, is shown by his refusal to yield the path on the sidewalk to any woman except a Negress; nor to a little child of any race—including his own. Courtesy is nowhere second nature with the Negro; only brute force of the jungle type is the guiding factor in his scheme of life, and this factor is given emphasis by enlarged educational advantages.

The Negro has a long road—many centuries long—to travel before matching the white race's experience that has built this race to world preeminence, and he makes a grave mistake in clamoring for a college degree while yet in grade school.

SUMMARY

The foregoing is compiled by a white man of mature years; born and raised in the deep South; son of a former slaveholder; accustomed to association with Negroes and familiar with their ways, through the paternalistic dealings with the race required of the whites who have sincere regard for the material welfare of their charges; because charges they actually are. Upon these descendants of slaveholders devolves the sympathetic handling and final solution of the so-called problem that has been raised by fanatical meddlers, with only a superficial knowledge of the conditions they would rush in to remedy, plus an intention to frustrate the efforts of the Negro's real friends—the southern whites.

The writer would challenge the present propriety; the ultimate wisdom of policies designed to destroy harmony and substitute discord, confident that first-hand knowledge concerning racial conditions in the South is paramount to half-baked opinion of occasional visitors—globe-trotting or otherwise.

The thinking Negro should consider the facts set out in the foregoing article and, in calm judgment, come to acknowledge that his best and truest friends are those southern white people, descended from the former slave owners who held something more than a proprietary interest in his ancestors—a sincere regard for their spiritual, moral, and physical welfare—and realize that such sentiment, deep and sincere, exists today among the native white southerners. When this realization comes to prevail, the interracial serpents will draw back into their dens, and that peaceful understanding, natural between the southern white and Negro races, will come into its own.

## Take the Lid Off the Atom!

EXTENSION OF REMARKS

OF

### HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial by Palmer Hoyt which appeared in the Oregonian on October 2, 1945.

Mr. Speaker, the haste with which the Military Affairs Committee of the House is disposing of the relatively inconsequential subject of atomic energy is causing concern amounting to consternation around the country. I wish it were possible to insert in the RECORD all the articles, editorials, and radio comments which are being made on this subject. There is not a single phase of our national life which will not be radically altered by this new force. For example, to be planning the size of the postwar Military and Naval Establishments without giving full and deliberate consideration to the effect of atomic energy upon military concepts is just as bad as if we had armed our fighting men with bow and arrow and slingshot to meet the machines, guns, and bombers and the fighters of the Nazis and the Japs. The editorial follows:

TAKE THE LID OFF THE ATOM

It is our growing conviction that the significance of the atomic bomb cannot be judged by merely staring at the ruins of Hiroshima and Nagasaki—about the only basis of judgment which the public has had so far.

We must, in addition, have the full and frank advice of the scientists who stand behind those ruins, so that we may know how plentifully the bombs can be produced, what hope there is of sequestering the secret, how quickly other elements than uranium can be utilized for atomic power, what chances there are of the development of effective defense, how costs are likely to run now that the United States, Britain, and Canada have financed the experimental work.

Such information as this, if forthrightly presented to the people at once, could well determine the direction which the United States is to take—and the rest of the world, for that matter—in the crucial months and years ahead. It could well determine whether we are to cling to the now futile machinery of the United Nations or seek a solution through a world state or world conquest.

And without that information, how stupid is our procedure!

The other day the Naval Affairs Committee reported out, unanimously, a resolution favoring a postwar fleet of 1,079 combat ships, including 116 aircraft carriers. At the same time the Army seeks to commit the country to a permanent military policy based upon universal service.

Conceive of it! It is admitted that hardly a Member of the House of Representatives or of the Senate has been let in on the secrets of the atomic bomb or nuclear research in general. Yet the House and the Senate, without knowing, are being asked to determine the permanent naval and military policies of the country. They are being asked to vote the exact number of ships needed, just as though this was still the age of the dreadnaught, and the exact number of men needed, as though it was the age of Tommy Atkins.

Actually, so far as this page can judge from both open and secret sources, mankind stands at the awesome moment of transition from the age of electronics to that of neutronics, a transition so drastic that possibly within a few years a fleet of 20,000 combat ships will be useless.

What kind of a government is it, from the White House down, which considers a permanent military and naval policy before the facts are revealed? Why are the scientists who made the discoveries being kept under censorship? Why have the British scientists gone so much further in their public statements?

Suppose, as the scientists appear to agree, that any first-class power is capable of making the uranium bomb within 5 years or a little more. Suppose that with the uranium available any one of these powers could make 50 to 200 such bombs. And suppose, as most of the scientists have asserted, at least individually, that there is no defense. Where does that leave us? Bombs could be planted a year or 2 years in advance in all our great cities and industrial centers, and set off by remote control. Or the job could be done with V-2 type rockets carrying the volatile atoms and traveling far too fast for interception.

Most disturbing of all, there is the fact that just over the scientific horizon is the possibility of the break-down of the atomic power of elements much more common than uranium. Aluminum, for example—so plentiful on earth. If an atomic bomb from aluminum were exploded, no one could answer with certainty how far the impulse would carry.

## Preservation of a Just Peace

EXTENSION OF REMARKS
OF
### HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PRINCETON UNIVERSITY,
DEPARTMENT OF CHEMISTRY,
*Princeton, N. J., August 6, 1945.*

Congressman RICHARD F. HARLESS,
*House Office, Washington, D. C.*

DEAR DICK: I very much appreciated your calling me on the phone and hope next time you are here you will let us show you around the university. Because you are in a much better position to evaluate current events and influence them, I am writing you my views.

For a long time I have been disturbed by the disparity between our leaders' statement of principles and our performance, but the accord at Potsdam seems to me to out-Hitler Hitler. It seems to me to be as vicious a discrimination against Germans, as Germans, as Hitler's policies were against Jews as Jews. In this accord we enslave seventy to eighty million Germans, men, women, and children—take away a large part of their means of survival, steal their lands in the best Hitler manner, and we do it in the name of freedom and democracy. Finland and the other Baltic states, and most of the Balkans, are turned over to the Communists who, unfortunately perfected the methods so effectively employed by the Nazis. So far as I can see there isn't much left of the Atlantic Charter.

We are then told that communism is just another form of democracy. Are the reported mass expulsions of Hungarians and Germans from their ancestral homes in Czechoslovakia and eastern Germany something we are going to commit the United States to defend with my three sons' lives? Surely not. This arbitrary Russian behavior makes any treaty to defend the peace a dead letter before it is signed. As a Christian and an American I cannot support this settlement.

In the Orient, why must we batter a beaten foe to destruction with uranium bombs? The Japanese children, burned in their homes, did not start this war. Let us ask only for a just peace which Christians can support, not a punitive one which murders the innocent with the guilty.

We lost the last peace, not because we followed the magnanimity to our enemies laid down by Wilson, but because we did not. I am terribly afraid for my sons that this peace is already lost. The next war will not be with the Germans. If the only way we can cooperate with our allies is in the destroying of our enemies, I very much fear we will run out of enemies to destroy, before we have learned Christian cooperation.

Perhaps I can summarize by saying that in my opinion our only great President since Lincoln was Woodrow Wilson, whose Christian idealism as expressed in his fourteen points has apparently been largely repudiated.

I am writing much the same letter to Senator ELBERT THOMAS.

Please visit us anytime and write me a statement as to how we can reconcile current national policy with our religious teachings.

Kindest regards,
Sincerely,

HENRY EYRING.

## Palestine

EXTENSION OF REMARKS
OF
### HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. VURSELL. Mr. Speaker, a great segment of the American people last week were shocked and disillusioned when there was given to the press by the State Department the first intimation that the late President Roosevelt had made secret commitments to Ibn Saud, King of Arabia, that this Government would not further press the British Government to open the gates of Palestine and continue to allow the distressed Jewish people of Europe to enter that haven set up for them as a Jewish Nation.

When Palestine was mandated to the British Government after the First World War it was under the authority of the League of Nations with the expressed conditions that this land was to become a home and a sovereign nation ultimately for the Jewish people.

Some strife later on developed between the Arabs and the Jews who came into Palestine and finally Britain reneged on her purpose and practically declared against allowing any more Jewish immigrants from entering that country.

During the Seventy-eighth Congress a resolution sponsored in the House by a Republican on the one hand and a Democrat on the other called upon the British Government to rescind the ruling and open the gates of Palestine to carry out the original purpose of the League of Nations' mandate. This resolution passed the House and finally the administration stopped its further consideration by extending its influence to its leaders here on Capitol Hill. The war was on and the Congress was willing to hold up the matter for a time because it might have an adverse international effect.

The recent publications of a day or two ago give for the first time the real reason.

The late President Roosevelt, on his trip to the Near East promised Ibn Saud, King of Arabia, that the American Government would not further press the issue.

This is a bitter pill for the Jewish people of America and for many people who sympathize with this world situation, when they learned that the one in whom this group had the greatest confidence had quit the fight in their behalf.

At this point, Mr. Speaker, I desire to include an article discussing this question which appeared in the Washington Post on October 19, 1945, and following this article, Mr. Speaker, I wish to quote an article by Gould Lincoln appearing in the edition of the Washington Star on October 20, and an article appearing in the Washington Times-Herald by John O'Donnell on Monday, October 22.

[From the Washington Post of October 19, 1945]

ROOSEVELT GAVE ARABS PLEDGE ON PALESTINE—LETTER TO IBN SAUD, DISCLOSED BY BYRNES, RECALLS HIS PROMISE

(By Edward T. Folliard)

The late Franklin D. Roosevelt, in a letter written a week before his death last April, told King Ibn Saud, of Saudi Arabia, that the United States would reach no decision on the basic situation in Palestine without full consultation with both Jewish and Arab leaders.

Addressing King Ibn Saud as "great and good friend," Mr. Roosevelt recalled that in a conversation with the monarch right after the Yalta Conference he had pledged himself not to take any action on Palestine that "might prove hostile to the Arab people."

ATLEE REJECTED REQUEST

The Roosevelt letter was made public late yesterday by Secretary of State Byrnes, along with a statement of his own to the effect that the policy of the United States with respect to Palestine remains unchanged.

Earlier in the day President Truman disclosed that British Prime Minister Atlee had rejected his request that the doors of Palestine be opened to 100,000 Jews. He said that Atlee did not want to admit that many. Asked about a Capitol Hill report that the British wanted to admit 1,800 Jews a month, Mr. Truman said it was a little more than that.

POST-YALTA MEETING

President Truman's proposal to the British Government, which the White House announced concurrently with the Harrison report on the plight of Jews in Germany, brought a sharp protest from the Government of Iraq. This said that the admission of 100,000 Jews into Palestine would be "contrary to all oral and written promises and undertakings to the effect that the United States would not move in the matter before consulting the Arabs."

It was disclosed last night that Ibn Saud warned the late President that Allied support of Zionism would bring "the fires of war" between Arabs and Jews.

The Syrian Legation in Washington, acting for the Saudi Arabian Government, which maintains no diplomatic representative in the United States, made public the text of a 2,000-word letter which Ibn Saud wrote to Mr. Roosevelt last March 10.

It was in response to that message that the late President wrote to Ibn Saud April 5.

The meeting of President Roosevelt and King Ibn Saud took place on a cruiser in the Suez Canal last February, while F. D. R. was on his way back from the Big Three meeting at Yalta.

What took place at the meeting of the two men has been the subject of considerable dispute. After a statement by President Truman on the Palestine question in August, Azzam Bey, secretary general of the Arab League, gave what purported to be an account of the meeting.

He said that King Ibn Saud told Roosevelt "If Palestine is given to the Jews I will never rest until I and all my sons have been killed in the defense of Palestine."

Azzam Bey's account continued:

"Ibn Saud then stood and placed his hand in Roosevelt's hand and told him:

"'Swear that you will never support the Zionists' fight for Palestine against the Arabs.'

"And Roosevelt shook Ibn Saud's hand and pledged he would not support the Jews against the Arabs."

King Ibn Saud wrote to President Roosevelt on March 10, a month or so after the meeting aboard the cruiser, and referred to the question of Palestine and to the Arabs' interest in current developments affecting that land.

WEEK BEFORE HIS DEATH

President Roosevelt wrote his reply to the Arab leader on April 5, exactly a week before his death in Warm Springs, Ga. To his "Great and Good Friend," he said:

"I am gratified that your Majesty took this occasion to bring your views on this question to my attention, and I have given the most careful attention to the statements which you make in your letter. I am also mindful of the memorable conversation which we had not so long ago and in the course of which I had an opportunity to obtain so vivid an impression of Your Majesty's sentiments on this question.

"Your Majesty will recall that on previous occasions I communicated to you the attitude of the American Government toward Palestine and made clear our desire that no decision be taken with respect to the basic situation in that country without full consultation with both Arabs and Jews.

"Your Majesty will also doubtless recall that during our recent conversation I assured you that I would take no action, in my capacity as chief of the executive branch of this Government, which might prove hostile to the Arab people.

"ASSURANCES" RENEWED

"It gives me great pleasure to renew to Your Majesty the assurances which you have previously received regarding the attitude of my Government and my own, as Chief Executive, with regard to the question of Palestine, and to inform you that the policy of this Government in this respect is unchanged."

Secretary of State Byrnes said yesterday that he had been "authorized" to make the Roosevelt letter available, the implication being that the authorization had come from President Truman. He said his own statement was being made in response to a number of inquiries as to whether it was true "that the United States Government had on various occasions expressed the view to Jewish and Arab leaders that they should be consulted before a decision is reached respecting the basic situation in Palestine."

[From the Washington Star of October 20, 1945]

ROOSEVELT'S PROMISE TO ARABIA STIRS SPECULATION ON ELECTIONS

(By Gould Lincoln)

Disclosure a few days ago that the late President Roosevelt, a week before his death, promised the King of Saudi Arabia to consult the Arabs as well as the Jews before the United States took any action toward opening up Palestine to free Jewish immigration has disturbed leaders of the Zionist movement here and in New York. That there will be bitter criticism was freely predicted last night.

It was recalled that in October of last year, during the Presidential campaign, Mr. Roosevelt addressed a letter to Senator WAGNER, of New York—the Jewish vote is the largest single bloc of votes in New York City—asking the Senator to convey to the forty-seventh annual convention of the Zionist Organization of America his cordial greetings. In this letter Mr. Roosevelt quoted the Democratic platform upon which he was running for reelection, which said:

"We favor the opening of Palestine to unrestricted Jewish immigration and colonization, and such a policy as to result in the establishment there of a free and democratic Jewish commonwealth."

EFFORTS WERE PROMISED

In the letter to Senator WAGNER, Mr. Roosevelt added:

"Efforts will be made to find appropriate ways and means of effectuating this policy as soon as practicable. I know how long and ardently the Jewish people have worked and prayed for the establishment of Palestine as a free and democratic Jewish commonwealth. I am convinced that the American people give their support to this aim; and if reelected I shall help to bring about its realization."

Mr. Roosevelt received the support of a large percentage of the Jewish voters in that election. How much his pledge to aid the Zionist movement had to do with their support is conjectural. Governor Dewey, his Republican opponent, had made similar pledges.

Many of the New York Jews were members of CIO, whose Political Action Committee was working hard for a Roosevelt election, for example, and there were other reasons for the Jewish support.

The question now is what effect, if any, the revelation of the Roosevelt letter to King Ibn Saud, who is violently opposed to the Zionist movement, will have on the mayoralty election in New York City November 6. The Republicans have given their party nomination to Judge Jonah J. Goldstein, a Democrat, against the Democratic organization nominee, William O'Dwyer. Judge Goldstein is a Jew. It has been predicted that if he receives as much as 65 percent of the Jewish vote cast on election day, he will stand a good chance of winning, and if he receives as much as 70 percent, he is a certainty.

Judge Goldstein, irrespective of any developments over the Palestine issue, undoubtedly will receive many Jewish votes. He has the nomination of the Liberal Party as well as the Fusionists and the Republicans. Mr. O'Dwyer has the Democratic and American Labor Party nominations. Newbold Morris, a Republican, is running as an independent candidate, backed by Mayor LaGuardia. The vote cast for Mr. Morris, however, is likely to be negligible, according to political observers in New York.

If the Jews in large numbers shift from the Democratic Party in this mayoralty election to support a Republican candidate, the effect may be felt in next year's gubernatorial and congressional elections. Governor Dewey is expected to be a candidate to succeed himself, and, if he is reelected, still may be very much in the 1948 Presidential picture.

The legations of Egypt, Iraq, Lebanon, and Syria yesterday released a joint note submitted October 12 to Secretary of State Byrnes urging that "no change in the status of Palestine should take place without the consent of the Arabs."

Stating that any proposal to permit land sales and free immigration of Jews into Palestine would be "only at the expense of the Arabs," the note added: "There obviously can be no peace in the Near East by sacrificing Arab interests for the sake of Jews."

---

[From the Washington Times-Herald of October 22, 1945]

CAPITOL STUFF

(By John O'Donnell)

The secret agreements made by the late Franklin D. Roosevelt in his role of wartime President of the United States—his secret covenants secretly arrived at with foreigners—are now creeping into honest sunlight.

To the annoyance—and at times dismay—of Roosevelt's political heirs, these private pledges of F. D. R. persist in living after him and refuse to be interred with his bones.

And the most embarrassing of all at the present moment (more embarrassing Roosevelt secret pledges will be forthcoming) is the revelation which Secretary of State Byrnes made last week with respect to the attitude of the present Truman administration toward the problem of Palestine Zionism, the clashing interests of Jews and Arabs, and, underneath, the deep concern of the British Empire toward the historic traditional thrust toward greater and greater power by the peoples of Russia.

Here in Washington, Zionist leaders were outraged and angry by the October 18 formal announcement of Secretary Byrnes that all final conclusions with respect to Palestine, so far as this Republic is concerned, would not be reached without "full consultation with Jewish and Arab leaders."

This was taken by accredited spokesmen for Zionists here in Washington as a flat run-out by the administration on pledges made by President Roosevelt privately and on the formal pledge of the last Democratic Convention, endorsed by F. D. R. when he was a fourth-term candidate. They don't blame Truman. But they do damn F. D. R.

And in this respect all the evidence shows that the anger is justified. The whole story is a perfect example of one of the slickest double-crosses in the great game of American politics as expertly practiced since 1932.

But the story of how F. D. R. skillfully played for a great block of racial votes in his native State of New York when he was fighting for 1944 victory and then, with fourth-term victory won, smoothly stepped aside and left the boys holding the bag, is one for the books.

It was back in March of '44, 3 months before the national conventions, that a determined drive was started to force Britain to reverse her policy and permit free and unrestricted entrance into Palestine of Jews who had felt the horrors of the Nazi terror. This is the inside story:

In Senate and House, majorities of the committees in charge of foreign relations at that time were prepared to back the pleas of the Palestine spokesmen. Then the hand of the White House reached out—secretly.

The British wanted no such statement of American policy from any American group. So, then Secretary of War Stimson wrote to the Senate Foreign Relations Committee and Chairman SOL BLOOM (Democrat), of New York, of the House Foreign Affairs Committee, that favorable action on the pending resolution "would be prejudicial to the successful prosecution of the war."

Then came the national conventions and Roosevelt's decision to run for a fourth term. Roosevelt gave his private backing (through New York's Senator WAGNER) to the Chicago platform plank desired by American Zionist leaders, which read:

"We favor the opening of Palestine to unrestricted Jewish immigration and colonization and such a policy as to result in the establishment there of a free and democratic Jewish commonwealth."

Then the Presidential campaign got under way and F. D. R. bore down heavily on his fight for votes.

On the advice of his leaders in New York City, the original Palestine resolutions were called up again before the committees in Congress, and 3 weeks before the election Secretary of War Stimson, on F. D. R.'s orders, withdrew his objections of March in a letter to Senator TAFT (Republican) of Ohio.

Five days later, with the battle for the White House blazing hot and GOP Candidate Governor Dewey denouncing White House "double talk," questioning Roosevelt's personal veracity and painting him as a slippery customer, F. D. R. went overboard on the Palestine issue in his letter to WAGNER.

This was the campaign letter from Roosevelt which raised the hopes of American Jewry to the skies—hopes dashed this week by the revelation of the later Roosevelt secret agreement with Saudi Arabia's King Ibn

said after F. D. R.'s meeting with Stalin at Yalta.

The Wagner letter read:

"DEAR BOB: Please express my satisfaction that, in accord with the traditional Democratic policy and in keeping with the spirit of the "four freedoms," the Democratic Party, at its convention, included the following plank in its platform:

(Then the fourth-term plank, calling for "unrestricted Jewish immigration * * * and establishment of a democratic Jewish commonwealth" was quoted.)

"If elected, I shall help to bring about its realization."

Well, Roosevelt was elected to his fourth term. And promptly the double-cross started to work. The British raised their fears of what might happen if F. D. R. carried out his pledge.

And so, a month after the Roosevelt victory, Roosevelt told the then Secretary of State Stettinius to go up on the Hill and tell SOL BLOOM'S committee in the House and TOM CONALLY'S in the Senate that "passage of the Palestine resolution at the present time would be unwise from the standpoint of the general international situation."

Stettinius, again at Roosevelt's direct orders, told the lawmakers on Capitol Hill that they must water down the resolution by knocking the all-important word "Jewish" from the phrase "reconstitute Palestine as a free and democratic Jewish commonwealth."

Then Roosevelt demanded that the whole resolution be killed. WAGNER, of New York, stuck by his guns. So did Senator TAFT of Ohio, and VANDENBERG of Michigan. Stettinius was summoned before the committee; had to admit that F. D. R. and the White House wanted no part of the Palestine resolution. The White House pressure won—even against objections of House GOP Leader MARTIN and Democratic Leader MCCORMACK.

Even the veteran chairman of the powerful House Rules Committee, Illinois' ADOLPH J. SABATH, folded up after a summons from the White House. But the whole story of the slick double-cross didn't sink in until last week when Jimmy Byrnes let the cat out of the bag springing F. D. R.'s secret letter to the Arabian monarch.

## Proposed Site for Headquarters of United Nations Organization

EXTENSION OF REMARKS
OF
### HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I include a letter to the United Nations Organization from the Honorable Chase S. Osborn, former Governor of the State of Michigan, setting forth reasons why Sugar Island—located in the St. Marys River between Sault Ste. Marie, Mich., and Sault Ste. Marie, Ontario, Canada—would be a suitable site for the permanent headquarters of the United Nations Organization:

ZHEGHEBE MINIS (DUCK ISLAND),
*Homestead P. O., Chippewa County,*
*Mich., September 5, 1945.*

*United Nations Organization:*

The sane nations of the world today have a tragically earnest desire for cooperation to ensure that another catastrophic war shall not occur, that mankind henceforth may enjoy a fair measure of peace. The United Nations Council, born of this hunger, ought not have its existence imperilled by a home in the atmosphere that killed the League of Nations. Switzerland, where that hopeful embryo was smothered by the surrounding feuds of centuries standing and the old opaque diplomacies, is not a safe place for the cradling and nurture of the United Nations organization on which the hopes of the future depend. Geneva would cloud the scene with the specter of past failure; at best it offers only the negative background of neutrality.

The world today wants no more bloody fumbles, no more clutchings at the fatuous straws of neutrality and isolation. International cooperation is the present prayer and need.

One vital necessity is to foster and maintain the belief that cooperation is not a dream but a completely practical, though difficult, objective. The seat of government of the United Nations should be set where this goal has an unmistakable foundation already cemented.

Such a firm basis for faith exists, clearly, on a colossal scale, in the international boundary that Canada and the United States jointly have erected. This 5,500-mile-long unfortified frontier that has stood the storms of frictional interests for a century and a quarter is vastly greater than all the wonders of the ancients combined. Its significance cannot easily be exaggerated. It is a will-o'-the-wisp of thousands of years at last forged into an actual fact.

Working together, Canada and the United States have wrought this boundary which has given international peace to an entire continent for over a hundred years. The nations of the world owe it to their own hunger for peace to recognize, emphasize, and build upon this inspiriting achievement. The United Nations organization should establ itself permanently on the United States-Canada boundary not only in theory but in dramatic fact.

The transcontinental stretch of this great boundary is 4,000 miles—1,500 miles link Canada and Alaska. On this impressive base line, evidencing plainly the practicability of international cooperation, there is one point which stands out conspicuously as the logical place at which the activities of the United Nations may best feed the spark of hope into the persistent fire of faith.

Instinctively, before they realized the deeper implications themselves, two communities that face each other across the international line they cherish, combined their efforts to have the United Nations Organization establish its home on the great boundary, Sault Ste. Marie, Ontario, and Sault Ste. Marie, Mich., through a joint official committee, have formally offered to the Council a site in the St. Marys River, on an island which once belonged to either or both countries in the old contentious days, but which a hundred years ago was awarded to the United States.

Sugar Island (called St. George by the British; known to the Chippewa Indians as Sissibukwutminis), between the Canadian and American shores of the St. Marys River, has an area greater than the District of Columbia. Its riparian rights extend clear to the boundary. At its lower end is the point where the commissioners under the Treaty of Ghent threw up their hands, unable to fix the line farther, in 1822; where subsequent negotiations, under the Webster-Ashburton Treaty in 1842, took up explosive issues and permanently settled them.

At the upper end of Sugar Island are the Sault locks—greater than Panama, Suez, Kiel, and Manchester Canals in their commerce and its implications—a marvel in the history of world trade, set upon the boundary that has no counterpart in the history of government. The imponderable part that the Sault locks played in the winning of what we hope will be the last World War is only now being revealed to the general public. These locks are also a facet of the practical basis for faith in the possibility of world peace; and they will be more so, as it becomes known popularly that here, again, is undeniable evidence of the workability of international cooperation; for these great locks are used in common by two different nations—these pioneers in international collaboration, the United States and Canada.

Sugar Island is flanked on the east by the old channel of the St. Marys which was fought over bitterly in 1812. Along its western shore runs the modern channel where the gigantic argosies of two nations mingle in a continuous procession along a secure international trafficway.

At the head of Sugar Island are the two Saults, each under its own national emblem: two communities which are cooperating daily—not because they are groups beatifically inclined toward each other, but because—in spite of rivalries, petty jealousies, and mutually irritating incidents and characteristics—they appreciate the major bonds of common good and human brotherhood.

On every side of Sugar Island, as well as in its own history, is vivid of international cooperation that has been molded out of friction by the will-to-peace and common-sense of nations.

As if it were not sufficient that international political and commercial cooperation should uniquely mark a cross roads at the strategic locks on the incomparable boundary, here also the conflicting currents of race have resolved themselves into a cultural collaboration that is a world masterpiece.

Longfellow's Hiawatha had its beginning in legends of the Lake Superior country that were first transferred to the white race from the red race in a log house that is still standing near the upper end of Sugar Island. This epic, translated into many languages, is familiar and beloved around the earth. But more than this, it is another example of human cooperation: between races; between primitive and highly civilized groupings of mankind; between conquerors and conquered. Should the walls of the buildings that house the United Nations carry murals of part I of Hiawatha, the "poor Indian" will, in the final analysis, have wrung highest spiritual victory out of what has too often seemed abject defeat.

If the Council of the United Nations is to survive, and grow in power to divert the passions of nations from the whirlpool of self-destruction into channels of constructive cooperation, its organization must obtain a strong hold on the imagination of men and an unshakable foundation on the religious forces that refine and control. Providentially, it would seem, the world-epic Hiawatha—born at the point where international politics, international commerce, and interracial cultures have combined triumphantly—provides the specific imaginative and religious setting for just such a body as the Council of the United Nations.

Consider the appended lines, extracted from the Lake Superior country's Hiawatha.

Ponder the far-reaching influence, in the council house of the United Nations, of murals based on this popular epic, in many languages, born of two races, at the place where international boundaries and commerce have won, out of dissension, more than a century of friendly cooperation.

Weigh the important fact that all the religious upreachings of all the peoples on earth, regardless of sect or denomination, can find themselves embodied here in the Great Spirit, Gitche Manito.

We have stepped overnight into a new era. Now is the time to set out the seed of the future in a proven soil. The Lake Superior tract proffered the United Nations Council by Canada and the United States, through

their twin Saults, is at the foot of the greatest body of pure water in the world. It is close to the ancient Laurentians which gave man his first foothold above the retreating oceans; yet it has pioneer freshness. The invigoration of its latitude equals the Alpine meadows without the possible discomforts of altitude. On every hand is grandeur as inspirational as that of the Aegean Archipelago.

This communication is a call to the executive officials and the press of Ontario and Michigan to present these facts forcefully, at once.

Sincerely,

CHASE S. OSBORN.

THE SONG OF HIAWATHA, PART I

* * * * *

Gitche Manito, the mighty,
He the Master of Life, descending,
On the red crags of the quarry
Stood erect, and called the nations,
Called the tribes of men together.

* * * * *

Down the rivers, o'er the prairies,
Came the warriors of the nations,
And they stood there on the meadow,
With their weapons and their war-gear,
Painted like the leaves of Autumn,
Painted like the sky of morning,
Wildly glaring at each other;
In their faces stern defiance,
In their hearts the feuds of ages,
The hereditary hatred
The ancestral thirst of vengeance.
Gitche Manito, the mighty,
The creator of the nations,
Looked upon them with compassion,
With paternal love and pity;
Looked upon their wrath and wrangling
But as quarrels among children,
But as feuds and fights of children!
Over them he stretched his right hand
To subdue their stubborn natures,
To allay their thirst and fever,
By the shadow of his right hand;
Spake to them with voice majestic
As the sound of far-off waters
Falling into deep abysses,
Warning, chiding, spake in this wise:—
"O my children! my poor children!
Listen to the words of wisdom,
Listen to the words of warning,
From the lips of the Great Spirit,
From the Master of Life, who made you.
"I have given you lands to hunt in,
I have given you streams to fish in,
I have given you bear and bison,
I have given you roe and reindeer,
I have given you brant and beaver,
Filled the marshes full of wild-fowl,
Filled the rivers full of fishes;
Why then are you not contented?
Why then will you hunt each other?
"I am weary of your quarrels,
Weary of your wars and bloodshed,
Weary of your prayers for vengeance,
Of your wranglings and dissensions;
All your strength is in your union,
All your danger is in discord;
Therefore be at peace henceforward,
And as brothers live together.

* * * * *

"Bathe now in the stream before you,
Wash the war-paint from your faces,
Wash the blood-stains from your fingers,
Bury your war-clubs and your weapons,
Break the red stone from this quarry,
Mould and make it into Peace-Pipes,
Take the reeds that grow beside you,
Deck them with your brightest feathers,
Smoke the calumet together,
And as brothers live henceforward!"
Then upon the ground the warriors
Threw their cloaks and shirts of deer-skin,
Threw their weapons and their war-gear,
Leaped into the rushing river,
Washed the war-paint from their faces.
Clear above them flowed the water,
Clear and limpid from the footprints
Of the Master of Life descending;
Dark below them flowed the water,
Soiled and stained with streaks of crimson,
As if blood were mingled with it!
From the river came the warriors,
Clean and washed from all their war-paint;
On the banks theirs clubs they buried,
Buried all their warlike weapons.
Gitche Manito, the mighty,
The Great Spirit, the creator
Smiled upon his helpless children!
And in silence all the warriors
Broke the red stone of the quarry,
Smoothed and formed it into Peace-Pipes,
Broke the long reeds by the river,
Decked them with their brightest feathers,
And departed each one homeward.

## Speech to Separatees

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Col. Neal Creighton, commanding officer at Scott Field, Ill., which he delivers to personnel being separated through the separation base at Scott Field:

Members of the Army Air Forces who are about to leave the service, I should like to introduce myself. I am Col. Neal Creighton, commanding officer of Scott Field. I am going to talk to you for a short time relative to your departure from the Air Forces and, also, as one soldier to another, I want to bid you good-by.

I have been in the Army Air Forces for more than 28 years. At one time I can remember that the entire Army consisted of 98,000 men, and we went on maneuvers with such a shortage of personnel and equipment that when we wanted to simulate a machine-gun installation, we had to use broomsticks for guns and a man with a red flag to represent a regiment. I have seen that small Army grow into the terrific, deadly efficient, powerful weapon of destruction that it is today.

During the period of this war I was most fortunate in having the opportunity to be overseas for 27 months, acting as commandant of Air Force headquarters for General Eaker and General Spaatz, and I also had the privilege of serving with General Eisenhower. My conclusion is that the American Army is the best Army that we have ever had or ever will have.

I have great respect and admiration for the loyalty, self-sacrifice, efficiency, and patriotism of the Ground Forces, but naturally my heart always turns toward my branch—the Army Air Forces. I know what the Air Forces did. I know that we destroyed German production, commerce, and lines of communication, and drove the Luftwaffe out of the air. We furnished the air umbrella that enabled our troops to land on the beaches of Normandy on D-day. I know also what the Air Forces did in Asia, that they blasted the Japs from the skies from New Guinea to Tokyo, and terminated the Asiatic war by dropping the atomic bomb on Japan.

Some of you may say to yourselves, "I did not do anything to further the war effort: I did not even get overseas," but I can assure you that as a team and organization you won the war. You justified your existence and justified the right to be born. Your achievement is something that you can hold and remember as long as you live. You have enabled America to remain a free nation with freedom of speech, freedom of worship, freedom from want, and freedom from fear. The greatest heritage that can be bestowed upon mankind is that of being an American. It is a heritage to be handed down to your children and your children's children.

Now that the war is won, we have another obligation—that of winning the peace. Many of our comrades in arms have lost their lives in the defense of our country. They believed that a country that is good enough to live in is good enough to fight for, and good enough to die for, and they have died that America might live. Those of you who remain are charged with a solemn obligation. Within a period of 10 years you will control entirely the destiny of America and the destiny of civilization. You must think of things bigger than yourselves—your community, your State, your country. I know that you will not fail or falter in your duty.

I hope that you will achieve your life's ambition upon your return to civilian status. When I think of my own career I cannot associate it with anything except the Army Air Forces. I came into the Army as an enlisted man and the Army is the only home I have ever had or wanted to have. I have been around the world; I have had some adventure and, at times, excitement. I shall never forget the contacts and friendships that I have made while I have been in the service. Then, there are other things that mean so much to anyone who stays in the Army for a long time, things that money can't buy—like watching the flag go down at retreat, or coming back to the post after nightfall and seeing the friendly lights of the station that are watching and waiting for your return, and standing on the hangar line watching the ships take off and feeling that you are not earth-bound.

Now that I, too, have come almost to the end of the road and will be retired, I can say with deepest sincerity that if I had to live my life over again I would travel the same road. I might add that the Air Forces will see that I live in comfort and security for the rest of my life.

It is quite possible that some of you who are leaving the service will decide to come back. If you do make that decision you may be sure that we shall be glad to have you, but don't wait too long. If any of you would like to write to me after you leave do not hesitate to do so. You may rest assured that I will try to do what you ask and that I will answer your letters. Your happiness and contentment are my greatest desire and I wish each and every one of you all the luck in the whole wide world.

## To Aid the Starving

EXTENSION OF REMARKS
OF
### HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my remarks, I include herein an editorial from the October 23 issue of the New York Times entitled "To Aid the Starving":

TO AID THE STARVING

One hundred and eighty million Europeans, according to Director General Herbert H. Lehman, of the United Nations Relief and Rehabilitation Administration, are right now "on the border line of starvation." In China many more people are probably much worse off. It is to meet such immediate and urgent needs that UNRRA was established 2 years

ago. UNRRA was not to be permanent. It was to take no more than 1 percent of the estimated income of the contributing nations for the fiscal year ended June 30, 1943. For the United States this sum, originally authorized by the joint resolution of March 28, 1944, was to be $1,350,000,000. Of this total Congress made $800,000,000 available. At the end of last August all but $20,000,000 had been spent or committed. Other countries had contributed or made available about $668,000,000 more. This, too, seems to be about gone. At UNRRA's recent London conference the statement was made that $1,800,000,000 would be needed from all sources to finish up the job.

Congress is now being asked to make available the $550,000,000 which was authorized last year but not at that time appropriated. We are committed to spend this much. Why there is so much hesitation when people are dying for lack of help is one of the mysteries of Capitol Hill. Twice this month, once in a letter to Speaker Rayburn and once in the message conveying UNRRA's last report, President Truman has urged the necessity for early action. Results have not been evident, though the House has found time to debate some pretty trivial subjects. But the $550,000,000 to which we are committed will not be enough. We ought to spend, and President Truman has intimated that he will ask, at least $1,350,000,000 additional. That is, our total contribution to UNRRA ought to be 1 percent of 2 years' income, or $2,270,000,000.

What has been bought and what can be bought with these funds? In order of money value UNRRA has provided clothing, textiles, and footwear; foods, fats, oil, feeds, and soap; medical supplies and equipment; agricultural supplies and equipment; transportation equipment. It has cared for displaced persons. It has fought epidemics. It has saved hundreds of thousands of lives in Greece, other thousands in Czechoslovakia, Yugoslavia, Poland, and Italy. It is preparing to undertake a massive relief problem in liberated China. After some initial mistakes and the removal of some initial impediments, UNRRA is now organized to do this work. It just needs money.

There is not much time. Sick and hungry people cannot wait for prolonged parliamentary procedure. The cold is deepening throughout the Northern Hemisphere, all around the world. People look to the United States, one of 44 nations signing the UNRRA agreement, and, with the nations of the British Commonwealth, contributor of most of the needed money. We shall not miss 1 percent of our income or annual food supply. Even if we did miss the 1 percent we should not grudge it. UNRRA is not an instrument of policy—it is, like the Red Cross, a disaster service. In the name of humanity, Congress should act without further delay.

## Attorney Favors Townsend Plan

EXTENSION OF REMARKS

OF

### HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter that I have received from Mr. Frank C. Smith, a prominent attorney in the city of East St. Louis, Ill.:

DEAR CONGRESSMAN: In the Journal, recently we were informed of the bewilderment of our Congress over the unemployment problem. President Truman, believing that the problem could be solved by allowing unemployed workers $25 a week for 26 weeks in a year made such recommendation to Congress, but Congress balked. The Senate, by a vote of 56 to 23, turned the proposition down. The President feels a mistake was made and is insisting on the 26 weeks. The governors of 30 States are protesting. These say unemployment is a question for the States, not for the National Government.

It is said that the constitutions and laws of 28 States preclude the appropriating of money for unemployment. But a very few States allow $25 a week, others less, a few $7. The argument used is that if workers can get $25 a week for not working they will not accept employment at $30 or $40. Strange indeed that our statesmen should take so much time seeking to solve the unemployment problem instead of trying to learn the cause of unemployment. If a person is ill and goes to a doctor, the first thing the doctor will do is to ascertain the cause of the illness.

President Roosevelt sought to solve the unemployment problem by putting on a vast spending program. When inaugurated there were 16,000,000 unemployed workers. The best he could do was to reduce the number to 7,000,000. Japan then made the attack on Pearl Harbor. The war has temporarily solved the problem.

Political economists tell us that because of the machines the day will never again come when there will not be approximately 5,000,000 unemployed workers. That being true, the only thing to do is to retire those who have reached the age of 60 on a suitable pension. The Townsend plan therefore is the remedy. By means of a tax of 2 percent on gross incomes—first $250 a month, $3,000 a year exempt—financial experts say a sufficient amount will be realized to allow every man and woman American citizen over 60 not gainfully employed, $200 a month. Unlike all other pension plans, the Townsend money has to be spent in 30 days, spent in the United States of America, and spent for articles manufactured in the United States of America. It can be spent for anything other than drunkenness or gambling. Not only will this plan take care of workers over 60, but it will affect the 800,000 old men and women in the poorhouse.

Giving these over 60 years of age money to spend, every kind of legitimate business will be benefited. And since there will be none of the unemployed, there will be no need of an unemployment pension. The Townsend plan shall have solved the problem. The Townsend bill, as originally introduced, calls for $200 a month. Another bill would make it $100 a month. These two bills, H. R. 2220 and H. R. 2230, now are pending. Congress should put one or the other into effect now.

FRANK C. SMITH.

## The Post-Dispatch Appraises Fascist Franco

EXTENSION OF REMARKS

OF

### HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. COFFEE. Mr. Speaker, one of America's great newspapers has a magnificent record of fearlessly exposing fraud, deception, and corruption in national and international affairs. Its editorial columns are an inspiration. Recently there appeared an editorial discussing the dictator of Spain. The content of such editorial is well worthy of study by my colleagues and by the country. Here it is:

[From the St. Louis (Mo.) Post-Dispatch of October 13, 1945]

FRANCO, FAKE DEMOCRAT

Generalissimo Francisco Franco, Fascist dictator of Spain, is typically opportunistic in his latest promise to restore civil liberties and grant amnesty to political prisoners.

Democracy has won the war, so Franco is trying to set himself up as a loyal devotee of its principles. But in the days when Fascism was riding roughshod over Europe, he was an even more loyal Fascist.

Thus, in July 1942, he said bluntly that "the totalitarian system has amply shown its superiority over liberalism and democracy." By last November, totalitarianism was so obviously doomed that Franco gave an American interviewer the surprising information that his government was "an organic democracy."

Similarly, Franco sent Hitler flowery congratulations on his victories, and on Dec. 7, 1942, went so far as to promise: "If one day Berlin should be endangered, Spain would send a million men to defend it from the Red hordes." The Spanish dictator was reminded of this pledge last spring, but by that time he was busy claiming credit for keeping Spain out of the war, and in drafting the fake bill of rights he now promises to put into effect. (It was made public the day before the Nazi surrender.)

The exceptions in this document make it worthless. It provides freedom of speech—so long as Spaniards do not criticize the "fundamental principles" of the Falangist state. It guarantees freedom of religion—but bars all religious ceremonies except Catholic.

Would Americans consider they had political liberty if their Bill of Rights forbade them to criticize a Democratic administration, or a Republican administration? Would they consider themselves endowed with religious liberty if the law permitted only Catholic services, or Protestant services? There is no reason for thinking that freedom-loving Spaniards will be satisfied with less than ourselves.

As for political amnesty, that has also been promised at various times. Yet, according to a recent report, some 400,000 Loyalists are still held in prison camps, although the Spanish Civil War ended 6½ years ago.

Franco's latest move to establish himself as a democrat adds point to an appeal to President Truman a few days ago by an American organization, the Friends of the Spanish Republic. This is far from being a radical group. Its chairman is William L. Shirer, the noted radio commentator. Its vice chairmen are Representatives John M. Coffee and Helen G. Douglas, and Bishop G. Bromley Oxnam.

The organization urges severance of diplomatic relations with Franco Spain. It says that "Franco Spain is an enemy country," and backs up this statement by citing the action of the San Francisco Conference, reiterated at Potsdam, barring Spain from the United Nations. It refers also to Truman's own statement that our Government does not like Franco or his Government, and the recently disclosed letter by the late President Roosevelt stating a Fascist regime could have no place in the community of nations.

But, some may ask, should we tell Spain what kind of government it should have? The Friends of the Spanish Republic cite recent history:

"Our Government informed Hungary that we would recognize only a truly democratic regime. We have protested in the strongest terms against the alleged nondemocratic character of the Bulgarian Government. We have differed openly with our ally, the Soviet

Union, on the score of the alleged nondemocratic character of the present Rumanian Government."

It is a historical anachronism to find a Fascist government continuing in Spain long after its sponsors, the Hitler and Mussolini regimes, have vanished from the face of the earth. Certainly it is to the interest of the democracies to do what they can to promote Franco's exit.

Franco is opposed by at least 80 percent of all Spaniards, a Saturday Evening Post article said in August. A New York Herald Tribune writer at about the same time estimated the opposition at 90 percent. Considering such a situation, it is amazing that Franco has clung to his power so long, even with the aid of an army totaling a million men.

Withdrawal of Allied recognition may be just the shove required to topple his regime and give his opponents a chance to put Spain again into the family of democracies.

## Address of George Haberman

EXTENSION OF REMARKS
OF
### HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, under leave granted to extend my remarks, I am pleased to offer as a part of them a short address by Mr. George Haberman, president of the Wisconsin State Federation of Labor, of Milwaukee, Wis. Mr. Haberman addressed the twenty-seventh annual convention of the American Legion at Milwaukee, Wis., in September, and his remarks were greeted with approval by most of the Legionnaires in attendance.

Mr. Haberman did not pull his punches and spoke out against certain labor abuses now rampant in this country. I am sure that his address will be of interest to all Members of the House:

Fellow Legionnaires, I want to make one correction for the record, inasmuch as I note that you have a soundscriber. I happen to be the president of the Wisconsin State Federation of Labor and not the American Federation of Labor—we'll leave that distinction to Bill Green.

I believe that many of the delegates, friends, and visitors of Legionnaires present this morning are somewhat concerned with the many work stoppages that are now prevalent throughout the Nation. I believe personally that it is a healthy situation, except that I do not confirm the manner in which some of these stoppages are being promulgated. I don't believe that in many instances, including some of our own affiliates, that all of the necessary machinery has been exercised in order to culminate a successful negotiation of conditions prevailing in these industries. Yet from a standpoint of reaction of pent-up feelings brought about by these 4 years of hostilities that we got into, regulation by federalization on conditions of employment and conditions of economic stability, these people naturally must relax. I do hope that the Legionnaires who are trade unionists will see that their organizations exercise every provision in their contract, and if they are unsuccessful in their negotiations, then, and only then, exercise their economic pressure. That brings about a situation that I think most of you are concerned with today.

We here back home have been postwar conscious on the part of the citizenry of our State. We felt that if we could stimulate sufficient interest, the people of Wisconsin will look out for the necessity of our economic stability in the postwar period to include reconversion of industry from war to peace time production; that we would at the same time be taking care of the interests of those who were making the sacrifices on the far-flung battle fronts of this world. In part we have done a pretty decent job. It has been my good fortune to be appointed by our commander of the American Legion to be a part of your postwar planning committee. It's been my good fortune to work with the University of Wisconsin through the committee for economic development on a national scale of postwar problems. The one thing that I foresaw, and now it is brought about to a very definite concern to you and to me and to future America, is prevalent in our country today. I don't know how many of you realize that we have consistently worked with our Congress in order to eliminate the poll tax from this country in order to grant to those in the Southern States of our Union the privilege of exercising their right of franchise at the polls. One State in the past 4 years accomplished that.

But I am wondering, too, whether certain institutions in America, on the one hand, who profess to establish the right of American citizenry in this Nation, can go to a membership in excess of 4,000,000 people and say, because of a very definite political policy, that here is a selected slate of candidates for which you are assessed anywhere from $1.50 to a day's pay for the privilege of voting for them. On the one hand, if you please, they say they will not tolerate the poll tax because they are dues-paying members of an institution, and on the other hand they justify it by extracting an assessment from that membership.

I believe that the democratic policy of our Nation is threatened and I may make some enemies here this morning because I do know that there are people within the ranks of my own organization and within the ranks of other economic institutions that are not in full accord with my program, but I've served this Nation, I've been wounded by enemy shell, and I believe in this country. I've given one son in this war, I have another one flying over in the Pacific, and one—the baby of the family—goes to sea tomorrow, all that we have. I am speaking from the heart and I say that there is no nation under God's sun can compare with what we have here, and when we look across the lake, and across the width of the State of Michigan and find there that an institution is issuing an ultimatum to one of the biggest industries in the world, with an ulterior motive in mind—that ulterior motive, my friends, is knowing rightfully now that the industry cannot bear the traffic of their demands, that the ultimate results will be that the Government even in peacetimes will take over that industry. That threatens our democracy and it threatens the right of free enterprise in this Nation of principle. That is why people left England to come to America. I don't want to lose it. I want every individual in America, regardless of what his station in life may be, to have an opportunity of going into business if he so desires. I don't want to threaten our economic policies and the right to free enterprise and of the right to exercise our right of franchise.

What we should do is to select people who we believe will do the greatest amount of good for the greatest number of people regardless of their political affiliations. So I say to you this morning, my friends, I know you have a lot of business to take care of here, so in conclusion permit me to plead that if we the people are willing to go hand in hand and consider what is best, not for you and me, but best for our neighbor, if we'll be our brother's keeper, if we'll just consider what his needs may be, and follow the scriptures, I am positive the American Legion, and the American Federation of Labor, and all other segments of our society who believe in democracy, will bring about the kind of a peace our boys fought for. Thank you.

## Small Incomes and Taxes

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of Friday, October 19, 1945:

SMALL INCOMES AND TAXES

The House Ways and Means Committee has now released certain basic tax data, used by it in the preparation of its tax bill. One table is of particular interest, for it shows that low incomes still bulk large in this country and that reducing the tax base materially must mean tremendous loss in revenue.

This table indicates that in 1946 there will be about 53,440,000 Americans with "net income." Of these, about 39,450,000 will have incomes, after deductions but before exemptions, of less than $2,000. Only about 14,000,000 will have incomes in excess of $2,000 and 91 percent of these will have incomes below $5,000.

Only 424,000 persons will have incomes in excess of $10,000. This means that 99.2 percent of those having incomes at all will be in the $10,000-or-under class, and these will have 85 percent of the total net income subject to taxation. In fact, those with incomes under $3,000 will have 68 percent of the whole.

From these figures it is obvious that large returns from the Federal income tax on individuals can be expected only if persons of moderate earnings are included in the tax base. If the entire income of all persons receiving more than $100,000 a year were declared forfeit, it would add only $290,000,000 to revenues beyond the $1,020,000,000 they already pay. If persons with incomes under $3,000 were freed of all tax, the Government would lose nearly $5,500,000,000, or nearly 20 times what could be gained by the confiscation mentioned.

## American Slav Congress Calls for Reestablishment of Big Three Harmony

EXTENSION OF REMARKS
OF
### HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. DE LACY. Mr. Speaker, I desire to call the attention of the House to the forthright statement on the recent London Conference issued by the American

Slav Congress, the patriotic group of Americans of Slavic descent which was so close to the heart of the late great President, Franklin Roosevelt.

In something of the same vein as the recent splendid column, America's Divided Conscience, by Walter Lippmann, the American-Slav statement calls attention to our failures at London, and the absolute need for reestablishing the harmony and cooperation between two great nations—the United States and the U. S. S. R.—which our late President struggled so long and hard to establish.

It is my belief, Mr. Speaker, that every Member of the House would do well to read and study this challenging statement. I fear that there has been too little constructive and fundamental analysis of our role at London—a role which has not given hope or comfort to those who, with President Roosevelt, looked to a world of cooperation and peace. Instead, it has added fuel, at least in this Nation's press, to the fires of those who throughout the war were violent objectors to the war and to any form of true international cooperation. It is for these reasons, Mr. Speaker, that I desire to include with these remarks the statement of the American Slav Congress.

It reads:

OUR FOREIGN POLICY MUST BE A PEOPLE'S POLICY

(Statement by the American Slav Congress on the London Conference)

WASHINGTON, October 13.—Declaring that "Our foreign policy must be a people's policy" if we are to achieve a people's peace, the American Slav Congress issued a statement on the failure of the London Conference. Signed by Zlatko Balokovic, acting president, and George Pirinsky, executive secretary of the organization, whose national headquarters are in New York, the statement reads:

The stalemate at the London Conference of the Foreign Ministers has aroused deep concern among all patriotic Americans and all liberty-loving peoples of the world.

Millions of Slavic Americans throughout the country share this concern and call upon President Truman and the Senate Foreign Relations Committee to exert every effort in helping to restore the previous harmonious relations between our country and the Soviet Union—the two nations upon whose close friendship and cooperation so much depends in building the peace.

There is no doubt that if the present trend of strained relations continues, a grave rift might develop between the English-speaking and Slav countries. Only enemies of world peace and security can profit from such a catastrophe.

No one who desires the establishment of lasting peace, and who realizes that the achievement of this goal depends first of all upon Anglo-American-Soviet cooperation, can ignore the serious implications of the failure of the London Conference.

WHY THE CONFERENCE FAILED

"The matter that caused the suspension of our work is no trivial or technical question," stated Secretary of State James Byrnes. He declared that the issue on which the Conference "closed in a stalemate" is "whether the peace shall be made by three, or even five, nations to the exclusion of other nations vitally concerned in the maintenance and enforcement of the peace which is being prepared."

But the Council of Foreign Ministers was not charged with the task of making the peace. The Berlin conference of the Big Three authorized it only "to draw up, with a view to their submission to the United Nations, treaties of peace with Italy, Rumania, Bulgaria, Hungary, and Finland, and to propose settlements of territorial questions outstanding on the termination of the war in Europe."

It is clear that nonparticipation of a nation in the drawing up of peace treaties does not deprive that nation of taking part in the making of the peace. The main discussion and final decision are made by all the United Nations.

The Potsdam declaration specifically states: "For the discharge of each of these tasks the Council will be composed of members representing those states which were signatory to the terms of surrender imposed upon the enemy state concerned." China and France were not signatory to the terms of surrender of Bulgaria and Rumania. They did not even declare war on these Balkan states. France, undoubtedly, is interested in the drawing up of peace treaties with Bulgaria and Rumania. But so are Yugoslavia, Czechoslovakia, and Poland. These countries did infinitely more for our common victory over Nazi Germany. They are also much closer to Rumania and Bulgaria than is France.

Mr. John Foster Dulles, Secretary Byrnes' special adviser in London, said that the Soviet delegates "found out that the United States was not willing to sacrifice its principles or its historic friendship with China and France." But nobody in London asked the United States to do that. We were asked only to observe what was decided at Potsdam. Why should fulfillment of the obligation in the Potsdam declaration lead to sacrificing our friendship with these two countries? Mr. Dulles' talk of sacrificing friendship and principles does not square at all with our apparent readiness at San Francisco to sacrifice our friendship with the Soviet Union on the question of seating the Fascist Government of Argentina. It was there that we really sacrified democratic principles to the practical consideration of satisfying some of our Latin-American friends.

OTHERS JUDGE US BY OUR ACTIONS

Mr. Byrnes told the Nation "about the Soviet delegation's disappointment at the failure of Great Britain and the United States to recognize the Bulgarian and Rumanian Governments." According to our Secretary of State, "The thought apparently exists in their (Soviet) minds that our Government objects to these governments because they are friendly to the Soviet Union and that our unwillingness to recognize these governments is a manifestation of unfriendliness to the Soviet Union."

But this thought exists not only in the minds of the Soviet delegates to the conference in London. It exists also in the minds of millions of our own American people. There is plenty of grounds for such thoughts. For instance, our intervention in the internal affairs of Bulgaria and Rumania has had the effect of encouraging not only all anti-Soviet elements but also the habitual disrupters of national unity in those countries. Our political representatives there have tended to become the protectors of the worst former Nazi collaborationists and reactionaries.

The case of Dr. George Dimitrov, expelled from the Bulgarian Peasant Party for his efforts to break up the fatherland front, is one example. This Dr. Dimitrov was under house arrest. The British representatives in Bulgaria helped him to escape. They took him to their headquarters. Later, on instructions from London, they turned him over to our political representative, Mr. Maynard Barnes, who put him under American protection.

Reporting on this case, Constantine Poulos, of the Overseas News Agency, wrote from Sofia: "The consensus appears to be that the American political representative by granting asylum to Dimitrov has risked the possibility of a serious incident, has amateurishly intervened in the partisan politics of a small nation, and has played into the hands of those who are faithfully executing Hitler's legacy to create a rift between the United States and Russia."

"It is disquieting," wrote Poulos further, "that the people made happiest by the American action in the Dimitrov case are the same people who smugly defended Bulgaria's collaboration with Germany, who are strongly opposed to any social or economic reforms, and pray for a break in the American-British-Russian alliance."

In the same dispatch of June 5, Poulos wrote: "Coming after the British refusal, on orders from London, to grant Dimitrov sanctuary, the American action may well make the United States the 'fall guy' and trim American influence in this area for some time to come."

This is exactly what is happening. We are destroying the good will that exists among the vast majority of the Balkan peoples toward America. We are "trimming our influence." It will do us no good to blame the Russians, as many are inclined to do, for the growing resentment which is developing in the Balkans and elsewhere toward our policy of opposing progressives and supporting reactionaries.

The Balkan peoples, as well as the peoples of all Slav and other democratic countries, have always liked and trusted America. They want to maintain close and friendly relations between their countries and the United States. That is why they are bewildered, and even indignant, when they see us taking the side of the disrupters of national unity and former collaborationists. They may justly wonder whether America is trying to help them establish their life on a new democratic basis or stand in the way of achieving this objective.

WHAT ABOUT GREECE?

How can we pretend that the sole purpose of our intervention in Bulgaria is to see that democracy be established in that country while in the meantime we keep silent in face of the most outrageous monarcho-fascist terror on Greece? The people of Greece, the peoples of Yugoslavia and other Allied countries are asking these questions. Here in our own country millions are disturbed by this contradictory policy of keeping quiet where reaction is in power and intervening where the anti-Fascists rule.

Referring to Bulgaria and Rumania, Mr. Byrnes complained that "we cannot know whether conditions justify recognition unless our political representatives are fully informed and unless our news correspondents are permitted freely to enter countries and freely to send their stories uncensored." But how can the governments of Bulgaria and Rumania give full information to our political representatives when these representatives act as the protectors of those who scheme and plot to restore the old pro-Fascist regimes?

It is not true that such a policy stems from lack of information as to what is happening in the Balkan countries. In the case of Bulgaria we know and the entire world knows that the new fatherland front government did a splendid job of punishing the war criminals. The people there gave the best example of how to deal with Fascist traitors who sold their country to Hitler.

It is not true, either, that no American correspondent was allowed to enter Bulgaria. Poulos was in Sofia from January to June 1945, and sent many dispatches describing the events there. But they were not published. They, apparently, were not considered fit to print.

WE ARE NOT KEEPING OUR PLEDGE TO THE PEOPLES OF THE LIBERATED COUNTRIES

Mr. Byrnes stated that "this has been a people's war; it must be a people's peace."

We wholeheartedly concur in this belief, but a people's peace can be achieved only through a people's policy.

We agree with Mr. Byrnes that the fact that the conference in London closed in a stalemate "need not, and should not, deprive us of a second chance to get on with the peace." Of course not. But if, by any chance, a second session of the Council of Foreign Ministers should end in another stalemate, then the damage to the relations of the Big Three might be too great to be repaired. The world cannot afford a second stalemate. Our major task now and the task of all Allied Governments and their peoples is to make sure that there shall be no second failure.

We of the American Slav Congress feel that nothing will be gained and much can be lost by an attitude of complacency, by glossing over some of the things that happened at London. We are of the opinion that the already too apparent basic differences between the United States, the Soviet Union and Great Britain on the organization of the peace should spur us Americans to a very objective calm reexamination of our foreign policy.

At Yalta we joined Great Britain and the Soviet Union in a pledge to wipe out the last vestige of Nazism and Japanese imperialism. Judging by our policy and actions—our exclusiveness about bases we have captured in the Pacific, even while moralizing about Soviet exclusiveness elsewhere; our insistence on one-power rule in Japan; the tendency to use the atom bomb as a means of coercion; and acts of our military officials pointing to an attempt to rebuild a strong Germany as a buffer against the Soviet Union—the conclusion is inescapable that we are not living up to this pledge.

FRIENDSHIP BETWEEN PEOPLES

We agree with our Secretary of State when he said that "lasting peace depends not only upon friendship between governments but upon friendship between peoples." That is why we of the American Slav Congress offer this constructive criticism of our foreign policy: We offer it in order to help strengthen the friendship between our mighty Nation and the 250,000,000 Slavs in Europe, without whose help and cooperation we could not have won the war, and without whose confidence we cannot expect to win the peace.

We, Americans of Slavic descent, as all true patriots, believe that Americanism as the late President Roosevelt said, "is not and never was a matter of race or ancestry. Americanism is a matter of the mind and heart." And our minds and our hearts are dedicated to the goal of a just and lasting peace, built on the friendship and understanding of all liberty-loving peoples of the world.

Millions of Americans of Slav descent, and many more millions with other racial backgrounds, firmly believe in what Hugo L. Black, of the United States Supreme Court so eloquently expressed when he said:

"Like most of the great values of life, the ideals of democracy and peace can be won or maintained only by constant struggle. For democracy is a fighting faith. No man with a conscience can be so far removed from that struggle as not to feel the compulsion of joining in it. Each of us in our own way has a job to do. The principles of fascism, and all that fascism stands for with its barbaric denial of human values, must be obliterated and destroyed. To accomplish this there must be an emphatic reassertion of democratic values and a resurgence of democratic faith at home and throughout the world. And there will be."

ZLATKO BALOKOVIC,
*Acting President,*
GEORGE PIRINSKY,
*Executive Secretary,*
*American Slav Congress, New York, N. Y.*

## Married Men Should Be Permitted To Return to Their Families

EXTENSION OF REMARKS
OF
### HON. DANIEL K. HOCH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. HOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from a soldier whose home is in my district. He is justified in insisting that he be permitted to return to his family.

OCTOBER 16, 1945.

Congressman HOCH:

Being that you are Reading's Congressman and that being my home town and me one of your former employees when you were with the Reading Eagle, I thought you may be interested enough to tell us what Congress is doing about getting married fellows back with their families and how soon something will be done regardless of the length of service. We fellows have been sent here to go to school 6 weeks ago and have not even seen the inside of school or have not been assigned to school yet. The 6 weeks we are here we have been doing nothing but KP and laying around in the barracks. This is not a few fellows doing this, but thousands of fellows just passing their time in the barracks, when these fellows could be home with their families where we belong, now that the war is over, and there are plenty of young fellows around to do the cleaning up who have no responsibility. Why can't the fellows with families go home and then come back to get their discharge when it is ready, instead of causing corruption in our families?

We don't think you are being fair to your public by having the Government pay these high allotments now that the war is over and causing taxes to be so high. Do you think it is being fair to our children now that the war is over, when our place should be in the home teaching our children discipline. A lot of us fellows had been classed essential up until 3 months ago when we were taken into the Army and this does not make very good sense after all we are just laying around for the last few weeks.

Our wives have been asking us fellows when we are coming out now that it is over, and we in turn are asking you this question. Hoping to have your reply soon.

Yours truly,

FROM SOME OF THE BOYS
IN CHANUTE FIELD.

## A Stubborn Vestige of Old Appeasement

EXTENSION OF REMARKS
OF
### HON. EMMET O'NEAL
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. O'NEAL. Mr. Speaker, Mr. Charles Strull, an outstanding citizen of Louisville, Ky., has sent to me an editorial from the Louisville Courier-Journal of October 3, 1945, and I ask unanimous consent to extend my remarks in the RECORD by including the mentioned editorial:

A STUBBORN VESTIGE OF OLD APPEASEMENT

The discussion now under way between official United States and Great Britain on Jewish immigration into Palestine serves to illuminate one of the most shadowy chapters of appeasement and dubious motive in the entire record which began with Hitler's rise to power. It serves also to bare the startling and shameful fact that the most evil legacy of nazism, which is hate, is still alive and active in Europe, to mock the name of liberation.

President Truman has asked the British Government in effect to abrogate the Chamberlin white paper of 1939 which stopped the admittance of Jews to Palestine and which thus left millions of harried Jews in Europe without asylum, with no way of escape from the concentration camps, the butchery, the gas chambers, and the crematoria of nazi barbarism.

Ironically, although Hitler Germany has been destroyed, and freedom of oppressed peoples is fondly supposed to have been won, the Jews of Europe find themselves on one hand unable to build new lives where they are, because of the backwash of prejudice, and on the other hand unable to move to the refuge of a promised homeland.

And this, although the British Labor Party when seeking election in May 1945 espoused the policy of reopening Palestine to the tragic refugees of the ancient faith; and although the United States Congress in more than one session has supported the plea which President Truman repeats and which his predecessor voiced with vigor in 1944 and before.

The white paper of 1939 was one of the numerous manifestations of appeasement which marked that unhappy period of Chamberlain's government. Twenty-two years earlier, the Jews of the world had been assured, by formal declaration of Foreign Secretary Balfour of Great Britain, of the opportunity to establish a national home in Palestine. This Declaration was strengthened in 1922 when our Congress approved it, and a year afterward Great Britain became the League of Nations' mandatory for Palestine and assumed responsibility for "placing the country under such political, administrative and economic conditions as will secure the establishment of the Jewish national home," in the terms of the Declaration.

With Hitler stalking the world in 1939, a year after the triumph of his bullying at Munich, the Chamberlain government apparently felt constrained to meet his competition in the Near East. A strange ferment had occurred among leaders of the feudal system of life among the Arabs—although it is easy to see today, as Mr. Chamberlain and his imperial agents saw then, that the source of this ferment lay in Nazi provocation. Diplomacy accorded the label of nationalistic spirit to the stirrings among the historically nomadic Arabs; and the white paper followed. It cut down Jewish immigration into Palestine to an aggregate of 75,000 in 5 years, and forebade it entirely thereafter except with Arab consent. Effectually doomed were the Jews of Europe, thus immobilized in the path of their destroyer.

It becomes rather plain that the British Labor Party, disregarding its assurance of last spring, chooses to cling to the line of deference to nationalistic pretensions of Arabs, in face of evidence that the rank and file of those people, left undisturbed, have lived in peace and in marked progress among their Jewish neighbors. These common people, however, are remote from the real significance of their land—its position as the stepping stone of empire, the untapped treasures of its oil, the strategy of maintaining its cultural and political status quo which depends on leaders whose quality was revealed when they blew hot and cold all through the war—and which a progressive, intellectual new influ-

ence (say, that of the Jews of modern ways and democratic yearnings) well might change.

These are the things that are being said today. One of the most vigorous statements of them, indicative of the temper and forthrightness of American leaders in this connection, comes from Senator ROBERT F. WAGNER, who says in an article in the Nation:

"In Palestine international promises have been broken, loyalty and fidelity have been unrequited, hostility has been appeased, and human life has been subordinated to the mysterious demands of imperial policy. The miracle is that, despite all this, Jewish Palestine has throughout the war been a bastion of security to the United Nations and is today the most successful pioneering effort of modern history. * * * The war is over. The military considerations which have restrained official expression of America's views on the Palestine issue are no longer germane."

Far more bitter were the denunciations by Zionists themselves, which appeared in Louisville in a newspaper advertisement of nation-wide publication, An Open Letter to Prime Minister Attlee, by the American Zionist Emergency Council. It was the most forceful of rebukes, reminding the Labor Government that while it is seeking America's financial help for restoration of Britain's economy and standards, it "cannot talk of social and economic progress and at the same time bolster the reactionary, pro-Fascist, feudal Arab rulers in the Middle East, including the pro-Axis Mufti." Justice, too, it concludes, is indivisible.

## Dangers of Militarism

EXTENSION OF REMARKS
OF
### HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. REED of New York. Mr. Speaker, to what extent is slow demobilization responsible for the deplorable domestic conditions that now exist? The tyrannical attitude of the military toward our soldiers, and the brutal indifference to the sovereign will of the people, in the matter of demobilization ought to warn the people of the United States as to the dangers of militarism. President Woodrow Wilson had some definite views on militarism. I quote from his speeches and statements:

1. Militarism consists in this, gentlemen: It consists in preparing a great machine whose only use is for war. (Speech at New York, Jan. 27, 1916.)

2. It is inconsistent with the traditions of the country that their (the people's) knowledge of arms should be used by a governmental organization which would make and organize a great army subject to orders to do what a particular group of men might at the time think it best for it to do. That is the militarism of Europe, where a few persons can determine what an armed nation is to do. That is what I understand militarism to be. (Statement to committee from American Union Against Militarism, White House, May 9, 1916.)

3. Militarism does not consist in the existence of an army, nor even in the existence of a very great army. Militarism is a spirit. It is a point of view. It is a system. It is a purpose. The purpose of militarism is to use armies for aggression. (Speech at West Point, June 13, 1916.)

Militarism is now showing its purpose, its point of view, and its spirit, which is to fasten its discipline upon the civilian population, the Congress, and to take over the control of the country in peacetime. Military law, courts-martial, cruel and unusual punishments are the aim and ultimate goal of militarism. The effect of the system of militarism is the same in all countries, unless restrained by an alert, freedom-loving people.

We saw militarism in practice in the Billy Mitchell case. France saw it in the Dreyfuss affair. Our people are seeing it in operation in dealing with demobilization. Militarism is also rampant in England. Under leave to extend, I insert as part of my remarks an article appearing in the Washington Times-Herald under date of October 23, 1945, as follows:

CHURCHILL FLAYS SLOW DISCHARGES

LONDON, October 22.—Declaring that the slow rate of demobilization was the fountainhead of all Britian's domestic difficulties, former Prime Minister Churchill today demanded that the Labor government release two and a quarter million men from the army, navy, and air force.

Initiating a debate on demobilization, Churchill told the House of Commons that he understood there would be 3,842,000 in the armed forces on December 31. He urged that the forces be cut to a total of 1,550,000 men and women, comprised of 1,000,000 in the army, 400,000 in the royal air force, and 150,000 in the navy. The balance of 2,250,000 kept under arms were redundant and surplus, he asserted.

Churchill pointed out that the fear of unemployment should not deter in speeding demobilization since every industry is clamoring for labor.

Churchill emphasized in his calculations regarding the size of the British forces that he has definitely excluded the possibility of a major war in the next few years. "If the Government considers this wrong, it would not be a case of demobilization but of remobilization," he said.

He also asserted that the housing shortage was not a valid reason for keeping men in the army, and called on the Government to commandeer land for houses if necessary.

## The Jap Code

EXTENSION OF REMARKS
OF
### HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

TUCSON, ARIZ., *September 24, 1945.*

DEAR MR. HARLESS: While we're investigating Pearl Harbor, let's find out also who told Governor Dewey that the Jap code had been broken. That secret certainly was known to only a few of our most trusted officials at the top of the Government, and the man who passed it on to Dewey obviously did so with the expectation that the Republican candidate would spill it to the world. If Dewey had been less scrupulous, the war might have been prolonged considerably and thousands more Americans killed.

The public has a right to know who thus put party politics above the national welfare. When a man is willing to stab his country in the back during wartime for motives of personal gain or party prestige, he should be exposed and branded as a traitor.

Yours truly,

BRUCE COLE.

## Old-Age Security

EXTENSION OF REMARKS
OF
### HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution memorializing Congress to act favorably upon either H. R. 2229 or H. R. 2230 as a broadened measure at the very earliest date possible in order to provide old-age security for all our people in an adequate amount for each retired worker and to force into circulation each and every month the full amount collected to provide such annuities, less the necessary administration expense:

"Whereas the National Social Security Act, which has now been in operation for several years, and has proved itself wholly inadequate, as a provider of old-age security; and

"Whereas only a minor portion of our people are covered by said act; and

"Whereas the operation of the act removes from circulation billions of dollars in excess of the amount required to pay the annuities it provides, thus curtailing the active flow of money in the channels of trade instead of augmenting it; and

"Whereas to broaden and extend the present old-age and survivors' insurance law in the Social Security Act as promised by both political parties last year, will only create a still greater stagnation of tax revenue in Washington, when more buying power among the lower-income groups will be so vital to postwar employment and business recovery: Therefore be it

*"Resolved by the County Commissioners of the County of Morrison, in regular session assembled*, That the Congress of the United States of America be requested to pass either H. R. 2229 or H. R. 2230 as a broadened measure at the very earliest date possible in order to provide old-age security for all our people in an adequate amount for each retired worker and to force into circulation each and every month the full amount collected to provide such annuities, less the necessary administration expense, thus providing a constant strong demand for goods and services; and be it further

*"Resolved*, That copies of this resolution be sent to Congressman HAROLD KNUTSON and to Senators HENRIK SHIPSTEAD and JOSEPH H. BALL."

J. E. BIEGANEK,
G. J. HODOFF,
RICHARD BORGSTROM,
STEVE OTREMBA,
M. J. KOKETT,
*County Commissioners,*
*Morrison County, Minn.*

## Michigan's Tourist and Resort Industry

EXTENSION OF REMARKS
OF
**HON. FRED BRADLEY**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my weekly broadcast for this week which was put on the air by Stations WMAM, Marinette-Menominee, WDBC, Escanaba, and WSOO, Sault Ste. Marie, on the subject of Michigan's tourist and resort industry:

Ladies and gentlemen, we are approaching a new vista in the tourist and resort industry of our entire State of Michigan and especially so in our Upper Peninsula of Michigan.

Before the war, Michigan's tourist and resort industry was the second largest in the State and from that industry we received an annual revenue of approximately $400,000,000. That is big business; and heretofore it has been promoted by our four regional tourist and resort agencies: southeastern Michigan, western Michigan, east Michigan, and the Upper Peninsula Development Bureau. Each of these four agencies receives its own proportionate share of a State appropriation for the development and enhancement of its own tourist and resort industry. With that no one can find fault because each section has its own manifold attractions and each is charged with and should properly pursue a program promoting its own immediate interests.

But, ladies and gentlemen, it is my sincere belief that this industry, which I predict will expand with rapid strides in the postwar world, should have its activities correlated in Lansing with a State administrator for this industry, whose job it would be to correlate the activities of all those bureaus in the interest of the State of Michigan as a whole. It should be his primary purpose to "sell Michigan"—to bring the tourist into Michigan. For instance, as an example, we might point to our neighboring State of Indiana, which has just recently correlated its State-wide activities in the hands of an able State public-relations director. Others of our neighboring States, as well as our own, are considering adopting the same policy.

Now what could we gain by such a program? It has been freely predicted by those who hoped to promote their own industry that European travel will greatly cut in on our own domestic travel. For instance, we hear statements advanced by some of our major air lines that week ends in Europe will be as frequent as week ends in the Upper Peninsula. We hear statements and read advertisements to the effect that the stratoliners of the immediate postwar world will ply between Detroit and London between breakfast and dinner. That might all be true, but I submit it is not going to hurt our tourist and resort industry in Michigan one penny's worth for the following reasons. First of all, Europe is down. Europe cannot revive itself for at least 5 years. Europe has no hotels available in which to house any such influx of week-end resorters and it has no coal with which to heat the hotels, no food with which to feed its patrons and, unless an ill-advised Uncle Sap gives them an extremely greater largess than I think the Congress of the United States will authorize, that condition cannot improve itself much less than 5 years hence. Europe has no travel facilities for the tourist. The railroads have been blasted to bits and such as can be restored in the near future will be restored for far more essential purposes than tourist travel. Europe for the next 5 years will be too busy feeding itself to worry about feeding other than those of our own citizens who are over there strictly on international business; and they will pay plenty for what little they get: no heat in the hotel, lights shut off early, no soap in the hotel, black-market prices for everything they eat.

With that picture before us, it becomes apparent that our great State of Michigan has every possible opportunity for greatly extending its tourist and resort industry into one which I predict with confidence can be doubled, if not trebled, during the next 10 years. I say this predicated on the fact that the four regional bureaus will combine their efforts, augmenting an ambitious all-State program headed up by a capable and experienced public relations man in Lansing, who will seek to serve all and injure none. His first responsibility, I repeat, is to bring the tourist into Michigan.

In approaching this program we must realize that each of our beautiful sections in Michigan possesses its own natural advantages and its own natural attractions. For instance, in southeastern Michigan, nearby metropolitan Detroit, can be found the advantages of a quick week-end jaunt by car or by water. Western Michigan, opened up many years ago fundamentally along the lines of the adequate railroads serving that area, became a more settled resort territory. Thousands upon thousands of our summer visitors attracted by our marvelous climate built themselves permanent summer homes which they and their children have enjoyed and will enjoy for many years to come. Eastern Michigan has comparatively recently come into its own as a tourist and resort area—coming into its own only after the depletion of its timber and some natural mineral resources and has expanded in proportion to the extension of hard-surface highways northward. Today down in the northeastern Michigan section where I live, with its excellent deer hunting (thanks to the energetic and active cooperation of the Michigan Department of Conservation in helping to increase the deer population) we see the possibilities open to us, if we will make it even more attractive for our tourist. For instance, we do not have the small-game hunting we used to have; we do not have the trout and other game fishing in our lakes and streams that we used to enjoy, but if we will help to improve these conditions through cooperation with the conservation department, just that much more can we increase our tourist revenue. That is, providing we first of all make up for our most noticeable deficiency of all, namely, a lack of tourist cabins and hotel facilities.

Now, when we come across the straits into this beautiful Upper Peninsula, it is safe to see and conservative to state that we have hardly scratched the surface as yet despite all the admirable work that has been done by your excellent Upper Peninsula Development Bureau, which recently celebrated its thirtieth anniversary. Some may challenge that statement, but I insist that in my own humble opinion that nevertheless is true—we have hardly scratched the surface. Why? Because we have been too far removed from the centers of population which have not as yet enjoyed what we have to offer up here in the Upper Peninsula. It has been principally a matter of transportation. In the immediate prewar world our highway system was greatly enhanced—much still remains to be done. We had an improved rail transportation system that with the advent of the streamliners had been coming into its own, but even so, during the war period vacation travel was drastically restricted, which has of necessity been a deterrent to us. But in this postwar world the air travel that we hear promoted toward Europe will at the same time be of inestimable value to you up here in the Upper Peninsula. Thanks to an energetic and farseeing Michigan State Department of Aeronautics, our State led our Nation in prewar private flying facilities.

Just as soon as you can cut the grass off of some of the fields I have seen in the past few years, the hundreds of thousands of our youth who have been trained in the world's greatest air forces will find it possible to purchase low-priced planes which will make our Upper Peninsula facilities readily available to them. And I predict there will be far more week-end travel to the Upper Peninsula and far more money left by the private flyer in the future in the Upper Peninsula than will be spent by the week-end travel to Europe.

Furthermore, it is well known that we are making a determined bid for adequate airline travel to this area to augment an ever improving rail service and an ever increasing flow of automobile traffic over a continuously improving highway system. It is well known that several of the major airline companies already have their applications on file for postwar lines all through the upper part of Michigan with a major point at Pellston for service which would cover the entire Lower Peninsula from Detroit to Chicago with intersecting lines and tying that in with a service that will link the Upper Peninsula. Those services in turn will go through to Chicago and across to Duluth or Minneapolis. What is needed are larger terminal airports for these planes. We have one nearing completion at Menominee right now; another huge airport is projected for Escanaba. The airport at the Soo will undoubtedly be drastically improved and as a safety factor for this particular airport we have the war-built airports at Raco and Kinross. Undoubtedly others of our Upper Peninsula cities will be in line for Federal and State aid to improve their own airports. In this latter connection Congress has just recently passed the Airport Construction bill of around $700,000,000 to be expended over the next 10 years for the construction of larger air terminals in the metropolitan cities and suitable size airports for larger cities in districts such as ours and then additional smaller fields for private flying in outlying districts.

Then I predict, too, a great future for our Upper Peninsula when, as, and if the Congress will provide funds for the Army engineers to continue its congressionally authorized program to establish an extended series of small-craft harbors to entice the amateur yachtsman. That program, while carefully pursued by the Army engineers in the prewar world with the meager funds placed at their disposal, will undoubtedly be enhanced in the near future and it opens a vista of primary importance to the entire Upper Peninsula and especially those cities bordering on Lakes Michigan and Superior. Improvements to small craft, such as ship-to-shore telephone, radar—both in vision ahead and in vision below, to find out where the fish are—are a reality as of today, and when there are sufficient anchorages provided and when the municipalities learn to cooperate with the visiting yachtsman by affording him docking space at its municipal pier and services in the form of fuel, food, and so forth, I predict that a steadily increasing influx of vacationists aboard their own private cruisers and yachts will prove extremely valuable to us.

In closing, there is one warning that I want to give all of you. It can be summed up in three words: "Don't be greedy." You may wonder why I give that warning. I say that because of my own observation in certain other tourist resort States. Whenever a merchant or a hotel man or a camp operator gets into the habit of looking out of the front window to see whether the car that just arrived has a "foreign" license plate on it and then automatically ups his price, or whenever those of us who are interested in the tourist and resort industry in our great

State assume the attitude that an out-State visitor is a "foreigner" and therefore should be gouged, just then do we stab a knife in the very heart of the tourist and resort industry of Michigan, because the gouged customer is not coming back and neither are his friends, to whom he will relate his sad experiences when he gets home. So I repeat, welcome, always welcome, our visitors but don't be greedy. We have to live for tomorrow as well as for today.

## With Malice Toward None

EXTENSION OF REMARKS
OF
**HON. EUGENE J. KEOGH**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "With Malice Toward None," by Grenville Kleiser, which appeared in the October 22 issue of the New York Enquirer:

WITH MALICE TOWARD NONE
(By Grenville Kleiser)

The American people are proud of a self-made man. They honor him because he symbolizes the qualities of personal character possible of high development in this land of opportunity.

The self-made man realizes early in life that in order to progress he must work diligently and constructively. He must have a knowledge of his own qualifications and abilities and do all in his power to improve them.

He is alert for chances to increase his knowledge and efficiency. He safeguards the golden moments. He turns every opportunity into an occasion for self-development.

The spirit of self-help is the root of all genuine growth in the individual; and, manifested in the lives of many, it constitutes the true source of national vigor and strength. Help from without is often enfeebling in its effects, but help from within invariably invigorates.

An outstanding example of the fine type of self-made American is James A. Farley, who through his own ability, integrity, and sound common sense has achieved exceptional success.

With true self-effacement he disclaims any personal credit for his achievements. He has an extraordinary faculty for getting things done. Through the years of conscientious effort, despite difficulties and discouragements, he has stood steadfastly for loyalty, honesty, and singleness of purpose.

Of self-made "Jim Farley," as he is affectionately called, it has been said that he is a man among men, of flawless character, clean personality, high-minded, and earnestly devoted to any interest in which he may be concerned.

Here is one of the many tributes paid to him:

"Jim Farley is and always has been a big man, a fine capable leader; the best organizer either party has known in a generation, a man whose personal traits of character have endeared him to thousands of his fellowmen."

It has been said of him that he was born for friendship. He likes people and they like him. His genial personality has often transcended political and tactical differences.

Invariably he has had the courage of his convictions. Difficulty failed to get him down—he always came up smiling. He has never lost the twinkle in his eye.

He has regarded the rewards of work well done—money, influence, position—as incidents, not the ends, of his efforts. A high-minded man seeks a great place, not that he may be seen of men, but that he may speak, influence, and serve unselfishly.

Today, James A. Farley is an eminent member of that great group of self-made men who have reached places of distinction in this country. His natural modesty, high intelligence, and patriotic devotion to duty, makes him an inspiration to young men and a truly great citizen of his beloved America.

## Address of Capt. John L. Beebe

EXTENSION OF REMARKS
OF
**HON. JAMES J. HEFFERNAN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the farewell address delivered by Capt. John L. Beebe, former Superintendent of the United States Maritime Service Training Station, Sheepshead Bay, Brooklyn, N. Y.

During the past 2 years I have made many visits to the United States Maritime Training Station at Sheepshead Bay, Brooklyn, N. Y., and observed the splendid administration of the superintendent, Capt. John L. Beebe. He has at all times impressed me with the efficient methods by which he has maintained command of this largest training station in the world for merchant seamen. Apart from his ability as an officer, he is a man of integrity and sympathetic understanding of the problems of the men he directed from May 1943, to October, 1945. Captain Beebe's remarks on the occasion of the last review in which he took part as commanding officer of the Sheepshead Bay training station follow:

This is the last review in which I shall take part as commanding officer of the Sheepshead Bay training station. Within a few days I shall leave and the task, symbolized here today in this ceremony, of passing the duties and responsibilities of superintendent to another, will be completed.

It is with very genuine reluctance that I approach this ending of associations. For some years I have been assigned to duties with the maritime service and had a part in its growth, and for the past 29 months I have been with the men of this station. It has been a source of never-ending admiration and pride to witness the sureness with which they have taken hold of unfamiliar tasks and duties and handled them competently and well.

Each man who took part in the wartime job of this training organization may feel personal pride in knowing how much has been achieved and how important was the task of the maritime service and of the American merchant marine in bringing to pass the final victory of our armed forces. Each one has had a place of importance in that victory and each should always remember and keep bright the knowledge that he served well in the triumph. Every man in the uniform of the maritime service should hold his head high in the company of the men of our Army and Navy, for without him and all the thousands of other merchant seamen the battle would not yet have been won.

In the years ahead, the maritime service will continue to have a place of equivalent importance in the peacetime world. America's great modern merchant fleet, created in the toil and fury of war, must continue to sail the seven seas and uphold our country's proud position as a maritime nation of the first rank. Every man now aboard a merchant ship or in training today for that service can feel confident that he has elected a career of dignity, and filled with opportunity and advancement.

I wish to leave these thoughts with you and add to them my personal expression of admiration and pride for each one of you, the officers and men of Sheepshead Bay.

I pass the command to one of those officers who has served with high efficiency and ability on my staff, first as administration officer, and then as executive officer. It is with confidence that I turn over to Captain Von Sneidern the task of directing the destinies of Sheepshead Bay for the future.

Good luck to him and to you all. I wish everyone a pleasant journey.

## Let the People Decide on Military Conscription

EXTENSION OF REMARKS
OF
**HON. HOWARD H. BUFFETT**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. BUFFETT. Mr. Speaker, President Truman urges the most far-reaching surrender to militarism ever proposed to the American people. Peacetime conscription, or as he prefers to term it, "universal training," would profoundly alter the future of every American now living. Accordingly it is imperative that the people decide this issue. To commit the American people to permanent militarism by steam rollering this measure through Congress would be a tragic misuse of the power held by the administration.

Unquestionably, President Truman wants the people of America to settle this issue. Accordingly, he should be willing that the people determine their course at the ballot box in the nearby 1946 congressional elections. Let the people choose Congress on this issue.

The people of America have entrusted Harry Truman with the highest office in this land. Now he should be glad to trust the people to determine whether or not they should march down the road of militarism, a pathway that has wrecked every major nation that has taken it. Most constitutional amendments have decided issues of lesser magnitude.

President Truman's sponsorship of military conscription automatically puts in motion the legislative power of the administration toward its enactment. Accordingly the duty and responsibility of the Republican Party is clear. It is to provide the organized political opposition to this surrender of the freedom of the people.

Here is the most critical domestic threat to liberty in our generation. All

patriots who believe that the people own the Government, and oppose the Hitler concept that the Government owns the people should rally against the European importation.

## God and the Atomic Bomb

EXTENSION OF REMARKS
OF
**HON. HERMAN P. KOPPLEMANN**
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave to insert my remarks in the RECORD, I wish to present for thoughtful consideration the sermon recently given on the atomic bomb by the Reverend Russell J. Clinchy, D. D., at the Center Church, Hartford, Conn.:

On Tuesday morning, August 7, 1945, the Boston Globe carried this headline across its first page, "A new world is born."

That headline, which no one ever expected to see in a newspaper, was caused by the report that 3 weeks before an atomic bomb had been dropped on the desert in New Mexico, and 2 days before another atomic bomb had been dropped on the Japanese city of Hiroshima, and these two bombs were the greatest explosion of power which had ever been let loose in the world. The new world, however, was not brought into being by the power of the bomb but by the discovery which made the bomb possible, that of atomic energy. The dream of every modern physicist and chemist had been realized; the atom had been smashed; the principle of atomic energy had been released into reality; this discovery would transform not only our methods of power but all of man's thinking concerning the nature of the universe, and his activity in the world. When one had read the official statement he knew the headline was true—a new world had been born. He did not say this because he knew the nature of this new world but, just as he had understood that he was in a new era of the transmission of sound when he first heard a radio and yet did not understand the secret of radial waves, he now knew that, together with all mankind, he would hereafter live with a different conception of the nature of the world than his fathers had ever comprehended.

It was inevitable that one of the first reactions to this astounding news was how this revelation would affect our idea of God. The instinctive reaction of many people was, "How can we still believe in God if this is the real nature of the universe?" During that memorable week it was exciting to see that the minds of many people were concerned with two ideas of which we know the least in all the world, and of whose real nature we shall never know the whole truth—God and atomic energy. We shall never know fully who and what God is, and our minds will probably never discover the final nature of atomic energy even though we shall have increasing knowledge of how to use it. Granting all this, however, the real question that was in the mind and conscience of most people was that of the relation of God and atomic energy, and it still is the important question before us.

Because the first use of atomic energy was made in the form of the atomic bomb we are confronted with two questions, or, rather, two phases of the whole problem. The first is whether we can still believe in the Christian conception of God because of this new revelation of the nature of the universe; the other is whether there was, and is, a moral use of the atomic bomb in war.

I

It was so clear that a feeling of awe and fear swept over most people when they heard the first report of the discovery of a new energy in the texture of the universe. There was a fear that man had created a Frankenstein monster that could not be held in leash and would go on to destroy humanity itself. There was also a sense of awe of standing before such majestic power, power which seemed to be beyond the comprehension of the mind. This awe and fear were mixed together for many religious people in what was almost a sense of agony that the atomic bomb might have blasted our conception of God, as well as a city, out of existence. "How can we continue to believe in God and in life", a friend wrote in those early moments, "when the world is made of such particles of destroying power and man now knows how to use it to destroy himself if he chooses to do so?" Many who did not express it that way held something of the same sense of disaster in their minds, and the old question of the book of Job came back to plague our hearts, "O, that I knew where I might find Him." There were those who felt they would have to look for God in the ruins of Hiroshima. Christianity therefore, must reveal anew to us the real meaning of God.

Our knowledge of God is never the full and complete truth about Him, but is only our concept of Him to the fullness of our immediate awareness and knowledge. Each age has only this concept of God and it lives by the best concept it can possess. In the course of man's history there have been three great changes in the concept of God. The earliest idea of deity was that there were many gods and even the early pages of the Bible place Baal on a par with Jehovah. The first change came in the transition from many gods to one God, marked by the ancient words of the Hebrew ritual which still stand as one of the majestic utterances of the human spirit—"Hear, O Israel, the Lord thy God is one God."

This was a conception, however, of God who had formed and shaped a static and finished world, the kind of a world which was apparent to the eyes. Our earth was the center of the universe, the sun moved around this earth, and the creation took place and was finished at one time. Then came the second change. In the space of one lifetime, Copernicus and Galileo smashed that conception to pieces and there emerged an image of God who was the creator of a living universe, beyond the comprehension of the human mind in size, and still creative in its life. If we take that for granted today, and believe that it did not strike fear to the hearts of men, we need only remember that the church prevented Copernicus from publishing his truth while he lived, and it made Galileo publicly deny that he believed what he had found to be true. But the concept was changed, and now we live with more of the light of God upon our faces because of the search of Copernicus.

The third change has now come at this moment in our lives and we have received the concept of the god of atomic energy who created a universe whose texture is that of endless energy and productive power.

All of these changes struck fear into the hearts and minds of men because they seemed to push God, at each step, out of any relationship with human life. Men believed in personal and tribal gods because then each group had its close relationship with its own god, and so the idea of one universal God must have changed the personal contact with the god who cared for his own group into the strange relationship of a God who cared for all people and could hardly be expected to care for one. So it was with the change from the God who had made this earth the center of the universe, with the sun and moon and stars bowing down before it as the sheaves in Joseph's dream bowed down before his sheath; the Church feared such a picture for how could the inhabitants of an earth, that was just like the head of a pin in a universe of light-years, be of any meaning to God, or that God be of any meaning to them? No wonder, then, that on August 7 the hearts of men and women were struck with fear as they learned that they were standing on particles of atomic power which could blow them, and their earth, into oblivion by the design of maniacs. The long road from the simple, homely God who walked in the garden in the evening with His children to the almighty power of the god of the endless atomic universe had been trod, and we wondered if the haunting fear had become true and we were orphans in a godless world.

This fear is as groundless as were the fears of those who felt that if God were the God of the Philistines He could not remember the Hebrews. It is our concept of God that changes, not God Himself. The God who watched Abraham move out of Ur in the Chaldees was the God who formed the world of atomic energy no matter how dim the spiritual eyes of Abraham might have been. How much light the old myth of the Garden of Eden now sheds upon all our search. The old myth tells us that God made man to enjoy the fruits of Eden without consciousness of the process. Yet He had also placed the power of choice in man—the choice of living in perpetual happiness in Eden without knowledge, or living in the search for knowledge which would be the pathway of travail and of struggle. Man chose the way of the search, and from the beginning he has been upon that quest.

Once man starts upon that quest there is no turning back, and there is no stopping place even though it may seem for a moment that we have reached the Promised Land. The road to truth leads ever on, and will lead on to the end of human existence. The mercy of it is that nothing on the road ever changes God; God is the same yesterday, today, and forever; all that can change is our growing and fuller conception of His kingdom, His power, and His glory. Every adventure of the human mind and spirit which unfolds greater knowledge and comprehension of the universe before our eyes can only increase the extent of His kingdom, the measure of His power, and the majesty of His glory.

II

All such discovery, however, provides the possibilities for the good or evil use of that truth. We understand this so well when we consider the discoveries of fire, of electricity, and of flight. We think of those as part of the basic foundation of life in the modern world. We use fire to cook our food and warm our houses; electricity to light our streets and run our machines; flight to open a new era of transportation. But each of these can be, and has been, used to harm and destroy man, and each was used by the Fascist powers as the tools whereby they sought to conquer the world.

We have now reached the secret of the essential texture of the universe, which is the energy to be found in the atom, and we now know how to control and use the inconceivably great power of that discovery. Whether we shall use that power for good or for ill does not have any relation to the nature of God. There are people who are saying that they cannot believe in a God who would create power which may be used to destroy humanity, but that is as idle as to say we cannot believe in the God who created fire, because some men use it to burn down their neighbor's home. Our fundamental question at this moment does not concern the nature of God, because the

atomic bomb is more powerful than a popgun; our question, as is always true regarding our use of the ways of God, is whether we have achieved a mature sense of the moral order great enough to let us use such power with responsibility.

By this we are presented with our true question. Some people are asking, "Should we ever use the atomic bomb?" And others are saying that we should never use it, because the use of so much power is immoral. The question which is really before us is quite different. It is, Should we ever use power to enforce the moral sanctions of the community?

The question, to be reasonable and constructive, must rest here, because on any other basis we lose contact with the foundation of the moral order. If we say we cannot use the atomic bomb, because it is so powerful we place the moral meaning of an act upon the materialistic consideration of the amount of power, and say it is better to shoot a rifle, even a million times, than to drop a bomb. That is sheer materialism, not alone because we would measure an act merely by the weight of the power behind it, but also, because in the moral sense the basic consideration is always the intent and the motivation, and not the weapon. Upon a moral consideration there is no difference between the slingshot by which David killed Goliath, a rifle, or a bomb—and certainly no basic difference between a thousand block busters and an atomic bomb. Whenever we allow ourselves to slip off into such observations we have become willing to leave the moral and spiritual considerations and enter the material.

Our real question is not a material one but a moral one. "Is it ever right to enforce moral sanctions by force?" and, "Is there a moral difference between the use of force for violence and its use to maintain the moral sanctions?" The social life of our civilized communities has always answered these questions in the affirmative. Civilization is the process of finding an order of life in which there can be as great a measure of freedom as is compatible with the safety and well-being of the community. Those who break the rules of this community life are criminals, and the community may use power for the social and moral ends of community life which it prevents the criminal from using for unsocial ends. That is why the common law not only provides the police with power, but also declares that a man who kills another in self-defence, or to save an innocent life, is not a murderer, but that he who kills for wanton ends is a murderer.

The social conscience of mankind, motivated by the Christian imperative for 2,000 years, has based its order of life upon this moral, rather than material, consideration. Society does not state the absurd proposition that anyone who shoots a gun is a murderer, for that is sheer materialism. It states the profound and moral proposition that the motivating forces of an act determine whether an act is criminal or not, whether it is bad or good.

It is upon such a basis of social and religious considerations that we must make our decisions regarding the use of atomic energy. We cannot disassociate the bomb from that energy any more than we can disassociate electric current from controlling the plane that dropped the bomb. The only difference between the effects of an atomic bomb and the bombs of 500 B–29's is in the time it takes to do the work. What we ask is whether America used the power responsibly and for the ends of social betterment. America gave a warning as to its use; did not use it wantonly but with responsibility; and used it to end a war and save hundreds of thousands of lives of ourselves and our adversaries. It did cost life, just as the invasion of Normandy cost life, but it is a principle written into the spiritual life of the universe that by the stripes of one many are healed. There is a strange paradox and mystery about it all. We know that those who died at Normandy saved the free nations and brought peace. We know that all those who gave their lives, and those who fought, for America in the Pacific saved their country and brought peace to the world. Strangely enough, the Japanese who died at Hiroshima probably saved their country for they brought it to surrender, and that surrender brought peace to mankind. The ways of life are passing strange.

We know now that there is a difference between those who use power to start a war and those who use power to end a war and bring order. We also know that the conscience of mankind has declared that the nature of an act must be determined by the motivating forces of its purpose. We understand that power is good or bad, not because of its weight, but because of the meaning and significance of the purposes for which it is used. Such is our faith, but now it is not a mere theory whispered in an ivory tower. It is written in letters of fire across the skies of our times. Upon the earth there are the piles of ruin and rubble of those who defied the sanctions of the moral order and the conscience of mankind and used power for violence, destruction, and self-will. Also upon the good earth are the countries of the free, inviolate, and valiant, those whose men and women maintained the covenant of the civilized world with spiritual integrity, and used the power God placed in the world for the purposes of the mind and spirit; created, nurtured, and sustained by the onward march of humanity in its search for the promised land. The deeds of our day have confirmed the faith of our fathers.

Surrounding the glory of this day—this day of the dawn of the greatest measure of truth and power ever possessed by the mind and hand of man; the day of the triumph of the spirit of man in using such truth and power to overcome evil and establish order and peace—surrounding this day stands God as the Eternal One, the Lord God Almighty, maker of heaven and of earth, and still we sing with joy "O Thou who changest not, abide with me."

## Continuing the Draft

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a telegram which I sent to Gen. Lewis B. Hershey, the Director of Selective Service.

Mr. Speaker, my mail is 10 to 1 against compulsory military training. The people are more concerned about getting their men and women out of the armed forces than they are of keeping them in. Any program which takes 1 year from the life of American men, when it is done by compulsion, is peacetime conscription of men for universal military training. One cannot help but wonder if this administration expects to keep the country war-minded by suggesting that another emergency is just around the corner.

No announcement has been made by the Army as to how large a force they need. I would call the attention of the House to the fact that more than 50,000 men are now enlisting voluntarily into some branch of the armed forces. The voluntary recruitment is just beginning. How much longer is it necessary to continue the draft? I have asked this question of General Hershey in the following telegram:

Gen. LEWIS B. HERSHEY,
*Director, National Selective Service,*
*Washington, D. C.*

I wrote you on October 17, requesting information about number of men you would ask for in your November and December quota. You have not replied. I trust you will take into consideration that the armed forces are now getting about 50,000 men a month by voluntary methods. Voluntary recruitment is just beginning. If sufficient men can be had by voluntary methods, why continue the draft?

A. L. MILLER,
*Member of Congress,*
*Fourth District, Nebraska.*

## Rights of Real Americans

EXTENSION OF REMARKS
OF
### HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an article written by Westbrook Pegler which every red-blooded American ought to read.

The matter referred to follows:

FAIR ENOUGH

(By Westbrook Pegler)

New York, Oct. 21.—Senator George Spelvin, American, was sitting in his office easing the feet on the desk after a hard day of fighting for the good old sacred heritage from Valley Forge, when his secretary, Eddie Which, came in and said there was a bunch of PAC's and Communists in the outside office wanting to chase him over some jumps.

Spelvin is not quite sure how he became a Senator but, you know how it is in a dream when you are finding nickels and dimes or mowing the lawn for no reason, and then all of a sudden he was Senator Spelvin, and this bunch filed into his office raising a big holler.

Spelvin got up and brushed the ashes off his vest and there, first in front of him, was Hillman. Beside Hillman was Mike Quill of the bus drivers and subway unions, and a lot of well-known red-hot Commies and a colored fellow who kept his hat on and spat on the floor.

"Senator," Hillman began, "on behalf of the foreign-born and other down-trodden minorities we demand that you state your position in regard to a number of——"

That touched Spelvin off.

"You demand, do you?" he roared. "Who do you think you are to be making demands? It is all I can do to understand the most of you without an interpreter and Hillman can't hardly speak United States and that Quill talks like he had a mouthful of mush and you have got the gall to walk in on a Member of the United States Senate and make demands.

"You are damn well tootin' I will state my position, and first off, my downtrodden colored friend, you spit on that floor again and I will rub your nose in it, because it is scum like you that are causing trouble between white and colored, and I don't want your

vote and I would be ashamed of myself if I ever got it, and the same goes for the whole PAC, and you can tell Mrs. Roosevelt I said so.

"I happen to have quite a few colored friends and they have the same opinion, so don't try to tell me that you came here to speak for 6,000,000 colored voters, because you only represent the very lowest riff-raff of your race and one week you are yelling because you want the DAR to let some jive piano player hit cross-handed blue licks in Constitution Hall and next week you want to put on a kootch on the altar of the cathedral, because it is tax-exempt and therefore a public institution.

"You may show your dirty Communist manners in Mrs. R.'s home, but I am a little particular, myself, and if you are telling me 'The Gab' is your great, sympathetic friend, why let me ask you how many colored people did you ever see working around the White House when she was there except porters and pot-scullopers, but I mean colored secretaries, and that goes for Hyde Park, too? And the answer is you never saw any.

"You want to know how I stand on minority rights and you couldn't have picked out a better man to ask than George Spelvin, American.

"My position is that minorities have no more rights than the native American and yet every week in New York we see that poor Tom Dewey traipsing down from Albany to stand in the reviewing coop with O'Dwyer and Goldstein and Wagner and LaGuardia for a parade of Croatians or Bessarabians or Latvians because they are minorities and he is afraid if he don't show up and waste a day's time from his job you are going to spread a stink that he is anti-Bessarabian, whereas my policy is America for Americans and Bessarabia means nothing to me.

"I am hoping for the day when it will be possible for a native American to get elected mayor of New York because this year the poor oppressed foreign-born minorities they have got two candidates in O'Dwyer and Goldstein and Wagner in the Senate and everybody in the campaign frankly says LaGuardia is an ideal man of the people for New York because he speaks 14 different languages, not counting the obscene, but you don't have to speak any foreign languages to talk American.

"My slogan is going to be equal rights for downtrodden native Americans and equal rights for anti-Communists, too, and, of course, that makes me a Fascist but I happen to know that there are several million Hoosiers and Jayhawkers and Buckeyes in New York and native Americans from Texas, Minnesota, Nebraska, California, and the Dakotas and all over and yet if we should get up a parade why the PAC would holler for the mayor not to give us a permit because we are un-American and the colored people in our parade would be called Fascist stooges and Uncle Toms and Aunt Jemimas just because they believe in the United States and good manners and equal rights for white people, too. And Dewey would hide in a hat closet so nobody would suspect him of friendship with us and O'Dwyer and Goldstein and Wagner and "The Belly" would call on the foreign-born to remain calm and show their wonderful Americanism by not throwing rocks and rotten eggs at the low-down un-American natives.

"So now get the hell out of here and don't forget anything I have said because it will make me a great guy with the native-born anti-Communist majority including colored, and next election they will probably elect me President.

"Eddie," Senator Spelvin called to Mr. Which, "for goodness sake let's open the windows and give the place some clean air."

## Emergency Legislation

REMARKS

OF

## HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. GRANT of Indiana. Mr. Speaker, I have a compilation of Federal laws containing emergency clauses of one degree or another. This list contains 229 statutes, some of them to expire on the termination of the limited national emergency of September 8, 1939, some to expire on the termination of the unlimited national emergency proclaimed May 27, 1941, and others to expire after the cessation of hostilities plus 6 months, and so on.

The list is as follows:

TIME LIMITS FOR TEMPORARY PROVISIONS OF FEDERAL LAW

(Not including provisions which expire on specific dates) [1]

PROVISIONS LIMITED TO THE PRESENT OR EXISTING EMERGENCY OR DURING THE EMERGENCY

Act of June 26, 1940 (54 Stat. 599, c. 430; Public, No. 667). Authority for employment of one-dollar-a-year men, with the approval of the President.

Act of October 8, 1940 (54 Stat. 999-1,000, c. 757, § 302; Public, No. 801). Amortization deduction authorized during the "emergency period," under I. R. C. 124 (d, 1; e, 2).

Act of July 1, 1941 (55 Stat. 498, c. 270, § 4; Public Law 147). Authority of the Secretary of Agriculture to encourage expansion of production of nonbasic agricultural commodities through loans, etc.

Joint resolution of September 22, 1941 (55 Stat. 728, Public Law 252). Temporary appointments as officers of the Army of the United States authorized without appointing such persons as officers in any particular component of the Army.

Act of January 21, 1942 (56 Stat. 12, c. 14, § 6; Public Law 409). Authority of the National Housing Administrator under the Lanham Act, § 4, to adjust rents to the income of the person housed (amending act of October 14, 1940 (54 Stat. 1127, § 4), as amended by act of June 28, 1941 (55 Stat. 363, § 4 (b)).

Naval Appropriation Act of February 7, 1942 (56 Stat. 82, c. 46, § 301; Public Law 441). Authority of the President to permit the Secretary of the Navy to lease ships appropriated for in whole or in part in this act or to dispose of defense articles procured from funds appropriated by this act, to countries whose defense he deems vital to defense of the United States (up to $2,500,000,000).

Act of July 12, 1943 (57 Stat. 520, c. 222; Public Law 136). Purchase of butter substitutes for St. Elizabeths Hospital authorized.

Acts of June 22, 1944 (58 Stat. 308, c. 269; Public Law 347), and May 29, 1945 (59 Stat. 208, c. 130; Public Law 62). Appointment of enlisted men from Navy, Naval Reserve, and Marine Corps to Naval Academy after 9 months' service.

Acts of June 26, 1944 (58 Stat. 337, c. 277; Public Law 354), and June 13, 1945 (59 Stat. 241, c. 189; Public Law 85). Employment of certain additional clerks for Senators authorized.

[1] Permanent provisions of law applicable in time of emergency or during war, etc., are not covered by this report.

*Same* (58 Stat. 345 and 59 Stat. 253). Appropriations for additional police protection for the Capitol buildings and grounds, etc.

Act of February 28, 1945 (59 Stat. 9, c. 15, Public Law 12). Amendment to AAA of 1938 and § 7-17 of Soil Conservation and Domestic Allotment Act to provide that during the present emergency certain farms are to be regarded as farms on which cotton, wheat or peanuts were grown.

Act of September 21, 1944 (58 Stat. 736, c. 412 § 207; Public Law 425). Expenditures up to $1,000,000 authorized for forest fire control without matching of funds.

PROVISIONS IN FORCE UNTIL 6 MONTHS AFTER THE TERMINATION OF THE PRESENT NATIONAL EMERGENCY

Act of September 22, 1941 (55 Stat. 728, c. 414). Temporary appointments of Army officers under this act are to continue until 6 months after present emergency.

Act of February 7, 1942 (56 Stat. 63, c. 46, Public Law 441). Involuntary retirement of Navy or Marine Corps officers adjudged fitted for service prohibited until 6 months after termination.

PROVISIONS LIMITED TO THE LIMITED EMERGENCY PROCLAIMED BY THE PRESIDENT ON SEPTEMBER 8, 1939.

Act of June 20, 1940 (54 Stat. 494, c. 400, § 3). Authority of the President to appoint an Under Secretary of the Navy to serve during any national emergency, including the present limited emergency.

Act of June 28, 1940 (54 Stat. 676-681). Various provisions of "Act to expedite national defense." (But § 12 of same act provides that it shall terminate on June 30, 1942.)

Act of September 9, 1940 (54 Stat. 884, c. 717 § 301, amended by act of October 26, 1942 (56 Stat. 1006 § 201 "Sec. 301"). Suspension of requirement that heads of executive departments and independent establishments submit to the Postmaster General quarterly reports relating to free mail matter transmitted (amending § 6 of act of May 6, 1939, 53 Stat. 683, as amended by § 2 of act of June 30, 1939, 53 Stat. 969; See also act of February 21, 1942, limited to emergency proclaimed October 27, 1941).

Act of October 14, 1940 (54 Stat. 1127 § 4), amended by acts of June 28, 1941 (55 Stat. 363 § 4 (a) "§ 301"; Public Law 137), April 10, 1942 (56 Stat. 212, c. 239 § 1), and June 23, 1945 (59 Stat. 260 c. 192; Public Law 87). Authority of Federal Works Administrator and National Housing Administrator under § 1, 202, 401, and 402 of the Lanham Act (defense housing).

Act of July 8, 1941 (55 Stat. 579, c. 278), extended by act of June 22, 1943 (57 Stat. 161, c. 137; Public Law 85). Authority of the Federal Communications Commission to suspend or modify requirement that cargo ships carry at least one qualified radio operator who shall have at least six months' previous service as operator on board ship (amending § 353 (b) of Communications Act added by act of May 20, 1937, 50 Stat. 193).

Act of July 11, 1941 (55 Stat. 585, c. 290 § 3). Authority of the Secretary of the Treasury to contract for Coast Guard vessels and aircraft.

Act of December 17, 1942 (56 Stat. 1052, c. 737; Public Law 806). Accumulation of unused leave by employees of departments, independent establishments and agencies until it totals 90 days; when unused leave equals 60 days, not more than 15 days a year may be accumulated (amending § 1 of act of March 14, 1936 (49 Stat. 1161).

TWO YEARS AFTER THE TERMINATION OF THE LIMITED EMERGENCY PROCLAIMED ON SEPTEMBER 8, 1939, AS TIME LIMIT

Act of July 7, 1943 (57 Stat. 388, c. 196; Public Law 119 § 4). Disposal of temporary housing by National Housing Administrator.

PROVISIONS LIMITED TO THE UNLIMITED EMERGENCY PROCLAIMED BY THE PRESIDENT ON MAY 27, 1941

National Housing Act amendment of March 28, 1941 (55 Stat. 56 "§ 603"), extended by act of March 31, 1945 (59 Stat. 47, c. 48; Public No. 27). Authority of the Federal Housing Administration to insure defense housing mortgages (until July 1, 1946 or during the emergency declared May 27, 1941).

Act of June 21, 1941 (55 Stat. 252, c. 210). Restrictions in act of May 22, 1918 on entry or departure from the United States during war made applicable during the national emergency proclaimed on May 27, 1941 (amending § 1 of act of May 22, 1918, 40 Stat. 559).

Joint resolution of July 29, 1941 (55 Stat. 606; Public Law 190). Suspension of section 24b of the National Defense Act of June 4, 1920, 41 Stat. 773 (which provides for annual classification of Army officers and retirement, etc., of officers in class B); for this period the Secretary of War is authorized to remove any officer from the active list of the Regular Army, under certain conditions.

Joint resolution of November 17, 1941 (55 Stat. 764, c. 473, § 2; Public Law 294). Authority of the President to permit arming of merchant vessels (repealing § 6 of Neutrality Act of November 4, 1939, 54 Stat. 7).

Defense Highway Act of November 19, 1941 (55 Stat. 765–770; Public Law 295), amended by act of July 2, 1942 (56 Stat. 562, c. 474; § 1 (d)). Appropriations authorized for "strategic network of highways", etc., subject to certain conditions. (See also act of July 13, 1943, for amendments expiring 1 year after unlimited emergency.)

Third supplemental national defense appropriation of December 17, 1941 (55 Stat. 822; Puolic Law 353). Availability of certain appropriations for road construction in accordance with the provisions of the Defense Highway Act of November 19, 1941, etc., under preceding act, §§ 6 and 8.

Act of December 23, 1941 (55 Stat. 855–857, c. 621; Public Law 371). Availability of appropriations of $300,000,000 for national defense housing, $150,000,000 for defense public works (community facilities), and $15,000,000 for relief and civilian defense in Alaska, Virgin Islands, and Puerto, etc.

Act of January 2, 1942 (55 Stat. 881, c. 646; Public Law 394). Authority to employ nationals of the United States upon public works in Hawaii.

Act of January 24, 1942 (56 Stat. 17–18, c. 17; Public Law 412). Tax-free transfer of spirits from registered distilleries for industrial uses authorized (adding § 2883 (c) to I. R. C.).

First Deficiency Appropriation Act of February 21, 1942 (56 Stat. 101, c. 108; Public Law 463). Suspension of Selective Service System quarterly reports to the Postmaster General relating to mail matter which has been transmitted free of postage (amending § 6 of act of May 6, 1939 (53 Stat. 683), as amended by § 2 of act of June 30, 1939 (53 Stat. 989).

Act of March 13, 1942 (56 Stat. 171, c. 180; Public Law 497). Suspension of duties on scrap iron, scrap steel, etc., under Tariff Act of June 17, 1930, as amended, and § 425 of I. R. C. (46 Stat. 590; 53 Stat. 415).

Act of March 27, 1942 (56 Stat. 187–188, c. 200; Public Law 508). Time limit for Internal Revenue Code, § 2883 (d–e), relating to transfer of spirits at registered distilleries (adding § 2883 (d–e) to I. R. C.).

Act of April 28, 1942 (56 Stat. 236, c. 247). Availability of $12,500,000 appropriation for emergency safeguarding of public buildings and property; authority granted to enter into contracts in amount of $25,400,000 for construction of access roads, etc., in accordance with § 6 of Defense Highway Act of 1941 (Public Law 295; 55 Stat. 766).

Act of July 2, 1942 (56 Stat. 634, c. 473; Public Law 650). Availability of war public works appropriation of $17,500,000.

Act of October 26, 1942 (56 Stat. 1000, c. 629). Special policemen for certain public buildings, etc.; availability of appropriation for war housing.

Act of December 24, 1942 (56 Stat. 1080, c. 812; Public Law 832). 12½% royalty obligation of oil or gas lessee who drills well resulting in discovery of new deposit on public domain.

Act of June 26, 1943 (57 Stat. 180, c. 145; Public Law 90). Availability fo $10,000,000 appropriation for strategic network of highways, etc., under Defense Highway Act of 1941, § 9.

Act of July 12, 1943 (57 Stat. 540, 541, c. 229; Public Law 140). Availability of appropriation of $50,000,000 for war public works (community facilities) and $100,000,000 for war housing.

Act of December 23, 1943 (57 Stat. 618, c. 380). Availability of appropriation of $50,000,000 for war housing.

First Deficiency Appropriation Act of April 1, 1944 (58 Stat. 153, c. 152; Public Law 279). Availability of $115,000,000 appropriation for war public works (community facilities) and of $7,500,000 for war housing.

Act of June 27, 1944 (58 Stat. 371, c. 286; Public Law 358). Availability of certain appropriations for strategic highway network, access roads and engineering surveys and plans.

Act of June 28, 1944 (58 Stat. 604, c. 304; Public Law 375). Availability of certain appropriations for war housing.

Act of December 20, 1944 (58 Stat. 817, c. 609; Public Law 504). Suspension of duty on coconuts or coconut meat under § 758 of Tariff Act of 1930 (46 Stat. 636).

Act of April 25, 1945 (59 Stat. 80, 82, c. 95; Public Law 40). Appropriations of $20,000,000 for war public works (community facilities), and of $1,000,000 for war housing to remain available during unlimited emergency.

Act of May 3, 1945 (59 Stat. 117–118, c. 106; Public Law 49). Appropriations of $10,000,000 for strategic highways, $35,000,000 for access roads, and $3,000,000 for surveys, etc., to remain available during unlimited emergency.

PROVISIONS LIMITED TO 30 DAYS AFTER EMERGENCY PROCLAIMED ON MAY 27, 1941

Act of July 3, 1945 (59 Stat. 319, c. 262; Public Law 123). Interior Department appropriation for Division of Geography.

PROVISIONS IN FORCE UNTIL 6 MONTHS AFTER THE TERMINATION OF THE UNLIMITED EMERGENCY PROCLAIMED ON MAY 27, 1941

Act of November 21, 1941 (55 Stat. 779, c. 493; Public Law 314). Provisions that Chief of Chaplains is to hold the temporary rank and to receive the pay and allowances of brigadier general.

Act of December 23, 1941 (55 Stat. 856, c. 621). Funds for emergency supplies for Territories and possessions to remain available.

Act of June 5, 1942 (56 Stat. 323, § 4; Public Law 586). Authority of Secretary of the Interior to lease or sell public lands for use in connection with manufacture of arms, etc.

Act of June 27, 1942 (56 Stat. 461–462, c. 455; Public Law 635). Free importation privilege for members of armed forces of United Nations, etc.

Act of September 29, 1942 (56 Stat. 760–761; Public Law 718). Authority of the War Department to move merchandise from transportation and storage facilities to other facilities when needed for military purposes.

Act of July 9, 1943 (57 Stat. 390, c. 209; Public Law 124). Period during which suspended newspapers or periodicals may resume publication without payment of second-class application fees.

PROVISIONS IN FORCE UNTIL 1 YEAR AFTER TERMINATION OF UNLIMITED EMERGENCY PROCLAIMED ON MAY 27, 1941

Act of July 30, 1941 (55 Stat. 612, c. 333; Public Law 197). Operation or maintenance of petroleum pipe lines constructed under authority of § 4 of act of July 30, 1941.

Act of July 13, 1943 (57 Stat. 560, 562, c. 236; Public Law 146, § 2, § 7). Availability of funds apportioned to States prior to January 1, 1942, for roads, etc., for obligations by the States; funds apportioned to States for emergency relief when roads damaged by floods, etc. (amending § 5 of Defense Highway Act of November 19, 1941 (55 Stat. 666, c. 474, § 5)).

PROVISIONS TO REMAIN IN FORCE UNTIL THE CESSATION OF HOSTILITIES

Selective Training and Service Act of September 16, 1940 (54 Stat. 897, c. 720, § 16 (b)), amended by act of May 9, 1945 (59 Stat. 166, c. 112, § 1; Public Law 54). Provisions of this act, except § 3 (c), 3 (d), 8 (g), and 12 are extended.

Act of July 11, 1941 (55 Stat. 583, c. 287), extended by act of May 15, 1945 (59 Stat. 168, c. 126; Public Law 58). Prohibition against prostitution, etc., within designated distances from military or naval camps, etc.

Act of April 28, 1942 (56 Stat. 246, § 403 (h)), extended by act of June 30, 1945 (59 Stat. 294, c. 210, § 1; Public Law 104). Termination date under Renegotiation Act to be December 31, 1945, or date of termination of hostilities.

Act of March 23, 1943 (57 Stat. 42, c. 20; Public Law 14). Shipments of manufactured tobacco, cigars, cigarettes, etc., to a territory of the United States for use of our military or naval forces without payment of certain tax (amending I. R. C. 2135 (a, 1); 53 Stat. 234).

Act of June 15, 1943 (57 Stat. 153–165, c. 126; Public Law 74). Provisions for training nurses (grants to institutions for training, etc.).

Act of December 17, 1943 (57 Stat. 601, c. 345; Public Law 200). Suspension of application of R. S. 3114 and 3115 (duty on equipments, etc., for vessels) until cessation of hostilities or December 17, 1945, whichever is earlier.

Revenue Act of February 25, 1944 (58 Stat. 44–46, c. 63, § 124, 93, § 802; Public Law 235). Termination of percentage depletion for certain minerals (amending § 114 (b, 4) and § 114 (b, 2) of Internal Revenue Code, 56 Stat. 840–841); time limit for making of war contracts to which repricing provisions are to apply (tax-year beginning on or after date of termination of hostilities).

Act of February 25, 1944 (58 Stat. 93, c. 62, § 802 (b)), amended by act of June 30, 1945 (59 Stat. 295, c. 210, § 2; Public Law 104). Time limit for repricing of war contracts to be December 31, 1945, or until termination of hostilities.

Act of September 27, 1944 (58 Stat. 745–746, c. 416; Public Law 429). Authority of the Secretary of the Interior to dispose of certain materials on public lands.

Act of June 30, 1945 (59 Stat. 289, c. 212; Public Law 106, § 302). Requirement that President declare holiday not a workday in Federal service, as a prerequisite to receipt of time-and-one-half pay for holiday duty by Federal employees.

Same (§ 607 (f)). Exemption of certain employees of War and Navy Departments and the War Shipping Administration from certain restriction on number of employees.

PROVISION TO REMAIN IN FORCE UNTIL 30 DAYS AFTER CESSATION OF HOSTILITIES WITH JAPAN

Act of July 6, 1945 (59 Stat. 459, c. 274; Public Law 134, § 20). Compensatory time, etc., for Saturday service, for certain postmasters, postal service employees, etc.

PROVISIONS IN FORCE UNTIL 60 DAYS AFTER CESSATION OF HOSTILITIES

Acts of July 12, 1943 (57 Stat. 520, c. 221, § 803; Public Law 135), June 23, 1944 (58 Stat. 572, c. 302, § 803; Public Law 373), and July 3, 1945 (59 Stat. 383, c. 263, § 803; Public Law 124). Obligation of appropriations for training of defense workers in Labor-Security Appropriation Acts.

Acts of June 27, 1944 (58 Stat. 362, 364, c. 286; Public Law 358), and May 3, 1945 (59 Stat. 107, 109, 110, 112, c. 106; Public Law 49). Availability of certain appropriations for national defense activities.

PROVISIONS IN FORCE UNTIL JUNE 30 OR JULY 1 AFTER CESSATION OF HOSTILITIES

Act of May 7, 1942 (56 Stat. 271, c. 294), extended by act of May 3, 1943 (57 Stat. 74, c. 91; Public Law 47). Suspension of requirement under R. S. 2324 that $100 worth of labor be performed, etc., on each mining claim.

PROVISIONS IN FORCE UNTIL 3 MONTHS AFTER TERMINATION OF HOSTILITIES

Act of March 23, 1943 (57 Stat. 41–42, c. 17; Public Law 13). Time limit for renewal of expiring 5-year-level-premium term policies for persons in active military or naval service outside continental United States, by beneficiary or agent or automatically (amendment to § 301 of World War Veterans Act as amended, 47 Stat. 334).

Act of July 3, 1945 (59 Stat. 381, c. 263; Public Law 124). Provision that Employment Service facilities are to be returned to the States within 3 months after termination of hostilities in war with Japan.

PROVISIONS IN FORCE UNTIL 6 MONTHS AFTER TERMINATION OF HOSTILITIES

Act of December 5, 1942 (56 Stat. 1041, c. 680; Public Law 790). Provision for free entry of bona fide gifts from members of armed forces of the United States on duty abroad.

Act of April 13, 1943 (57 Stat. 65, c. 62; Public Law 37). Provision that subscriptions to certain United States securities be excluded from bank deposits for certain purposes (adding proviso to Federal Reserve Act 12B (h) paragraph 1, 2d sentence and to last sentence of § 19).

Act of May 29, 1943 (57 Stat. 92, c. 107; Public Law 62). Deferment or waiver of payments under Alaska public land leases.

War Labor Disputes Act of June 25, 1943 (57 Stat. 163–168, c. 144; Public Law 89). Authority of the President to operate plants, mines, etc., taken over under this act; extension of powers of National War Labor Board, etc. (adding § 9 to Selective Service Act, etc.).

Act of July 9, 1943 (57 Stat. 391, c. 212; Public Law 127). Penalty for violation of certain regulations or orders promulgated by the Secretary of the Navy for protection of vessels, water-front facilities, etc.

Act of July 12, 1943 (57 Stat. 520, c. 223 § 1; Public Law 137). Time limit for leases of silver held or owned by the United States.

Act of July 16, 1943 (57 Stat. 567–568, c. 242; Public Law 172 § 5). Time limit for use of certain funds for water-conservation and utilization projects under certain conditions; employment of prisoners of war, etc. (adding § 4 (d) to act of August 11, 1939 (53 Stat. 1418; 54 Stat. 1122).

Act of December 20, 1943 (57 Stat. 605, c. 371; Public Law 268), extended by act of June 7, 1945 (59 Stat. 233, c. 176; Public Law 77). Time limit for prosecutions in connection with the Pearl Harbor catastrophe.

Act of February 29, 1944 (58 Stat. 107, c. 72; Public Law 241). Existence of office of additional Assistant Secretary of the Interior.

Act of June 22, 1944 (58 Stat. 324, c. 271; Public Law 349). Suspension of certain requirements relating to work on tunnel sites under R. S. 2323.

Act of August 21, 1944 (58 Stat. 728, c. 404 § 2 ("§ 25"); Public Law 418). Time limit for sections 22 and 23 (and indirectly § 24) of the Hatch Act to prevent pernicious political activities.

Act of December 15, 1944 (58 Stat. 806–807, c. 589; Public Law 486). Authorized use of District of Columbia motor vehicle operator's permit which may have expired, by members of the armed forces, etc. (adding § 7 (a) to act of March 3, 1925 (43 Stat. 1121)).

Act of December 22, 1944 (58 Stat. 913, c. 675; Public Law 542). Authority of the committee, composed of the Postmaster General and the Director of Censorship, to dispose of certain condemned mail matter.

PROVISIONS TO REMAIN IN FORCE UNTIL THE FIRST DAY OF FIRST MONTH AFTER SIX MONTHS AFTER TERMINATION OF HOSTILITIES

Revenue Act of February 25, 1944 (58 Stat. 61–63, c. 63 § 302, 64 § 304, 66 § 307 (b, 5; c), 68 § 309 (b), 69–70 § 401–403, 405, 409–410; Public Law 235). Time limit for war taxes and war tax rates; suspension of manufacturers' excise tax on luggage; tax exemption of certain War Shipping Administration transportation; power of the Secretary of the Treasury to authorize certain tax exemptions; drawback on distilled spirits used in manufacture of certain nonbeverage products; increase in postal rates, fees and charges.

Act of September 17, 1944 (58 Stat. 733, c. 411 § 5; Public Law 424). Provision for increased rates for registered mail receipts. (Amending § 407 of Revenue Act of February 25, 1944, 58 Stat. 70).

PROVISION TO REMAIN IN FORCE UNTIL JUNE 30TH NEXT FOLLOWING THE FIRST DAY OF FIRST MONTH AFTER SIX MONTHS AFTER TERMINATION OF HOSTILITIES

Revenue Act of February 25, 1944 (58 Stat. 63, c. 63 § 302 (b, 2); Public Law 235). Increase in billiard and pool tables and bowling alleys tax.

PROVISION TO REMAIN IN FORCE UNTIL 7TH MONTH AFTER TERMINATION OF HOSTILITIES

Acts of April 29, 1943 (57 Stat. 72, c. 82; Public Law 45 § 5 (f) and February 14, 1944 (58 Stat. 15, c. 16 § 5 (f); Public Law 229), amended by act of April 25, 1945 (59 Stat. 80, c. 95; Public Law 40). Exclusion of income from agricultural labor, and nursing, in considering State payments of old-age assistance.

PROVISIONS LIMITED TO ONE YEAR AFTER CESSATION OF HOSTILITIES

Act of February 26, 1944 (58 Stat. 104, c. 65, § 19; Public Law 237). Provisions of act implementing the Provisional Fur Seal Agreement of 1942.

Act of February 13, 1945 (59 Stat. 3–4, c. 1; Public Law 1). Total personnel of the Naval Reserve Officers' Training Corps is limited to 24,000 until one year after (amending § 22 (a) of act of March 4, 1925, 43 Stat. 1276).

PROVISIONS LIMITED TO TWO YEARS AFTER CESSATION OF HOSTILITIES

Act of December 8, 1944 (58 Stat. 798, c. 547; Public Law 472). Authorization for two additional Assistant Secretaries of State.

PROVISIONS LIMITED TO TWO YEARS AFTER JANUARY 1ST AFTER TERMINATION OF HOSTILITIES

Act of February 16, 1938 (52 Stat. 67, c. 381 (c)), amended by act of April 12, 1945 (59 Stat. 50, c. 54, § 2; Public Law 30). Suspension of provisions of § 381 (c) of A. A. A. of 1938, restricting sale of cotton by C. C. C.; restrictions on sales of farm commodities below parity, by C. C. C.

Act of July 1, 1941 (55 Stat. 498, § 4 (a)), amended by act of October 2, 1942 (56 Stat. 768, c. 578, § 9). Authority of the Secretary of Agriculture to use certain funds so as to support a price for producers of certain agricultural commodities, at not less than 90% of parity.

Act of October 2, 1942 (56 Stat. 767–768, c. 578, § 8). Authority for loans on certain agricultural commodities by Commodity Credit Corporation.

PROVISIONS TO REMAIN IN FORCE UNTIL 3 YEARS AFTER THE TERMINATION OF HOSTILITIES

Act of August 24, 1942 (56 Stat. 747–748, c. 555), extended by act of October 3, 1944 (58 Stat. 781, c. 479, § 28; Public Law 457). Suspension of the running of statutes of limitation applicable to certain offenses.

Surplus Property Act of October 3, 1944 (58 Stat. 784, c. 479, § 38; Public Law 457). Time limit for provisions of Surplus War Property Disposal Act.

TIME LIMIT OF 5 YEARS AFTER TERMINATION OF HOSTILITIES

Contract Settlement Act of July 1, 1944 (58 Stat. 667, c. 358, § 19 (a); Public Law 395). Time limit for prohibition against destruction of certain records concerning war contracts.

TIME LIMIT OF DECEMBER 31 OF FIFTH FULL YEAR AFTER CESSATION OF HOSTILITIES (OR DECEMBER 31, 1950)

Act of August 4, 1939 (53 Stat. 1198, c. 418, § 17), extended by act of April 24, 1945 (59 Stat. 76, c. 94, § 3; Public Law 39). Extension of time for payment of reclamation charges by certain water users.

PROVISIONS LIMITED TO THE PRESENT WAR

Act of June 11, 1940 (54 Stat. 275, c. 313). Active-duty pay for retired naval officers only during war or national emergency.

Act of July 1, 1940 (54 Stat. 710–711, c. 501), amended by act of August 21, 1941 (55 Stat. 657, c. 391), and extended by act of June 16, 1942 (56 Stat. 370, c. 415; Public Law 609). Authority of the Commissioner of Patents to order that certain inventions be kept secret, etc.

Act of December 17, 1941 (55 Stat. 808, c. 588), extended by act of June 13, 1945 (59 Stat. 259, c. 190; Public Law 86). Prohibition against employment of radio operators aboard any vessel if the Secretary of the Navy has disapproved such employment.

First War Powers Act of December 18, 1941 (55 Stat. 840, § 303). Authority of the President to have communications between United States and foreign countries censored.

Act of February 16, 1942 (56 Stat. 94, c. 77; Public Law 455). Authorization for temporary promotions of officers assigned to duty with the Air Corps and of officers commissioned in the Air Corps.

Act of March 27, 1942 (56 Stat. 182, § 1001 "§ 702"). Provision for naturalization of persons entitled to naturalization under § 701 of Nationality Code and serving in military or naval forces, without appearing in naturalization court (adding sections 701–705 to Nationality Code).

Second War Powers Act of March 27, 1942 (56 Stat. 185–186, c. 199, §§ 1301–1304). Authority of governmental officer or agency, designated by the President or the Chairman of the War Production Board, to inspect and audit books of war contractors (amending § 10 (e) of act of July 2, 1926 (44 Stat. 787).

Act of April 11, 1942 (56 Stat. 217, c. 241; Public Law 524). Decorations authorized for outstanding conduct or service by persons serving in the American merchant marine during the war.

Act of June 25, 1942 (56 Stat. 390–391, c. 447; Public Law 627). Prohibition against photographing, etc., of military or naval reservations, naval vessels, etc., without authority.

Act of June 27, 1942 (56 Stat. 461, c. 453; Public Law 633). Free importation of personal and household effects of person in service of United States, or his family and persons evacuated under Government orders, until proclamation of peace.

Act of October 1, 1942 (56 Stat. 763, c. 573; Public Law 724). Authority of the President to reduce course of instruction at United States Military Academy to 3 years.

Act of October 21, 1942 (56 Stat. 814, c. 619, § 119; Public Law 753). Involuntary liquidation and replacement of inventories

authorized for taxable years prior to termination of present war, under I. R. C. 22 (d, 6, A).

Same (p. 852, § 156). War losses limited to those "in the course of military or naval operations by the United States or any other country engaged in the present war," under I. R. C. § 127.

Act of October 29, 1942 (56 Stat. 1012, c. 632; Public Law 766). Provision for scholarships for meteorological students, under Secretary of Commerce.

Act of December 1, 1942 (56 Stat. 1024–1025, c. 651; Public Law 779). Authority of the Secretary of War, of Navy, and Chairman of Maritime Commission to provide transportation to persons employed in plants engaged in manufacture of war material, etc.

Act of December 2, 1942 (56 Stat. 1028–1036, c. 668). Provision for benefits for injury, disability, death, or detention of employees of contractors, etc., injured as a result of war-risk hazard arising prior to end of present war (p. 1033, § 201 (b)).

Act of December 17, 1942 (56 Stat. 1053–1054, c. 739; Public Law 808). Authority of the Secretary of the Navy, when it is impossible to make contracts, etc., for items for prosecution of the war, to provide facilities and provide for their operation, etc.

Act of February 19, 1943 (57 Stat. 4, c. 1, § 4; Public Law 1). Authority for lease of ships, boats, barges or floating drydocks of the Navy in accordance with Lease-Lend Act of March 11, 1941 (55 Stat. 31).

Current Tax Payment Act of June 9, 1943 (57 Stat. 149–150, c. 120, §§ 7, 8; Public Law 68). Provisions for $1,500 additional allowance for military or naval personnel under income tax and abatement of tax for members of armed forces upon death (amending I. R. C. 22 (b. 13), 56 Stat. 814, § 117, and adding I. R. C. § 421).

Act of June 19, 1943 (57 Stat. 159, c. 132; Public Law 80). Provisions for participation by United States in Emergency Advisory Committee for Political Defense and authorization of appropriation therefore (for the period of the war emergency or so long as the American Republics may deem the continuation of its activities to be essential to the welfare of the hemisphere).

Act of July 13, 1943 (57 Stat. 561, c. 236; Public Law 146, sec. 6). Reimbursement of States for rehabilitation of roads damaged by the military forces, etc., in connection with the war and national defense (amending § 10 of Defense Highway Act of 1941 (55 Stat. 768).

Act of November 22, 1943 (57 Stat. 590, c. 301; Public Law 187). Authority of the Administrator of the Veterans' Affairs to issue flag used at funeral of person who dies in military or naval service, to nearest relative, etc.

Act of June 22, 1944 (58 Stat. 310, c. 269; Public Law 347). Employment of Naval Procurement Fund.

Public Health Service Act of July 1, 1944 (58 Stat. 712, c. 373, § 604; Public Law 410). Appropriations are authorized for certain emergency health and sanitation activities during the present war and any period of demobilization after the war.

Surplus Property Act of October 3, 1944 (58 Stat. 768, c. 479, § 6; Public Law 457). Until peace is declared the needs of the armed forces are declared to be paramount.

Act of December 22, 1944 (58 Stat. 886, c. 661; Public Law 530). Temporary rank of rear admiral for officer designated as Chief of Chaplains in Chaplain Corps of the Navy.

Until after termination of war (Time to be determined by Administrative Committee of the Federal Register.) Act of December 10, 1942 (56 Stat. 1045, c. 717). Suspension of certain requirements concerning the Code of Federal Regulations. (Amending § (a) of the Federal Register Act, as amended, 50 Stat. 304.)

PROVISIONS IN FORCE UNTIL JUNE 30 OR JULY 1 AFTER TERMINATION OF WAR

Act of June 30, 1942 (56 Stat. 463–465, c. 462, § 1–3, 5–6, 8–9; Public Law 639. Suspension of certain provisions of law relating to officer personnel of the Navy and Marine Corps; increase in number of rear admirals; modification of age limit for staff corps officers; provisions for retirement in temporary rank, etc.

Act of October 16, 1942 (56 Stat. 795, c. 613; Public Law 748). Suspension of restrictions on detail of Marine Corps officers to headquarters (under second proviso of act of May 24, 1934 (48 Stat. 812), as amended by § 1 of act of May 1, 1936 (49 Stat. 1249).

Act of October 29, 1942 (56 Stat. 1012, c. 632; Public Law 766). Time limit for contracts for instruction of meteorological students in weather forecasting.

Act of December 18, 1942 (56 Stat. 1057-1058, c. 765; Public Law 813). Postponement of prohibition against payment of deposits, and interest thereon of enlisted men, until final discharge under R. S. 1305 and 1306).

Act of July 1, 1944 (58 Stat. 713, c. 373, § 605 (c); Public Law 410). Time limit for presentation of written claims under § 18 of the Employees' Compensation Act of September 7, 1916, for injury or death of Public Health Service commissioned officer occurring between November 10, 1943, and termination of present war.

Act of December 23, 1944 (58 Stat. 926, c. 726; Public Law 564). Civil Service Commission's authority to omit or defer required five-year valuation of the civil-service retirement and disability fund (adding provision to § 16 of Retirement Act of May 29, 1930 (46 Stat. 478).

Act of July 31, 1945 (59 Stat. 411, c. 338; Public Law 170). Time limit for presentation or claims of Philippine inhabitants arising out of accidents, etc., occurring in time of war, to be 1 year after peace is established.

PROVISION TO REMAIN IN FORCE UNTIL JUNE 30 AFTER 1 YEAR AFTER THE WAR

Act of June 30, 1942 (56 Stat. 463-465, c. 462; Public Law 639). Suspension of certain provisions of law and modification of other provisions concerning Naval and Marine Corps officers.

PROVISION TO REMAIN IN FORCE UNTIL SIX MONTHS AFTER JUNE 30 AFTER FISCAL YEAR FOLLOWING THAT IN WHICH PRESENT WAR ENDS

Act of July 24, 1941 (55 Stat. 605, § 10), as amended by act of June 30, 1942 (56 Stat. 465, § 7). Continuance of temporary status of personnel appointed or advanced under authority of act of July 24, 1941.

PROVISIONS LIMITED TO 2 YEARS AFTER THE TERMINATION OF THE WAR

Act of May 10, 1943 (57 Stat. 81, c. 96; Public Law 52). Authority for awarding of insignia, medal, or device to merchant sailors in recognition of their services.

Act of April 24, 1944 (58 Stat. 216, c. 178; Public Law 295). Authorized suspension of operation of statute of limitation under insurance agreements (adding provision to § 226 (a) of Merchant Marine Act of 1936 (54 Stat. 691), as amended by 56 Stat. 216).

Act of June 22, 1944 (58 Stat. 291, c. 268, § 500 (a); Public Law 346). Time limit for loans to veterans (2 years after war or 2 years after separation from service, but not more than 5 years after war).

PROVISIONS IN FORCE FOR THREE POSTWAR YEARS (BEGINNING WITH FISCAL YEAR ENDING JUNE 30 FOLLOWING TERMINATION OF EXISTING WAR EMERGENCY)

Act of December 20, 1944 (58 Stat. 839, § 2; Public Law 521). $500,000,000 annual appropriation authorized for postwar construction of roads.

PROVISIONS LIMITED TO 5 YEARS AFTER TERMINATION OF THE WAR

Act of June 22, 1944 (58 Stat. 291, c. 268, § 500 (a); Public Law 346). Time limit for loans to veterans to be 2 years after war or after separation from service, but not later than 5 years after termination of the war.

Veterans' Preference Act of June 27, 1944 (58 Stat. 388, c. 287, § 3; Public Law 359). Federal examinations for positions of guards, elevator operators, messengers, and custodians are restricted to veterans until 5 years after the war.

PROVISION LIMITED TO 6 YEARS AFTER TERMINATION OF PRESENT WAR

Act of March 24, 1943 (57 Stat. 43, c. 22, § 2; Public Law 16). Vocational training for disabled veterans (adding pt. VII to Veterans Regulation No. 1 (a)).

PROVISION LIMITED TO 6 MONTHS AFTER TERMINATION OF AUTHORITY CONFERRED BY SECTION 2 OF THE SERVICE EXTENSION ACT OF 1941 (56 STAT. 626)

Act of August 27, 1940 (54 Stat. 858, c. 689, § 1; Public Res. No. 96), extended by act of August 18, 1941 (55 Stat. 628, § 11). Authority of the President to order reserve components of the Army of the United States and retired personnel of the Regular Army to active service.

Mr. Speaker, I am introducing today a concurrent resolution declaring the end of the limited national emergency and the unlimited national emergency, and the termination of hostilities.

Certainly there are some temporary measures that will be required during the reconversion period, but Congress ought to have the courage to deal with them as reconversion measures and authorize them as such after consideration and debate.

Let us stop using the emergency as a catch-all to carry forward the multitude of Government controls that were adopted during the war.

## Point System Does Not Do Justice

EXTENSION OF REMARKS
OF
### HON. DANIEL K. HOCH
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. HOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely letter from a soldier. I feel that this complaint is justified. Unfortunately the point system does not do justice to many of our boys who have rendered extended service.

OCTOBER 16, 1945.

SIR: I am a citizen of Berks County, having resided in the city of Reading, Pa., all my life. For the past 3 years and 4 months I have been serving in the United States Army. I am married but have no children.

The subject on which I wish to bring to your attention is the discharging of Army personnel. Coming to the point right away, I would like to know why men who have served two or more years in the Army and who have never been overseas, are being discharged for the simple reason that they are 35 years or older.

There is a grave injustice being done to the men who were on the fighting fronts. My case is an example. I have spent 11 month overseas, and I have earned three campaign stars. Of the 11 months overseas, I spent 5 months of torture and starvation in a German prison camp. After liberation I lay 5 weeks in a hospital in France suffering with malnutrition, and infected sores all over myself. I then was shipped back to this country, given a convalescent furlough and then sent to this camp where I am at the present. I find that I have but 48 points toward my discharge which is a long way from the required amount.

There is my case sir, one among many. We are here in this camp doing practically nothing, watching the 35-year olds, of whom, 9 out of every 10, have never even been out of this country. Serving faithfully, yes. But nice and safe over here, where the artillery shells did not come screaming at you at rate of more than three a minute.

It is of my opinion that you, as our Congressman from Berks County, can bring forth some of the real facts about this slap in the face given us. As things stand now, we are doomed to wait till March 20, 1946, before even being eligible for discharge. General Marshall's own statement says that on March 20 all men with two or more years service will become eligible for discharge, and that they will be discharged on the first in, first out basis. Is not any thought at all given to men who were on the fighting fronts, and to those who were prevented from

earning more laurels by being captured and then suffering terribly in German prison camps? Point scores are ignored if you are 35 years old. Why? If the war were still on with Japan, I would say, discharge the 35-year olds. But, I cannot see where they rate a discharge ahead of men who saw action overseas, and, who happened to be captured, therefore preventing them from earning more points. My case is one of many, sir. I want to go home to my wife. I feel that I have done my duty to my country, and it is really a morale shaker to see men being discharged who have been nice and safe throughout the war, before us men who have suffered the tortures and hardships of war and prison camps.

My opinion is, that you, sir, could bring forth these facts to your fellow Congressmen, which could influence the United States Army into remedying this injustice being done to veterans of the fighting fronts, who are just unlucky enough to not have the necessary points for regular discharge.

Hoping that this statement of true facts will have some bearing on future demobilization.

I remain, your truly.

## World-wide Bible Reading Program

EXTENSION OF REMARKS
OF

### HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I am inserting excerpts of my radio broadcast over Station WHP at Harrisburg, Pa., on October 14, 1945:

Tomorrow marks the start of National Bible Week, during which activities, designed to encourage the reading of the Bible, will be conducted by the churches and Sunday schools, and religious organizations of the Nation. The Bible reading program will culminate this year in a Bible reading schedule running 34 days between Thanksgiving and Christmas. For each day of the 34 days a chapter or a passage in the Bible has been named. These were born through a world-wide canvass among service men and women.

This idea of encouraging wider reading of the Bible had its inception 2 years ago in a letter from a soldier to his mother asking that she read a chapter from the New Testament every day, while he did likewise. In this way he felt that somehow they would be united.

Early in this present Congress I introduced a bill giving national sanction to this program. So did Congressman JERRY VOORHIS. There is nothing compulsory about our proposals, but it would have national sanction to something we feel would be fine and of great spiritual benefit to the Nation.

EMPLOYMENT OF PHYSICALLY HANDICAPPED

This also marks the end of the National Employ the Physically Handicapped Week. It would have been almost impossible a few years ago for those interesting people to get Government jobs. Personnel directors wouldn't have hired them for fear they would be a burden to the offices. But during the war Dr. Verne Harvey, Medical Director of the Civil Service Commission, made a study of 3,500 Federal jobs, and he discovered that most physically disabled people can meet the minimum physical requirements. He also found that the production efficiency of disabled persons was about equal to that of able-bodied workers; and, furthermore, that there was little turn-over problem among the handicapped. The war and the manpower shortage was made for the situation, and since April 1943, when the handicapped placement unit was created, more than 58,000 disabled persons have been place in Government work.

I wish I could tell you some of the success stories of physically handicapped persons that have been brought to my attention recently. They are indeed inspiring. I feel strongly that anyone who does employ physically handicapped persons in jobs for which they are fitted is doing a service for himself as well as for the person he is seeking to help.

IMMIGRATION OF INDIANS TO THIS COUNTRY—CHINESE EXCLUSION ACT

On Wednesday the House passed a bill authorizing the admission into the United States of persons of races indigenous to India and to make them racially eligible for naturalization. Under existing law the quota for Indians is 100 per annum. This quota is not increased by this bill, which merely permits natives of India of the Indian race to enter the United States within this quota limitation. Consequently, under the proposed legislation, not more than 100 Eastern Hemisphere Indians could enter the United States annually as quota immigrants. Under the Alien Registration Act of 1940, there were 3,896 aliens born in India who resided in the United States. They would become eligible for naturalization. This does for the Indians exactly what the repeal of the Chinese exclusion laws of December 19, 1943, did for the Chinese. If finally enacted, it will place the Indians on an equal footing with every other nation in regard to immigration into this country. But they will be subject to the existing quotas which are established long ago on a certain base period. Since there are so few Chinese and Indians in this country, the law does not open the gates to any flood of immigration from outside. So few Indians and Chinese are in this country now that there is only around 100 for each race.

I favored the repeal of the Chinese Exclusion Act and also strongly favor this one. This Nation has always stood for the principle of equal opportunity regardless of race, creed, or color. Therefore, it is clearly against such a principle to exclude the nationals of certain areas for the sole and specific reason of race. This is particularly true where the inflow is so small that no economic or social questions are created. Secondly, this is sound from the standpoint of economics and national welfare because both India and China are huge potential markets for the United States. Although only 100 Indians can enter each year under this law, yet India has a population of approximately 390,000,000 people. Even a minute per capita increase in the standard of living in India would vastly increase our markets there. The same is true for China. Thirdly, there is international good will. By placing in our statutes a stigma on the Asiatic peoples we can scarcely expect anything save ill will and distrust, not to say hatred, in return. By correcting this error we can secure more readily their trust and good will. The bill removes a legislative insult to a people and a race.

ATOMIC BOMB

The atomic bomb is such a mysterious and awe-inspiring invention that I hesitate to discuss it at length. Here are a few observations. They are based on the unanimous opinion of the experts. I have no scientific background qualifying me to give you my opinion but where the scientists do agree it seems reasonable to accept their findings. First, it cannot be kept secret nor can the secret be destroyed. The principles are known and it is just a question of time until other nations discover the technique. Second, our plants and our equipment for its creation are so far superior to any existing elsewhere that we have a head start of probably 3 years over any other country in the world. Third, new devices, either defenses against these bombs or new, cheaper, and easier ways of unleashing atomic force, may be developed at any time in any country.

With these three facts as a basis, and reserving the right to change my present judgment in view of future developments, I feel we should retain the secret of the atomic bomb in our possession, at least and unless and until we can receive definite and unqualified assurances from the other nations of the world that it will be controlled and utilized to maintain peace and advance human living standards. These assurances must be far more than statements, promises, and signed agreements. They must embody solid guaranties. Meanwhile, we should continue to develop our research and knowledge along this line just as rapidly as we did during wartime. Only by so doing can we mafntain our position as the nation which actually has the power to use atomic energy as a means of self-protection and enforcing world peace.

The other evening, one of my friends in Congress, CHESTER MERROW, of New Hampshire, made a speech over the air to which I listened. He had compiled some facts—facts staggering the imagination—about the use of atomic energy. Here are a few of his illustrations which are almost unbelievable: 22 pounds of matter—any kind of matter whatever—would be sufficient to supply the requirements of all the electric power in the United States for a year. Let's go back to our school days. There are 16 ounces in a pound and 28 grams in an ounce. One-third of a gram of water can produce heat enough to turn 100,000 tons of water into steam. If the atomic energy of 1 gram of water were fully utilized it could raise a load of 1,000,000 tons to the top of a mountain 6 miles high. You have often bought a railway ticket. It is just a little piece of pasteboard. You and I have always thought of that as something entitling us to the privilege of a ride on a train between certain points. That is what it did and does mean. But it is something more. The information the scientists gave Mr. MERROW is this: If the atomic energy in that little bit of pasteboard in a railway ticket is released it could run a heavy passenger train around the world several times. Again, 1 pound of any substance has the power content of 3,000,000,000 pounds of coal or 1,500,000 tons. You know what the atomic bomb did to Hiroshima and Nagasaki. Yet the scientists say that the energy utilized in that atomic bomb is only one-tenth of 1 percent of the energy in the material.

We do not remain superior in the field of atomic energy because of the theoretical knowledge of the secret but because of our vast industrial power. We can only hold our superiority by the full utilization of our industrial resources and our scientific knowledge and the ability of our scientists and inventors. It would be foolhardy and ridiculous to give away this knowledge unless and until we can gain for certain our high purpose of creating an enduring peace with world-wide increased standards of living. If we should be so careless or negligent as to permit some other nation to win from us the power we wisely decided not to give, to outstrip us in the race for knowledge, then we would be in a far worse position than if we had made a full disclosure freely. Hence, I feel positive that no matter what decisions are made on other phases of this all-important question, we must continue full speed ahead at present, bending every effort to learn the secrets, and taking every precaution to see that our added knowledge is used for the benefit of mankind. There is the same urgency in progressing in atomic energy and research now as existed during the war. Whether you believe the secret should be retained as long as possible, or

whether you think it should be freely disclosed and shared, should unite in advocating its immediate development. Along this road lies our hope for security for ourselves and the attainment of peace for mankind.

## Funds for UNRRA

EXTENSION OF REMARKS
OF
### HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my remarks, I include herein an editorial from the October 23 issue of the Washington Post entitled "Funds for UNRRA":

FUNDS FOR UNRRA

There is occasion for concern over some of the amendments which have been proposed in connection with the $550,000,000 requested appropriation for the United Nations Relief and Rehabilitation Administration. This sum represents the balance pledged to the international organization when Congress authorized an American contribution of $1,350,000,000. It is needed now, urgently needed, for the purchase of foodstuffs and other supplies to be shipped into the liberated countries of Europe in which UNRRA is operating. UNRRA's activities were badly impeded in its early days by a scarcity of shipping and supplies. Now that shipping and supplies are relatively plentiful, it would be tragic if the organization were hampered by a lack of funds. The needs of Europe are immediate and brook no delay. If we are to help the helpless through the desperate winter ahead, there must be no break in the UNRRA pipeline.

Representative HERTER, of Massachusetts, after a 2-month tour of European countries served by UNRRA, brought back to the House last week a lucid and illuminating report on the operations of the agency. It was an extremely favorable report for the most part, and Mr. Herter was wholly sympathetic to UNRRA's aims. He observed, however, that "in some of the countries which I visited, bitter criticisms were voiced against the UNRRA operation, often by our own officials, because of the feeling that too little was known as to what became of UNRRA goods once they entered the country, and too little was known of the operations of the Government with respect to its own economic problems."

To correct these defects, Mr. HERTER has proposed that no part of the American contribution to UNRRA shall be used in any country unless it certifies, among other things, that press representatives "will be granted full liberty to observe and report upon the distribution and utilization of relief and rehabilitation supplies and services." There can be no doubt that UNRRA would be aided, and that American confidence in its activities would be enhanced, by unhampered reporting on the part of American correspondents. It is much less certain, however, that this freedom ought to be brought about in the manner suggested by Mr. HERTER. We should like very much, of course, to have American newspapermen unleashed in countries where their movements are now restricted; and we hope that the State Department will continue to press for this right. But we doubt the wisdom of obtaining it through the threat of withholding food from the hungry. Freedom for American press representatives is a political matter, however desirable; and the attachment of it as a condition upon an act of charity smacks of playing international politics with relief.

The conditions under which UNRRA aid is extended were agreed upon by the representatives of 44 nations, and, properly executed, they afford abundant assurance that relief will go to the genuinely needy. If the United States imposes special conditions for the use of its contribution, other nations may be strongly tempted to do likewise respecting the funds that they donate. The upshot may be to hamstring UNRRA completely. The absurd lengths to which the attachment of special conditions can go was illustrated by amendments proposed by Representative CLARENCE BROWN which would forbid the use of American funds in any country which interferes internally with freedom of the press or imposes any censorship upon information in time of peace. This would make impossible, for example, the provision of any relief for the Philippines because General MacArthur feels that press limitations are still necessary there. Perhaps we had better let UNRRA tend strictly to the administration of relief and leave it to the State Department to bring about the political conditions we desire.

## St. Lawrence Seaway

EXTENSION OF REMARKS
OF
### HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of Friday, October 19, 1945:

BACKBONE OF ANY PUBLIC PROGRAM SHOULD BE ST. LAWRENCE

The St. Lawrence seaway and power project should be the backbone of whatever public-works program the United States Congress considers necessary.

As Julius H. Barnes, of Duluth, president of the National St. Lawrence Association, recently said, the proposed waterway will "cement world peace through new opportunities for foreign trade."

It will do more. It will provide much additional and cheap power for New York State and parts of Canada. It will open the way between the great manufacturing and agricultural areas of the Middle West and the markets—for both exports and imports—of practically all areas of the world that do not use direct Pacific transit.

Additionally, the Great Lakes, with an adequate outlet to the Atlantic coast, could become an added facility for defense of this Nation and of Canada, in a world that is yet disturbed and in which universal peace is not yet assured.

Mr. Barnes believes that opposition is dwindling, support is growing, and that, with President Truman's recent insistence, the seaway at last will be gotten under way by the Congress.

If so, it indeed will, or should, become the major project of the national public works program. It is a big undertaking. It will provide jobs and opportunities for common and skilled laborers, planners, engineers, administrators, and others.

It will not be a mere regional project. If the harbors of the Great Lakes become world harbors, the movement of goods to them will provide new volumes of freight for the railroads, to offset possible losses when present long hauls to Atlantic tidewater are curtailed.

Congress indeed should see that the St. Lawrence project at last is under way. Its construction has become a "must."

## An Appraisal of the Washington State Congressional Delegation

EXTENSION OF REMARKS
OF
### HON. GEORGE E. OUTLAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. OUTLAND. Mr. Speaker, in the current issue of the Progressive, nationally known weekly magazine published at Madison, Wis., by the Progressive Publishing Co., of which Senator ROBERT M. LA FOLLETTE is president, there appears an article by the well-known writer, Richard L. Neuberger, entitled "My Congressional Pin-up." The article appraises the Washington State congressional delegation. Because I am very friendly with members of the Washington congressional delegation and entertain affection and admiration for all of them, and because the article contains facts and analyses of interest to my colleagues and to the country, I am asking unanimous consent to have the article reprinted in the CONGRESSIONAL RECORD.

Here it is:

MY CONGRESSIONAL PIN-UP

(By Richard L. Neuberger)

TACOMA, WASH.—Six years ago in The Progressive I nominated the delegation in the Senate and House from the State of Washington as the outstanding liberal delegation in the American Congress. This provoked considerable discussion. Partisans of other States nominated different delegations and a good time was had by all.

Now that I am back in civilian life after somewhat more than 3 years in the Army, I have been reading the CONGRESSIONAL RECORD again. I also have been following debates and votes and bills introduced. And I still come to the same conclusion of 6 years ago, viz, that the State of Washington has the most consistently liberal and progressive delegation on Capitol Hill.

By this I mean all-around delegation, considered from the senior Senator on through the most junior Congressman. I realize that certain States have notable individual liberals—Vermont with Senator GEORGE AIKEN, Wisconsin with Senator BOB LA FOLLETTE, Idaho with Senator GLEN TAYLOR, Montana with Senator JIM MURRAY and Representative MIKE MANSFIELD, California with Representatives JERRY VOORHIS and GEORGE OUTLAND, Oregon with Senator WAYNE MORSE, New York with Senator ROBERT F. WAGNER, West Virginia with Senator HARLEY KILGORE.

But these outstanding liberals are only individuals. They do not constitute an entire congressional delegation. And on the score of long-range consistency and dependability, I am certain that the Senate and House delegations of the State of Washington are the most reliable in Congress. Not only is this true of the present delegation, but it also has such notable recent graduates as former Senator Lewis Schwellenbach, now Secretary of Labor; former Senator Homer Bone, now a Federal circuit judge, and former Senator Mon Wallgren, now Governor of Washington.

As I did 6 years ago in the Progressive, let's look over the Washington delegation and see why it ranks as the No. 1 liberal outfit on Capitol Hill. It is not the same delegation that it was 6 years ago so far as personnel is concerned. Both Senators are new and so are 4 of the 6 Representatives. Yet it is almost as progressive as it was in 1939, despite this nearly complete overturn in individual Members. The State of Washington, out in the extreme northwestern corner of the Nation,

has the liberal voting habit ingrained pretty strongly at this moment.

Let's scan the roster, beginning with the Senators:

WARREN G. MAGNUSON, senior Senator from Washington, is the second youngest Member of the upper Chamber. This youthful outlook has been shown in his stand on many important issues. He sponsored repeal of the un-democratic Chinese exclusion laws, which kept our Chinese allies at complete arm's length. He has been one of the principal enemies of the aluminum monopoly wielded by the Aluminum Co. of America. Recently he took up the fight against the Army and Navy practice of granting terminal leave to officers but not to enlisted men.

When he was a Representative, MAGNUSON was one of the few defenders of the FCC, on the committee appointed to investigate that body. MAGNUSON also distinguished himself for his opposition to the witch-hunting methods of former Representative Martin Dies. Only 40 years old, MAGNUSON, or "MAGGIE," as he is called, is one of the most popular political figures in Washington history. When Representative LYNDON JOHNSON, of Texas, visited Seattle, he said he had never found a politician as well liked in his district as "MAGGIE" was.

HUGH B. MITCHELL, junior Senator from Washington, is the youngest Member of the United States Senate. He is only 38 years old. MITCHELL was appointed to the vacancy left when Senator Wallgren became Governor of Washington. He formerly had served as Wallgren's secretary. The appointment of a comparative political unknown originally antagonized Washington voters, but MITCHELL has proved a pleasant surprise. He started off by sponsoring a bill for a Columbia Valley Authority, and he soon will amend the bill to pattern it identically after the TVA.

As a member of the Mead War Investigating Committee, MITCHELL has fought to retain industry on the west coast, rather than allowing the Eastern monopolies to recover their former stranglehold. On Labor Day MITCHELL said that the workers of the Nation had a right to share in the exorbitant profits earned by management during the war. MITCHELL is a former newspaperman. He comes from Montana and he is a son of Harry B. Mitchell, president of the United States Civil Service Commission.

JOHN M. COFFEE, Representative from Tacoma, is the most consistently liberal Member of the House of Representatives. No crusade for the underprivileged takes place without his support. He is rapidly ascending to a position in the lower House comparable to that occupied in the upper Chamber by George Norris. COFFEE led the long fight to withdraw recognition from Franco Spain. He campaigned against shipments of scrap-iron to Imperial Japan. He exposed the commercial interests behind these policies.

He has been the principal congressional authority on Latin America and an invaluable exposer of corrupt and undemocratic governments south of the border. COFFEE has been vigilant in demonstrating the intrigue of the big oil companies in bolstering local tyrants in South America and the Middle East.

COFFEE is an outstanding champion of public ownership, a position he fills naturally, for his own city of Tacoma, with a municipal power plant, has the lowest light bills in the United States. When other Congressmen hesitate, COFFEE will wade into a touchy issue. His reputation for fearlessness has made him leader of the liberal congressional bloc. A graduate of Yale Law School, COFFEE will probably be either Governor or Senator some day. His secretary, Paul Olson, is also an outstanding liberal who has been active in the labor movement.

HENRY M. JACKSON, Representative from Everett, represents one of America's great lumber districts in the House. He is only 33 years old. The loggers and sawmill workers have found him an effective champion, despite his youthful years. He is also a conservationist who realizes that protection of our dwindling virgin timber is in the real interests of the lumber workers. Jackson supported the bill for the Olympic National Park, although sawmill owners tried to make the workers believe that this conservation measure would reduce employment opportunities.

As chairman of the Indian Affairs Committee, JACKSON has advocated increasing benefits and privileges for the minority from which this continent was wrested by the whites. JACKSON opposed the Dies committee methods and voted consistently against funds for these witch hunts. Along with MAGNUSON, JACKSON has been the principal congressional authority on Alaska. He now is seeking a development authority which will help, financially and otherwise, in the establishment of veterans on Alaskan land. When choice war jobs, such as OPA and WPB chairmanship went to power-trust people in the Northwest, JACKSON led the protests from the liberals. He is a bachelor and considered one of the Capital's most enticing matrimonial catches.

JACK recently led a heroic fight to prevent the national vast wartime merchant marine from being frittered away to shipping companies for scandalously low prices.

HUGH DE LACY, Representative from Seattle, is one of the most controversial figures in the House of Representatives. Some liberals criticize him for voting so closely with the leftist MARCANTONIO, of New York, on many major questions. But the fact remains that since his election in 1944 he has been one of the most militant fighters for progressive legislation. In addition, his scholarly and well-documented speeches have pleasantly surprised even his most bitter critics.

DE LACY has not hesitated to go beneath the surface of important issues. When the country was indignant over the fact that returning war heroes were being transported transcontinentally in dirty day coaches DE LACY showed that railroad presidents and lumber barons were using private cars. He told the House how the president of the Great Northern had gone to Glacier National Park in a private car, while the same line was hauling war heroes in coaches. Indignant railroad workers sent DE LACY sub rosa information to add to this exposé. DE LACY'S secretary, Richard Sellar, is nationally known for the fact that in 1936 he led the famous guild strike which closed the Hearst Post-Intelligencer in Seattle for nearly 100 days.

CHARLES R. SAVAGE, Representative from Shelton, has one of the most spectacular and unique labor backgrounds of any Member of either House. He has worked at nearly every job in the lumber industry, including that of high-climber. The high-climber is the man who scales the trunk of a 225-foot Douglas fir and saws off the needled top, while the tree sways like a flagpole in a storm. SAVAGE has been an officer of both A. F. of L. and CIO loggers' unions, and he has helped build many power dams.

SAVAGE, unlike some who rose from the ranks of labor, is true to this workman's background.

HAL HOLMES, Representative from Ellensburg, is one of the two Republicans in the Washington State congressional delegation. The men already mentioned are all Democrats. HOLMES, a former college professor, is also a livestock rancher. He is not as liberal as the Democrats but he has opposed Dies committee continuations, and he has stood up against local power companies in his district to favor Federal construction of transmission lines. Grand Coulee Dam, biggest power project on earth, is in HOLMES' constituency. The utilities would like to distribute this energy. HOLMES has insisted that the Government build transmission lines so that all the people can get the full benefit of the Coulee hydroelectric output.

WALT HORAN, Representative from Wenatchee, is the most conservative member of the Washington congressional delegation. He and HOLMES are the sole Republicans in the group. HORAN follows GOP policy, as set down by JOE MARTIN, on most issues. Yet he is not a reactionary and on questions of power he sometimes follows the lead of Rufus Woods, Republican editor of the Wenatchee Daily World, who is the principal newspaper advocate of a Columbia Basin Authority modeled directly on the TVA. HORAN had a distinguished record in World War I. He is a fruitgrower and packer, Wenatchee being the apple capital of the inland empire.

So there it is—Washington's delegation to Capitol Hill. In some respects the delegation is spotty. Not all the men are liberal on all questions. For that matter, who is? Perhaps there is no Senator George Norris or "Fighting Bob" La Follette in the group, although some day JOHN COFFEE may rank as one of the country's foremost progressives of the past decade. But by and large, considered as a unit, I would field this delegation against that from any other of the 48 States.

## Shotgun Shells

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA

*Wednesday, October 24, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, on October 12 the Department of Commerce made the following announcement:

Duck, pheasant, and other small-game hunters will have plenty of 12-gage shotgun shells on hand this fall for their favorite sport. Over 40,000,000 rounds of 12-gage shells, frozen for military use since the start of the war, will be sold this month to dealers throughout the 11 United States regional offices of the Office of Surplus Property.

The report further states that—

Supplies of shotgun shells for civilian use have been extremely short and the return of this ammunition to dealers' shelves in time for the hunting seasons will be welcomed by sportsmen the country over.

Mr. Speaker, the catch in this welcome news is that the majority of the shells are loaded with No. 8 birdshot and the balance with 00 buckshot. That definitely is not good news to the hunters for no hunter cares to use either of these loads for ducks, pheasants, or rabbits. Just why these shells should be loaded with that size shot could only be answered by the bureaucrats. The dealers buying this size shot will find that they will long remain upon their shelves.

## Michigan Democratic Congressmen Endorse Labor's Take-Home-Pay Program

EXTENSION OF REMARKS
OF
### HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, October 24, 1945*

Mr. LESINSKI. Mr. Speaker, yesterday afternoon the Democratic Members of the Michigan delegation held a caucus

and agreed upon a statement relative to the take-home pay of industrial workers. We are of the opinion that the take-home pay should and must be maintained, and under permission granted I insert at this point a statement released to the press:

TAKE-HOME PAY CAN BE MAINTAINED, SHOULD BE MAINTAINED, AND MUST BE MAINTAINED

We, your Congressmen, know that the take-home pay of industrial workers can, should, and must be maintained.

1. We know industrial workers' take-home pay can be maintained, because the Congress of the United States has made ample provision through generous tax rebates for the postwar of American industry. Wartime net profits of billions of dollars have provided industry with the means to maintain take-home pay necessary for a decent American standard of living.

2. We know that industrial workers' take-home pay should be maintained, because workers cannot support their families at a decent American standard of living with a large percent reduction in take-home pay, in view of the continued high cost of food, clothing, and shelter. We in Congress never again want to be called upon to appropriate funds for relief in this land of plenty.

We know that industrial workers' take-home pay must be maintained, because the welfare of every American in every walk of life, the merchant and professional man, the nurse and the beautician, the janitor and the taxi driver; yes, the welfare of every American depends on protecting the standard of living of the industrial worker.

JOHN LESINSKI,
*Sixteenth District, Chairman*
*Michigan Democratic Delegation.*
GEORGE D. O'BRIEN,
*Thirteenth District, Secretary.*
GEORGE G. SADOWSKI,
*First District.*
JOHN D. DINGELL,
*Fifteenth District.*
FRANK HOOK,
*Twelfth District.*
LOUIS C. RABAUT,
*Fourteenth District.*

## A Plug for H. R. 3939, To Establish Government Funds for Research To Ascertain the Cause and Cure of Dread Disease, From the Saturday Review

EXTENSION OF REMARKS
OF
### HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, October 24, 1945*

Mr. STEVENSON. Mr. Speaker, in accord with the purposes of H. R. 3939 the objective of which is to establish a permanent fund for use in finding the cause and cure of cancer and infantile paralysis, is the following paragraph taken from an editorial in the Saturday Review, titled "Modern Man Is Obsolete," by Norman Cousins:

What a fantastic irony that organized science knows the secret of the atom, but as yet knows not a fig about the common cold. Who can tell what advances in medical knowledge might accrue to the welfare of mankind if as much mobilized effort were put into the study of man as there has been of matter? Cancer, heart disease, nephritis, leukemia, encephalitis, poliomyelitis, arteriosclerosis, aplastic anemia—all these are anomalies in the modern world; there is no reason why mobilized research should not be directed at their causes and cure.

I am setting forth a letter received from Mr. Cousins relative to my bill H. R. 3939:

THE SATURDAY REVIEW OF LITERATURE,
*New York, N. Y.*

Representative WILLIAM H. STEVENSON,
*Washington, D. C.*

DEAR MR. STEVENSON: I congratulate you for your bill on cancer and polio research. I am completely in accord with what you say.

Sincerely,

NORMAN COUSINS.

## Air Policy Commission Would Be Valuable in Establishing Definite Pattern by Which To Proceed

EXTENSION OF REMARKS
OF
### HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. RANDOLPH. Mr. Speaker, there appears to be a considerable sentiment in Congress, and throughout the country, for a definite aviation policy for the United States. It was in the Seventy-eighth Congress that I first presented the House joint resolution to establish an Air Policy Commission. This measure was reintroduced on January 3, 1945, as House Joint Resolution 20. Its provisions are as follows:

Joint resolution on establishing an Air Policy Commission

*Resolved, etc.*, That the establishing of sound national policies on the problems created by and associated with present and future developments in military and civil aviation is essential both to the peace and security of the United States and to the achievement of full employment and improved standards of living.

SEC. 2. (a) There is hereby established an Air Policy Commission (hereinafter referred to as the "Commission") to make a full study and investigation of the problems created by and associated with present and future developments in military and civil aviation and to recommend basic national policies on (1) air power as an instrument of national defense and international security and (2) the expansion of civil aviation.

(b) No later than 6 months after the commencement of its operations, the Commission shall transmit its first recommendations to the President and to the Congress, together with such suggestions for legislation as it may deem necessary or desirable; and the Commission shall from time to time submit such additional recommendations as it may deem necessary or desirable, or as may be requested by the President or the appropriate committees of the Congress.

SEC. 3. The Commission shall be composed of the following members:

(1) Two Members of the Senate, one from the majority party and one from the minority party, to be selected by the President of the Senate; and two Members from the House of Representatives, one from the majority party and one from the minority party, to be selected by the Speaker of the House of Representatives.

(2) Four members of the executive branch of the Government, to be selected by the President, who have special competence with respect to the problems and policies referred to in section 2 of this joint resolution, and who shall serve in a personal capacity rather than as representatives of any department or agency.

(3) Six public members from industry, science, labor, and other sections of the national economy, not directly engaged in the aircraft manufacturing or air transport industries, to be selected by the President, who shall serve in a personal capacity rather than as representatives of any particular groups or interests.

(4) A chairman, to be selected by the President.

SEC. 4. For the purpose of this resolution, the Commission is authorized to hold such hearings, to sit and act at such times and places, to administer such oaths, and to take such testimony as it deems advisable.

SEC. 5. The Commission shall have the power to employ and fix the compensation of such officers, experts, and employees as it deems necessary for the performance of its duties. The heads of the executive agencies, upon the request of the Chairman, shall detail or engage personnel temporarily to assist the Commission. The Commission may utilize such voluntary and uncompensated services as it may deem necessary. The commission may utilize the services, information, and facilities of the departments and agencies of the Government.

SEC. 6. The Commission shall, by a majority vote of its members, determine its rules of procedure, and the powers conferred upon the Commission by this joint resolution may be exercised by a majority vote of all its mebers. Members of the Commission shall be reimbursed, from funds appropriated pursuant to section 7 of this act, for the actual and necessary expenses incurred by them in the performance of their duties as such members.

SEC. 7. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $100,000 to carry out the purposes of this joint resolution. The Commission may make such expenditures as it deems advisable within the limits herein authorized.

SEC. 8. The authority conferred by this joint resolution shall expire on December 31, 1946.

Editorial comment in recent days focuses attention on this important proposal. At this point I insert the following comment from the American Aviation of October 11, 1945:

There was a strong feeling in industry and Capitol Hill circles today that the Mead committee, which yesterday listened to testimony of east coast aircraft presidents, would recommend to the Senate passage of legislation which would create an investigating board to serve the function performed by the Morrow Board following World War I.

Senator HUGH B. MITCHELL, chairman of the Mead subcommittee, asked all of the witnesses their reactions to the creation of such a board, and in all cases the response was enthusiastically in support of such a move. His committee had received a similar response when west coast aircraft manufacturers were heard by the committee at Seattle last month.

The President's Aircraft Board (Morrow Board) was created September 12, 1925, after more than 20 committees had investigated the aircraft situation without bringing forth any constructive results. The Board had been appointed 1 week after September 5, 1925, when Billy Mitchell had charged the Army and Navy with "incompetence, criminal negligence, and almost treasonable" dereliction of their duties. While Mitchell later was court-martialed, the War and Navy Departments followed his charges with a recommendation to the President that a committee be appointed "for the purpose

of making a study of the best means of developing and applying aircraft in the national defense."

The President's Aircraft Board headed by Dwight Morrow, worked rapidly and by December of 1925 had recommended to Congress legislation which in May of 1926 resulted in the passage of the Air Corps Act, the Air Commerce Act and an Army and Navy aircraft development and production program.

Numerous congressional committees today have been floundering around with studies and investigations of this country's postwar Air Force needs and there were indications today that the War and Navy Department, following the precedent of 1925, might beat the Mead committee in recommending to the President the creation of a board to do the job that was done by the Morrow Board in 1925.

RESEARCH PROGRAM PARAMOUNT

There was some feeling in industry circles that if such a board is created, Army, Navy and the aircraft industry should be represented only in a technical advisory capacity to eliminate selfish interests from having a too important role in the policy recommendations.

In addition to those mentioned in yesterday's Daily, Alfred Marchev, president of Republic Aviation Corp., H. M. Horner, president of United Aircraft Corp., and Harry T. Rowland, vice president of Glenn L. Martin Co., appeared before the committee.

All of these witnesses agreed upon the need of a basic and applied research program which would keep this country in the forefront in aviation developments and sufficient Government contracts, which plus peacetime manufacturing, would enable this country to keep alive an industry which helped give the Allied Nations complete supremacy in the air in this war and which would be ready, on the basis of quick expansion, to meet the possible threats of aggression in the future.

Charles T. Lucey, Scripps-Howard staff writer, gives the following interesting story as it appeared in the Washington Daily News of October 19, 1945:

Creation of a special commission of men of outstanding ability to study and recommend a national aviation policy will be proposed in the Senate soon. It may get the support of the Mead War Investigating Committee.

Senator MITCHELL, Democrat, of Washington, chairman of a subcommittee of the Mead committee which has been studying various phrases of peacetime air policy, announced today he would introduce a resolution for an independent civilian study.

The investigation probably would be modeled somewhat on the 1925 study made by the Board headed by the late Dwight W. Morrow. At a time when there was widespread disagreement over United States air policy, the Morrow Board produced a report which helped chart a course in both military and civilian aviation.

Senator FERGUSON, Republican, of Michigan, is among the supporters of the idea who believe that a civilian board's investigation would have advantages.

ATOM CONSIDERED

The proposed study, as envisioned by some, would take into account the change in warfare brought about by the atomic bomb and guided missiles.

Such figures as Bernard M. Baruch, Herbert Hoover, Karl Compton, president of Massachusetts Institute of Technology, Admiral William D. Leahy, and Gov. Earl Warren, of California already are being suggested for the board.

The aviation industry as such has expressed no view, but numerous individual company presidents, questioned by the Mead committee, have favored such a study. There has been some feeling in the industry that the greatest need of the moment is to adjust research and production programs to it.

WHERE ARE WE GOING?

"No one seems to have any very conclusive approach to the whole aviation picture," said Senator MITCHELL. "The Navy requested $156,000,000 for aviation developmental work, but this was cut to $61,000,000 in the Budget Bureau. This shows there is no agreement on policy."

The Morrow Board grew out of charges by the late Gen. Billy Mitchell that the Army and Navy were neglecting aviation. It was appointed by President Coolidge, and after a 3-month study it brought forward a 5-year procurement program for military aviation, and recommendations in civilian air development which helped mold the first Air Commerce Act of 1926.

The Martinsburg, W. Va., Journal of October 19, 1945, published in the district which I represent, carried the following timely comment:

A NEW MORROW BOARD

The past few weeks have produced an unmistakable ground swell of public and official enthusiasm for a new and expanded Morrow Board which would do for our present problems of air defense what that body did for the problems of 20 years ago.

Today, of course, the situation is not the same, nor are the problems the same. The so-called "Morrow Board" was created in September 1925 by President Coolidge as a consequence of Brig. Gen. Billy Mitchell's sensational accusation that the Army and Navy, in the administration of their air services, were "incompetent, criminally negligent, and almost treasonable."

Now we have just won a war in which a superb military air organization played a leading part. There is no thought of criticizing any part of that contribution. Yet there is need of a new Morrow Board. The coming of peace has left us with no policy, or rather a confusion policies.

American military aviation got its first real impetus and direction from the Morrow Board. Its recommendations to Congress resulted, among other things, in passage of the Air Corps and Air Commerce Acts, which might be considered our constitution for aviation. Through them the Under Secretaryships for Air were set up in the War, Navy, and Commerce Departments.

The Morrow Board mapped programs for the design and production of military aircraft, and for the development of civil aeronautics. Had the former program been followed, the coming of war might have found this country with a more efficient nucleus of aircraft production than that hurriedly set up to fill French and British orders in 1940.

Congress could use suggestions for such a wise program again, a program which this time would be followed up carefully and completely. Perhaps a new Morrow Board could not provide a set of pat answers and precise blueprints. But at least it could take unto itself some of our more serious problems of national defense, hold hearings which would provide the best available opinion as to their solution, and try to integrate the sum of this opinion and the members' own thinking toward a workable policy.

Some of the questions such a Board would have to consider may be discussed later. It is enough now to suggest that the present activities of some congressional committees, the general attitude of a research-conscious Congress, statements of several Army and Navy leaders, and the tone of much of the Nation's press indicate that the formation of a new Morrow Board is not only desirable but inevitable.

The Sunday Exponent-Telegram, of Clarksburg, W. Va., October 21, 1945, discusses the proposal in the following manner:

A NEW MORROW BOARD

At least a half dozen vitally important questions will confront any new committee which the President might appoint to formulate an air policy for our national defense. Such a committee would find its problems considerably more complex than those which the Morrow Board faced in establishing our air policy of 20 years ago.

But there also would be a reasonable assurance that, in contrast to the Morrow Board's experience; the new policy recommendations would be heeded. The country is no longer complacent. Most Americans now realize that their lives and futures are intimately linked to the future of their military defense. They want to know the answers to such questions as these:

What effect will the harnessing of atomic energy have on the problem of national defense?

That is obviously the most important and least answerable question of all. But at least a new Morrow Board might recommend facilities which would give American science the fullest possible assistance in trying to find the answer.

Should all branches of the service be put under a unified command?

This is a touchy, confused, and controversial subject which Congress is in no apparent hurry to settle. The decision of a Board of distinguished private citizens and Congress' own best-informed leaders should help the legislators in making their ultimate choice.

What size peacetime air force will be required to meet our own defense needs and our obligations under the United Nations Organization, and still be economically feasible?

What Government policies should be adopted to stimulate a healthy rate of technological progress?

What peacetime nucleus of production should be maintained in the aviation industry to insure a rapid expansibility in time of emergency?

What part should civil aviation and aircraft exports play in support of the peacetime military aircraft industry?

Can we afford to neglect air power in the thought that it is an inadequate defense against the "push-button war" of the future, or shall be continue to depend on and support the evolution of military aviation, which has brought the world to the threshold of that "push-button war"?

The answers to these questions depend, to a great extent, on public sentiment as reflected in congressional appropriations. At present the military aviation program has been cut back, at the Budget Bureau's suggestion, to 2.5 percent of its wartime peak.

Certainly a big military aircraft schedule is out of the question. But it must be decided whether the present program of 2,400 military planes a year is enough to keep intact the expansible industrial core of research, development, and production which seems essential to maintain our air security.

In Aero Digest of January 15, 1945, I advocated the creation of such a group in the following language:

The time has come for the United States to create an "Air Policy Commission" for a full study and exhaustive investigation of problems created by developments in military and civil aviation. Basic national policies should be established on airpower as an instrument of national defense, international security, and the expansion of civil aviation.

Such a commission would have characteristics of the "Morrow Board" set up by Presi-

dent Coolidge in 1925, out of which came, partially at least, the Air Corps Act of 1926; and which in turn, resulted in the designation of Aviation Assistants to the Secretaries of Commerce, War and Navy Departments.

One lesson this terrible struggle has taught us—a lesson that our airmen have been trying to pound into our heads for a quarter of a century—is that our future world trade is clearly bound up with the development of flying. The nation with the best and the most planes, the best and the most highly trained pilots, the best and most ingenious designers, laboratory technicians, and productive capacity will, at that time, be in a favored position.

Many other factors will enter into the problem. There must be national ability for long-range vision in a field so vital to world stability.

Mr. Speaker, it seems to me that the reasons for the passage of this legislation are even more compelling today than they were at the time of its initial presentation to Congress in 1944. America must retain its leadership in aviation. It is important, therefore, to have a basically sound program which will serve our peacetime needs and be available in time of necessity. I respectfully urge Members of Congress to study the proposal with a viewpoint of benefiting the United States and accomplishing a plan for international cooperation and security.

## Anniversary of Czechoslovak Independence

REMARKS
OF
**HON. KARL STEFAN**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, October 25, 1945*

Mr. STEFAN. Mr. Speaker, 27 years ago, on October 28, 1918, the proclamation of Czechoslovak independence was read from the steps of the Prague Museum. As Bohemia celebrated its release from 300 years of bondage, the black and yellow flags of the Hapsburgs and the Austrian double eagle were torn down from public buildings. The citizens of "golden Prague," justly prominent among European cities for over twelve centuries, jammed St. Vaclav's Square to listen to the tidings of liberation.

There was then—and there is now—a vital American interest in the welfare of the independent Czechoslovakian people. The draft of the Czechoslovak declaration of independence was prepared by that great patriot and lover of liberty, Tomas Garrigue Masaryk, in Washington, D. C. That document was signed in Independence Hall, Philadelphia, on the 26th of October 1918. Masaryk actually sat in the same chair once occupied by John Hancock, signer of the American Declaration of Independence, when he affixed his signature to that memorable message of Czechoslovak liberation.
